We said, in reply to this sort of talk, that we were among the number of those who advocated the extension of the franchise to the blacks as a means of protection, and as a sign of their equality before the law, and that we believed that this would in the long run have proved sufficient for their protection. It would have furnished the whites with a powerful reason for conciliating them and treating them kindly, and would have, in all probability, prevented the appearance of race lines in party politics—perhaps one of the greatest misfortunes that can happen a community—and it would not have excluded from the service of the State the great number of educated, experienced, and *honest* native whites which every Southern State contains, and with whose service no Southern State can safely dispense. They are "ex-rebels," but they are not thieves. They have owned slaves, and revolted in defence of slavery; but they are influential, economical, and trustworthy in the management of State affairs, and it was of the first importance not only to the negro, but to the whole Union, that, during the transitional or reconstructive period following the war, they should neither be driven into hostility to the local government nor prevented from giving it the benefit of their experience and ability.

Nothing would satisfy the hot-headed majority in Congress, however, but to drive these men into private life, and hand over the government to ignorant negroes and worthless Northern adventurers; and the pretext on which this was done was, that this was the only way in which the blacks and the Unionists could be protected in the enjoyment of their lives and property and in the exercise of the franchise. It was quite useless to point out what anybody's experience of human nature might have told him, even if he knew nothing of the lessons of history, how futile any such expectation was. The whole American system of government and society is based upon equality, conciliation, and compromise. Everybody is allowed to vote—even the foreign rabble of this city—not because people believe their voting does no mischief, but because their exclusion from the franchise, by exasperating and embittering them, would do more. The very execution of the laws in a country where all the officers of the law are drawn from the body of the people and return to it, and where the Government has no armed force at its disposal, depends on the general sympathy of the community with the legislation and its respect for the legislators. In all that relates to the government of his own State, these truths are familiar as household words to every man at the North. Anybody who proposed here to disfranchise even "Reddy the Blacksmith" because he was a "bad man," and vexed his neighbours, and was disposed to knock people down on their way to the polls, would be laughed at. Nevertheless, an expedient which, proposed as a remedy for grave political evils in any State in the North, would excite laughter, and does excite laughter, when the well-known "educated American" who has "lived long in Paris" ventures to hint at it, was solemnly applied to the whole South at the close of the war.

The American remedy for bad government is to give the government the largest possible popular basis, and let the majority get out of their difficulties as best they can; but the remedy applied in the South was a feudal one, and consisted in sifting the population, and letting nobody take part in the government who could not give proof of what the Puritans called "constant good affection." The republican cure for discontent is to call the malcontents into the council-chamber and hear what they have to say, and try to soothe and conciliate them—in short, to treat them as brethren. The monarchical remedy is to shoot them down, or lock them up, or impose disabilities on them till they "repent" or confess they have done wrong, and promise to do better—till, in short, they kiss the rod or lick the dust. Every American is familiar with the former, and has always practised it in politics and business and society; nevertheless, the very first occasion on which the country was called on to deal with discontent on a great scale, the monarchical remedy was resorted to, and the republican one unhesitatingly thrown aside as worthless, and everybody denounced as "unpatriotic" who said a word in its favor. Everybody knows, too, what a misleading thing faction is, and how apt intense personal feeling is to cloud the judgment, and yet we see Congress listening with deep attention and respect to the opinions of the frantic Unionists and colored men who come up hot from internecine contests with their neighbors as to what ought to be done with the South—and their opinions, of course, all run in the same direction: their enemies ought to be kept down with the strong hand, and cowed and humiliated—a process we should all of us like to see performed on our enemies, but to which in sensible communities we are not treated.

One other curious departure from democratic doctrines has been displayed in our mode of dealing with the South. The democratic theory of human nature is that it is, on the whole and at bottom, good; and that for social and political purposes you cannot do better than trust to its instincts, and that, where it has shown itself in a bad light, it has been due to the corrupting or maddening influence of oppression. But during the war—as was not wonderful—the belief sprung up that human nature among slaveholders and rebels was hopelessly and incurably depraved, and that the usual reformatory influences might be brought to bear on it in vain; and that the only arguments of any value in dealing with men who approved of human bondage, or bore arms against the United States, were the halter and the prison and the test-oath. That this opinion should have held its ground during the heat of the rebellion was not surprising; that it should be allowed to influence the policy of the United States in dealing with so weighty a question as the pacification of the South six years after the war is over, is, we do not hesitate to say, discreditable to our good sense. Southern human nature is like other human nature. It is affected in just the same way by the same influences. It loves life and ease and security, is grateful for kindness, expands under confidence, rejoices in the growth of civilization, and is maddened by injustice or hostility—not, perhaps, in all cases in the same degree as Northern human nature, but in *some* degree; and when we say this, we furnish the key to the Southern problem. Slavery is a bad thing, and rebellion is a bad thing; but, were they twice as bad, they could not convert Southern white men into fiends. They may have rendered them exceptionally difficult for Northern men to deal with, but this is no excuse for refusing to deal with them by the ordinary methods.

These were all *à priori* arguments when used five years ago; they have now been justified by actual experiment. The proscriptive system for the protection of life and property at the South has been tried and has totally failed. The disaffected have not grown good, and learned to love the blacks; they have grown worse, and have taken to killing the blacks wholesale, and society is on the brink of disorganization in several States. The remedy is still the same. We must still, if we would end confusion, resort to the method to which we should have resorted five years ago: we must hand the Government over to the people, and let the persons who have most influence and knowledge and are most trusted by that portion of the community whose co-operation is most necessary to the proper conduct of the Government, administer it if they will, and as best they can. The notion that any permanent good can come of martial law or proscription, or that they prepare the way for anything but more martial law and more proscription, is a dangerous and monstrous delusion, and we are glad to have another opportunity of denouncing it, in the certainty that if allowed

to govern our policy at the present crisis, the next five years will illustrate its folly still more strikingly than the last five years have illustrated it.

As to its results during the last five years, we shall cite as a witness our old friend, the Charleston *Daily Republican*, whose present plight ought to be a warning to unscrupulous party organs everywhere. The solemn confessions it is compelled to make now, at the eleventh hour, in the presence of the misery and disorder into which its friends have plunged the State, is as striking an exposure as we have yet seen of the mendacity and charlatanry by which the work of reconstruction at the South has been thus far, though we hope not fatally, hindered. It thus enumerates the evils from which the State has been suffering, and which furnish excuses to the Ku-klux:

"1. In our State the superiority of numbers threw the government almost absolutely into the hands of the colored citizens. The late slaves practically ruled the late masters. This was a calamity. It was a repetition of the old curse of South Carolina, namely, the ruling of one race by another. True, slavery had been abolished, but there are sometimes oppressions in the name of liberty, and these real oppressions, and fancied oppressions too, the whites keenly felt.

"2. The evil will be seen to be the greater if we look at the real condition of the colored people as they emerged from slavery. Their training had certainly not been of a kind to make them statesmen. We speak of the great body of the colored people. We speak kindly. There are men among them well up in statecraft, but the colored people, as a people, were not only untrained in the schools, but untrained in the commonest matters of politics and government. They were ignorant and easily misled. Their political instincts were, it is true, in the right direction, that is, on the side of liberty; but they had to trust some one as leader, and unfortunately they too often trusted the veriest scoundrels simply because these pretended to bear the dear name of Republican. The Republican party had given to them liberty, and they were grateful to that great party for that great work, and implicitly trusted those who bore the standard of that party. They are learning wisdom in this matter; learning that some wolves go about dressed up as sheep."

After, however, complimenting the negroes on their social advance, it goes on to say:

"But that they have made great mistakes must be admitted. They undertook too much. They were not fitted to do everything in ruling South Carolina. And demagogues led them not only to believe that their late masters were in every case their foes, and therefore to be excluded from every office, but also led them into the fatal blunder of putting men in office simply because they were colored. This matter of color has had much to do with our politics. In the last election many of the men elevated to office were placed there for this one simple reason, that they were colored. Some of these had no fitness whatever for office.

"3. Corrupt and incompetent officers. This we have too often admitted and condemned to need to give a fresh admission and condemnation now. The evil is of startling magnitude. It not only affects the legislature, but through other ranks, down to trial justices, etc.

"4. Heavy taxation, in part made necessary by bad measures passed by the legislature.

"5. The militia, so organized that, as claimed, the whites have not the same advantages as the colored people."

Speaking of the governor's appointees, it says some of them "had better hammer stone in the penitentiary" than hold office; and speaking of the elected officers, it says "many are ignorant or degraded, and altogether sold to the devil."

We might be told that phenomena like these may be witnessed in New York, which is true. But in New York no one is disfranchised, and we may add that, were decent people in New York hot-blooded, like the same class in South Carolina, and did they believe, as the South Carolinians do, that Ku-kluxing would work reform, they would be busy at it day and night, and many a hardened ruffian would be yelling for Federal troops to save him from the consequences of his villany. We say deliberately, too, that we believe a community which sits down, as we do, under some of the evils from which we here suffer and of which we hear every day, is doubtless wiser than the South Carolinians, but it is very doubtful whether it is healthier in spirit. We seek neither to defend nor palliate Ku-kluxes, but we cannot allow the persons who sow the seeds from which Ku-kluxery naturally springs to throw the whole blame on the men who engage in it.

MATERIAL INTERESTS IN FRANCE.

The rapidity with which nations recover from the material effects of the longest and most destructive wars, is a standing marvel to all who have not carefully investigated the relation of the annual production of wealth to the accumulated savings or capital of a nation. We hear a great deal of older nations possessing the inherited wealth of generations, as if any large proportion of the existing wealth were of great age; while the truth is that the whole of our inherited wealth is utterly insignificant, and that almost all our wealth is, as it were, the product of yesterday. It is no exaggeration to say that the average age of all the wealth in the world probably does not exceed, if it reaches, five years. Nor does it need a profound investigation to convince any one of the general truth of this statement. Of what does our wealth consist? Buildings of every description constitute the most permanent of all important classes of our wealth. Yet even in the oldest countries of Europe, unless they are in utter stagnation, the new buildings erected annually form a very important percentage of those already existing, and tend to lower materially the average age of all, while the old ones, with the comparatively rare exceptions of a few substantial palaces and churches, need so many repairs to keep them habitable that they may fairly be said to be remade every few years. Next to buildings come railroads, ships, machinery; yet railroads are practically rebuilt every seven years, the average life of ships, especially wooden ones, is even less, and it needs no mechanic to tell that there is no machinery of any description that is not constantly wearing out, despite of repairs, or rendered valueless by new inventions and improvements. The whole of our agricultural wealth, farm-houses, barns, implements, cattle, animals of every kind, crops, and fences are all but a few years old; and a very large part of them, the crops and all the increase of the herds, are the creation of the year. These examples suffice to point out the falsity of the general belief that the wealth of the world is of great age, and to make it evident that all existing property is of comparatively recent production. But we derive even more positive evidence from a comparison of the results furnished by actual statistics. These show that in the United States, for example, the annual production of wealth is equal to nearly three-fourths of all existing wealth, so that if it were possible to save all we produce we might double our existing wealth in fifteen months, or, if it were possible to produce without capital, we might destroy every vestige of property now on the earth, and in fifteen months our labor would reproduce the whole. Of course it is impossible to produce without capital; but then war, even in its most destructive form, cannot destroy more than a very small portion of the total wealth or capital of a great nation. Of course, too, it is impossible to save all we produce; but it is easy to see that an economical people, under the pressure of necessity, can make much greater savings than they have ever made before; in other words, consume a much smaller proportion of their product than they were in the habit of doing.

By a consideration of these facts, the marvel of the rapid recovery of peoples apparently ruined by war is easily explained. The time of war itself compels many privations and economies, which amount in some form or another to an increased national saving, while the return of peace stimulates to intenser activity and to closer economy. When it is understood how great production is, compared to capital, it is no longer difficult to understand how even a slight increase in production, a slight decrease in consumption, can quickly repair even serious injury to the accumulated capital. A nation like the United States is in a position similar to that of an individual whose capital of $100,000, joined to his labor, produces him an income of $75,000 a year. If by any accident his capital is reduced one-fourth, increased labor and increased economy will speedily enable him to replace the deficiency out of his earnings. But in order to do this, it is of course necessary that his income should be large, that he should be able to reduce his expenditures, and willing to work harder than before. It is upon conditions similar to these that the ability of France to recover from her losses by war chiefly depends. If the income of France is large; if she is able and willing to reduce her expenditures, we shall witness in France, as in other countries desolated by war, a rapid recovery of prosperity, a rapid reproduction of the property destroyed.

Unfortunately for France, her annual production is comparatively limited. In no country of Europe is there so large a proportion of small property-holders, whose cultivation has been carried on for the last fifty years by the same methods and with the same implements as

under the elder Napoleon. Agriculture has been reduced to a system of almost Chinese minuteness, but rendered, by exhaustion of the soil, by competition with more intelligent nations, and by the steady process of deterioration of man and beast, so unproductive as barely to furnish subsistence to the owner in return for the most exhaustive labor and in spite of a truly proverbial economy. This extreme subdivision of the soil prohibits every improvement, and results, or has resulted, in stagnation of production, of wealth, of population, and intelligence. It is among these rural districts that the advent of children, threatening the division of the ancestral half-acre, is dreaded far more than among the city shopkeepers. It is here that mothers habitually sell their own babes' food to nourish the children of strangers for pay. It is here that the recruiting sergeant gathers those conscripts whose simple bravery and patient endurance and ignorance form the marvel of those who have accompanied them on the march and to the battle-field. It is here that a woman and a cow can still be occasionally seen harnessed to a plough *à la Louis Quatorze*. It is among these rural districts, living still in the traditional light of the First Empire, that the Third Napoleon found his chief support. It is here that was rooted the power which, by means of the plébiscite, enabled him and his confederates to overrule the intellect of France; to undermine its sense of honesty; to corrupt its official morality, and lead it into a ruinous career of self-adulation and self-deception. What can be expected from these regions in the way of aid to restore the waste of war? But little. A production forced, these many years back, to the greatest height of which the average intellect of the producer is capable, and not to be increased by any known method, save a total revolution in the ownership of land, not conceivable except as the result of widespread famine; a consumption limited, for generations past, to the veriest pittance that will keep body and soul together, and not to be diminished save by actual starvation—what prospect do these conditions offer of the increased production, the diminished consumption, by which alone the war's destruction can be repaired? Very little.

The success of the national loans of Napoleon III. has done much to deceive the world concerning the condition of the French people, and especially concerning what has been called "the reserved financial strength" of the country. In the first place, this course of incessant borrowing to make up the chronic deficit, even in times of peace, is the most striking evidence that the sources of taxation were exhausted, that it was found unsafe to wring more money from an impoverished people. Disinterested foreign economists have long since pointed out this danger of collapse in the French financial system, from its inability to bear the slightest additional tension; and their prescience is confirmed in the strongest possible manner by the desperate measure adopted by the new Government of raising a large income from duties on imports, which in France, more than any other country, consist of the raw materials of industry. In the next place, these Imperial loans, astounding as was their success at the time, have really proved to-day the chief source of French weakness. From 1815 to 1851, France was virtually in a continuous ferment, inspiring no faith among her own people in the permanence of her institutions. It *is* the unquestioned merit of the Second Empire that, since Waterloo, it alone succeeded for nearly twenty years in convincing the people of its permanence. Prior to its advent the French, who practically know no savings-banks, who had no opportunity to invest in land, who were too ignorant to purchase improved tools and implements, even had their restricted land-ownership permitted the use of them, were very largely in the habit of converting their petty savings into coin and hoarding it. It was these accumulated petty savings of generations that the loans of the Empire drew from the people *and wasted*. This "reserved power" of the nation has been looked upon as the measure of the people's annual saving. It has been constantly represented by the Imperial press as unmistakable evidence of the continued growth and prosperity of the people, whereas it was really only an evidence of their growing faith in the Empire—a faith which, like most French faiths recently, has proved a delusion. As a proof of the growing annual savings of the French people it is comparatively valueless, and cannot offset the evidence to the contrary furnished by their admitted inability to bear further taxation. In considering the course of France with regard to her debt, these facts will assume increased importance; they are referred to here chiefly to show that the argument in favor of a probable rapid recovery in France, based upon the evidence of these loans, is far from conclusive.

Surveying the condition of the agricultural population in France, we are constrained to conclude that the prospect of a rapid revival of prosperity is decidedly discouraging. But the farmers do not constitute the whole of France; the industrial resources of the nation are great. But even here the prospect is gloomy. Two of the wealthiest of its industrial provinces are precisely those taken by the enemy—Alsace, with its cotton-printing and wool-dyeing; Lorraine—of which a third is gone—with its coal and iron; and those that remain are to resume after peace with the superadded burden of fresh import duties on the raw material which they manufacture, rendering competition in the markets of the world next to impossible. The drawback resulting from a six-months' interruption to manufacturing, which in itself gives a powerful advantage to a competitor, will thus be aggravated by the inability to resume the competition even on the same terms that prevailed before the war.

A great nation like the French is not ordinarily ruined by a six-months' war, nor by the loss of two provinces; but when the war is both the result and the final evidence of years of bad government, when it follows upon a long period of financial exhaustion, disguised by the most reckless appliance of all the ingenious devices known only to French finance, then we must not be misled into anticipating as rapid a revival as, for instance, our own Southern States witnessed after a war far longer and more exhausting. Without taking into account the Prussian indemnity, which, from its peculiar nature, requires a more extended consideration, and is likely to have most disastrous consequences, the prospect for the material welfare of France must be considered as gloomy in the highest degree.

A FRENCH VIEW OF THE PRUSSIANS.

THE reports of Colonel Stoffel, of the French Staff, who resided for two or three years in Prussia, as French Military Commissioner, after 1866, on the Prussian military system and the condition of the Prussian armies, have often been referred to in our columns. They were discovered amongst the Imperial papers in the Tuileries, a majority of them, it is said, unopened. Had they been opened and read, and believed in, there is no doubt the war of 1870 would not have been attempted, for they would have shown it to be ridiculous to pit the French army against the force Prussia was prepared to bring into the field. Only extracts from them have seen the light until very recently. They have, however, now been published in full, and as the Prussian success in the late war is one of the most extraordinary phenomena in history, and will probably gain rather than diminish in interest as time wears on, and as the *Nation* has steadily contended from the very outset that its causes were mainly moral, and were to be found in the very constitution of Prussian society and in the habits and training of the people, even more than in the superiority of Prussian strategists or the excellence of the Prussian military organization, we shall take leave to justify our position by a more extended notice of Stoffel's reports than we have hitherto been able to give.

In April, 1868, he pronounced the Prussian army superior to the French, in the most positive manner, and predicted this would be found to be the case "if war broke out to-morrow," putting aside, of course, all conditions, such as the comparative skill of the commanders, which could not be foreseen. The elements of superiority, he says, of one army over another are "moral and material." The moral ones lie in the character, temperament, traditions, history, and education of the nation at large; the material, in the organization of the army, the military training of the officers and soldiers, and in their arms and equipment.

The moral superiority of the Prussian army to the French he ascribes to three things: 1, the compulsory service; 2, the high state of popular education; 3, the strong sense of *duty* diffused through the Prussian people. After speaking of the respect with which the army and everything pertaining to it are treated in Prussian society, he goes on to say:

"To speak only of the officers, what a fine example they present to all the other classes. Do we see there as elsewhere those who are distinguished by birth or fortune living in lamentable idleness? Far from it. The members of the richest families and the wearers of the most illustrious names serve as officers, endure all the hardships of military life, and thus preach by their example. In the presence of such a spectacle,

not only does one find one's self forced to esteem this serious and rough people, but one comes almost to dread the strength which such institutions must give the army."

Coming to the question of compulsory education, he says:

"The Prussian nation is the most enlightened in Europe, that is, that in which education is most widely diffused through all classes. . . . In France, where we are so completely ignorant of all that relates to foreign countries, we have no idea of the amount of intellectual labor of which Northern Germany is the scene. Not only do common schools abound, but, while in France the centres of intellectual activity and production are a few great cities only, Northern Germany is covered with them, and indeed, to enumerate them all, one has to go down to towns of the third and fourth rank."

He then combats and ridicules the French notion that hardy peasants make better soldiers than educated men, and says that nothing did more to give the Prussians the sense of superiority which made their victories easy in the war of 1866, than their discovery of the ignorance of the Austrian troops. From that moment they had the utmost contempt for the enemy.

What Colonel Stoffel says of the German "sense of duty" we shall quote entire, as we have often dwelt on it ourselves, and endeavored to show the important part it plays in politics, and the folly of trying to substitute for it simple liberty and individualism:

"I have still to point out a quality which peculiarly characterizes the Prussian nation and contributes to increase the moral value of its army—I mean *the sense of duty*. This is developed in such a degree among all classes that one never ceases to be astonished by it, no matter how much one studies the Prussian people. It is not my province to investigate the causes of this trait; I confine myself to mentioning it. The most remarkable illustration of this devotion to duty is furnished by the employees of all grades in the different branches of the administration of the monarchy. They are paid with surprising parsimony; they are generally burdened with families; and yet they toil all day long with indefatigable zeal, without complaining, and without appearing to desire an easier position. 'We take good care not to meddle with it,' said M. Bismarck to me one day; 'this laborious and badly-paid bureaucracy does the best part of our work, and constitutes one of our principal forces.'"

He sums up the elements of superiority possessed by the Prussian army as follows:

"1. The deep and healthy sentiment that the principle of compulsory military service diffuses through the army, which contains all the manliness, intelligence, and living strength of the country, and regards itself as the nation in arms.

"2. The intellectual level of the army, which is higher than in any other country, owing to a wider popular education diffused through all classes of the people.

"3. In all ranks and conditions a stronger sense of duty than is to be found in France.

"4. The special services, for the working of the railroads and telegraphs and the care of the wounded, which are organized permanently with the greatest pains, and without diminishing the number of the combatants.

"5. The greater effectiveness of the infantry fire, owing to the peculiar temperament of the North Germans and the great pains taken with the rifle practice.

"6. The superiority of the materiel of the artillery, both as regards precision, range, and rapidity of fire."

There is, perhaps, nothing more interesting in the reports than what Colonel Stoffel tells "of the composition of the Prussian staff," which he pronounces by far the best in Europe. The manner in which it is made up is thoroughly Prussian, and, indeed, is an excellent illustration of the whole Prussian system. No officers are educated specially for it before entering the army, nor is it a separate organization properly so-called. It is simply a collection of officers of proved talents and acquirements, selected from the whole army and retained at headquarters for the performance of staff duties. General von Moltke was then, as he is now, the head of the staff, and he does as he pleases about its organization and duties. Any lieutenant who has served three years in a regiment, and thinks he has in him the makings of a staff-officer, can present himself for admission to the Military Academy, at Berlin, and, if he can pass the required examination, he enters. The average annual number of candidates is 120; the average number of those who succeed in passing is 40. Once in, the student finds himself plunged into a vast range of studies which, of course, nobody who has not a strong head and thorough preparation can hope to manage. The course embraces tactics, theoretical and practical; military history; armament; fortifications, permanent and temporary; the history of sieges; topographical surveying; military geography and administration; and then, as accessory studies, mathematics, geodesy, universal history, literature, the elements of philosophy, general geography, chemistry, experimental physics, and French, English, and Russian. The course lasts three years; nine months of each of the first two are given to study, and the remaining three months (in autumn) are passed with the regiment in the field manœuvres. In the third year, instruction is given in the duties peculiar to the staff, and a month is passed with the professors in a journey through some rough country, which is carefully studied with reference to reconnoissances, outpost duty, and the encampment of troops; and the students are practised in sketching.

The school course over, there takes place what is called the "first choice." The officers all go back to their regiments without examination or classification, but the professors nominate twelve to the General as the most studious and capable of all, taking care to select them in as nearly equal proportions as possible from the three arms of the service. After they have been six or eight months with their regiments, in complete ignorance of what is in store for them, General von Moltke selects as many of the twelve as have showed most aptitude and zeal after leaving the Academy, and summons them to Berlin for actual service on the staff under his own eye. Here they find themselves in a kind of school of which he is the head master. They live with him, and he makes himself thoroughly acquainted with each man. Moreover, he gives them lectures on their duties and on the various subjects with which they have to be familiar. He makes them write essays or memoirs on prescribed questions, and these he criticises before the whole staff, without revealing the name of the writer. In fact, the greatest pains is taken through the course not to awaken jealousy or emulation, and not to create either depression or vanity. This trial lasts eighteen months or two years, and the candidates are again sent back to their regiments, still in complete ignorance of their chances or of the impression they have made. But the General has already marked his men, and they find themselves, after a few months, promoted to the rank of captains, and are ordered to prepare for staff duty and wear the staff uniform. The others hear nothing more about this episode in their career, but remain in their regiments. After such trials as these, it may be readily imagined that the Prussian staff is a remarkable body of men. No wonder Colonel Stoffel, after a saddening comparison with it of the officers of the French *état-major*, concludes by saying, as his closing admonition, "*Méfions nous de l'état-major prussien!*"

The events of the war have, of course, justified his previsions very remarkably, as they have also justified those of General Trochu, who has had a sad personal experience of his own skill as a prophet. Trochu's book is full of allusions to the extent to which the discipline of the French army has been affected by the decline of the sense of duty among the whole French people. He says distinctly that the craving for equality and the dislike of responsibility to anybody which have spread to such a lamentable degree among the people, have weakened the control of the officers over their troops and made it difficult to count on the punctual and exact execution of orders. Combine this with the neglect of education, and we have all that is needed to account for the ease and completeness of Prussian victories, and for the readiness of the French troops, during the late disturbances, to "fraternize" with the mob. A man has only to occupy himself exclusively for a while with the consideration of his own "rights," and with making the separation of his individuality from his neighbor's individuality as complete as possible, and to deny all responsibility for the way he behaves to anybody but abstractions such as Humanity, or Posterity, or the Infinite, or the Absolute, or the Round, or the Whole, to make himself nearly useless for either war or peace. That there is a tendency in this direction in modern democracy there is no denying, and it is well illustrated by a story told of a gentleman in the South, during the war who, having made himself remarkable by his untruthfulness, and finding his word doubted on a particular occasion, declared "he was willing to have the matter enquired into—in fact, he would rather have it enquired into—at the Last Day."

THE PEACE.

BERLIN, March 9.

PEACE at last, and a glorious peace! *Seven months* have sufficed to achieve the greatest military feat of the century. On August 2, Napoleon at Saarbrücken opened hostilities, and gave his boy Lulu the baptism of fire and blood; exactly seven months later, the Germans marched through the "Arc de Triomphe" into the French capital. It took the great Frederic seven years to give his little kingdom an acknowledged position among the leading powers of Europe, and, a century later, Prussia carries on a short but unusually successful war of *seven weeks*, which, by defeating Austria, prepares the German unity. Great as the conquests of the Seven Years' and the Seven Weeks' wars are, the last *seven months*' war outdoes

both of them in military renown, national glory, and beneficial results for the present and the future.

There is no overbearing assumption in any class of the people; on the contrary, everywhere I observe a feeling of pride and self-respect mingled with modesty, not to say meekness. It is as if each individual were dazzled by the prospects of his own great future, as if he could not yet fully realize the sudden change which has taken place in his own condition as well as in that of the world: but, at the same time, every one feels the heavier responsibility towards his country, and will cheerfully do his duty.

Hitherto, Germany has been the only one of the great nations of Europe which, for the last fifty years, has been sentenced not to work out her destinies by herself from within, but to have her lot cast by outsiders. She has now attained a greatness with which even the proudest, almost legendary, periods of her history can hardly be compared. In the interstate relations of modern Europe, Germany was a mere deadweight. These relations remained the same, or were changed, and no one took the trouble to consider the interests or ask the consent of Germany. To-day, in all great political questions, the eyes of Europe will first be turned towards her. Germany, for the first time since the days of the Reformation, feels in her veins the life-breath of history—a feeling which is in itself the greatest bliss for a people. Although she had in the me ntime seen a great hero who ennobled his people, her outward position re ained almost unchanged, as Frederic was politically confined to a very small sphere of action. She had, too, an incomparably grand national uprising, but, owing to the jealousies of her allies, and to the narrow-mindedness of her own rulers, her destinies were not directed into a new and broader channel. This war at last has removed the artificial obstacles which for centuries had created dissensions and enmity between the different parts of the country. Henceforth but a single breath of life will inspire the popular organism. All the various springs of life of the German people have wonderfully revived in the recovered consciousness that in future they will unitedly strive for a noble and promising commonwealth, and not merely for the satisfaction of private interests and wants. Instead of studying foreign countries, or looking for their examples abroad, the Germans will now build their own house, and lay its solid foundations by drawing from the inexhaustible sources of their own nationality.

The same stern sense of duty, and the same incessant discipline of body and mind which have won the victories of this war, will enable the Germans to maintain their higher position in peace, and to devote their energies to the home-work of internal progress and freedom. The first consequence of the downfall of French military glory will be a different and better appreciation of true heroism. It was chiefly due to the French Revolution and its subsequent wars that only military bravery and warlike deeds were taken for heroism. A Napoleonic marshal or general, with tight trowsers and top-boots, big sword, and cornered hat, butchering his fellow-beings by the dozen, and wading through a sea of blood, was enthusiastically cheered as a great man. What benefit has the world derived from these generals? What has remained of their achievements? If we forget the harm they have caused their country by inspiring it with the thirst for military renown and exploits, their name is all that is left of them. Unfortunately, these foolish notions had spread over the whole civilized world. Recall, in the history of your last war, the comparisons which were drawn between the Napoleonic marshals and your own generals. Little Mac was for a time the Napoleon of the Union army, Sheridan its Murat, a third one a Ney, and Stanton was proclaimed by Gurowski the American Carnot, the organizer of victory. I trust that the overwhelming defeats of these "sabreurs" by a popular army, by the disciplined farmer and workingman, will make the civilized world throw off these reminiscences like evil dreams. It will now understand that one Washington doing his duty to his country simply and modestly is worth more to mankind than a dozen Napoleons; that the name of one Lincoln, dying at the post of his duty, weighs heavier in the scales of human progress than hundreds of successful generals; and that the modest tiller of the soil, a Western farmer, does more for the lasting benefit of his fellow-citizens than a dashing colonel making the most brilliant charge in a war of conquest.

It is a most cheering observation, which I daily make, and which augurs well for the future, that, in spite of all the military exploits of the last seven months, people here are imbued with this peaceful spirit, that the Cæsarian idea has not taken the least hold on them, and that the universal desire, manifested publicly and privately, is to resume the daily business which was so frivolously interrupted by the war. For this reason, peace was welcomed by all as the great harbinger of a well-deserved tranquillity, and of the return to the accustomed pursuits of civil life. The great event was celebrated here with more than usual splendor. Being announced beforehand, the illumination and public demonstrations assumed more of an official look than on former occasions—as, for instance, after the surrender of Sedan. Among the flags of all nations waving from houses and balconies, I noticed many American; but it struck me that the latter were not greeted and cheered as enthusiastically as formerly. When passing Wilhelmstrasse, opposite Behrenstrasse, I heard one of the crowd, pointing to the Stars and Stripes, cry rather ironically, "Better hoist a Remington rifle and a gold-bag; that's what the Americans are after." From the fashionable quarters I went to the far-off districts, where the poor people live, and where, on that evening (March 3), they demonstrated their joy by putting a few lighted tallow-candles into their front windows. The Berliner is a good-natured fellow, rather saucy here and there, but neither rough nor uncivil. There was no insolence or animosity towards the French in the tableaus or transparencies with which the houses and doors were decorated, only an unlimited hatred for Louis Napoleon as the instigator of the war. In the eyes of the people, he is the evil principle, the devil incarnate, the prince of hell. The German traditions of the old Napoleon, still alive in the hearts of the fathers and grandfathers of the present generation, are almost unconsciously interwoven with the deep exasperation felt by the Germans of our days against the prisoner of Wilhelmshöhe, making him the representative of all that is mean, cruel, and despicable in human nature. In one of the rougher pictures I saw old Louis as Mephisto; in another he appeared as an old, worn-out organ-grinder, his wife, with a tin plate in her hands, singing and standing at his side, and his boy sitting as a monkey on the organ; in still another, Napoleon on his knees before King William, imploring his grace. Whenever the latter and Bismarck appeared on the same tableau, they were sketched as giants, while Napoleon was the dwarf *Sic transit gloria mundi!*

Bismarck has to-day returned from Versailles. He looks well and hearty, and is far from being feeble or in broken health. The most extraordinary exertions of mind and body seem to have a rather strengthening influence on his constitution. The King will be back before the 20th of this month, and open the Imperial Diet in person. From good and trustworthy authority, I can state that he is rather worn-out and subject to nervous attacks, which often for days unfit him to attend to his business. He will be seventy-four years old on the 22d inst., and has certainly, for his age, admirably stood the hardships of the campaign. After the return of King or rather Emperor William, Berlin will pass through a new series of public festivals, such as reception of the troops, a day for thanksgiving, etc.

Our "Landwehren" are leaving France, and will all reach their homes before the end of this month. The conditions of the peace are carried out strictly and exactly on the part of Germany. As you will have expatiated upon them, I confine myself to the statement that our people consider them just and reasonable. Let me here correct a mistake in relation to the motives which made the Germans enter into Paris. They did not originate in personal vanity or in any military ambition. It was at first not intended to make Paris undergo this humiliation, but the haughty tone of her press, and the supercilious cries that the "holy city" had only been conquered by hunger, not by the German barbarians (who, however, by sundry operations and movements around the city had created a famine), changed the minds of the powers who dictated the peace. Bismarck is too sober a man to allow legends to be invented, at Germany's expense, in this age of steam and telegraphs. Paris, therefore, had to see, to feel, and to suffer the presence of the hated foe, thus directly admitting that she was beaten, and giving the lie to her own bragging. But there was another and still more important end to be gained. The Assembly at Bordeaux, not suffering under the immediate effects of the German occupation, might have wasted days and weeks before mustering the courage to swallow a peace so disagreeable and humiliating to the French vanity. Bismarck, therefore, on becoming aware of this disposition, concluded to avail himself of it to his best advantage. Every day of war spared was a clear profit to our army. For these reasons he made the stay of our troops at Paris dependent upon the signature of the preliminaries of peace. This condition exerted a wholesome pressure upon the Bordeaux Assembly; within twenty-four hours it accepted the terms. The apprehension that Paris would be subject to a longer occupation by the enemy did away with long speeches, theatrical declamations, and time-killing amendments. Thus the representatives promptly performed an unwelcome duty, which

so deeply concerns the inner and outer life, the present and future of the whole nation. As soon as the resolutions of the Assembly were submitted in writing, Bismarck ordered the withdrawal of the German troops, which had, for twenty-four hours only, occupied the most fashionable quarter of Paris. The mob behaved as cowardly as usual, hissing and crying when the troops had turned their backs, and running away when they lifted a sabre or a bayonet; ill-treating defenceless women, and singing the Marseillaise. But no matter; the end has been reached, and a prompt understanding been brought about. Our armies are on their way home, and, as we all most ardently hope, never to return again to France to defend themselves against so frivolous an attack as the last one. The French will cry for vengeance, but let us likewise hope that they will soon find better employment for their leisure hours, which at present, it seems, fill their whole day.

Correspondence.

RULOFF'S SCHOLARSHIP.

To the Editor of the Nation:

Sir: Observing among your "Notes" in No. 295 of the *Nation* a few remarks about the literary attainments of the murderer Ruloff, I bethought me of a few particulars in my personal knowledge of the man which you may possibly think would be interesting to your readers. Indeed, I cannot help surmising that the "observations on a certain philological treatise" written by Ruloff while "imprisoned in a New York penitentiary," to which your note refers, are a production about which I was personally interested. If I am right in this surmise, the report given in your note is somewhat inaccurate. At all events, I will furnish you a brief statement of what I know, and you can make what use of it you please.

At a time (1850–1) when the writer of this was a student of theology at Auburn, and was in the habit of making frequent visits to the State prison with the chaplain, he became acquainted with Ruloff, who was serving out there a ten-years' term of imprisonment. The prisoner was reported to be a remarkable scholar. He was thick-set and powerful in bodily appearance, had a broad face, large mouth, and small, brilliant eyes, rather widely separated. A little fluid-lamp used to be hanging at the grating of his cell-door, a special favor conceded to his well-known love of study. He would always come briskly up to the door for a talk; was quick in perception, impatient to reply, and had a habit of setting his head on one side, with a keen, scrutinizing look, while addressed, that gave one the impression of his intention to make a pounce the moment the sentence was finished. Often he caught the word out of the speaker's mouth, and poured forth a voluble reply of his own. His language was good, with a dash of sarcasm, and what he knew, he appeared to have well in hand. About that time, the writer, as a candidate for licensure, had been assigned themes for certain trial-pieces to be presented to the presbytery. One in particular was a critical essay upon a certain passage in the Book of Acts, in the treatment of which the young theologue supposed himself to have displayed great learning, and had completed his essay with vast parade of authorities and quotation of Greek authors. This essay the chaplain wished might be shown to Ruloff. It was shown to him, and he retained the MS. a few days, after which its author went to talk with the learned prisoner about it. But the author, in *that* talk, stood no more chance of shining than Bill Nye did in playing with the "heathen Chinee." The learned prisoner was up to his eyes in Xenophon, and Plato, and Sophocles, and Euripides, where the young theologue was only ankle-deep; and the latter left somewhat disgusted with the ways of these convicts. In the sequel, Ruloff prepared a review of the critical essay itself, and lent it to the writer, who has always regretted that he did not make and preserve a copy of it, for it was a remarkable production. I showed it, however, to Dr. Henry Mills, the most learned linguist in the theological faculty, who, while censuring the perversity of Ruloff's argument, expressed unfeigned surprise at his unusual knowledge of Greek. Written in a firm, beautiful hand, scrupulously correct in punctuation, and sprinkled over plentifully with Greek quotations (the characters of which were deftly and elegantly formed and carefully accentuated), it was a manuscript to attract a scholar very powerfully. Ruloff had a considerable quantity of books in his cell, the product of over-earning at his work. I do not think he quoted "from memory," as your note intimates. Nor, in spite of all his attainments, do I think he would have passed for what De Quincey calls "a sound, well-built scholar." He was ingenious, penetrating, persevering, curious, but crotchety, perverse, and immensely opinionated. As to the essay he wrote in review of mine, I remember that he objected, on some frivolous ground, to nearly every one of my positions, controverted all my grammatical authorities, but, of the Scriptural passage in question, had such excessively refined grammatical views, *that he utterly declined to venture on any rendering or exegesis of his own.*

One little memorial, a very trifling one, of this remarkable criminal I retain. It is a scrap of paper containing, in his own handwriting, a note on some words in the "Memorabilia" of Socrates (i. 1, 9). I transcribe it as a curiosity:

"*ἐπὶ ζεῦγος λαβεῖν*] rendered by Kühner, *ad vehendum adhibere*, as *ἐπὶ δεῖπνον* (as he says) *may* sometimes be rendered *ad coenandum*. This passage, however, seems capable of a less constrained interpretation. Compare also *ἐπ' ἄλλα τοιαῦτα* (Mem. Soc., i. 2, 9), and *ἐφ' ἃ ἥκομι* (ii. 3, 13), as these all require (perhaps) a common treatment."

I really think that this little scrap, when we consider that it was penned behind the grating by a man who has been convicted of the most horrid crimes, and will probably soon die on the scaffold, deserves preservation.

I remain, dear Mr. Editor, yours truly,

William Waith.

Lancaster, Erie Co., N. Y., March 20, 1871.

THE CHAIRMANSHIP OF THE SENATE COMMITTEE ON FOREIGN AFFAIRS.

To the Editor of the Nation:

Sir: In the *Nation* of March 23, p. 190, I find the following: "A resolution has been passed by the Massachusetts Legislature protesting against Mr. Sumner's removal from the chairmanship."

No resolution relating to the matter has passed either branch of the Legislature of Massachusetts.—Yours truly,

Horace H. Coolidge,
President of Massachusetts Senate.

Boston, March 25, 1871.

[Owing to an oversight of the printer, we said "Legislature" instead of "Senate," which would have been still an error, but not so great a one as we actually committed. The resolution was, we believe, introduced in the Senate, and we are glad to hear was not acted on.—Ed. Nation.]

Notes.

Citizens of Baltimore have contributed to the French Relief Fund the expenses of translating and publishing in English the London discourse of Father Hyacinthe on France and Germany, of which we pointed out the merits the other day. Messrs. G. P. Putnam & Sons are the New York agents for the sale of this pamphlet, the gross proceeds being devoted to the charitable object for which the discourse itself was delivered.——Messrs. E. H. Butler & Co., Philadelphia, will reprint from the Proceedings of the London Philological Society the lecture on Pennsylvania German with which Professor Haldeman lately finished his course at the University. It shows that this so-called "Dutch" dialect is the German of the Pfalz and of Suabia, in nearly the same state that it was brought to Pennsylvania by the emigrants from those parts nigh two centuries ago. The infusion of English is much smaller than is commonly supposed. As Professor Haldeman's lectures (on comparative philology) had but a small audience, there is good reason for giving one of them at least a wider publicity.——Messrs. D. Appleton & Co. compete with the Messrs. Harper in reprinting the vivacious "Diary of a Besieged Resident in Paris," Earle's "English Premiers from Walpole to Peel," and "The Novels and Novelists of the Eighteenth Century," by William Forsyth; and they have also in press the following selections from the English storehouse: Mr. Leslie Stephen's "Play-ground of Europe;" and "Mahommed Ali and his House."——Harper & Bros. will republish Azamut-Batuk's "Fall of the Second Empire;" and also announce "Three Years' Slavery in Patagonia,"

by M. Guinnard.——Chas. Scribner & Co. will publish "Martyrs and Apologists," by E. de Pressensé; and "Experiences of a Planter in the Jungles of Mysore," by Robert H. Elliott.——Michelet's "France before Europe" —a most extraordinary burst of rhetoric, if not all sound and fury, signifying nothing—translated under the author's revision, is to be published by Messrs. Roberts Brothers; with Arthur Helps's "Conversations on War and General Culture."

—His native country is about to do justice to the memory of Benjamin Thompson, Count of Rumford, who, whether as a philosopher or as a statesman, must be reckoned one of the greatest men America has ever produced, though no one here has yet thought of erecting a monument to him. The American Academy of Arts and Sciences are about to publish a memoir of him, and, for the first time, an edition of his collected works. The Memoir is by the competent hand of the Rev. Geo. E. Ellis, and will form a volume of more than 600 pages, illustrated with many engravings. This will be issued in two styles—a medium quarto, on extra fine paper, costing ten dollars; and an octavo, uniform with the Works, at five dollars. The Works will be contained in four volumes, at five dollars each. Notwithstanding the fact that some of Rumford's published writings passed through several editions, it has been found exceedingly difficult to obtain them for the use of this edition. Of the 16th, 17th, and 18th Essays, transcripts had to be made from the only known copies of them in the Library of the Royal Society; another was copied from a volume in the British Museum; and still others were derived from various collections in France and Germany. A large outlay has been made in this enterprise, and it is almost an act of patriotism to lend it support. Subscriptions may be sent to the Academy (in Boston), or to the publishers, Messrs. Claxton, Remsen & Haffelfinger, Philadelphia.

—Among the other blessings of this favored country, the opportunities for the study of physical science must be counted not the least. Without quitting the boundaries of the United States, the geologist and the mining engineer can find nearly all the conditions necessary to their instruction. Nowhere in the world are there grander examples of volcanic and glacial effects, of denudation and erosion, submersion and elevation, and, in consequence, clearer revelations of the formation of the earth's crust and the history of the growth of continents. But while the traces of glacial activity in past ages are common and widespread throughout the United States, hitherto it has been supposed that there were no existing glaciers between the 49th parallel and the Gulf, and that the student of geology must still revert to the original field of observation among the Alps. This mistaken notion has been corrected by the discoveries last fall of the "United States Geological Exploration of the 40th Parallel," of which a summary account has been given by Mr. Clarence King in the *American Journal of Science and Arts* for March. Mount Shasta, in Northern California, was the first height to reward the researches of the expedition among the extinct volcanoes of the Pacific Coast. Although this mountain had been previously and often ascended, the southern side had been the usual mode of access, and, as it proves, "an east and west line divides the mountain into glacier-bearing and non-glacier-bearing halves." "From the crest, a point 14,400 feet above the sea-level, I walked out," says Mr. King, "to the northern edge of a prominent spur, and looked down upon the system of three considerable glaciers, the largest about four and a-half miles in length, and two to three miles wide." Mr. Arnold Hague at the same time found, on the southern slope of Mount Hood, in the Cascade Range of Oregon, smaller but not less interesting glaciers; and Mr. S. F. Emmons subsequently explored on Mount Rainier, in Washington Territory, the grandest of all. "Ten large glaciers observed by us," he says, "and at least half as many more hidden by the mountain from our view, proceeding thus from an isolated peak, form a most remarkable system, and one worthy of a careful and detailed study." These glaciers have all the marks of motion, such as longitudinal and transverse crevasses, lateral, terminal, and medial moraines; with ice-caves and chasms only to be crossed by "snow-bridges similar to those in the Swiss glaciers," and which "lend a spice of danger to the whole examination." The coming season, we believe, is to be improved by the Exploration in making monographic surveys of Mount Baker, Mount St. Helens, and Mount Adams, and, probably, San Francisco Mountain, giving us, at the close of the summer, "a complete series of maps and studies of all the great isolated volcanic cones of the Western United States."

—The absence of glaciers in the Cordillera north of latitude 36° is attributed by Mr. King to the almost invariable west wind that sweeps the entire region, and "whose lower strata have been deprived of their moisture by the warm ascending currents of the valleys." The powerful evaporation which is thereby constantly produced in the high land between the Rocky Mountains and the California Sierras is tolerably well known. In the neighborhood of the Humboldt River and Lake we believe it amounts to an inch an hour, and the effect of this on the human fluids may be imagined: the lips crack and the hands are chapped as with cold. How this would act on a population permanently settled in those parts remains to be seen; but it would seem likely to exaggerate all the physiologic phenomena ascribed to the general dryness of the air in this country, as contrasted with that of Europe. A correspondent of the *Boston Medical and Surgical Journal*, deprecating the filling in of the Back Bay tract, and urging the reservation of what remains, translates a paper read before the Helvetic Society of Natural History by M. E. Desor, of Neufchâtel. This naturalist had visited America, and he discusses the differences in the climate of Switzerland and the United States as experienced by emigrants. He says the American habit of washing the clothes every week arises from the facility with which linen dries even in winter. On the other hand, our bread dries too rapidly; but then it does not mould, and our cellars generally keep provisions well. Germans are struck with the infrequency of arborization in the frost on our panes, just as they are astonished at being obliged to resort to the hair-dresser's for pomade and Macassar oil if they would keep their hair moist. Houses newly built can be occupied almost immediately, varnish and paint dry more quickly than in Europe, and wood for cabinet-work must be chosen much more carefully, and joined with a stronger glue. Tanners dry their skins more easily, and so shorten the operation. Collections of birds and animals need much fewer precautions against dampness. M. Desor also seems to extend to man an observation of Buffon's, that "the animal species of the American continent were in general smaller than their congeners of the old continent, while nearly the reverse was true of plants." At all events, the Yankee type is opposed to *embonpoint*, and foreigners who live here long lose flesh. The American may be detected by his neck, which is slender and seems longer than it is. The hurried and nervous movements of the Americans may be traced to the dry air caused by the prevailing west wind, and so may their nervous irritability. It may be assumed also that this has much to do with the craving for stimulants and the drinking habits of the people; and finally, thinks M. Desor, with the national susceptibility.

—The most popular English publications of the past month have already been named among the announcements of our publishers here, who on the arrival of each foreign mail strive with each other in pre-empting the choice lots. A few select works may still be mentioned. The Duc d'Aumale's "History of the Princes de Condé in the Sixteenth and Seventeenth Centuries" has been translated by Robert Brown-Borthwick, and should now be out. "The History of India, as told by its own Historians," is edited from the posthumous papers of the late Sir H. M. Elliot, by Prof. John Dowson. The Rev. E. J. Eitel, of Hong-Kong, is the author of "Sketches from Life among the Hakkas of Southern China," in five parts, treating of the topography and language; customs and manners; religion; superstition, including spirit-rapping; and literature, including popular songs. "A Hand-book of Chinese Materia Medica" and "A Vocabulary of Proper Names in Chinese and English," are by F. Porter Smith; and Rev. Justus Doolittle's "English and Chinese Dictionary" is now nearly off the press. W. R. Morfill's Oxford lectures on "The Slaves: their Ethnology, Early History, and Popular Traditions," have been made into a book, and contain also some account of Slavonic literature. A brief bibliographical essay on "The Literature of the Lancashire Dialect," by Wm. E. A. Axon, may be mentioned together with a second series of Wm. Bottrell's "Traditions and Hearthside Stories of West Cornwall," which awaits the requisite number of subscribers; and the second edition—"thoroughly revised and corrected by the author, and extended to the classical roots of the language"—of Hensleigh Wedgwood's "Dictionary of English Etymology." Mr. Wedgwood has had, he says, "the benefit of the very learned and very judicious annotations of Mr. Geo. P. Marsh," whose views have in many cases been adopted. Mr. Axon also publishes "Statistical Notes on the Free Town Libraries of Great Britain and the Continent." Medical works worth reading are: "Physiological Essays" (on drink-craving, differences in men, idiosyncrasy, and the origin of disease), by Robert Bird, M.D., Bengal Army; "Neuralgia, and the Diseases which resemble it," by Dr. F. E. Anstie; and the following correlated works: "Matheran Hill" (near Poona, a favorable resort for invalids), its people, plants, and animals, by J. T. Smith; "Pau and the Pyrenees," by Count Henry Russell; and "Water

Supply: a Comprehensive Treatise on the Water Supply of Cities and Towns," by William Humber. Finally, Americans might find this book a guide to hygiene: "Shifts and Expedients of Camp Life, Travel, and Exploration," by W. B. Lord and T. Baines.

—Some Milanese students last year celebrated the marriage of a favorite professor by publishing a collection of inedited poems of the older Italian poets ("Rime inedite d'ogni secolo, pubblicate nelle faustissime nozze del prof. cav. Giovanni Rizzi colla signorina Carlotta Cella.") We quote the entire title for its prettiness, which could hardly be rendered into English. The thirteenth century is represented by a love-song of Frederic II., King of Sicily, drawn from the most ancient repository of Italy's poets and troubadours, a Vatican codex; and a sonnet of Guido Cavalcanti's, taken from Bolognese MSS. The latter source also supplies a sonnet to Messer Cino da Pistoja and a hymn to the Deity, attributed more or less doubtfully to Dante, together with two of Petrarch's sonnets and a song by Ricciardo degli Albizzi; and from a manuscript in the Bibliothèque Impériale in Paris is taken a lyric poem on Italy by Franco Sacchetti—all illustrating the fourteenth century. For the fifteenth stands Niccolò Malpigli, in a sonnet against the Court of Rome; for the sixteenth, Tasso, in a sonnet ("contro la sua donna"); for the seventeenth, Tassoni, in a sonnet, the gem of the collection, in which the shade of Charles Emanuel, Duke of Savoy, addresses Italy; and for the eighteenth, Giuseppe Baretti. A poem by Prof. Lignana is the only one by a living author, and is the voice of the present age. The volume is elegantly printed.

—Cesare Paoli, who last year published Massimo D'Azeglio's Letters to Giuseppe Torelli, now edits a compilation from the miscellaneous writings of the latter which will be found agreeable reading. D'Azeglio likened Torelli's style to Blondin's free and easy movements on the tight rope, without ever tumbling into Niagara. Dr. Channing's address on "Self-Culture," delivered in Boston nearly twenty-five years ago, has been translated into Italian by Alessandro Rossi, a senator of the kingdom, and a leading manufacturer, conspicuous for the interest he has shown in the welfare of his operatives. The introduction states that the translator's object was to benefit principally the laboring classes—a labor of love in which he has been preceded by others of his countrymen, who have turned to the United States for examples and doctrines calculated to elevate the Italian character.

—We not long since drew attention to the quiet but effective manner in which Russia was extending her Asiatic frontiers, and recent Russian papers afford ample proof of the existence of that desire for "annexation" to which we alluded. One of those chronic insurrections ever prevailing in China recently "came to a head" near the Chino-Russian frontier, at a place called Ouliassoutai, much frequented by Russian traders, who were represented and protected by a consul. The rebels surrounded the town, and the Russians, knowing its utterly defenceless character, took to flight, followed shortly after by the consul and his family, who made a narrow escape to the town of Biisk, with the loss of all their property, and in a very exhausted condition. The Russian journals which record the affair speak of it in terms of indignation, and "urge the Government *to extend the Russian frontier towards the centre of China*, in order to 'civilize' the northwestern districts of that country, and thus *take the only effectual means of developing the Russo-Chinese trade.*" Judging from the advances of the past few years, the absorption by Russia of a large portion of China proper is but a matter of time.

—In some recent remarks upon the extension of the telegraph in Eastern Asia, we spoke of the indecision prevailing as to the route of the cable shortly to connect Singapore with Hong-Kong, the Franco-Prussian war rendering the future status of Saigon a matter of considerable uncertainty. The conclusion of peace, however, has again reanimated local enterprise, and a deputation from the Government of the Colony has proceeded to Singapore to arrange, if possible, with the telegraph company that the cable shall touch at that port. As the naval headquarters of France beyond the Straits of Singapore, Saigon may well desire to be thus placed in communication with the outer world. But, unless some guarantees of neutrality in case of war be entered into, it is by no means certain that the British shareholders, whose interests in China are overwhelming, will consent to thus jeoparding the safe transmission of intelligence at the very time when secrecy would be most important. The French, however, are determined to get Saigon within the circuit if possible, and as the delay of postal communication would be fatal to their hopes, they are carrying on negotiations with the London directors by means of the cable just completed to Singapore. Despite the doubtful result of their endeavors, the action taken shows that Saigon must have made considerable progress since its foundation as a military and naval depot, and that France is alive to the importance of preserving this one *point d'appui* on the shores of Eastern Asia.

—The *Pall Mall Gazette* states that the authorship of the obscene and mendacious Chinese attack on the Christian religion, called the "Death Blow to Corrupt Doctrines," has been traced to one Tang Tse-shing, at the time he wrote Treasurer of the Province of Houpe—a post of some eminence. This was in 1862, and that the book should have remained unknown to European residents in China for so long a period seems almost incredible. In 1865, indeed, the French Consul at Hankow did get wind of it, and the free distribution of it to the district magistrates of Houpe and Hounan, and also its sale, were interrupted by proclamation in consequence of his protest. The secret circulation, however, continued, and the book, already well known in the central provinces, has lately been freely sent around throughout the whole of both the northern and southern districts of the empire. There have even been numerous editions, altered to suit local prejudices, the author's nativity being conformably assigned now to one department and now to another. That more trouble has not come of it is therefore surprising, and may be set down by who likes to the credit of the Chinese character. The author, meantime, it has been ascertained, was found guilty of peculation, removed from office, and condemned to death. Although the sentence was not executed, death soon followed from the depression of spirits caused by his public disgrace—a fate not very far removed from that which poetic justice would have assigned to him.

WASHINGTON BEFORE THE REBELLION.*

About the beginning of this century a worthy gentleman of Boston, a lawyer by trade, took a final leave of his friends and removed his household goods to Washington, which had just been occupied as the seat of the National Government, with the intention of spending his remaining days under the droppings of the Capitol. In less than six months he was seen once more in the streets of his native city, and in reply to the jeering enquiries of his acquaintance as to why he had come back again, he made the sensible answer, "When a man has taken a foolish step, the wisest thing he can do is to retrace it as fast as possible!" There were many men doubtless who had dearly purchased as much wisdom as this practical philosopher, but who had mired themselves so inextricably in the morasses in which, according to Tom Moore, they saw the squares of the future, that they could not escape from them so readily as he, and had perforce to remain, many of them to be swallowed up with all they possessed. No subsequent land speculations have been more frantic or more ruinous, in proportion to the wealth of the country, than that which set in soon after President Washington had selected the site of the future capital of the United States, and Congress had adopted it as such. The new city was laid out on a scale calculated for the accommodation of a million of inhabitants, and Oliver Wolcott says, in one of his letters, that the speculators believed, or said they did, that it would in time be the most magnificent city in the world, and very soon have 150,000 inhabitants, New York at that time having less than sixty thousand. The opinion prevailed strongly then which is by no means obsolete now, that all that was necessary to create a city out of a swamp, or a civilized community out of a population demoralized by centuries of slavery and mastership, was a parchment duly engrossed and authenticated by the proper official signatures, without considering the obstacles opposed by the laws of nature, human and material, or of political economy.

These laws, however, would have their way, and Washington gradually settled down into a straggling, shabby, dirty little third-rate Southern town, magnificent only in its distances—by which the Abbé Correa da Serra, the witty Portuguese ambassador, who bestowed its well-known designation upon it, intended the distances between the scattered houses rather than the spaces which separated the public buildings. And this was five-and-twenty years after the early dreams of its grandeur had been dispelled by the hard necessities of its condition. It was not until the railways had made it accessible, say about thirty years ago, that Washington began to pass from the gristle to the bone, and to close up the distances in its ranks, and the period of its greatest prosperity dates from the beginning of the rebellion, which gave it the benefit of the expenditure of large sums of

* "William Winston Seaton, of the *National Intelligencer*. A Biographical Sketch." Boston: J. R. Osgood & Co. 1871.

public moneys, and made it possible as a residence for persons not willing to purchase admission to its society by paying homage to slavery. The society of Washington was as incongruous as its conditions and its pretensions in those days. The foreign ministers brought the best of European refinement of manners and luxury, and the West and South contributed their share of backwoods crudenesses and plantation habits to make the mixture slab and good. There was always a moderate proportion of the best class of well-bred and well educated gentlemen from the North and the South in Congress, but the majority was not made up of such. The resident society was composed, till comparatively recent times, of office-holders and hangers-on of the Government of one sort and another, and a few of the Virginia and Maryland families of the neighborhood, who found even such change as Washington gave them an improvement upon what they had been used to. And these worthy persons would turn up their noses at the casual residents, such as senators and representatives and the like, as an inferior class of beings to themselves, though the pleasure of Congress was the breath of their nostrils, and they lived upon the crumbs that fell from Uncle Sam's table.

It was to such a society and to such a city that Mr. William Winston Seaton came in the year 1812. Being a Virginian of Scottish descent, it is needless to say that he had a formidable pedigree, which mixed itself up with that of sundry lords and gentles of high degree. It is fair to say, however, that his pretensions to gentle blood seem better founded than those of many of the First Families. We presume that the family had rather fallen from its original greatness from the fact, which is rather implied than plainly told, that this scion of it served an apprenticeship in Richmond to the printing business. This introduced him to his future profession of editorship, and after trying his wings in Richmond and one or two other small Southern towns, he established himself in partnership with his brother-in-law, Joseph Gales, in Washington, and established the *National Intelligencer*, for many years as integral a part of the city as the White House itself. A great part of the most interesting portion of this book, as far as it relates to Washington, consists of the letters of Mrs. Seaton to her mother, at Raleigh, N. C., where her father, Joseph Gales the elder, conducted the *Raleigh Register*, which he had established. These letters are very lively and entertaining, and give spirited descriptions of Washington life and persons then prominent on the Washington stage. The accounts of the balls and dinners are very amusing, and such as every young lady, married or single, should give to her relations and friends, and which, to do them justice, they generally do. The dinners seem to have been excellent, in the style of those days before *dîners à la Russe*, and the wines were unexceptionable—comment on which, we are sorry to say, "formed the chief topic after the removal of the cloth." We grieve yet more, however, to learn that it was the custom of ladies to rouge and *pearl* unblushingly, and especially to hear that Mrs. Monroe painted very much and that Mrs. Madison herself was said to rouge. This last statement, however, Mrs. Seaton doubts, as she felt assured that she had seen her color come and go, not, we presume, like that of the lady celebrated in the "School for Scandal," whose color not only came in the morning and went at night, but her maid could fetch and carry it. Nothing of this kind, of course, has been known in Washington since that world before the flood. The balls are very divertingly described as well as the dinners, and they were perhaps more diverting in the description than the reality, if it be true that Lady Bagot, the British ambassadress and niece of the Duke of Wellington, "found them a great bore, and deplored the necessity of sticking pins in herself to keep herself awake at the stupid balls."

During the long Washington life of Mr. Seaton many public characters passed over that stage, some of them of permanent interest and more that vanished from memory as soon as they left the scene. Interesting anecdotes of many of these are preserved in this sketch, but we lend our ears more readily to the accounts of unpolitical characters, such as John Law, the brother of Lord Ellenborough—whom the writer erroneously speaks of as Lord Chancellor—who sank a large fortune he had made in India in the swamps of Washington. He was a special oddity, who always carried a piece of dough in his hands without kneading which between his fingers he could not mold his thoughts into words. His absence of mind, too, sometimes placed him in predicaments embarrassing to others if not to himself, as when he forgot to put on his clothes on coming out of the bath at Berkeley Springs and presented himself to the company in the costume of Paradise. He married the sister of George W. P. Custis, who well might be made a companion portrait of his brother-in-law, had he died long enough ago, and whose extraordinary works of art at Arlington House, which the writer of the sketch forbearingly only describes as "startling," no one can forget who has ever seen them. We should like to have heard even more of Mr. Digges, of Maryland, who went to England at the beginning of the Revolution, and was admitted to the society of the great Whigs who stood by America in Parliament, such as Fox and Sheridan, and spent his latter days in Washington. The writer errs, however, in making the Prince of Wales the leader of the Whigs during the Revolution, as he was but thirteen when the battle of Lexington began and nineteen when the surrender of Cornwallis ended it. We would say, however, that there are very few errors as to facts in this work, considering the great number and variety of them it contains. The writer, if a lady, as we infer, might well enough not have known that the punishment to which the ancestor of Mr. Digges was condemned was the ordinary penalty of treason, abolished only within the present reign, and not a caprice of Queen Bess. A later eccentric was Mr. Fox, a nephew of the great Charles, who was British minister here, and lived the life of a hermit, literally turning day into night, excusing himself, to one who invited him to dine at six o'clock, that he should be happy to do so, but that his people were waiting breakfast for him.

We have nearly finished our notice of the sketch without saying anything about the subject of it. In fact, there is not a great deal to say. The life of Mr. Seaton was an uneventful one, occupied mainly with the engrossing duties of a daily paper and varied only by one or two journeys to Canada and the North, and a short tour in England and on the Continent. His letters, however, while on these excursions, though creditable to his warmth of heart and family affection, are not inspired with that *éloquence de billet* which mark those of his wife. His hand had become so used to handling the heavy guns of the *Intelligencer* that it did not easily accommodate itself to the flying artillery of the epistolary field. He was for ten years or so Mayor of Washington, the most important duties of which office—to wit, obtaining grants and privileges from Congress by his personal influence—he performed so well that the members used to say that if he "remained mayor much longer he would bankrupt the national treasury." He was, however, in all respects an excellent magistrate. His portrait is drawn by the writer of the sketch with a loving, we believe a filial hand, and like those of Queen Elizabeth it has no shadow to it. It is hardly in nature that there should have been none, but it is honorable to his domestic character and manners that the writer should never have discerned it. He was a handsome man, of gracious if somewhat stately and formal demeanor and solid conversation, as we gather from this account of him. Having no other means of acquaintance with him, we should infer that he was rather formidable and the least in the world oppressive in society, and one whom we should prefer to respect at a distance rather than to encounter often at close quarters.

His relations with his brother-in-law and partner in the *National Intelligencer* were most honorably cordial and fraternal, each preferring the other, and knowing no distinction of interest, pecuniary or otherwise. The *Intelligencer*, begun as the organ of Jeffersonian democracy, remained of that complexion until the disgraceful administration of Jackson drove it into the opposition, of which, in its various phases till it crystallized into the Whig party and afterwards, it spoke the political sense and purposes. It was a political force for many years, and its volumes contain much material for history. Its original matter was dignified and decent, if a little heavy, in substance and form, though of course it was informed by the spirit of compromise with the slaveholders by which the Whigs hoped to mount to power. The vexed topic of slavery is skilfully avoided in this sketch, though we think we gather from it that Mr. Seaton was a slaveholder, and it is put forward that he was a promoter of that cunningest device of slavery, the Colonization Society, by which it proposed to strengthen itself by expatriating the free negroes and the slaves whose intelligence made them formidable to its safety. Though he may have accepted slavery as a domestic necessity, as he certainly did as a political one, he could have had no love for it in itself. This we think appears from his being chosen by the French Minister, M. Hyde de Neuville, in 1821, as his agent, to use his own words, "to make free one poor little slave child, in celebration of the baptism of the young Prince who is one day to rule over the Franks." No holier gift, nor one more precious, attended the baptism of the young Duc de Bordeaux, than the freedom of the young girl whom this humane diplomatist rescued from the auction-block of Moses Poor and made it at once his offering and his testimony. The election of President Lincoln and the rebellion, withdrawing at once the Government patronage and two-thirds of the subscribers, gave the death-blow to the *Intelligencer*. It lingered for a while in a moribund

condition, which not even the infusion of new blood could remedy, and it died not very long ago of inanition, and without "the dignity of death" which Mr. Seaton wished for it. Mr. Seaton paid the usual penalty of long life. The shadow of the valley of death fell upon him before he entered it. In 1860, his lifelong friend Joseph Gales died, and in 1863 he lost his beloved and admirable wife, and the next year he parted with the journal which had been so identified with his life for so much of it. And it is sad to think that his last days were darkened by poverty as well as grief. He sacrificed, as he says himself, all he possessed in trying to sustain the paper, and ended fifty-two years of labor with nothing.

The account of Joseph Gales the elder, who was driven from England by the persecutions known as "Pitt's Reign of Terror" along with Priestley and other reformers, is very interesting, though we have not been able even to hint at it. The Sketch is thoroughly entertaining, and it is done gracefully and modestly on the part of the writer. It has one deficiency, however, and to our mind a great one. There is neither index nor table of contents. Should it have the circulation we think it well merits, the publishers will increase the value of the work by supplying this want.

RUSKIN'S POLITICAL ECONOMY.*

Mr. Ruskin must certainly be the despair of his friends. He neither follows any known law, nor is a law unto himself. He cares nothing for what any one may think of what he says, in which he is certainly right, being *always* honest and unselfish; but he cares as little if what he says to-day destroys the results of all that he has said hitherto. He especially delights in disappointing the expectations of every one who has followed his course and expects anything, but he goes so far in this as to upset logic and destroy all confidence in his consistency, and induce a very common belief in his dishonesty. He is a Phaethon who thinks he can drive his father's chariot nearer to the sun than *he* can bring it. Incapable of generalization, alike in art and science, he thinks that his little by-paths and short-cuts are the true roads of progress, and shrieks and rails because the world won't move therein, until the world has ceased to pay any attention to what he says; and in this state he has commenced the publication of a series of letters to the workingmen of England, in which he takes a tone in which very few of his audience can follow him, and which, for better security for their not being read, he publishes himself, and prefaces the book with a note that it will only be sent from Heathfield Cottage, Kent, on the transmission of seven stamps—no discount to the trade, and no other advertisement.

"Fors Clavigera" (key—or club-bearing chance) is a tirade with a tinge of the Jeremiad in it. It begins by accusing England of cowardice and incapacity. She is "afraid of the Russians, afraid of the Prussians, afraid of the Americans, afraid of the Hindoos, afraid of the Chinese, afraid of the Japanese, afraid of the New Zealanders, and afraid of the Caffres; and very justly so, being conscious that our only real desire respecting any of these nations has been to get as much out of them as we could."

All this, with the logical consequences of this, have produced a state of things which Mr. Ruskin will not put up with passively "an hour longer." He disclaims in advance any extraordinary unselfishness; "he has no particular pleasure in doing good; neither does he dislike it so much as to expect to be rewarded for it in another world."

"But I cannot paint, nor read, nor look at minerals, nor do anything else that I like, and the very light of the morning sky, when there is any—which is seldom nowadays near London—has become hateful to me because of the misery that I know, and see signs of when I know it not, which no imagination can interpret too bitterly.

"Therefore, as I have said, I will endure it no longer quietly; but henceforward, with any few or many who will help, do my poor best to abate this misery. But that I may do my best, I must not be miserable myself any longer; for no man who is wretched in his own heart, and feeble in his own work, can rightly help others.

"Now, my own special pleasure has lately been connected with a given duty. I have been ordered to endeavor to make our English youth care somewhat for the arts, and must put my uttermost strength into that business. To which end I must clear myself from all sense of responsibility for the material distress around me by explaining to you, once for all, in the shortest English I can, what I know of its causes."

His keen perception of shams, his intense and penetrating power of analysis, and absolute and uncompromising honesty of opinion, make him a most valuable and trustworthy iconoclast—a breaker of false gods; but to construct new ones, or even find the true ones, he is not the man. His savageness and acumen as critic are in no wise supported by his correctness and knowledge as teacher. He sees always in detail and from very near, growing bitter and morose over the very irregularities and imperfections which make a more comprehensive, ultimate perfection possible. He inveighs against the incomplete without perceiving whether it be in retrograde or in advance; he desires an utopia, and rails at the world because it has not yet made one—incapable of looking back to the old standards, the mile-posts of progress, and impatient that he sees no new ones in advance. He declares that the world has stopped, and that dissolution is imminent; and all this makes him miserable, and morbid, and bitter, because he is at heart intensely philanthropic and benevolent, caring less for his own comfort than his power to do good; and so, with a last word to the workingman, to whose interests he is devoted—word which no one of them will hear or comprehend—he discharges himself of politics as the despair of philanthropy. He makes a summary of his political creed: "There is opposition between Liberals and Illiberals; that is to say, between people who desire liberty and who dislike it. I am a violent Illiberal. Now, though I am an Illiberal, there are many things I should like to destroy. I should like to destroy most of the railroads in England, and all the railroads in Wales. I should like to destroy and rebuild the Houses of Parliament, the National Gallery, and the east end of London; and to destroy without rebuilding the new town of Edinburgh, the north suburb of Geneva, and the city of New York." And, in a maxim which he lays down, he gives us clearly to understand what his practical notions of politics are: "Men only associate in parties by sacrificing their opinions, or by having none worth sacrificing; and the effect of party government is always to develop hostilities and hypocrisies, and to extinguish ideas."

Of course, no one will enter the lists to combat Ruskin's ideas. To practical men they are simple nonsense; to theorists, too unlikely to have any effect to induce hostility. We should as soon think of discussing the practicability of Plato's Republic as of Ruskin's Monarchy; both belong to the same order of ideas, unrealizable creations of fancy, but full of suggestions of intense import. The misery, and wrong-doing, and oppression-enduring around him drive the Englishman into retirement and misanthropy, while they drove the Greek into a cheerful and airy utopia, whose possibility made him a compensation for what was not. The latter was serene, tender, hopeful, the former despairing, vindictive, ironical; the one is full of faith in the λόγος, the other has no faith in anything. What exists of good is to him a still undestroyed relic of simplicity, an oasis of his dead utopia.

"Even with respect to convenience only, it is not yet determinable by the evidence of history what is absolutely the best form of government to live under. There are, indeed, said to be republican villages (towns?) in America where everybody is civil, honest, and substantially comfortable; but these villages have several unfair advantages. There are no lawyers in them, no town-councils, and no parliament." "Notwithstanding, there is agonizing distress even in this highly-favored England, in some classes, for want of food, clothes, waging, and fuel. And it has become a popular idea among the benevolent and ingenious that you may in great part remedy these deficiencies by teaching to these starving and shivering persons science and art." Inveighing against the notion of there being any utility in art, he says: "You may sometimes sell a picture for a thousand pounds, but the chances are greatly against your doing so—much more than the chances of a lottery. In the first place, you must paint a very clever picture, and the chances are greatly against your doing that. In the second place, you must meet with an amiable picture-dealer, and the chances are somewhat against your doing that. In the third place, the amiable picture-dealer must meet with a fool, and the chances are not always in favor even of his doing that."

If Ruskin could but be induced to embody his political notions, now scattered through many writings, and give us the ideal contained in them as an objective creation—something tangible to the perception even of theorists, we are certain that a real contribution to political literature would be the result—a curious antithesis, in all probability, of Plato's Republic.

ELECTORAL REFORM.*

Popular self-government, acting through representation, based on democracy, so far from losing favor, is growing in favor and power all over the world. But some of the results of the machinery to put in prac-

* "Fors Clavigera. Letters to the Workingmen and Laborers of Great Britain. By John Ruskin, LL.D." London: Smith, Elder & Co. 1871.

* "On Representative Government and Personal Representation. By Simon Sterne." Philadelphia: J. B. Lippincott & Co. 1871.

tice are being vigorously, and perhaps successfully, criticised. While everybody wants the majority to govern, it yet seems to turn out in practice that the minority has, on some questions, no voice in the legislation of the country at all equal to its strength among the people; while, curiously enough, on other questions, the minority has governed, and perhaps still is governing, the country. It has long been known that the theory of our Presidential elections had not only broken down in practice as to the precise thing it was intended to accomplish, but that the forms of the machinery from which the spirit had departed were well devised for occasionally defeating the popular will.

But this is not the weight of the complaint now made against our electoral machinery. The complaint—and it seems well founded—is that through party government, whether the representatives be elected by districts or by general ticket, a bare majority not only decides, but absolutely excludes, a minority nearly as large from all voice or influence in legislation. The illustrations of this arising in practice have been so frequent both in this country and in England that we need not stop here to repeat them. Hare's work on "The Election of Representatives, Parliamentary and Municipal," became at once a landmark in modern political science, notwithstanding it is so abstruse, complicated, and detailed as to repel any but the most earnest or the purely amateur political student, and caused a member of Parliament to say of it that, though he approved of the theory, he never could carry the plan in his head twenty-four hours at a time. It was first doubted, then approved, by Mill; and, later, the substance of the plan was urged by Mr. Buckalew in the Senate, and Mr. Marshall in the House, and is recently incorporated, on a limited and perhaps crippled scale, in the new constitution of Illinois. The movement is one of immense importance, is evidently growing in favor, and really seems destined to be adopted wherever the basis of suffrage is tolerably extended.

The object of the work before us is to advocate and explain the proposed reform in the mode of voting, and is avowedly based on Hare's work, which it is intended to simplify and explain. In this statement of the plan and object of the work, the author has been more modest than his execution. While the idea is not new, yet bating some too lengthy quotations from Herbert Spencer and others, the plan of the discussion is in a large measure original. We cannot, in a notice like this, enter into even a statement of the proposed plan of voting. Most of our readers know it under the names of cumulative voting, personal representation, minority representation, etc. Those who have not investigated the matter would do well to obtain Mr. Sterne's book; while those who are convinced, and wish to convince others, will find the matter presented in a strong and clear, and in some respects a new, light. In saying this, we must add that, while the book is so far scientific as to be at once recognized as a respectable contribution to political science, it does not appear to us so systematic as it should be, nor so much so as we think the author could have made it; and that the style, generally good enough for such an investigation, is at times not quite enough elevated—if not careless, just a little too familiar.

The author raises a special issue with the advocates of civil service reform. We do not see the pertinency of this to the question in hand. If he believes in rotation, political appointments, and dismissals, the whole spoils system, this work is not the place to defend such a faith; and the human mind is so organized that some good people would not listen to a writer on any question who advocates such an iniquity as many believe this system to be. But we do not understand the author as advocating the present system in all its results and forms. He denies the extent of the evils charged against it, and denies that so much good as is expected would result from civil-service reform. And the gist of his argument seems to us summed up in the following sentence: "Compared with the importance for weal or woe of the power of the officers who are elected with the power of those who are appointed, the former is so preponderating that the latter sinks into utter insignificance."

When it is a question of degree—of relative importance—in the opinion of the author, and while his own estimate of the relative importance of civil-service reform may be either accepted or doubted by his readers, we cannot see that a book advocating personal or minority representation is the place to throw an obstacle in the way of another reform which is advocated by three-fourths or nine-tenths of the people who will accept Mr. Sterne's views of the necessity of a reformed system of voting. With the reform he advocates put in practice, it would still be possible, under our present spoils system, to have the best of executive and ministerial officers dismissed without any reason, and the worst and most inefficient appointed for the most corrupt reasons. And seeing that, in the long run, "public opinion" will dominate public questions; that, though delayed, it will, in an awkwardly rigorous way, it may be, assert itself at last in *politics* and *legislation;* and seeing how closely home to every man's daily life and interests come the innumerable acts of routine administration, to say nothing of the vast moral, political, and economical questions involved in a corrupt civil service, there may be those who would doubt the relative importance assigned by Mr. Sterne to these two reforms—a question we cannot here further enter into, only repeating that we regard this part of his book as a useless and an unfortunate digression.

Recent Republications.—That a large part of the time spent by boys in fumbling over the lexicon is time wasted cannot be doubted. Neither can it be doubted that much of this time might be saved if teachers would incidentally pay more attention to derivations and the meaning of prefixes and suffixes. For example, the boy comes across the word *salubris;* he looks it out for his lesson of the day, and then goeth his way and straightway forgetteth. Now let the teacher show him that *salubris* is a compound word, that the last part of the word, the *-br=-ber* is found in the Latin *fer-re*, the Greek *φέρ-ειν*, or, still nearer home, in the English *bear;* that the word *salu-br-is* contains exactly the same elements as *safe* + *bear:* let the teacher once point this out and he will kill two birds with one stone. The next time the pupil will remember the word, and—what is better still—new ideas of the beauty and interest of language will begin to dawn upon him. Thus the dreary *crambe repetita* comes a step nearer to the "delightful task" of the poet's golden dream. The practical difficulty is that the ordinary teacher, too much jaded by overwork for deep thought or study, and not much informed himself on such subjects, has no convenient book to lay hand on for guidance. It is just this want that Mr. Haldeman's "Affixes" supplies (Philadelphia: E. H. Butler & Co. Revised edition). For the young pupil we fear it might be a little bewildering; but as a manual for the teacher it is full of instruction, nor can the scholar by profession read the work without great profit and mental stimulus. Naturally enough in so multifarious a work, there must be a good deal that is doubtful or conjectural. It is very questionable whether *sincerus=sine+κερώ* (p. 88). We should hardly put the squinancy or quinsy under the prefix *syn-*, as the Q points rather to *κυνάγχη* than to *συνάγχη*. The D of *seditio* can hardly be a "connective"; it hints rather at *sed* as the original form, an ablative, like *prod* in *prodire*. Nevertheless, open as such a work must naturally be to criticism on single points, it is one which nobody who wants to understand his own mother-tongue can afford to leave unread. The general beauty of the book is marred by a feeble Greek type and by some carelessness in the printing. Breathings are sometimes left off, as p. 45, *αμπί*; p. 54, *ανδρία*; p. 20, *ιῶτα*. Accents are wrong, as *καλὐπτω*, p. 43; *κεχηνοτές*, p. 185; *πνεύμα*, p. 20; *φρενίτις*, p. 242. Quantity is violated in *ὕπὲρ*, p. 208; *tĕgo*, p. 58; *plĭco*, p. 89; *cŭcŭlus*, p. 240. The following objectionable forms can hardly be laid to the proof-reader: *moereo* for *maereo*, p. 141; *humeo*, p. 252, *humecto*, *humidus*, p. 104, for *umeo*, etc.; *lamina*, p. 165, for *lammina*. On p. 19, *connecto* is given as an example for the pronunciation of double N. Why are our American scholars so slow to learn that *conectere conivere coniti conuĭvium* are the *only* Latin forms, and that the double N is a barbarism?

The receipt of the fourth edition of Goodwin's "Greek Moods and Tenses" (Cambridge: Sever, Francis & Co.) gives us an opportunity of calling the attention of our readers to its very great merits. It is almost a model of what a text-book ought to be, and the successive editions have enabled the author to correct such errors as the book originally contained. It is exceedingly difficult to make a book which shall be at the same time practical and not superficial; but this Prof. Goodwin has apparently succeeded in doing. The metaphysics of Greek moods and tenses can only be studied with advantage by one who is already well acquainted with the language; and yet so subtle was the Greek mind that it seems almost impossible to explain the practical use of their complex modal system without diving deeper than the undergraduate at least can follow. Hence most Greek grammars have been so abstruse that the pupil had a very misty idea of optatives and subjunctives. But the publication of Mr. Goodwin's book began a new era in the study of Greek in this country. After a thorough course of it, an ordinary student feels as much at home among the optatives as in our own *mays* and *mights*. The greatest service that has been rendered to syntax for many years was the distinguishing of the particular and general conditions—a service for which we are indebted to this book. It is not a little odd that after the acute investigations of German

scholars it should have been reserved for the "practical American" to give the clue to the protasis and apodosis. The more scientific treatment of relative sentences also dates from the publication of this treatise. So, too, the more accurate distinction between the tenses of the infinitive and the different uses of the aorist of that mood belongs chiefly to Mr. Goodwin. Apart from the original ideas contained in it, the chief characteristic of the work is its really practical character and the numerous examples with which each statement is supported, which make it a safe guide for the student either in studying the system or in translating from English into Greek. It is unfortunate that we have nothing of the same kind in Latin. If that could be arrived at, we should have a good foundation for a comparative syntax of the Indo-European languages which would lead the way to a better knowledge of the logical history of the human intellect—an exceedingly curious subject of enquiry.

Chips from a German Workshop. By F. Max Müller, M.A., etc., etc. Volume III. Essays on Literature, Biography, and Antiquities. (New York: Charles Scribner & Co. 1871. 12mo, pp. 492.)—When the first two volumes of this series were published, Professor Müller was planning to follow them up with two more—one on language, and one on general literary subjects. The plan seems now to have been modified by the omission of the third volume, and we are given to understand that the one just issued will be the last. We conjecture that the author has come to realize the presence of too much that is unsound and insufficient in the old basis of his linguistic science to make his scattering contributions to it worth gathering up. The present volume cannot pretend to any such career as its predecessors had, since it deals with subjects comparatively accessible and often treated, and on which the author has no higher authority to speak to us than a great many of his contemporaries. Yet nearly all the essays that it contains are able and interesting. The first is a really valuable sketch of German literature from the earliest times; it was originally published as introduction to a volume of selections from German authors. Then follow several more indifferent papers on special points in German literary history; among them a sketch, rather brief and slight, of the life of Schiller, and an account of the author's own father, Wilhelm Müller, a poet of real merit, though not of wide repute, who died while his more celebrated son was a very young child. Three articles on French subjects come next; the most entertaining of them is that on the Sieur de Joinville and his naïve narration of the deeds and adventures of his king and master, St. Louis of France. The succeeding trilogy shows us England and English matters as seen by German eyes; and many students of English literary and scientific history will be glad to learn something of how Bacon is regarded in Germany, and why. Once more comes a set of three related articles, apparently the result of some summer's residence in Cornwall, on Cornish antiquities and matters connected therewith; these, as involving etymological researches and archæological combinations, have more that is characteristic of Professor Müller in them than anything in the earlier part of the volume. The collection is brought to a close by a lively and appreciative sketch of the life, genius, and labors of the author's patron and life-long friend, Bunsen, from which many will be glad to learn something of the many-sided activity and noble spirit of that truly great man. The friends and admirers of Bunsen, too, will find no small interest in the extended series of letters from Bunsen to Müller, which, under the title of an appendix to this article, fill up the remainder of the volume. But we must say that they seem to us to be crowded in here quite out of place; they are in no sense of the word Müller's "chips," and they are in much too great bulk to constitute a legitimate appendix to a biographical notice, since they occupy more than a fifth part of the pages of the whole volume, and, being in small print, constitute somewhere between a quarter and a third of its readable contents. In the hands of Bunsen's biographer, or as parts of a special and independent tribute to Bunsen, they would have been welcome material; but it was certainly an error of judgment to put them before the world as a part of Müller's collected essays.

The volume, as a whole, will not perceptibly add to Müller's reputation; it contains nothing which, in point of eloquent style and attractive handling, will bear comparison with some of his former productions; but those who may be led by its author's fame to possess themselves of it will find it will repay their study.

Hymns and Poems. Edited by Rev. T. V. Fosbery. (New York: E. P. Dutton & Co. 1870.)—Mr. Fosbery is, or was, an English country vicar, and this volume of his was no doubt primarily intended for the sick and suffering of his own communion. He has, for instance, so arranged the pieces which he has gathered together that each expands or illustrates more or less well some phrase or sentence of the Office for the Visitation of the Sick. Thus, as that Office begins, "Peace be to this house and all that dwell in it," the first poem is a hymn entitled "Peace," from the pen of Henry Vaughan:

"My soul, there is a country
Afar beyond the stars,
Where stands a winged sentry
All skilful in the wars.
There, above noise and danger,
Sweet Peace sits crowned with smiles,
And One born in a manger
Commands the beauteous files.

"He is thy gracious friend,
And (O my soul, awake!)
Did in pure love descend
To die here for thy sake.
If thou canst but get thither,
There grows the flower of peace—
The rose that cannot wither,
Thy fortress and thy ease.

"Leave, then, thy foolish ranges;
For none can thee secure,
But One who never changes,
Thy God, thy Life, thy Cure."

Our hymnals, by the way, make too little of this fine hymn, though it is perhaps better adapted to their particular purpose than almost any other production of the important school to which its author belonged. The Silurist, as Vaughan was quaintly styled, was one of Herbert's most faithful admirers, not to say copyists; though he rather walked in the same path as his master than trod in his footprints, and was no servile imitator. Like his master and his fellow-pupils, he made hymns and spiritual songs which are full of pith and of a holy thoughtfulness, often ardent with love indeed, but very far removed from the feeble pious sentimentalism of very many modern hymns. They usually have, however, the great faults, considered as hymns, of being unsingable, and of requiring too much of the attention of the understanding. From both of these characteristics "My soul, there is a country," is perfectly free. Perhaps its author was momentarily under the influence of the sweetest of mediæval ecclesiastical poets, Bernard of Morlaix. The latter part of the hymn we have quoted would seem to bear witness that its author was fresh from the reading of the "De Contemptu Mundi," with its mixed, reiterated, and crowded metaphors—blemishes turned necessary beauties—so descriptive of the homesick but rapturous longing of the saints for "the Celestial country," "Jerusalem the golden, the glory of the elect."

The singableness of poems and hymns is not, however, that quality in them which fits them for the readers whom Mr. Fosbery had in mind, and he has drawn very largely from the treasures of the earliest Protestant religious poetry of England—the poetry which bears the stamp of the thoughtfulness impressed on the English religious mind by the English Reformation in general, and by that notable product of it in particular, the English version of the Scriptures.

Later poets than these cannot be said to have been wholly neglected, though they figure in the compilation to an extent not proportionate to the relative quantity, and perhaps to the relative value, of their work and that of the men above referred to. It is, for example, noticeable that Charles Wesley is made to contribute but one piece, and that Watts is not admitted at all. Earlier poets than those of the Reformation school are accorded admission much more sparingly still. But the book seems to us to be a very good one, and likely to do what it is to be hoped it may do—fulfil the compiler's desire of giving comfort and more content to minds that are in peculiar need of both.

Dictionary of Doctrinal and Historical Theology. Edited by the Rev. John Henry Blunt, M.A., F.S.A., Editor of the "Annotated Book of Common Prayer," etc., etc. (Philadelphia: J. B. Lippincott & Co. London: Rivingtons. 1870.)—The title-page designates Mr. Blunt as editor and not as author of this work, but neither a preface nor a note or mark attached to a single article points out a co-laborer, or indicates in what way the editor has been aided in his arduous undertaking. Possibly the term chosen—and chosen from reasons of modesty—is to make us understand that the extensive "dictionary" before us does not, in the main, embody articles originally elaborated from primary sources, but articles presenting in an abridged form the substance of the investigations of others. But be this as it may, Mr. Blunt's publication represents a vast amount of theological learning, well digested, and put into a convenient shape for the ben-

efit of both regular and occasional enquirers into subjects of ecclesiastical interest. Even those to whom the exceedingly narrow Orthodox-Anglican standpoint of the editor may appear far from satisfactory will find it a valuable addition to their books of information or reference in the same field. That standpoint it makes no attempt whatever to cover or disguise; it spurns all coquetting with criticism, and most of all with what it designates as "higher criticism." Thus we read in the conclusion of the warm argument in favor of "Everlasting Punishment:"

"A few remarks may be added respecting the danger of rejecting this doctrine on account of certain *à priori* opinions or objections of our own. . . . If doctrines which, like this, are unquestionably contained in God's Word are to be given up because we think them unreasonable and untenable, the same criterion may fairly be applied to other doctrines which have the same authority and sanction; and thus we may reject, and on this principle many have rejected, what Christians generally consider the fundamental or essential doctrines of the faith, as the doctrines of the Holy Trinity, the Atonement, and the resurrection of the body. If we profess to believe that the Bible *is* really God's revealed Word, we are bound by our very admission to receive it in its entirety, and cannot without manifest inconsistency either admit or reject any portion merely in accordance with our own private opinion or judgment."

Beyond this legitimate exclusiveness, however, some of the articles betray leanings in judgment which are obviously the outgrowths of less legitimate predilections and antipathies. Thus, for instance, a comparison of the articles "Jesuits" and "Judaism" will show that the writer or writers employed different scales in weighing the merits and demerits of different antagonistic systems. The weakest sides of the doctrines enunciated by the disciples of Loyola are treated—or ignored—in a spirit of mildness and toleration strangely contrasting with the severity and harshness with which the tenets and character of the followers of Moses are censured. The Law of Moses, according to the last-mentioned article, "was a mere system of fleshly justification;" Tacitus has photographed the Jews of the time of the authors of the Mishna and the Apostles "with unerring fidelity"—even when calling them a "'projectissima ad libidinem gens,'" in comparison with the Romans of the Neronian period; and "such is the Jew of the nineteenth century:" "hardened in his infidelity, bigoted in his self-regard, and inveterate in his hate for the Christian name." And the latter assertion is made immediately before mentioning as authorities such liberal Jewish writers of our times as Jost, Fürst, Zunz, Munk, Geiger, Kaiserling, and Philippson.

The misquoting, in one sentence of the same page (380), of a number of other Jewish literary names—thus: "Creisenach," "Hildenheim," "Lusatto," "Gratz," "Fassal," "Jellenick," for Creizenach, Hildesheim, Luzzatto, Grätz, Fassel, Jellinek—and such misspelled or false titles, in the same connection, as "Die Offenbärung," "L'Universe Israelite," and "Zeitschrift für Hebr. [Jüdische] Theol.," show the occasional defectiveness—to say the least—of the strictly editorial labor bestowed upon the work. Another defect is inconsistency in the plan. While some of the articles offer plenty of historical details, others treating of analogous subjects consider only doctrinal points. Thus we find very little about Jesuitism and a great deal about Jesuits in the respective article, while "Gnosticism" almost entirely ignores the Gnostics—leaving unmentioned even such masters of Gnostic thought as Basilides, Valentinus, and Bardesanes.

Presbyterian Reunion: A Memorial Volume. 1837-1871. (New York De Witt C. Lent & Co.)—The division of the Presbyterian Church in 1837 was the effect of a "natural necessity" which there was no "moral ability" in the body to hinder; its reunion in 1870 was the result of "moral necessity" which there was no longer any "natural ability" in either of the separate members to hinder. A stringent ecclesiastical system which holds its members together by a vow of allegiance to the words of a formula or to the rubrics of a ritual, and which has in its very structure a tendency to centralization in a supreme and final authority to interpret standards, issue causes, and enforce conformity, has within itself also a logical tendency to disruption, whenever the spirit of progress, swelling the hearts of the Liberals, shall strain formularies, and provoke the Conservatives to tighten the bands of arbitrary power. It was the spirit of freedom-asserting itself against slavery—then a neutralizing element in the church, and liberalizing church action and theological opinion, which had strained the Presbyterian system for some years prior to 1837, and which the Conservatives sought to exorcise by the forcible ejectment of the Liberals. Zeal for "the standards"—the *ipsissima verba* of the Confession—became the test of Orthodoxy and almost of personal integrity. The law of self-preservation in a centralized system, the foreordained antagonism between the letter and the spirit, repelled those who were no longer held together by strong moral affinities. The controversy was not a war of words, but of tendencies and ideas, if not of principles.

But after the separation the New School body gradually discovered that it was weak organically in the exact ratio of that moral freedom which had given it strength as a party within the original organization. Had it fully worked out the law of liberty, it might have become a great religious power in the land, strong numerically, financially, and spiritually, though making little show of ecclesiastical unity, and no attempt at uniformity. But there came a reaction from this tendency toward consolidation; one by one its distinctive principles of ecclesiastical union with freer churches, of co-operation in voluntary societies, and of popular administration in church affairs, were relinquished in favor of a more unified and coherent denominational action. Other causes in the religious movements of the times worked toward this result. Meantime secession had relieved the Old School Church from the drag of slavery, and the younger men in that church had become liberalized in thought and spirit. Episcopacy, Methodism, Roman Catholicism, were growing, and this was attributed to compactness of organization; scepticism was threatening not church extension only, but Christianity itself; and it was unseemly that two great bodies of the same name, faith, and order should be rivalling one another in every town and village, instead of working together for the same end; and so a *moral* necessity united what a *logical* necessity had divided. The movements toward reunion, and the consummation of the act, were highly creditable to the Christian magnanimity of both parties. The whole story is told in this memorial volume by representatives of both sides, and by historical documents. Every intelligent Presbyterian will wish to keep this as a household book, and it will have a permanent place in the Church History of the United States. The Historical Reviews from opposite points are mutually contradictory in sundry particulars; but there is no spirit of recrimination in the attempt to justify the attitude of either party at the division. The Old School claim to have surrendered nothing of the integrity of the standards, the New School nothing of the freedom of interpretation; but if unity shall run into uniformity to the prejudice of liberty, then division will be as much a necessity of the future as it was of the past.

Elliot's Debates. 5 vols. 8vo, sheep, $12 50.

THE MOST IMPORTANT BOOK OF THE DAY.

GINX'S BABY.

HIS BIRTH, AND OTHER MISFORTUNES.

The Fourth American Edition

Is in Preparation.

SEVEN EDITIONS HAVE BEEN PUBLISHED IN LONDON.

12mo, cloth, price $1 25.

"It is no small matter that 'Ginx's Baby' has attracted the eye of intelligent Christians and philanthropists of every shade of opinion; and, although in the marvellous diversity of sentiment as to the best course to be pursued with him, he is still exposed to no inconsiderable peril and suffering, yet it is a great point gained that the eye of the community has been fastened upon him."—*From a Paper read at the National Congress on Penitentiary and Reformatory Discipline held at Cincinnati, October*, 1870.

For sale by all Booksellers, or will be mailed, post-paid, to any address on receipt of price, by

GEORGE ROUTLEDGE & SONS, Publishers,

416 Broome Street, New York.

NEW BOOKS.

Messrs. NOYES, HOLMES & CO.

Have the pleasure to announce the following new and popular Books:

I.

AD FIDEM;

OR,

PARISH EVIDENCES OF THE BIBLE.

By Rev. E. F. Burr, D.D.,

Author of "Ecce Cœlum" and "Pater Mundi," etc.

Uniform in style with "Ecce Cœlum," "Pater Mundi." 1 vol. 12mo, 362 pp., $1 50.

The new work proposes to do for the Evidences of the Christian Religion what "Ecce Cœlum" aims to do for Astronomy. It proposes to bring these Evidences, without any sacrifice of scholarly accuracy, luminously and effectively within the reach of ordinary minds. It will show the people how to believe.

II.

"THE ART OF ARTS."

GUTENBERG, AND THE ART OF PRINTING.

By Mrs. Emily C. Pearson.

1 vol. 12mo, tinted paper, illustrated, $2.

A complete and comprehensive history of the art of printing, with more than thirty original plates, illustrating the steps of its development and advancement. Also embellished with an elegant illuminated title, and bound in an original and very attractive style. The only book on this subject adapted for popular use.

III.

EVERY DAY.

A BOOK FOR YOUNG LADIES.

By Mrs. S. J. M. Pike,

Author of "Step by Step," "Striving and Gaining," "Climbing and Sliding," etc.

Second Edition now ready. 1 handsome vol. 12mo, 282 pp., $1 50.

For sale by all Booksellers, and sent prepaid on receipt of the price by

NOYES, HOLMES & CO.,

Boston, Mass.

VAN NOSTRAND'S Eclectic Engineering Magazine.

Weekly papers copying the above Prospectus, and sending us a marked copy, will be entitled to a copy of the *Spectator* for one year.

Histories of the French Revolutions.

(BOHN'S STANDARD LIBRARY.)

BY ALPHONSE DE LAMARTINE.

HISTORY OF THE GIRONDISTS; or, Personal Memoirs of the Patriots of the French Revolution. 3 vols. post 8vo, with portraits, $1 75 each.

This work contains a detailed History of the Revolution (from the Death of Mirabeau to the Execution of Robespierre) and of the principal actors in it—La Fayette, Condorcet, Pétion, Dumouriez, Vergniaud, Isnard, Danton, Desmoulins, Marat, Robespierre, Couthon, Saint-Just, Charlotte Corday, etc., etc.

HISTORY OF THE RESTORATION OF THE MONARCHY IN FRANCE. 4 vols. post 8vo, $1 75 each.

Containing an account of Napoleon's final Campaigns in the North of France during 1813-14; the Accession of Louis XVIII.; the Return of Napoleon from Elba and the Hundred Days, and the Reigns of Louis XVIII. and Charles X., terminating with the abdication of the latter in 1830.

THE FRENCH REVOLUTION OF 1848. Post 8vo, $1 75.

From the Abdication of Louis Philippe to the Election of Louis Napoleon to the Presidency of the French Republic. Containing an account of the Acts and Policy of the Revolutionary Leaders, MM. Thiers, Lamartine, Guizot, Arago, Dupont de l'Eure, De Girardin, Louis Blanc, Ledru Rollin, Blanqui, etc., during this period.

BY J. MICHELET.

A HISTORICAL VIEW OF THE FRENCH REVOLUTION. Post 8vo, $1 75.

This work enters more fully than Lamartine's "Girondists" into the remote and proximate causes of the Revolution. It terminates with the attempted escape of Louis XVI. from Paris in 1791.

BY F. A. MIGNET.

HISTORY OF THE FRENCH REVOLUTION from 1789 to 1814. Post 8vo, $1 75.

HISTORY OF THE FORMATION AND PROGRESS OF THE TIERS-ETAT, or Third Estate, in France. By Augustin Thierry. Post 8vo, $2 50.

LECTURES ON THE HISTORY OF THE FRENCH REVOLUTION. By William Smyth, late Professor of Modern History in the University of Cambridge. 2 vols. post 8vo, $1 75 each.

Comprising the period from the Reign of Louis XIV. to the end of the Reign of Terror.

A DEFENCE OF HOLY ORDERS
IN THE CHURCH OF ENGLAND,

Including the Statutes, Documents, and other evidence attesting the validity of Anglican Orders. With a facsimile of the Record of Archbishop Parker's Consecration, Photozincographed. Printed in Latin and English. Edited by the Rev. T. J. Bailey. Folio, cloth, price $15.

"I know of no treatise on the Orders of the English Church that can at all take the place of Mr. Bailey's noble work. It is simply invaluable."—I. Williams, Bishop of Connecticut.

"This work is a luxury for the Library, and a most valuable supplement to all that has been written on the Orders of the Church of England."—A. Cleveland Coxe, Bishop Western New York.

"The 'Defence of Holy Orders in the Church of England' is a timely and valuable book."—Wm. Crosswell Doane, Bishop of Albany.

"A copy of this work should be in the hands of every Bishop, and in the Library of every Church, College, and Theological Seminary in our land."—George F. Seymour, Professor of Ecclesiastical History, General Theological Seminary, New York.

"Of this invaluable work, as an instrument of light and power in the advancement of the Catholic unity, we know not how to speak without seeming oversanguine. We bespeak for it a place in the library of every Bishop and Priest, College, and Seminary in the land."—Church Journal.

"Mr. Bailey has, with almost superabundant pains, given us not only the whole documentary account from the Lambeth Registers, both in Latin and English, but also a Photozincographic fac-simile of the documents themselves."—Saturday Review.

"We owe thanks to Mr. Bailey for this handsomely printed and great effort to lay the case fairly before Foreign Churches."—Guardian.

"The whole sum and substance of the controversy upon Anglican Orders is arranged with documentary proof in the sixty-five folio pages of the English portion of this beautiful Monogram."—Church Review.

JUST PUBLISHED.

The Romance of the Charter Oak;
A PICTURE OF COLONIAL TIMES.
BY
WILLIAM SETON, ESQ.

Two vols. 12mo, cloth, bevelled, $4.

In the production of this work, Mr. Seton has at once taken his place in the front rank of American writers of fiction. "The Romance of the Charter Oak" is not only a charming novel, but it is, besides, a valuable contribution to history. His narrative fascinates by its very simplicity and naturalness. It is, we believe, the first of a series of Historic Novels, which, judging from the author's ability and research, will afford instruction and entertainment to a large number of readers.

P. O'SHEA, Publisher, 27 Barclay Street.

MACMILLAN & CO.'S
New Publications.

ON THE GENESIS OF SPECIES. By St. George Mivart, F.R.S. With Illustrations. $2.

"This work abounds in the fruits of extensive and accurate knowledge; the singular honesty of its reasonings and illustrations inspires the highest degree of confidence in his statements; and in his manly and generous appreciation of Mr. Darwin, even when he comments most severely on his ideas, he always shows himself 'a foeman worthy of his steel.'"—*New York Tribune.*

"In no work in the English language has this great controversy been treated at once with the same broad and vigorous gush of facts, and the same liberal and candid temper. The range and depth of Mr. Mivart's learning are as conspicuous as that unvarying courteousness of tone which we have by no means been used to meet with in most phases of the same stripe."—*Saturday Review.*

TALES OF OLD JAPAN. By A. B. Mitford, Second Secretary to the British Legation in Japan. With Illustrations drawn and cut on wood by Japanese Artists. 2 vols. crown 8vo, $5.

MACMILLAN & CO.,
63 Bleecker Street, New York.

[SECOND EDITION.]

THE ONLY AMERICAN TEXT-BOOK OF ENTOMOLOGY.

"Certainly the best manual of entomology which the English reader can at present obtain."—*Nature, London.*

A Guide to the Study of Insects

Being a popular introduction to the study of Entomology, and a treatise on Injurious and Beneficial Insects, with descriptions and accounts of the habits of Insects, their transformations, development, and classification. By A. S. PACKARD, Jr., M.D., Curator of Articulata at the Peabody Academy of Science, Lecturer on Entomology at the Mass. State Agricultural College, and Entomologist to the Mass. State Board of Agriculture. Containing 700 pages, 11 full-page plates, and 651 cuts in the text, embracing 1,238 figures of American Insects. In a large octavo volume, printed on extra paper, and in full cloth binding (colors, brown, green, and claret), price $6. The "Guide" has been already introduced either as a text-book or for reference, in Harvard University, Williams College, Dartmouth College, Antioch College, Massachusetts Agricultural College, and other institutions.

PRATT'S Astral OIL. Not the cheapest, but the best illuminating oil ever made. Does not take fire or explode if the lamp is upset and broken. Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have occurred from it.

Oil House of Charles Pratt, Established 1770, New York.

The Nation.

NEW YORK, THURSDAY, APRIL 6, 1871.

The Week.

CONGRESS has been mainly occupied with debates on the Ku-klux legislation. Mr. B. F. Butler has made another speech, of the usual kind, in which he took the ground as broadly as possible, that policing the States was one of the duties of the General Government. It is needless to say that the formal adoption of this doctrine would rapidly bring about the repudiation by all the States of all responsibility for the security of their own citizens, and the assumption by the General Government of *all* the duties of government; and we should then have a totally new and highly centralized form of administration, which, when extending over such an enormous territory, and dealing with great masses of population, would have to be arbitrary, minute, highly organized, and rigidly disciplined—Cæsarist, in short. A hundred years hence, when people asked how this monstrous body came to be substituted for the early confederated republic, they would be told that the people, being disgusted by local disturbances caused by the sudden accession of ignorant bodies of voters to the constituencies after the great rebellion, suddenly determined, in a fit of impatience, under the advice of a band of wild and reckless politicians, to abandon their constitution, and set up a system like that of France, which was at that moment engaged in the substitution of a "Universal Republic" for a sensual Empire. We cordially agree with the *Evening Post*, that we are about to witness now a desperate attempt on the part of a large number of political adventurers and corrupt speculators, by working on the humanitarian feelings of the Northern people, to prevent the restoration of peace and order by natural processes, and to protract the period of violence, arbitrary rule, and disregard of forms through which they have risen into notoriety and made money.

The great work of reforming the civil service, which the President recommended Congress to undertake, and which Congress in its turn authorized him to undertake, has just been pushed on by the sudden removal of Mr. Moses Grinnell from the post of naval officer of this port, and Mr. Palmer from that of appraiser. We believe the first intimation Mr. Grinnell received of his removal he got from the announcement in the morning papers that the name of his successor had been sent in to the Senate. The object of this way of doing things is, we believe, to prevent officials falling into that lethargy and stolid content so characteristic of the official classes among the down-trodden peoples of Europe. American officers, on the other hand, are kept in a state of healthy apprehension and uneasiness, which makes them frisky, active, and wide-awake, like the application of pepper or turpentine which dealers make to tender parts of their horses before showing their paces. No officer who goes home, as most American officers do, without feeling sure he will not find himself dismissed in the morning, can ever be a drowsy or sluggish man. What makes the present change the more striking is, that Mr. Palmer was, we believe, a very competent officer. His successor must of course be better, or the President would never have removed him.

The San Domingo Commission has not, at this writing, made its report, and all sorts of rumors are afloat as to what it is to be. It seems to be generally agreed that it will be long; but no matter how long it may be, it will fall far short of the requirements of Congress. The resolution which defined the range of the enquiry in which the Commission was to engage cut out work for about two years, and the result ought to fill two volumes at least of the size of the *American Encyclopædia*. In fact, one of the curious features of the Commission is the number of things it professes to have found out about a foreign island, with whose language the members are not familiar, in the short space of four weeks. A good deal of ridicule has been heaped by critics on travellers who make a month's run through a foreign country, and then offer the world a full explanation of its leading social and political phenomena. Nevertheless, nearly all travellers who have ever done this have had a decided advantage over the San Domingo Commission, inasmuch as the natives have no interest in deceiving an ordinary traveller, and do not care enough about him to act a part before him. Indeed, it would be difficult to imagine an investigation conducted under more unfavorable circumstances than that in which the Commission has been engaged; and there is, under all the circumstances, something very curious in the perfect confidence in the propriety of annexation with which Mr. Wade has come back.

What the President will do about the matter seems to be still uncertain. If the report is favorable to the scheme, of which there appears to be no doubt, some think he ought to and will at once write another message advocating the scheme still further. On the other hand, the serious division the matter has already produced in the party ranks seems a good reason for dropping it. But, after making all the fuss he has done, the President cannot safely drop it. To do so now, would present his first persistence in a very unfavorable light. If the plan be of such small consequence that he may fairly give it up now what are we to think of the judgment which for nearly two years has made it the leading, and indeed we may say the only, measure in the policy of the Administration? The President cannot decently abandon, in the third year of his term, an affair which he has thought worthy of his almost undivided attention ever since he took office, and no silence about San Domingo now can possibly heal the split in the Republican ranks.

The Republicans have probably carried Connecticut, electing the Governor and two, and perhaps three, members of Congress, but by an infinitesimal majority. Even this result, in spite of the discouraging condition of the party at Washington and the recent defeat in New Hampshire, is largely due to the discovery of an alliance between the Democratic candidate and "Boss" Tweed. The Republicans professed, a day or two before the election, to have discovered a telegram from English to Tweed, reminding him of promised aid in the shape either of repeaters or money. Of this English denied the authenticity, but he acknowledged communication with Tweed in the shape of requests for aid of some kind in the canvass. Now, Tweed does not enter into alliance with anybody for ordinary political reasons. He is not a party politician, and cares nothing about political ideas. All parties are to him simply means of making money, and any politician who applies to him for aid must know very well that he must make a return in the shape of fresh means of corruption. Nobody can get Tweed, for instance, to interfere in the politics of a neighboring State except as a means either of supporting his corruption in New York or spreading it to other legislatures and cities. He would be tempted by the chance of establishing "sub-rings" in New Haven and Hartford, but he cares nothing about the effect of the election otherwise. Consequently, it is fair to accuse Governor English, when he telegraphs for help to such men as Tweed and O'Gorman, of willingness to see the system which has reduced this city and State to their present degradation extended to Connecticut. The New York Ring have already made extensive inroads into Connecticut along the Sound. If they get much further, the State will be lost socially as well as politically.

The Board of Trade of Charleston met, we are glad to say, last week, to take into consideration the financial condition of the State; and of the composition of the meeting, the *Republican*, the radical organ, says it cannot be denied that those present "represented a large amount of the entire capital of Charleston;" and it predicts that the movement will spread "to other cities, towns, and communities" in the

State. The matter that brought the meeting together may be told in a few words. Here is the story, and very dismal it is:

The average taxes for ten years previous to 1860, were but	$431,000 00
The year 1860 being only	392,000 00
The taxes for 1868 were	1,858,000 00
The taxable value of the property of the State in 1860	490,000,000 00
Taxable value in 1871	184,000,000 00

It will be perceived that in 1860 the taxes were not quite $400,000 on a taxable basis of about $500,000,000, whereas the taxes of 1868 amount to $1,858,000 on a basis of only $184,000,000, so that while the property of the State was reduced to one-third its former value, the taxes are increased nearly five hundred per cent.

It is true that this enormous increase is composed, in part, of money spent in reconstruction expenses, and perhaps some additional interest on the public debt.

1858. Expenses of the Legislature	$51,000 00
1868. Expenses of the Legislature	270,000 00
1858. Executive expenses	5,000 00
1868. Executive expenses	40,000 00
1858. Civil expenses	97,000 00
1868. Civil expenses	218,000 00

And the legislative appropriations for the four months' session, which closed last month, amount to the enormous sum of $535,000.

In the presence of this disgraceful and unprecedented state of things, the majority of the property-holders and taxpayers of the State are excluded from any share in legislation. It is not wonderful, therefore, that the meeting, after declaring that the taxes are corruptly raised and improvidently spent, and that the credit of the State has been pledged illegally, and that it is now proposed to pledge it for still further loans by a new issue of bonds, announced that the taxpayers and property-holders of Charleston will not hold these bonds binding, and will resist all taxation for the payment of them by "every legitimate means in their power." We add our warning to that of the meeting. It is impossible that the liabilities which the carpet-bag governments at the South are creating can be fairly met when society gets into its normal conditions, and any one who takes these new bonds not only helps to sustain a pack of great knaves in the enjoyment of their plunder, but takes a thoroughly bad security. The meeting arranged for the holding of a convention in May to discuss the subject still further, to be composed of two delegates from each county.

The meeting referred to and deplored the Ku-klux outrages as "occasional disturbances in some of the counties of the State," and said that "these violations of the public peace were the consequences of generous but unwise efforts to suppress the fraud and corruption of corrupt local rulers from parties who accept the Union and desire to obey the legitimate authority of the Federal powers." Now, it is just this kind of mild talk about shameful and barbarizing atrocities which prevents reform movements at the South from receiving more support at the North, and which enables unprincipled charlatans like Butler to make capital out of bills "for the protection of life and property at the South." We have no doubt there are among the Ku-kluxes *some* such persons as the resolutions describe, but in all such movements, human nature being what it is, the real reformers must be a very small body, and the unmitigated robbers and cutthroats a large one; and this is why decent and intelligent men bear almost any evils sooner than attempt redress by force of arms. In the very paper in which this meeting is reported, we find an account of the brutal murder of a highly respectable and wealthy old doctor, seventy years of age, a South Carolinian to boot, a large land-holder and tax-payer, and who had no more to do with carpet-baggers than with communists. He was called out of his bed in the night, and shot simply because he was a Republican. As long as things of this kind occur and meet with nothing but mealy-mouthed censure from Southern conservatives, it will be impossible for calm and moderate men at the North to do much to help them.

The Sub-Committee of the Methodist Book Concern is doing nobly in the matter of not finding an expert to examine its books, and see whether, as is charged, its agents and employees have been swindling. It has been sitting for weeks, and found nobody who will do. The fact is, its standard about experts is very high. It would never do to let a common, worldly, sinful accountant overhaul the books of the church. He has to be "altogether lovely," and accountants of this kind are rare. In the meantime, the vile secular papers go on lying about the Sub-Committee in the most disgraceful way. They keep saying, for instance, that the Sub-Committee does not want an accountant. Judge Fancher writes to say that they have "unanimously nominated J. P. K. as chief accountant," but the rest of the Committee wanting to have two assistant accountants appointed also at the same time, Judge Fancher refused "to approve of them by the bulk;" that is, appoint all three together. He wishes to weigh them separately—so there is a dead-lock. Judge Fancher says the other side is to blame. Of course it is. Our advice to the Judge is not to give in. Never "approve" of experts "by the bulk." In the meantime, our friend, Dick Connolly, the City Comptroller, who has not published his account for two years, must chuckle over the growing dexterity of professed Christians in preventing suspicious books from being overhauled. We begin to fear that the Sub-Committee will yet turn up in high places in the City Tax Office.

Commissioner Pleasanton, if he cannot kill the income-tax, has certainly managed to take the life out of it. He rules that under the statute no man need give the particulars of his income, or answer any questions about it. All that is required of him is a statement of the gross amount and the taxable amount. Moreover, persons whose income is under $2,000 need not take any notice of the assessor or collector at all; and, more important still, persons whose tax was not withheld by corporations paying coupons and dividends last year are to be allowed to return as if it had been withheld. There can be little doubt that these modifications are the result of careless legislation, and they make the further retention of the tax positively ridiculous. Congress might as well now finish it—particularly as a powerful movement is on foot, here and in Philadelphia, to procure its abolition as unconstitutional, by a judgment of the courts. If the association formed in New York gets the injunction for which they talk of applying, it will probably not leave money enough in the tax to pay the expense of collection, if, indeed, any further collection is attempted.

Among the "testimonials" of the week is a gigantic bouquet to James Fisk, Jr., presented by a circle of admirers on his thirty-sixth birthday. Among the donors are found the names of John Chamberlain, the noted Twenty-Fifth Street gambler, and, we are sorry to say, Mr. Thomas G. Shearman, Mr. Field's partner. If Mr. Shearman's name has been put there without his authority, as we would fain believe, he owes it to public decency to repudiate it; if he has put it there himself, he owes the public some kind of explanation. Does the defense of him in the courts involve the expression of admiration of Fisk in private? Does Mr. Shearman really think it a good thing for the world that Fisk was born thirty-six years ago? and does he really mean to say that Fisk's career entitles him to public marks of esteem from honorable members of society?

The unusually heavy importations of foreign merchandise, which for the last week reached the extraordinary sum of nearly twelve millions of dollars at this port alone, have enabled Secretary Boutwell to show another large reduction on the national debt, the excess of income over expenditure amounting to a trifle over eleven millions of dollars for the month of March. The total receipts from customs alone, about eighteen millions of dollars at all the ports, enabled the Treasury to meet all its ordinary expenses, amounting for the month to about thirteen millions, and to have five millions to spare. These, with about six millions from internal revenue, and other sources, have reduced the debt about eleven millions, mainly in the shape of bonds purchased at the weekly Treasury offerings in this city. The announcement of the Secretary of his operations for April proves that he is not to be swayed from the conservative course which he has marked out for himself from the beginning. In spite of the temptation to use a large portion of his idle coin balances in buying bonds now (as we have repeatedly urged

in other times), and thus aiding his funding operations, he has wisely adhered to his programme of last month, and only proposes to sell his monthly surplus, recognizing that any momentary advantage to be derived from a different course would be more than lost by the appearance of artifice. The funding has received a decided impetus during the week, and, so far, has largely exceeded our anticipation. The amount of bonds exchanged exceeds fifty millions.

On Tuesday, March 28, two days after the election, the Paris Commune was proclaimed in the Place de l'Hôtel de Ville. Salvoes of artillery were fired, and speeches were made from a platform covered with red cloth, which were not heard, but enthusiastically applauded by enormous crowds—the red cloth, we suppose, producing the principal effect. On the same day, the Sub-Central Committee, which had replaced the Central Committee of the insurrection, ordered the formation of twenty-five battalions of infantry and fifteen mitrailleuse batteries for active service, and of twenty batteries of reserve artillery. Generals Duval and Bergeret, charged with organizing the infantry and cavalry respectively, were empowered to make all needed requisitions. The National Guards were allotted two francs and a-half daily in addition to their rations. The Bank of France was persuaded —if this be the term—to make the necessary advances, and a number of officials in the Department of Finance were dismissed "for disobedience." Two members of the Committee itself were thrown into prison, and another, according to report, condemned to death "as a Bonapartist." The Postal Director was summoned to surrender his functions to an appointee of the Commune, but refused, and the affair resulted in the total disorganization of the service. The judicial benches were deserted, all the judges having fled. The workshops were without hands. A general exodus of the wealthier people began. But the red flag waved gaily over the public buildings, and "Paris was quiet."

On Thursday, General Duval submitted to the Sub-Central Committee a proposition for the disarmament of those portions of the National Guard which had not declared their adherence to the Commune. M. Assy, the great "International," deemed the measure unnecessary, as the Republic "formed a Committee of Public Safety," ready to mete out death to all conspirators, and thus—as he wisely opined—ran no danger from its opponents. And, in fact, the Sub-Central just then passed sentence of death upon Wilfred Fonvielle for being engaged in an attempt against the existence of the Commune; or, possibly, for being suspected of such an attempt, as Wilfred's brother, Ulric Fonvielle—once the companion of Victor Noir on his fatal errand to Pierre Bonaparte—was at the same time reported to be organizing a large body of loyal Guards at St. Germain. General Duval, whose proposition was not carried, was authorized to ferret out and arrest all enemies of the new régime. The Sub-Central also appointed an Executive Committee, composed partly of heroes of the sword, like Duval, Bergeret, and Endes, and partly of newspaper heroes, like Pyat and Vaillant, of whom the former once offered a prize, in his paper, for the assassination of King William, and the latter, in the present *Journal Officiel* of Paris, now urges the assassination of the Duc d'Aumale.

A few hours later, however, the Sub-Central and its offspring, the Executive Committee—if the genesis of the latter, as reported, be correct—remitted their powers to the regular Communal Council, and a proclamation announcing the fact was issued. The Commune, thus solemnly installed, but holding its sittings in secret, and inspired by Blanqui from his "hiding-place," established a new Executive Committee, composed of several obscure men besides the renowned Flourens, Pyat, Endes, and Delescluze. The last-named had resigned his seat in the National Assembly. Pyat, however, who declared it dissolved when he abandoned it, at the same time declaring his determination to remain its member, seems to cling to all his titles. New decrees were now rapidly issued in succession. Conscription was abolished, the introduction into Paris of any military force but National Guards prohibited, and every able-bodied citizen ordered to enter the Guard; lodgers' rents from October, 1870, to April, 1871, were declared remitted, and sales of pawned articles suspended; the public officials were warned to disregard all orders emanating from the Versailles Government, and all its documents forbidden circulation in Paris; the title of Commander-in-Chief was abolished, the flag of the "Universal Republic" made the flag of the Commune, Endes appointed Delegate Minister of War, Bergeret Chief of Staff, and Duval Military Commander, also Prefect of Police, also judge. Besides these chiefly local measures, sweeping reforms of less imminent application were decreed, some of an anti-clerical and some of a socialistic character. And still more sweeping reforms were proposed. The sale of Versailles, St. Cloud, and Fontainebleau was talked of as a financial measure, and the issuing of assignats suggested, and, as a crowning work, the re-erection of the guillotine of 1793 was expected.

Fortunately for the Government and the National Assembly established in Versailles, the Paris movement, stained as it was with blood from its beginning, met with little encouragement in the provinces. Lyons remained loyal; the revolutionary convulsion in Marseilles proved ephemeral; more or less important agitations in Creuzot, St. Étienne, Toulouse, Narbonne, and Perpignan were easily suppressed; Charette, with his volunteers, preserved order in Nantes; and the large cities in the north showed no insurrectionary symptoms. The departments were not slow in sending reinforcements to the camps in and around Versailles, and Generals Trochu, Ducrot, Leflô, Clinchant, and others, and among them some returned from captivity, were active in organizing the loyal forces, or concerting plans for the reconquest of Paris, while a new convention, concluded with the German military authorities, partially removed the restriction of the preliminaries of peace limiting the French forces north of the Loire. Most of the Radical members of the Assembly remained on their benches in the Assembly; only a few delegates from Paris preferring, with Delescluze, to cast their lot with the insurrectionary Commune. Some, like Lockroy, continued to act as mediators, undismayed by the ill-success of Schoelcher and Admiral Saisset. To facilitate reconciliation, the Assembly passed various measures of future reform, favoring departmental and municipal autonomy. But Thiers, while displaying a readiness to accept an honorable conciliatory arrangement, and a determination not to compromise by pusillanimous concessions the honor and the future of the nation, showed a considerable leaning towards sterner resolutions.

The first hostile encounter between the troops of the Assembly and those of the Commune took place on Sunday, April 2, in the vicinity of the bridge of Neuilly, between Courbevoie and Puteaux. It is not quite clear, from the Cable reports before us, which side was the aggressive party, nor whether much blood was shed. The men of the Commune were defeated, and fled into the city, where the excitement rose to the highest pitch, and preparations were begun for an immediate march on Versailles. Before daybreak on Monday, the insurgents, under Flourens, Bergeret, Duval, and others, marched out in two corps. The principal one, flanking Mont Valérien on the right, attacked the Government forces at Nanterre, Rueil, Bougival, Besons, Chatou, and Croissy, north and west of that fort, on the two Seine peninsulas. At daybreak, Mont Valérien opened fire upon the insurgents, but with little effect, as they were sheltered by the villages. Their attack, however, was repulsed, and, as General Vinoy's cavalry executed at the same time a movement to outflank them, they fled in a complete rout, leaving many dead and wounded behind. The other corps, which marched via Meudon and Châtillon, met with a similar fate. And, according to a later despatch, the Government troops, on Tuesday, "completely defeated the remnant of the Communists, taking many thousands of prisoners, and all of their artillery, and destroying their army." Duval and Flourens are reported dead. The speedy occupation of Paris is expected. Thiers announces the determination of the Government "to exercise clemency towards all who have been blindly misled," but to "punish the ringleaders with severity."

THE ANGLO-AMERICAN ASSOCIATION ON THE FISHERIES QUESTION.

An association, to which reference has already been made by the *Nation*, exists in England, "formed for the purpose of obtaining the best securities for the maintenance of a friendly understanding, and for the cultivation of more cordial relations between the United States and Great Britain." An address recently issued in their name says that "the lamentable ignorance of contemporary American history which exists in England even amongst otherwise well-instructed politicians, is too notorious; and the case is much the same in the United States with reference to Great Britain. Upon all questions in controversy between the two countries, the facts and arguments which form the strength of the case on each side are, for all practical purposes, unknown in the other." The same address announces that "the work of the English association for the present will be confined to the publication of carefully prepared statements upon the questions at issue which are specified in the President's Message." In pursuance of this design a committee was appointed in December last to prepare a report upon the fisheries question. Their report, published as a pamphlet, has been forwarded to this country, and a copy of it now lies before us. It contains a short recapitulation of the facts connected with the long controversy, a summary of the treaty stipulations and of the imperial and colonial legislation bearing upon the subject, and a dry statement of the matters now remaining unsettled between the two Governments. It is more remarkable for what it omits than for what it includes. If it was the object of the association to inform and enlighten the people of each country in respect to the claims made by the people and Government of the other country, and the grounds upon which those claims were based, and the reasons by which they are supported, the report will do little or nothing towards the accomplishment of such a beneficent purpose. The Americans are quite familiar already with the pretensions set up by the Colonial Parliament and sustained by the home authorities, and the labors of the committee will add little to their knowledge either of facts or reasons. On the other hand, the report will remove none of the "lamentable ignorance" which is said to exist in England, for it does not profess to treat the matter from the American point of view, nor to furnish any of the arguments by which the American claims are supported; but, on the contrary, with a most carefully preserved appearance of fairness and impartiality, it quietly conveys the impression that the British position is simply impregnable.

Passing from this general description of the report as a whole, we will in a very brief manner notice some of its special features, and, in particular, some of its most important omissions. In stating the doctrines of the international law which define and regulate fishing rights, the conclusion is reached that a "bay" over which exclusive British dominion extends, must be taken to mean an indentation, the headlands of which are at a distance from one another of not more than ten miles. Larger and wider indents would be free to American fishermen over such parts of their surfaces as were more than three miles from the coast. This definition of a bay would undoubtedly be satisfactory to our citizens, and has been practically adopted by the British home government in their instructions to naval officers. But the report fails to notice the fact that the Colonial authorities utterly repudiate this construction, and have been sustained in their position by the law officers of the crown. Recent Canadian writers, either official or in the interests of the Dominion Government, assert complete jurisdiction and exclusive rights over the largest bays, including Fundy and Chaleurs.

After a short history of the several treaties affecting the subject, from the treaty of peace in 1783 to the abrogation of the Reciprocity treaty in 1865, with an abstract of their provisions and of the diplomatic correspondence which preceded their adoption, the question is stated, "By what treaties are the rights of the United States fishermen now regulated?" and the answer is given: "It seems clear that the treaty of 1818 is now in force." The most important of all the American claims—a claim which, if well founded, makes all the others useless—is thus dismissed as not worthy a discussion. In fact, the position of the report, and of the British Government, that the restrictive clauses of Article I. of the treaty of 1818 are now in force, cannot be maintained without overturning all the settled rules for the construction of contracts. The Reciprocity treaty was substituted in their place in 1854, swallowing up and destroying their provisions; and when this latter convention was abrogated in 1865 there was nothing left in the nature of a compact between the two countries except the treaty of 1783. That the grants of fishing rights in Canadian waters conferred by the treaty of 1783 were not annulled by the war of 1812 has always been maintained by the American Government—maintained even in the very act of making the partial renunciation of 1818, which renunciation was in its place swept away by the positive stipulations of the convention of 1854. We cannot now discuss the correctness of this claim, and simply remark that it is impossible to produce a single European publicist of authority, nor even any English text-writer except Phillimore, who lays down rules and doctrines antagonistic to this American position. We believe that to-day our fishermen have full rights to pursue their calling within any distance from the Canadian shores and in all the Canadian bays.

The report proceeds to state some of the questions arising under the legislation of the Dominion Parliament. It may be true that, upon the basis of the convention of 1818 as an existing compact, American fishermen have no right to trade in Canadian ports, or to prepare to fish or to tranship cargoes of fish in Canadian waters. But the committee fails to notice the fact that the existing statutes directly interfere with and virtually destroy the privilege granted by that treaty of entering bays and harbors for purpose of shelter, and for other specified purposes. These statutes make no discrimination, and apply to all American fishing-vessels alike; and, if enforced, would render a most important part of the convention a mere nullity.

With the conclusion of the committee we entirely agree, that the matters in dispute "all involve questions which, if no agreement is speedily arrived at between the governments of the two countries, may lead to serious dangers."

THE REVOLT OF THE MERCHANTS AGAINST THE TYRANNY OF THE RAILROADS.

Next to the right of personal liberty, the most sacred, most essential, most pervading right of the citizen of a free country is the right of locomotion and of transportation. Personal liberty itself is of no avail, is indeed a mere mockery, if not accompanied with the unrestricted right of moving person and property from place to place. The right of moving person and property from place to place implies the absolute right of every citizen to use the sidewalks, carriageways, highways, and by-ways of the whole country, and of every description, with absolute freedom, subject only to such restrictions as the preservation of good order requires, and to the payment of such taxes or tolls as the State may impose, or permit to be imposed, for the maintenance of the roads themselves. Fifty years ago, the mere statement of such a proposition on the part of a public journal would have been considered trite, if not silly. Yet to-day it has become absolutely necessary to revert to this elementary principle to justify and render intelligible an act of the gravest national importance, into which an imperious public necessity is precipitating this people before they are fully aware of the true nature of their doings.

The right of locomotion and of transportation has never been disputed in theory. Yet in practice it has to-day passed away from the citizens of the United States just as absolutely and entirely as if they had never possessed it. It has been taken away so gradually and insidiously that we did not become conscious of the process until now, when we seek to remove some petty or odious restriction, and find ourselves suddenly confronted with the alarming fact that we have, by law, statute, enactment, or charter, whatever the device may be called, actually, fully, and absolutely surrendered our rights to an irresponsible, unscrupulous tyrant, whose power is for the time being absolute, who laughs to scorn our claims for redress, and sets our efforts at remedy boldly at defiance.

Lest any one deem this sweeping statement an exaggeration, we desire to call attention to a few facts, which in their isolated occurrence, however much indignation they may excite at the time, are apt to be

remembered so imperfectly by the public, that their force as arguments is lost, unless collated and verified. Only within the last few months the entire postal service has been repeatedly delayed, or at times totally interrupted, at the Bergen Tunnel, during the quarrel between the Erie and the Delaware, Lackawanna, and Western Railroad Companies; on the Long Island Railroad, which is reported to have positively refused to carry the Sag Harbor mails; at Harrisburg, where, in a period of three months, the whole or a part of the Western newspaper mails was thirty-two times compelled to lie over until next day, owing to the wilful neglect of the Pennsylvania Railroad Company to provide the necessary room. Numerous other cases occurred which we do not remember with sufficient distinctness to specify here.

The forcible interruption to traffic on the Delaware, Lackawanna, and Western Railroad a few weeks since; the riotous seizure of the Albany and Susquehanna Railroad by regiments of armed men, bringing the State to the verge of civil war; the wilful derangement of traffic over the road to Saratoga last summer to enable Commodore Vanderbilt to carry New York passengers over the Hudson River road instead of permitting them to take the boats from some of the river stations; the abandonment of the Bangor, Oldtown, and Milford Railway in Maine at the behest of its competitor, the European and North American; the forcible blockading of the approaches to the Suspension Bridge, and the attempt to burn the bridge across Cayuga Creek to prevent the Erie Junction road from interfering with the New York Central—an act that brings to mind the old law in force even among the "barbarians" of Peru a few centuries ago, according to which "to burn a bridge was death;" the refusal of the New Jersey Railroad Company to forward passengers to Washington, owing to their dispute with the Baltimore and Ohio Company; the Minnesota Railroad ring that made a desperate and partially successful effort last summer to use its power over transportation to control the entire wheat market of the State; the New Haven Railroad exercising a censorship of the press by prohibiting the sale and transportation on its line of a newspaper that had dared to criticise its management; the trebling of freights on coal during the bitter winter months of January and February, when thousands of poor in the Atlantic cities were all but perishing of cold; the additional two dollars a ton put on the rates by the Reading Railroad Company in March, when it found that some coal was still being mined; the case of passengers hustled off the cars for infractions of petty rules of the companies, and especially of those who were thrust off trains while in motion over trestle-bridges; the despatch from the President to a conductor of a passenger train on the Morris and Essex Railroad:

> "Put your train on the side switch, and keep it there until the commuter and his backers conform to the rules of the company.
> "SAM SLOAN."

—all this is strong enough support for our statement. But we advise our readers also to turn to the petition of the citizens of the City of New York, published in the daily papers of March 29, in which, over the signatures of more than five hundred of the most responsible and respectable mercantile firms in every branch of the city trade, there is set forth in detail a system of extortion, ill usage, tyranny, and corruption on the part of the New York Central and Hudson River Railroad Companies.

These men, whose mere statement, under all the circumstances, must be accepted as conclusive, charge the New York Central and Hudson River Railroad Companies with "seriously injuring the commerce and business interests of this State," with "outraging its citizens," with being "an irresponsible, grasping, and dangerous monopoly," with "levying taxes in defiance of equity and public law," with "placing an embargo upon trade and destroying industry," with "usurping the legitimate functions of Government, and unjustly oppressing the people."

The great importance of this action on the part of the New York merchants lies in the recognition of the evil, and in the statement of the abuse, in a manner which must silence the clamorous denial *of the facts* by which the friends and organs of the railroad corporations have heretofore been able to set aside and render ineffective all isolated cases of complaint. The great value of this protest consists in the emphatic declaration of calm, thoughtful, law-abiding citizens, "that a railroad is a *public highway*, constructed for the public use, and that the public are entitled to all the benefits resulting therefrom beyond the adequate compensation due its constructors and operators." It annihilates by a simple appeal to the inalienable right of free locomotion all the bulwarks which shallow theorists and designing advocates have built up around the railroad monopoly on the basis of non-interference, competition, and corporate rights. The error of these theorists has always lain in their failure to recognize that the rights of railroad corporations, in so far as they trench upon the higher right of free locomotion, are rights which no Government has *the power* to surrender, however much it may attempt to do so, however much the attempt may have had the popular sanction. For it must not be forgotten, in spite of the abuses which in the course of time have crept into railroad management, that the railroad corporations as now existing were created with the full consent of the people, though in ignorance of the monopoly and tyranny to which they were surrendering their rights.

The process now going on in the public mind is a gradual recognition of the fact, that the attempt to place the control of essential popular rights in the hands of individuals and corporations has resulted in unbearable abuses, and that the very existence of popular liberty absolutely requires that this control, surrendered in ignorance, and wantonly perverted, shall be entirely resumed by the people, or else so thoroughly limited as to correct existing abuses and prevent the perpetration of new ones. In what manner this control can be resumed, or how it can be limited, is a question requiring more thorough, practical, and detailed discussion than the New York merchants appear to have as yet devoted to it. Their general appeal to the Legislature to remove certain special evils, and to regulate rates of fare and transportation on all railroads running in this State, evinces more confidence in the State Legislature than that body merits, especially after their recent unjust repeal of the Delaware and Hudson Canal Company's charter amendment at the bidding of the very Central and Hudson River Company indicted before them. Even were the present Legislature as honest as it is corrupt, as intelligent as it is ignorant, it might still be doubtful whether any remedy it could devise *and enforce* would cover the ground, since it is chiefly the inter-State relations of the different roads which give them their greatest power for evil, and over these connections outside the State limits our Legislature would, of course, exercise no authority. But it is neither necessary nor desirable to enter now upon a discussion of remedies. When the public mind has become fully alive to the true nature of the evil, the remedies will suggest themselves almost spontaneously.

THE BAR ASSOCIATION.

WE did not intend to return to the controversy between General Barlow and Mr. D. D. Field until the Bar Association had passed upon it; but a correspondent writes to ask us in what position we now understand it to be left, and the *World* last Sunday, after observing dead silence about it while it was pending in the *Tribune*, published an article which, whether designedly or not, will in many people's eyes obscure the really important points in the case, and, what is worse, raise new and wholly irrelevant ones. There is evidently an attempt about to be made to produce the impression that General Barlow has been guilty of an impropriety in dragging a professional brother into a newspaper controversy about matters which a professional tribunal only is competent to decide, and that Mr. Field, in declining to answer General Barlow's last letter, and appealing to the Bar Association, is simply carrying the case into the proper forum.

It would be difficult to imagine a greater misapprehension. Mr. Field began the newspaper controversy by a letter to the editor of a newspaper asking for a retractation of certain statements appearing in a newspaper, and engaged with this editor in a long debate, in the course of which he said that the editor "had arraigned his professional conduct," and he "repelled his charge and challenged him to specify an in-

stance" (letter of Jan. 5); and later (Jan. 17), he renewed his challenge by saying: "Please get, if you can, one respectable lawyer or judge to say that I am wrong."

Now, this certainly left it open to Mr. Bowles to get "a respectable lawyer or judge," if he could, to take up the controversy at the point where he, as a layman, had to let it drop; and it left it open, too, to any respectable lawyer or judge to appear on his own account, if he thought the public interest would be thereby promoted, in the forum which Mr. Field had deliberately chosen, and then and there produce, if he could, the instances for which Mr. Field had so defiantly called. This General Barlow did. He made his charges very carefully in three letters, citing evidence as he went, and it is to be observed that nearly all his evidence is drawn from reports of testimony taken in court. Mr. Field replied in one letter traversing *some* of General Barlow's allegations; General Barlow rejoined with fresh evidence, and pointed out wherein Mr. Field's reply was insufficient. Now, it was, at this point or at any other, competent for Mr. Field to carry his case before the Bar Association, but no appeal to the Bar Association can possibly take the place of a full reply to General Barlow's charges and proofs in the newspapers, and, as the matter now stands, the latter's heaviest and most formidable letter lies literally unanswered. This is unfortunate. Mr. Field may say that he does not choose to pursue the newspaper controversy any further, but the public will think that, having begun it, he was bound to close it, if he could.

The *World* has endeavored to give a false complexion to the manner in which the newspaper controversy has come to an end, by the insinuation that General Barlow is too young, and possibly too "immature," to entitle him to a full defence at Mr. Field's hands. It was open to Mr. Field when he challenged Mr. Bowles to specify the standing in years of the lawyers whom Mr. Bowles might produce as accusers. He did not do so; he simply asked that they be "respectable." General Barlow is highly respectable. He is respected by the judges, and has the confidence of his clients. These two things give a man weight at any bar in the world. If New York lawyers do not take care, they will yet give a man distinction at the bar of this city. Mr. Field made the great mistake of suggesting a personal comparison with General Barlow in his first letter to the *Tribune*, of which the *Tribune* took ferocious advantage, and certainly not to General Barlow's detriment. But then all this is beside the matter in hand. If the point in dispute were the relative age and legal standing of Messrs. Field and Barlow, it might have been decided long ago by a reference to family Bibles or the files in the County Clerk's office. The question is, Are the charges in General Barlow's letters true? Is his evidence impeachable? and if so, where and how? As long as these questions are unanswered, all personal comparisons between the two disputants are simply silly, particularly as we have yet to hear of a lawyer of any standing at the New York bar who professes to have any doubt of the truth of the greater part of what General Barlow says. This is the serious part of the affair. Mr. Field has most improperly, and apparently under the influence of a misapprehension as to his real position, published a note from Judge Parker in the *Evening Post*, saying that he had read Mr. Field's letter in the *Tribune* of the 11th, and corroborating Mr. Field's assertion as "to what took place at Albany," and testifying that Ramsey got an *ex-parte* injunction from Judge Murray at Delhi, and expressing his belief that the whole attack on Mr. Field is "unwarrantable and unjustifiable." What the public wants to know, however, is whether Judge Parker has read General Barlow's letters, and what he thinks about the charges there made. Unless he has done so, his meddling in the controversy at all is uncalled for; and his opinion as to what "fair-minded men" will or do think about it is simply worthless.

Another question of some importance begins to be raised, and that is, the nature of the proceeding by which these charges are to be tried before the Bar Association. An impression seems to prevail among many lawyers that the evidence adduced in support of them must be such as will bear the tests in use in courts of law, and that it is open to the accused to avail himself of these tests.

The Bar Association, as we understand it, is not a legal tribunal. It is not even a legal corporation. It is a voluntary association of gentlemen, formed with the view of promoting all the interests of their common profession, and notably its purity. In other words, it is a club, and, like all clubs, it has machinery for ridding itself of unworthy members. This is the end, and the sole end, of its judicial procedure. It does not and cannot undertake to punish in any other way any lawyer for professioual misconduct; what it does undertake to do is to prevent lawyers proved guilty of improper professional misconduct from belonging to it or coming to its rooms.

Now, what kind of proof should it require in support of charges of improper conduct? The kind of proof which sends a man to jail? By no means; simply the kind of proof which is sufficient to satisfy one gentleman that another is not a person to be trusted. In other words, its rules of evidence are not and ought not to be the rules of evidence in use in the courts of common law, but the laws of the human mind, which are the rules in use in all "courts of honor." The object of a trial before a legal tribunal, as we pointed out when this controversy first began, is not to find out whether a man has really committed an offence or not, but whether certain prescribed indications of his having committed it exist. The courts do not trouble themselves about moral guilt, but about legal guilt only, which is often a very different thing. The consequence is that men are discharged every day of whose crimes neither judge nor jury entertain any manner of doubt, simply because, although there were plenty of signs of their guilt, the prescribed signs were not forthcoming.

An enquiry into a man's conduct before a court of honor is an entirely different proceeding. Here the object aimed at is not simply to find out whether he has brought himself within the purview of a statute, but whether he has fairly rendered himself an object of suspicion to his friends. The accused, therefore, does not appear before it on the defensive simply. It is his duty to attack. He is bound to say not "Find me out if you can!" but, "Why do you dare to doubt me?" He says not only, "Where are your proofs?" but, "What proofs do you require?" It is not enough for him to show that the evidence against him is insufficient; he must show that there is no evidence at all. He therefore is expected not only not to impede the prosecution, but to help them; to lead the way into the dark corners of his career, and throw the fullest light on all the suspected points. It is not enough, for instance, to say that he did not get a judge to sign an order in a house of ill-fame; he has to say where he did get him to sign it. In fact, it is preposterous to suppose that any society of honorable men could be kept up with no better guarantees for the respectability of their members than are supplied by the technical rules of evidence. Any enquiry into a man's character on such a basis would be a wretched farce, and we venture to say has never been attempted, except before "Chief Baron Nicholson" in the underground entertainment known as "The Judge and Jury."

If the Bar Association in the present case conducts the enquiry on any such basis, its verdict will not only do nobody any good but will be received with derision by the world outside. If the enquiry is to take place at all, it must be thorough. There must be no technical jugglery about it. We do not want to know whether there is legal proof of Mr. Field's having acted improperly on behalf of the Erie managers; we want to know whether he did really so act or not, or whether there is reasonable ground for believing that he did. An acquittal for failure of proof would do nothing for his reputation as long as he refused to explain whatever seemed to need explanation, which of course it is to be presumed he will not do. The notion that lawyers, because they are lawyers, must conduct an enquiry of this nature with the forms observed in the courts, is about as sensible as the notion that an astronomer's measure for a suit of clothes should be taken by triangulation, or that a doctor should never accept a friend's reply to his greeting without feeling his pulse and looking at his tongue. The Bar Association ought to be an association of honorable men; if it tries to convert itself into anything other than this, or anything short of this, it will before long become simply a refuge for scoundrels, because no honest man would stay in a body where the only reason he had for believing in the integrity of his fellow-members was that nobody had as yet succeeded in securing *legal* proof of their rascality.

SIGNING NEWSPAPER ARTICLES.

THE New York correspondent of the Springfield *Republican*, the *causa teterrimi belli*, discoursing on New York journalism the other day in the columns of that paper, highly commended the practice of having the articles in periodicals signed by the writers. It undoubtedly is a good practice, for several reasons, but the weight of argument as regards newspapers, in the present state of human nature, is against it. It will take some time for the public to reach the degree of cultivation which will enable it to consider what a writer has to say apart from the writer himself. It makes no great difference as regards light literature, or magazine literature, properly so-called, whether the articles are signed or not. Indeed, it doubtless adds to the pleasure of the reader to have them signed, and it certainly helps

the writer's reputation and enlarges the market for his wares. But then, prejudices are not shocked, or passions roused, or pride wounded by tales, sketches, and anecdotes, reminiscences or humorous poems. The people who read them sit down to be amused or entertained, not to be reasoned with or preached at, and they are, therefore, in the pleasantest possible frame of mind towards the writer. The man or woman must be strongly constituted who, rising from the perusal of "A Night on a Crocodile's Back," or "The Little House Under the Hill," or "Hints on Behavior at the Dinner-Table," experiences towards the author, no matter who he may be, any worse feelings than a sense of disappointment. In nine cases out of ten, he feels nothing but gratitude and admiration, and a desire to make his personal acquaintance.

But when we come down to newspaper literature, however, as newspapers are now conducted, the arguments in favor of signing articles will hardly bear any examination whatever. The nature of the subjects newspapers treat, and of the audiences they address, and the character and training of the writers, all make anonymous writing almost essential, not only to their usefulness, but to their harmlessness. They are dealing constantly with questions of the day, on which the public is either greatly excited or quite ready to be excited. They are appealing all the time to and are dependent on the patronage of a large body of persons who are entirely unused to the treatment of any subject on purely intellectual grounds, and of whom not one in a thousand has ever weighed an argument without putting the man who used it into the scale along with it, and who approach nearly all social and political topics in a passion—it may be a noble or it may be a base passion, but still a passion. And then, as regards ourselves, the writers, supposing us to be all that the greatest admirers of the press could desire, but which many people say we are not—thoughtful, cautious, thorough, well-educated, scrupulous, good-tempered, free from envy, and malice, and uncharitableness, there is something in the nature of our calling which tries even the best natures sorely—and that is the possession of *power* without *responsibility*. It is difficult to say anything about "the power of the press" which will not seem commonplace after all that is said about it in after-dinner speeches, and we shall not touch at all upon its power over public opinion in the ordinary sense of the phrase. We refer simply to its power over individuals. In the present state of our society, a newspaper can literally make the life of any man it chooses to single out for its ridicule or reproaches utterly miserable, or can raise a very mediocre man into fame, and, if he pursues certain callings, into fortune, and it can do this without having to justify itself to anybody or bear with anybody's criticism. Now, there is no monarch, potentate, or corporation in our day of whom this can be said. The men who are armed with such power as this ought to be picked men, both as regards character and attainments; and even then they would be sure to abuse it. The general opinion is, however, that we are not picked men, or, if picked, that the work has been done with extraordinary carelessness. We are said to have among us, besides the usual proportion of downright donkeys, a very fair proportion of very ignorant men, of very unscrupulous men, of very conceited and malignant and shallow men, honeycombed with mean jealousies and small spites, and base greeds, and ignoble aims of all sorts. Every profession contains such men. Yes; but it is only in the newspaper profession that such men can take a gun, go behind a hedge, and, when they see an opponent coming along the road, knock him over without the least personal risk. It is only the newspaper rascal who is always armed amongst the unarmed. The newspaper is a kind of citadel from which he can take aim at anybody he pleases in the marketplace below, without any chance of having his shot returned. The consequence is that newspapers have produced a new type of bravo, far more dangerous to the community—that is, less capable of being guarded against or resisted—than any of his predecessors.

Now, it may seem as if the proper way to disarm such people was to make them put their names to what they say; or that, if you could not disarm them, you would at least furnish those whom they assail with the means of resisting them. On the contrary, you would simply convert ambushes into street-fights, as far as the quarrels between the members of the press were concerned, while for the protection of private individuals you would do nothing whatever. Two things have been proved by experience both in this country and in France and England, and they are things which observation of human nature in other callings might have led us to expect. One is, that the more impersonal the newspapers are—that is, the less there is known about the editor and writers, and the more they are veiled from observation—the more decorous they are in their language, and the more apt they are to treat public questions on their merits. The other is, that the more there is known of the writers of articles, the more scurrilous and violent they are apt to be in their treatment of each other, and the more of their space and time is likely to be given up to personal controversy—discussions of what I said, and you said, and he said, and of the lies you told, and that I found out, and that he tried to cover up, and of the probable effect of the curliness of my hair upon my treatment of the reconstruction question, and of your mother's unhappy relations with your father upon your treatment of the divorce question, and of his use of wine on his dinner-table upon his treatment of the temperance question. The Paris press, before 1848, was violent, and extravagant, and rhetorical, but as soon as writers were compelled, in 1851, to sign their names to their articles, it became a sink of stupidity and nastiness—a calling from which most decent men retired, and in which a writer's career came to be made up largely of an exchange of billingsgate and pistol-shots with his brother-writers. It seems strange, no doubt, that as soon as Brown of the *Footstool* finds out that it is Smith who is writing the editorial for the *Armchair* on fire-irons, he should at once lose his temper, and insinuate that Smith knew more about manacles than about pokers and tongs. But this disposition has been recognized in the rules of parliamentary procedure, which forbid all allusions to members by name. It is found in practice that the mention of a man's name in debate, inasmuch as it brings his naked individuality up more vividly before the orator's eye, has a tendency to excite pugnacity and breed personalities, and cause wanderings from the subject. Every member is therefore wisely veiled under the name of the district he represents. The rule is even more valuable in the press. Men can discuss calmly, we know, what the *Armchair*—for that is a sort of abstraction—says; but as soon as they begin to talk of Smith of the *Armchair*, all that they dislike about him, his personal history, fills their mind's eye, and the animal love of victory rises up within them, and makes them long to scourge him, and torment him, and make life hateful to him.

We might illustrate all this readily and forcibly from the history of the New York press if we chose, and if it were not delicate ground. We think it may be said, as a general rule, that the tone of the discussions in every one of the daily papers here has risen or fallen in proportion to the closeness of its connection in the public mind and the mind of the newspaper writers with one man. The periods of downright blackguardism on all sides which occasionally recur are mostly brought about by the differences between four or five men having become too fierce for restraint. Even the Springfield *Republican*—one of the best-conducted papers in the Union, and more metropolitan on the whole in its tone and management than most of the metropolitan press, and running its career in the calm atmosphere of the country, and practising the anonymous itself—finds it hard to respect the anonymous in its contemporaries, and writhes occasionally under the necessity of buckling down to the consideration of cold, dry facts and arguments, and longs to tear aside the veil, get at the writer, and have a bout with him, about his clothes, or his complexion, or his birthplace, or his education. One of its not uncommon practices is to guess at the authorship of an article in the columns of its contemporaries, and, on the strength of its guess, abuse him roundly, in this sort of way: "The article on 'wages' in the last number of the *Footstool* was, we have no doubt, written by T. B. Brown; doubtless, too, the same Brown who was sued at Albany last spring for cheating his washerwoman. A pretty fellow he is to write on 'wages.' We advise him to turn his attention to common honesty before he takes up the labor question again," etc., etc.

The true remedy for the evils of the newspaper press, it cannot be said too often, whatever they be, lies not in making the writers reveal themselves, but in making the public demand a better article, and exact from newspaper men an observance of the rules by which gentlemen in other callings are governed. As long as there exists an effectual demand for a low order of literature, in any shape, it is useless to hope that nobody will try to supply it, or that the men who undertake to supply it will be "scholars and gentlemen." There is something very simple in the supposition that the blackguard who says anonymously in his paper that you beat your wife every night before you go to bed, will mend his manners if you make him put his name to his filth. He would as soon put his name to it as not, if you make it worth his while. Any writer who does this sort of thing is "on the make," as they say at the City Hall; it is an affair of money with him, and if he finds signing his name will improve his market, he will sign very cheerfully. You can never do anything with him by making him

show his face; if you wish to reform him, you must refuse to buy his wares. But the amelioration of the public taste might undoubtedly be supplemented by an amendment in the law giving all libel suits precedence on the calendar over everything else. Could suits for slander be quickly tried close on the commission of the alleged offence, they would be brought, as they ought to be, more frequently, and would do much to rid us of the pest of low journalism. Few men care to commence proceedings when there is no chance of having a decision for three or four years, during which the plaintiff has to bear whatever odium the libel has caused, and may expect to see it aggravated by the increased publicity necessarily given to it by his appeal to the law. The really honest and legitimate comments of the press would in this way gain in force, because rogues would not dare to resent them, and the failure to resent them would raise a presumption of inability to do so; and those who were unwarrantably assailed would have a ready means of redress within their reach, and would use it. As matters stand, the worst knaves and charlatans are able to justify their sitting down calmly under newspaper exposure by saying that nobody minds newspaper attacks. Good men do mind them, but only they cannot help themselves.

ENGLAND.—JUDGMENTS AGAINST HERESY.

LONDON, March 17, 1871.

THE political interest of the past fortnight has again been ostensibly confined to the question of army reform. The debate has been dragging its slow length along without, as I imagine, materially enlightening the public mind. It is a peculiarity of the House of Commons that it includes an enormous proportion of military men. The normal career of the Englishman in a certain class is to spend a few years in the army during his youth, and to retire on coming into his property or settling down in life, in order to amuse himself in legislating. The consequence is that, if I am not mistaken, not far from a fourth part of our representatives have some kind of military experience, and they now have an unusual opportunity for airing their eloquence. They have proved, with great superabundance of eloquence, that the purchase system is essential to the efficiency of the army. The most popular argument is, that as the English army is the pride and envy of the world, and English officers buy their commissions, it is plain that the system must be a good one. This is backed up by appeals to the battle of Waterloo, the charge at Balaklava, and the Indian mutiny. Further, we are assured that any other system would lead to favoritism and jobbery, and that, therefore, it is the best plan to let money exercise its influence in a straightforward manner; also, promotion would be so slow, if people could not buy their way over their neighbors' heads, that the army would be discontented; and, finally, there is a wonderful thing called the regimental system, which, it seems, has never yet broken down, and which is inextricably mixed up with the purchase system; in spite of all which, it is quite plain that the purchase system is doomed, and one great obstacle to future improvement is thereby removed. On the other or constructive side of the question, the weakness of the Government proposal is painfully obvious. But we must hope for better things in time. Time, unluckily, is a very important element in all our reforms.

I will not dwell longer upon this question at present. Another matter which has excited less general attention seems to deserve some consideration. The clergy are in a state of excitement compared with which anything existing in the army is moderate. The recent judgments of the Judicial Committee of the Privy Council have naturally altered the position of the Established Church. Hitherto every prosecution for heresy has failed. I can, at least, only recall one insignificant exception, in which a gentleman was excluded from the church because he managed to stumble into a flat contradiction of the articles in a matter for which nobody cared, and then to draw attention to his misdoings by getting up public discussions, in which he assailed one of our most cherished popular beliefs, namely, the existence of the devil. All other judgments had tended to relax the strictness of the rules by which the clergy are bound. Recently, however, Mr. Voysey has been turned out; and, though Mr. Voysey is not a man of any great power, and will obviously be much more at home in preaching (as he is now doing) to the congregation of what is called the "Free Christian Church" than in the pulpits of the Church of England, the terms of the judgment are such as to cause some alarm to all liberal churchmen. Especially, the limits within which criticism of the Bible is restricted seem to be defined with unpleasant stringency.

But of much greater practical importance is the judgment in the case of Mr. Purchas. Mr. Purchas is one of those gentlemen who have recently been endeavoring to approximate as closely as possible to the ritual of the Church of Rome. An action was brought against him, and the judgment which has recently been delivered goes far to upset the whole ground upon which Ritualists have hitherto relied. All their favorite practices are condemned as illegal. Their vestments, chasubles, albs, tunicles, and I know not how many more, are ruthlessly swept away. They are forbidden to elevate the sacrament or to indulge in genuflexions; the position at which they stood at the altar has to be abandoned; the use of incense and tapers is to be suppressed; and, in short, they are ordered to put off their fine new clothes, and to array themselves in the simple apparel of a clergyman of the old school. The public in general laughs, and it is hard to avoid laughing, at the immense importance attached to these questions of millinery. It laughs all the more, because the most pitiable evasions of the law have been attempted. That excellent but not strong-minded gentleman, Mr. Mackonochie, on being forbidden to kneel, tried to get round the law by bending his knees without touching the ground; and not being allowed to elevate the sacred elements above his head, tried whether he could be permitted to lift them as far as his chin. All this is contemptible enough, and, to say the plain truth, the Ritualists are a feeble folk. But the consequences may be very serious. The religious papers are perfectly foaming at the mouth. They declare that the judges (namely, the Lord Chancellor, a man of very high character and deep religious feeling; Lord Chelmsford, an ex-chancellor; the Archbishop of York; and the Bishop of London) were actuated by the basest motives, and have flatly contradicted the law. They declare in the most peremptory terms that they will refuse to obey, and that if one taper or one chasuble is suppressed, they will agitate for immediate disestablishment. One curious symptom is that Canon Liddon, the most eloquent member of the party, is so indignant with courts of ecclesiastical law in general as to undertake the defense of Mr. Voysey, his natural enemy. Misfortune makes strange bedfellows; and in their anger at being punished themselves, the Ritualists are ready to declare that nobody ought to be punished at all.

Meanwhile, the question remains, What is to be done? Dean Stanley, who is systematically on the side of toleration, writes to express an earnest hope that the law will not be carried out. He is the most popular representative of that school of liberal thought which sees in the continued existence of the state church the best guarantee against the dangers of bigotry and exclusiveness. A free church, he fears, would fall into speedy disruption; the rival parties would be excommunicating each other, and one section would drift away under the guidance of men like Mr. Mackonochie towards the Church of Rome, whilst another would probably gravitate towards Unitarianism, and a third would take the colors of the most bitter Puritanism. Moderate men like himself, who believe in the gradual dying out of religious animosities, and the development of our existing creeds by a continuous process into some wider and purer faith, are naturally terrified by the prospect before them. They are anxious to keep men together by the bonds of a state church, in the hope that animosities will subside, and the Ritualist in course of time lie down by the Rationalist. Now, Dean Stanley is a most amiable and excellent man, and is admirably qualified to act the part of a mediator. He has never been afraid to utter his own convictions, nor unwilling to listen to the freest utterances of others, yet it must be admitted that the course recommended rather savors of weakness. If the congregation of a state church give up all claim to interfere directly with their clergyman, and thus leave him that freedom of action which is the great merit of his position in Dean Stanley's eyes, they must have some guarantee that his excursions will be confined within certain limits. Mr. Purchas goes on sidling up to Rome; his congregation cannot interfere or turn him off; they appeal to the courts of law, and the law supports their view. Immediately they are to be told that the law is not to be enforced, and that the reason for not enforcing it is simply that Mr. Purchas thinks it hard, declares that his judges are grossly partial, and says that he will not submit. Obviously, if this is to go on, the state church becomes a mere collection of individuals, bound by no common discipline, and each indulging in such vagaries of ritual or doctrine as may seem good in his own eyes. Why, it is naturally asked, should the state support a set of officials all over the country who are to preach the most opposite doctrines, and absolutely decline to be bound by any conditions whatever?

Doubtless the solution of the question will seem simple enough to you who are not accustomed to hear the praises of established churches. In

fact, the word disestablishment is on every one's lips. The dissenters begin to think that their opportunity is come. The High-Church party, though still affecting some reluctance, are beginning to regard it as the most natural step that can be taken. How soon the question will become one of immediate practical interest it is, of course, impossible to say; but the Purchas case has probably advanced the explosion by years; and if the Evangelical party continue to carry on the war, it is not impossible but the battle will be fought out within a very short time. Those who look forward to such a contest with most pain are such men as Dean Stanley, Dr. Jowett, Professor Maurice, and other so-called Broad-Church men, who are bound together rather by a general sympathy with liberal ideas than by any specific party platform. They include the ablest of the English clergy, and though eager partisans will generally regard their hopes of passing from the old to the new without any violent transition as somewhat visionary, such hopes at least deserve sympathy and respect. Yet their position is daily becoming more inconvenient. They may, perhaps, care little for the loss of Mr. Voysey, whose opinions carried no great weight, and who seemed rather to enjoy making a scandal. But the decision which has cast him out strikes at many of their opinions, and the ground seems to be hollow beneath them. To maintain the church establishment in order to enable such men as Mr. Purchas to preach rank sacerdotalism is, in fact, to maintain a fortress for the benefit of their bitterest enemies. That they should be willing to do so is creditable to their spirit of charity, but the position shows signs of becoming intolerable.

The mention of the Broad Church recalls to me that Professor Jowett, now Master of Balliol College, has at last brought out his long-promised work on Plato. No man in recent times has had any position in the university at all comparable to that which he occupied as tutor of Balliol. Belief in his manifold merits almost amounted to a superstition amongst the younger generation of Oxford men, and to dispute the excellence of his book would be considered as a flagrant act of heresy. Part of the admiration thus felt is doubtless due to the new master's amiable personal qualities. When a dinner was recently held in London to congratulate him on his new appointment, so many distinguished men gathered to do him honor, and so much warmth of feeling was manifested on all sides, that even a dinner in a London tavern became a touching ceremony. No man ever succeeded in producing a greater impression on a large number of the most rising young men of the day. Under such circumstances, I should fear that, if his book were a bad one, it would still be praised; but of that there can be little real danger. It represents the labors of a man of eminent ability for a period of many years, and though I am not qualified to act as critic in such matters, I should not be afraid to commend it to the attention of your readers. His chief literary rival at the present moment is Mr. Darwin, and everybody whom I have met in London society since the publication of the "Descent of Man" is carefully examining his own and his neighbor's ears, to discover whether they bear that "mark of the beast" which indicates our relationship to the monkeys. In America, I presume, as you represent the most advanced stage of mankind, you will find that it has totally disappeared.

Correspondence.

BERNARD DE MORLAIX AND HENRY VAUGHAN.

To the Editor of the Nation:

Sir: Your review of Fosberry's "Hymns and Poems," in to-day's number, page 223, says that Vaughan's poem—"'My soul, there is a country'—would seem to bear witness that its author was fresh from the reading of the 'De Contemptu Mundi.'"

Bernard's whole poem was printed, says Dr. Neale, in 1556, and again in 1597, 1610, 1626, and 1640, always in Germany. As Vaughan lived till 1695, he *may* have owned or seen one of these editions. He was a good scholar, and one of his books contains translations from Boethius and Casimir.

Still, the mediæval sacred poetry was not known to Englishmen two centuries ago as it is now. Indeed, the revival of that literature, or at least the calling of general attention to it, is purely a work of the last thirty-five years. So far as we may judge by translations, the only Latin hymns which attracted our older poets were a few of the more famous and familiar ones, as Dies Iræ, Veni Creator, and Vexilla Regis, which might be found in any of the breviaries.

Moreover, Bernard's poem covers some three thousand lines, in which few would have thought of looking for the lovely hymn which, scattered here and there, forms but a small portion of the whole. Nor is there any evidence of its being mentioned or noticed in English till Archbishop Trench, in 1849, gathered some of its beauties into a canto of ninety-five lines. From that Dr. Neale made, in 1851, the first translation, embodying the hymns now popular everywhere; and the general fame which the Cluniac poem now enjoys among English readers may be said to have come entirely through that magnificent version.

F. M. B.

Spotswood, N. J., March 30.

Notes.

A library that will be worth the attention of book-collectors is to be sold in Boston (by Messrs. Leonard & Co., 48 Bromfield Street), on Tuesday, May 9, and four following days. Catalogues will be sent on application, for one dollar each. The collection numbers 11,000 volumes, and besides rare works and fine editions of standard works in general literature and bibliography, is notably rich in the departments of Fine Arts, Antiquities and Topography, Natural History and Numismatics—embracing a large number of costly illustrated folios. In periodicals and serial works, both American and English, there is a fine show of full sets.

—On the whole, we doubt if any people, among outside nations, has judged the Franco-German war more correctly than the American. We have not lacked diversity of opinions, but the preponderating sense of the community has steadfastly been, and been declared, in favor of the German side. For most of the open sympathy, indeed, which the French have received, they stand indebted to the accidental conjunction, in this country, of the Catholic faith with the Democratic party—a conjunction which, in New York, had to be respected by the *World*, but in the latitude of the Missouri *Republican* had equally to be disregarded. The natural sympathy and rational judgment of Republicans, it is safe to say, were with the Germans, and such perverse diatribes as disfigured the Boston *Traveller* were quoted chiefly as a curiosity, even while the similar ravings of the Southern press during the rebellion were still fresh in the minds of all. It may be doubted, therefore, whether the successful allegory known as "The Fight at Dame Europa's School," which has created a distinct class of literature in England, would have received much notice here as an original publication. It is amusing reading, it is true, and it is not so obnoxious to human reason and facts alike as the flippant summary of the whole matter given in a late number of the London *Vanity Fair*: "If a man" (we quote from memory) "snaps his fingers in my face, and I retaliate with my fist or my boot, am I [France] to be considered the aggressor?" But it nevertheless takes the same false position of antagonism towards Germany, and of course has made its greatest hit in reproaching England with her neutrality. In this latter question Americans have only a remote, and at most a sentimental interest, due to the satisfaction which they always feel at John Bull's exposure by his own children. Nevertheless, the pamphlet having become notorious and evoked many answers in England, Mr. Brentano doubtless found it profitable to reprint its account of "how the German boy thrashed the French boy, and how the English boy looked on." Messrs. F. B. Felt & Co. also will probably not lose by reprinting it, as they announce their intention of doing, with the aid of Mr. Thomas Nast, who furnishes thirty illustrations. The edition just published by Claxton, Remsen & Haffelfinger, Philadelphia, contains a brief rejoinder.

—The interesting proceedings at the celebration last year of the two hundred and fiftieth anniversary of the landing of the Pilgrims have been published in handsome form by Messrs. A. Williams & Co., Boston. Nearly one-half of the volume is occupied by Mr. Winthrop's oration, which has also been printed separately, from the same types. In this well-considered and finished discourse, the gathering of the "Brownists" in a small district of Yorkshire and Nottinghamshire, the removal of their church under persecution to Amsterdam and subsequently to Leyden, and the Pilgrim departure for America, with the incidents of the voyage until they landed on Plymouth Rock, are all related, from a full knowledge of the facts, and in a liberal and appreciative spirit, without rhetorical or historical exaggeration. Many of the after-dinner speeches contain additions to this picture of the great event celebrated, and still other traits are embodied in the notes which make up the Appendix. Here also will be found stated the reasons why the date of the landing was, some years back, fixed definitively at the 21st instead of the errone-

ous 22d of December, involving an explanation of the change from old to new style that should be kept for convenient reference.

—The second and third annual reports of the Trustees of the Peabody Academy of Science appear under one cover, and give an account of the several institutions now consolidated in this noble foundation. Salem's eminence as a seaport at the close of the last century, and the change wrought on the town by seventy years of progress in the material arts, are well illustrated by the history of the East India Marine Society, of which the famous Dr. Bowditch, himself a supercargo, became a member in 1800. One of its objects was "to form a museum of natural and artificial curiosities, particularly such as are to be found beyond the Cape of Good Hope or Cape Horn;" and no one was allowed to join the society who had not actually navigated the seas near one or other of these Capes, "either as master or commander, or as factor or supercargo" of some vessel belonging to Salem, or, in the case of a resident of Salem, of some vessel belonging to a port of the United States. In spite of these stringent conditions the society had in all no less than 348 members—a total which shows how extensive was the East India trade of Salem before the days of railroads and of ocean steam navigation. One of the most useful departments of the Academy is the Naturalists' Agency—an exchange which perhaps is not as widely appreciated as it should be, although it has met with great success. It is an office for the sale of scientific works on natural history, whether consigned by publishers or authors or by private owners, and for procuring to order works not thus in store. In 1869, when just started, it sold books for authors and institutions to the amount of $3,000, and was enabled to publish Dr. Packard's valuable "Guide to the Study of Insects." The agency has chiefly relied for its advertising on the *American Naturalist*, of which we have spoken often, but not too often nor in too high praise. It is emphatically a periodical for every family—there being no issue of it wholly beyond the comprehension of a boy or girl past twelve years of age, and few in which the young would fail to find many pages to interest and improve them. When the popular scientific lectures which the Academy purposes instituting for the benefit of the County of Essex and for the State at large are successfully established, it is to be hoped that they will have the effect of restoring the lyceum system to its original and legitimate functions.

—The Essex Institute is one, and the most active, of the societies incorporated with the Peabody Academy. Parts II. and III. of Vol. X. of its "Historical Collections" are entirely occupied with an elaborate genealogy of the Hutchinson Family, from which the well-known singers were derived; and with an account of the origin, first cruise, and subsequent career of the frigate *Essex*, by Capt. Geo. Henry Preble, U.S.N. There is good reason for writing the annals of this famous ship, as it was the first United States vessel to round Capes Horn and Good Hope, and to capture an English armed vessel in the war of 1812; as she was the patriotic loan of the citizens of Salem, who built her, to the national government; and as with her are associated the names of Captain David Porter, father of the present admiral, and of Admiral Farragut, who first served as a midshipman in her. The *Essex* was fated, after she was captured in Valparaiso Bay in 1814, to form part of the navy of Great Britain; in 1833, to be a convict-ship at Kingston, Jamaica; and finally (so far as is known) to be sold at auction, with other vessels, at Somerset House, by order of the British Admiralty, July 6, 1837—up to which transfer she had retained her name. It may properly be said here that the story which freighted the *Mayflower* with a cargo of slaves for Virginia after she had brought over the Pilgrims, has no foundation outside the brain of the genius who thought it a clever invention to make the same vessel an instrument in bringing to this country the two elements, of liberty and slavery, which were afterwards to strive for possession of the continent. Some orators have found the fiction a convenient one. The *Mayflower* twice visited these shores after her immortal voyage—as one of four which brought Mr. Higginson and his company to Salem in 1629, and of the fleet which bore John Winthrop and the early settlers of the Massachusetts Colony in 1630.

—We were, it seems, too sweeping in our assertion, when speaking lately of the revision of the English version of the Bible now in progress, that no American, German, or Jew had yet been called in. This was true, in the limited sense that none had been asked to take an active part in the revision, as a member of any of the several "companies;" but from the debate in the Upper House of Convocation, which we had not seen at the time, it incidentally appears that a circular has been sent to each of the American bishops, proposing to send them proofs of the amended version for criticism by themselves and such other scholars as they may see fit to submit them to. Possibly a similar circular has been distributed on the Continent. In either case, the efficacy of this sort of co-operation will depend, apart from the scholarship of the bishops themselves, on their liberality, as to which they are likely to suffer from a very bad example; and it does not relieve the whole scheme of revision from the exclusiveness in which it was begun and by which it has been marked at every stage.

—The latest German publications still suggest, by the absence of works of universal interest, the state of war that is but just passing away. Carlyle's "Life of Cromwell" has furnished the basis of a work on the same subject by Dr. B. T. W. Stroeter; and Tennyson's "In Memoriam" has been poetically translated by R. Waldmüller-Duboc, with the title "Freundesklage," which is accompanied by a critical appreciation of the English poet. Friedrich Gerstäcker appears as an historian of the Maximilian tragedy in a work of four volumes, entitled: "In Mexico. Charakterbild aus den Jahren 1864–67." Two historical annuals are worth examining: the *Europäischer Geschichtskalender*, of Schulthess, Vol. X., which includes occurrences in North America also, for 1869; and the *Geschichtskalender* of Karl Schlosser, which is in its second volume only, but takes in the whole of the past eventful year. Prof. Dr. von Holtzendorff, with many learned associates, has begun the publication of a popular cyclopædia of jurisprudence ("Encyclopädie der Rechtswissenschaft"), which may be pronounced excellent in advance. "Rom und seine Umgebung" consists of text by Prof. Dr. Kühne, and of wood-cuts from sketches and studies made in Rome and its vicinity by Karl Zimmerman, during many years' residence on the scene. Friedrich Kapp's new work is entitled: "Frederic the Great and the United States of America: With proposals of reform in the existing maritime law." This work, we believe, completes the series so ably conceived and executed by Dr. Kapp, with the design of tracing Germany's share in the establishment of this republic, and in building it up by emigration. We believe Dr. Kapp does not cherish any illusion as to the ultimate absorption of the German population in this country, an amusing instance of which is given by the *Westliche Post*. The following letter, it says, is copied verbatim, and was written in Roman script:

Racine, 15 Martz '71.

Mein Freund:—Oxkoose me dat I Schreib you in Englisch. Ich habe so long stadt in Visconsin gewont, das ich alredy twise have gevoted. Das Englischer steet mir so vor dat I can not hardly schweiz any deutsch no more.

Mein adresse est zwei mile from Racine in busch. So you send it nach der postmeister, I get em.

—The Germans, in reviewing the achievements of the late war, rightly place among the foremost the equipment and mobilization of a force of 500,000 to 600,000 men in the space of seven days, and their marching into strategic position on the line Trèves-Landau in six more. Subtracting this interval preceding actual hostilities, together with the period of inactivity caused by the armistice, from the 210 days of war (from July 19, 1870, to Feb. 16, 1871), there remain 180 days, which were signalized by 150 engagements of more or less importance, 17 great battles, the reduction of 26 fortified places, and the capture of 11,650 officers, 363,000 privates, over 6,700 cannon, and 120 eagles or flags. Distributing these statistics, it appears that nearly every day there was an engagement (*Gefecht*), every ninth day a battle (*Schlacht*), every sixth day a fortress taken; while the daily average of prisoners of war was 65 officers and 2,070 men, and of captured cannon 38—two flags being captured every three days. These figures are not to be accepted implicitly, as it is impossible to ensure their correctness; but they probably fall short of the truth.

—Toscanelli is an Italian Deputy belonging to the small minority of Papists who in vain endeavor, in their places in Parliament, to resist the logical sequence of the taking of Rome. In discussing the second chapter of the Papal Guarantees Bill, the other day—that defining the future relations of the church to the state—the honorable Toscanelli had the floor; and after broadly affirming that "in no country in the world is religion divorced from the state," the orator, in the language of the official report, "went on to speak of the practice of religion in America and of its relations to civil society." The United States had been frequently cited in the debates as an example of the benefits of religious freedom, and it was time that somebody should correct this mistaken notion. Toscanelli was equal to the occasion. "In America," said he boldly, "every man is free to choose the religion that suits him; but choose he must; and when he has chosen, he is obliged to share in the ex-

penses of his form of worship, in the religious instruction, and in all that contributes to the growth of the denomination. Thus religion is never abandoned to itself with the danger of seeing it succumb." At this point the speaker was interrupted by an impertinent colleague (the honorable Macchi), who enquired where he got his news, and declared he had invented it. Without deigning to reply, Toscanelli proceeded: "In other countries (*altri paesi*) being an atheist excludes one from all public offices. I refer to Mississippi." We can only account for the "*ilarità*" which followed this last remark on the supposition that the rest of the Chamber had paid some attention to American geography.

PARKMAN'S CONSPIRACY OF PONTIAC.*

THE "Conspiracy of Pontiac" holds so well-established a position as an historical composition of high rank, that any additional words in regard to it might seem superfluous. Nevertheless, the appearance of a new edition, in which much fresh material has been incorporated, gives an opportunity to look back over the nineteen years of Mr. Parkman's historical labors, and form an estimate of the book from a new point of view. Its author, who was then a young and unknown writer, now occupies a distinguished rank among American historians; and a review of these years shows, on the one hand, that the high expectations raised by his first venture have been amply fulfilled; and, on the other, that this first venture was every way worthy of his later reputation. There is in it nothing crude or unfinished; but in clear-sightedness, firmness of touch, and maturity of judgment, the book fully deserved the success which it achieved. It has appeared, too, from his subsequent works that not merely this particular subject, but the general field of labor, was selected with a definite purpose; and he tells us in the preface to the present edition that he hopes to continue his historical series "to the period of the extinction of the French power on this continent," in which case this work will form the closing volumes of the series. The few repetitions which will necessarily be found in a book which was first written as a complete work, but is last in order in the series, will be no serious disadvantage.

Pontiac's War appears such a mere episode in American history that Hildreth's History, for instance, gives only three pages to it, in which the name of the chief is but once mentioned. For this reason, it was all the better adapted to the special treatment which it has received from Mr. Parkman. With all the variety and romance of Indian warfare, it had all the freshness of a new story. He selected this topic, he tells us, "as affording better opportunities than any other portion of American history for portraying forest life and Indian character," and for this purpose the episodical character of the event would be no drawback. But he has shown that it was by no means a mere episode; that it was closely connected with the great war which it followed, and was, in reality—as this book will be in his series of histories—a sequel to the brilliant and heroic, but unsuccessful, career of France on this continent.

This point, which is the leading historical idea in the book, is traced by the author with great clearness. The preface foreshadows it by pointing out the vital importance of that event—the conquest of Canada—"which rescued the vast tracts of the interior from military despotism, and gave them eventually to the keeping of an ordered democracy." The second chapter takes up the theme again, in an admirable sketch of the two opposing forms of civilization represented respectively by the Canadian French and the New England Puritans, which were to struggle for the possession of the continent. Then follow the collisions and complications which were sure to arise between two such neighbors, and a brief and graphic account of the war which established the English power and led to the outbreak of Pontiac. A single sentence in the second volume, p. 252, brings vividly before the reader the nature of the change which had been effected, and the contrast in the two classes of settlers. Speaking of the creoles of Illinois, we are told that "when, after the War of the Revolution, the Illinois came under the jurisdiction of the United States, the perplexed inhabitants, totally at a loss to understand the complicated machinery of republicanism, begged to be delivered from the intolerable burden of self government, and to be once more subjected to a military commandant." No wonder such people as these have been swallowed up and forgotten in the stream of immigration that has swept over the country. These French colonists who first opened the great West, and who laid the foundations of many of its most thriving cities, have left few traces behind them—a few graceful names of towns and rivers, and a few old Catholic families still clinging to their old homes.

The events told in this history have, then, a dignity and an importance of their own, and are worthy of the manner in which they have been narrated. This, the first considerable work of the historian, was the result of the most thorough training and the most conscientious preparation. He was fortunate in possessing, as his preface relates, a preparation of two kinds—one that can be got from books, and one that cannot, but only from actual life among the savages of the forest. Even this double preparation would not have been sufficient. There is enough intrinsic interest in the story to engage the attention, however told; but we have before us not merely a well-told story, but a finished work of art. Every line shows study and training, and could only have been the production of a man who knew what good work was, and had all his powers well in hand. Indeed, the execution of the work may be pronounced almost perfect, and if it falls short of being a history of the first rank, it is not from any defect of the writer, but because a work of the highest order requires a subject of the highest order. In the plan of the whole, and the relation of the several events to each other, and to contemporaneous events, in the dramatic development of the plot, in the vivid personality of the actors, in the animated narrative and picturesque descriptions, in the just and appropriate observations introduced when called for, but not forced in—in all these qualities of an historian, Mr. Parkman is conspicuous.

Next to the relation pointed out between Pontiac's conspiracy and the development of the Anglo-American power on this continent, a second peculiar merit of this book is its delineation of the Indian character and customs, which is in every way satisfactory. It is contained in the introductory chapter, and in various notes and remarks in the body of the work—the whole copiously illustrated by the events of the war itself. We quote one or two passages which have attracted our attention: "An Indian council, on solemn occasions, is always opened with preliminary forms, sufficiently wearisome and tedious, but made indispensable by immemorial custom; for this people are as much bound by their conventional usages as the most artificial children of civilization. . . . An Indian orator is provided with a stock of metaphors, which he always makes use of for the expression of certain ideas. Thus, to make war is to raise the hatchet; to make peace is to take hold of the chain of friendship," etc. (vol. ii., p. 226). Again, p. 296: "A language extremely deficient in words of general and abstract signification renders the use of figures indispensable; and it is from this cause, above all others, that the flowers of Indian rhetoric derive their origin. . . . The Indians are much pleased when white men whom they respect adopt their peculiar symbolical language—a circumstance of which the Jesuit missionaries did not fail to avail themselves."

We copy, also, the following striking example of Mr. Parkman's descriptive power:

"In the calm days of summer, the Ojibwa fisherman pushes out his birch canoe upon the great inland ocean of the north, and, as he gazes down into its pellucid depths, he seems like one balanced between earth and sky. The watchful fish-hawk circles above his head; and below, farther than his line will reach, he sees the trout glide shadowy and silent over the glimmering pebbles. The little islands on the verge of the horizon seem now starting into spires, now melting from the sight, now shaping themselves into a thousand fantastic forms, with the strange mirage of the waters; and he fancies that the evil spirits of the lake lie basking their serpent forms on those unhallowed shores. Again, he explores the watery labyrinths where the stream sweeps among pine-tufted islands, or runs, black and deep, beneath the shadows of moss-bearded firs; or he drags his canoe upon the sandy beach, and, while his camp-fire crackles on the grass-plat, reclines beneath the trees, and smokes and laughs away the sultry hours in a lazy luxury of enjoyment.

"But when winter descends upon the north, sealing up the fountains, fettering the streams, and turning the green-robed forests to shivering nakedness, then, bearing their frail dwellings on their backs, the Ojibwa family wander forth into the wilderness, cheered only on their dreary track by the whistling of the north wind and the hungry howl of wolves. By the banks of some frozen stream women and children, men and dogs, lie crouched together around the fire. They spread their benumbed fingers over the embers, while the wind shrieks through the fir-trees like the gale through the rigging of a frigate, and the narrow concave of the wigwam sparkles with the frostwork of their congealed breath. In vain they beat the magic drum, and call upon their guardian manitoes—the wary moose keeps aloof, the bear lies close in his hollow tree, and famine stares them in the face. And now the hunter can fight no more against the nipping cold and blinding sleet. Stiff and stark, with haggard cheek and shrivelled lip, he lies among the snowdrifts, till, with tooth and claw, the famished wild-cat strives in vain to pierce the frigid marble of his limbs. Such harsh schooling is thrown away on the incorrigible mind of the northern Algonquin. He lives in misery, as his fathers lived before him. Still in the brief hour of plenty he forgets the season of want, and still the sleet and the snow descend upon his houseless head."

* "The Conspiracy of Pontiac and the Indian War after the Conquest of Canada. By Francis Parkman." Sixth edition, revised, with additions. Boston: Little, Brown & Co. 1870. 2 vols. 8vo, pp. 367 and 384.

Guizot pointed out long ago how the institutions and customs of the North American Indians illustrated those of the German barbarians; and the description given by Mr. Parkman affords some further points of comparison. The well-known expression of Tacitus (Germ. VII.), "Reges ex nobilitate, duces ex virtute sumunt (they choose their kings by birth, their chiefs for merit)" finds an exact parallel. "The sachem is the civil chief, who directs the counsels of the tribe, and governs in time of peace. His office, on certain conditions, is hereditary [descending often by the female line, another point of partial analogy with German usages]; while the war-chief, or military leader, acquires his authority solely by personal merit, and seldom transmits it to his offspring. Sometimes the civil and military functions are discharged by the same person, as in the instance of Pontiac himself" (vol. ii., p. 217, note). It was these war-chiefs, *duces* (rather than the hereditary kings, *reges*), says Guizot, that led the bands of German invaders into the Roman empire.

An analogy with the classic institution of *hospes* is found in the interesting story (vol. i., p. 334) of the friendly attachment conceived by an Ojibwa chief, Wawatam, for the trader Alexander Henry—an attachment which resulted in saving Henry's life. Another interesting class of enquiries—that of the family origin of political associations—is illustrated by the social institution, described in vol. i., p. 4, of the division of Indian communities into clans, "independently of their local distribution into tribes, bands, and villages," each clan having its emblem or *totem*. We say this illustrates the discussion rather than that it upholds any special view; the clan here was not developed into a nationality, as appears to have been the case in some communities. Again, the description of the religious belief of the Indians, on p. 39, might very well apply to the primitive belief of the Greeks and Romans. "To the Indian mind, all nature was instinct with deity. A spirit was embodied in every mountain, lake, and cataract; every bird, beast, or reptile, every tree, shrub, or grass-blade, was endued with mystic influence; yet this untutored pantheism did not exclude the conception of certain divinities, of incongruous and ever-shifting attributes." We do not mention these points of resemblance as showing identity of origin, or any borrowing of ideas and institutions; they only afford another proof of a still deeper fact, the *essential* identity of human nature, and its tendency under similar circumstances to produce similar results.

The additions to the present edition are chiefly in the form of footnotes, giving copious extracts from a mass of correspondence of officers and others, recently added to the British Museum. They contain, among other things, "the proposal of the commander-in-chief [Sir Jeffrey Amherst] to infect the hostile tribes with the small-pox, and that of a distinguished subordinate officer to take revenge on the Indians by permitting an unrestricted sale of rum."

CURTIUS'S HISTORY OF GREECE.*

THE German scholars have done more than those of any other nation to advance the knowledge of Greek history. They have investigated every point and question belonging to it with characteristic diligence and thoroughness. They have covered the entire field with special treatises of the highest value. But, strangely enough, until of late they have left it to the English to treat the history of Greece as a whole. For the comprehensive works of Thirlwall and Grote, they had none to show of similar extent and character. This deficiency Professor Curtius has undertaken to supply. His "Griechische Geschichte," published in three volumes, from 1857 to 1863, presents a connected view of the Grecian world, in its history and progress, from the earliest times to the loss of national independence. It is a work of acknowledged merit, which does credit both to the scholarship of its author and to his literary powers. It has not, indeed, the fulness of its last and greatest English predecessor; yet the difference in this respect is not so wide as might at first be imagined. The three volumes of the German book seem likely to make five in the translation—five stout duodecimos of some five hundred pages each. Grote, in the American reprint, has twelve duodecimos; but a large fraction of the space is occupied with the notes, of which Curtius has scarcely any.

This want of notes we must regard as a defect of the book before us, considered even with reference to the general reader. He needs to know the principal authorities for the narrative he is reading; and in Grote he cannot help seeing their names, as cited at the foot of each page. He needs to know whether the statements of the author are admitted and certain, or doubtful and controverted. It has always seemed to us one of the chief advantages of Grote's history, that the reader is made to understand so clearly the nature of the ground over which he is passing. If this is of questionable soundness, the notes warn him of the fact, by presenting the dissentient opinions of other writers and the arguments on which they rest. In Curtius, on the contrary, he is carried smoothly along over all manner of difficulties and uncertainties; not because the author has any wish to hide the real condition of the track, but because the notes in which he might show it, without breaking in on the course of narration or description, were excluded by the plan of the work. We have the same complaint to make of Mommsen's "History of Rome," which belongs to the same series of hand-books. The value of that great work would be largely increased by a series of notes which should give constant references to authorities, point out what is peculiar in the author's views, and defend them from actual or possible objection.

In the volume under review, the want of such notes is the more sensibly felt from the nature of its contents. It is occupied mainly with what may be called the ante-historical history of Greece. It deals with times concerning which we have no knowledge, obtained, directly or indirectly, from contemporaneous documents. What the Greeks believed in regard to those times was a mass of legendary stories, remarkable for extent and variety. In their treatment of these stories, there is a wide difference between Grote and Curtius. The former gives them a place in his history, rehearsing them, with all their intermixture of supernatural persons and events, just as they were accepted by the Greeks themselves. He does so because these tales, having possession of the Greek mind, exerted a sensible influence on the conduct of the people, on the course of their history and politics, in later periods. He does not attempt to extract history out of them by critical process. That there may be historical elements among them, he is ready to admit; but he denies, in general, that there are any criteria by which these elements can be distinguished from the fancies and inventions with which they are mingled. It is only where they receive confirmation from the facts of recorded history—as the legends which relate to Ionian and Dorian migrations—that he treats them as furnishing material for the historian. Curtius, on the other hand, does not give the legends themselves; but many of his statements are founded upon them, the fact stated being regarded as implied in the legend, as necessary to account for its existence or character. This method, however, is attended with serious dangers. It gives wide room for subjective tendencies. What one finds in the myths depends very much on what he brings to them. Whatever ideas he may have formed as to the primitive states and early changes of Greece, he can always find confirmation for them in this huge aggregate of confused and fluctuating traditions.

The view of primitive Greek times set forth in this volume is largely affected by a theory which the author himself proposed, more than fifteen years ago, in his essay entitled "Die Ionier vor der Ionischen Wanderung," and which is not yet accepted by many of those who are best able to judge it. Everybody knows that a large and important section of the Greek race was settled on the western sea-coast of Asia Minor and in the neighboring islands. Their establishment in these regions was ascribed by the unanimous voice of Greek tradition to a colonization from European Greece, and especially from Attica, from whence the so-called Ionian migration was supposed to have taken place about ten centuries before the Christian era. But Curtius is persuaded that, for many ages prior to that time, Greeks—Ionian Greeks—were occupants of the Asiatic coast, that the Ionians of European Greece were colonists from Asia, and that those who took part in the Ionian migration, just mentioned, were only returning to their native seats to find in Asia a population more nearly akin to them than the Æolians and Dorians whom they left in Europe. It is true that Greek tradition knows nothing about any such primeval Ionians of the Eastern world. But Curtius finds them in the stories of Cecrops and Danaus and Cadmus and Pelops, whom he holds to have been real Ionians, though described in the myths as Egyptian, Phœnician, Phrygian, because they chanced to have been in these countries before they came to Europe. We see here how elastic these legends are in the hands of the historical critic, and how readily they lend themselves to the requirements of his theories.

Curtius is strong as a geographer. The power which he showed in his earlier book on Peloponnesus appears again in this history. The descriptions of mountain ranges, river valleys, sea-coasts, and other natural features of the Greek lands, are exceedingly vivid; and the effects produced by the formation of the country on the civil and social relations of the

* "The History of Greece. By Professor Dr. Ernst Curtius. Translated by Adolphus William Ward, M.A., Fellow of St. Peter's College, Cambridge; Professor of History in Owens College, Manchester." Vol. I. New York: Charles Scribner & Co., 654 Broadway. 1871. 12mo, pp. 509.

people are exhibited in a very striking manner. As a political thinker, it is no disparagement to Curtius if we find him inferior to Grote. For in this respect Grote stands by himself, without equal or rival among all who have written about Greek history. His strong grasp of the actual world, his power of conceiving the practical operation of political forces and institutions, his knowledge of politics, present and past, on which he can always draw for illustrations of Greek affairs—are points of superiority which even those must recognize who can least sympathize with his democratic tendencies. They make his book an indispensable help, a perennial fountain of instruction for the scientific student of politics. It should be added that Curtius, if not so much a friend of democracy as Grote, is yet thoroughly liberal in his thinking, and sympathizes with Athens as against Sparta in the great struggle between them, which decided the destinies and ruined the hopes of Greece.

The volume before us, the first of the translation, brings the history of European Greece to about the year 500 B.C. The general reader will find it less interesting than those which are to follow it. Occupied mainly with the movements of population and the changes of institutions, it has little to say of individual men, their characters and actions, their successes and failures. But from this time on, the material becomes more abundant, and the writer will be able to give his narrative the charm of a personal interest.

In his English translator, Curtius has been less fortunate than Mommsen. The German style of the latter, though singularly vivid and expressive, has not the easy flow, the grace and clearness, which mark that of Curtius. But one who judged from the translations only, would be apt to think of the two writers as having quite the contrary relation. Dickson's Mommsen is easier reading, Ward's Curtius decidedly harder, than the original. We note a few points which have struck us in turning over the volume. On page 9, "*complexes* of land" seems a strange expression for the immense plains which are intersected by the Ural range: the German here has *Landmassen* (masses or bodies of land). On page 21 occurs "the *multiplicitous* formation of its territory;" where *various* or *diversified* would have been more English. On page 35, we read: "The character of the Doric dialect becomes more clearly marked by contrasting with it the Ionic form of [the] language, *with which countries with a long extent of coast line are especially familiar*." The words italicized would be more literally and adequately rendered: "Which had its home chiefly in long stretches of coast-land." On page 135, the translation speaks of "the *northern* shore of the Corinthian Gulf," where the southern shore is evidently referred to. The original has "the northern shore [of Peloponnesus] *along* the Corinthian Gulf." On page 228, we find: "It is true that [the] natural boundaries could *impossibly* be more accurately defined than there," etc.; which may be corrected by changing *impossibly* to *nowhere*. It is said, page 307, that "in Argolis the mighty popular movement . . . first *made way*," which would suggest the idea that it *yielded* or *receded*. The meaning is, "first found a course for itself," "first broke out in action" (*sich zuerst Bahn gebrochen*). And in the next sentence we read of "a royal power, which seemed *to terminate in a new course* the history of the entire peninsula." The German says simply, "to give a new turn (*eine neue Wendung zu geben*) to the history of the entire peninsula." On page 17, it is stated that "From Thermopylæ straight across to the Corinthian Gulf the distance is less than *six* miles." A footnote says that these are *geographical* miles, by which the English reader would naturally understand *English* geographical miles, sixty to the degree of latitude; whereas the German miles have four times this length, and the distance described in the text is twenty-four geographical, or twenty-eight statute, miles.

THE MAGAZINES FOR APRIL.

Lippincott's is the April magazine which is best worth the attention of such magazine readers as are of the better sort. It is in fact very well worth the attention of readers who are not to be classed among magazine-readers at all. The opening article is one entitled "Wild Ireland," by a writer who gives his name as B. Doubavaud, a signature new to our periodical literature, and though apparently not very much used to the pen, nevertheless succeeds in throwing over his simple narration of sufficiently commonplace events, and his account of personages not at all unfamiliar, a good deal of the charm which makes William Carleton's stories so admirable and so taking. Mr. Doubavaud, going into the wild west of Ireland, makes the acquaintance of an amiable parish priest, of a common enough type, who is the guide and pastor of a few poor peasants living among bogs and mountains close upon the sea. Here he hunts and fishes with the priest, listens to the people's talk, and notes their ways, or sits over the turf fire with his reverence, who is not above brewing punch, and who tells stories, comical or tragical. With this kind of writing we are all familiar, or rather we are all familiar with similar scenes and incidents and personages; for, as for Mr. Doubavaud's way of handling them, it is very unconventional and without art, and extremely agreeable in its unliterary naturalness. Not that what he gives us is much, but there is something unfailingly pleasant in the contemplation of the sort of simple life which such sketches as these depict.

On a very much higher level is the third article in the magazine, a translation of Ivan Turgeneff's tale entitled "Mou-mou." Like everything of Turgeneff's, it is deeply tragical; but, as is often the case with this writer, there is a poetical element which relieves the sombreness, and which brings it about, as we think we find, that the effect which he produces is not, on the whole, depressing; unprosperous and sad though his conclusions may be. Perhaps it is that he so surely in every case gives us, amid much that may be base, sordid, cruel, and unhappy, some aspect of human nature which is so lovely or so strong that we cannot but feel in the end elevated and strengthened. Even the cruel inscrutableness of fate, and man's subserviency to it—a thought very familiar to Turgeneff's mind—is in a way very elevating and stregthening, to many natures at least. And were it not, we should say that this writer has never presented it without, as we have said, giving us at the same time some vivid presentation of some beautiful or strong quality in the victim which causes us to rise unsaddened and even braced. This is to be truly tragical in the best sense. Compare, or rather contrast, with this the effect produced by the reading of another great master of the sombre and tragical, Hawthorne. Turgeneff's very great merits as a poet, as a delineator of character, as a thinker, and as a story-teller it would be well if our reading public appreciated more fully than it does. This tale of "Mou-mou" is a simple little thing as regards its story, and will be best enjoyed by readers who have some training in the reading of poetry, and not so much enjoyed by those who care more for novels strictly so-called. These latter may better begin with some of the larger works. "Mou-mou" treats of some passages in the life of a Russian serf, a gigantic deaf-mute, Garassim by name. It is exquisitely pathetic and beautiful with true beauty, both in the few and slight details and in the main conception. We hope the editor of *Lippincott's* may have more such in store, and that the demand for them may justify the publication of many of them. Perhaps this may be doubtful. Still, we are of opinion that about one-half, or say two-thirds, of the present number of vapid, abortive little love-stories which our magazines furnish us would abundantly supply the whole demand. How many stories, now, for instance, like "He, She, and It"—a dismal little piece of unreality and weakness in this same number of *Lippincott's*—should the *Atlantic*, *Galaxy*, *Harper's*, *Scribner's*, *Lippincott's*, and *Old and New* give us in the course of a twelvemonth?

But the article which will most interest the men whom our editors, catering for the feminine audience which they seem to have in view, still retain among their readers, is an essay with the title "Charles Francis Adams." There is, perhaps, a little less of Mr. Adams in the body of the essay than the title of it would promise, for the author has taken occasion to give a brief digest of the political history of the State of Massachusetts in the days when the famous old Free-Soil party was in existence, and in those later days and worse days when the men who now control Massachusetts merged the Free-Soil party in the Republican. Apparently the writer was a part of that which he relates: and it is plain to be seen that for some of the men of whom he speaks he entertains a most sincere contempt. As a result of his knowledge and of his indignation, we get a highly readable essay. Not that there is any violence in it, or anything that seems to us unjust or unduly harsh or in any way undignified. On the contrary, it is dignified and restrained, and, it seems to us, perfectly fair as well as able. It is, indeed, a very good paper, both for its matter and for the feelings it expresses as well as for the manner of its expression, and may be profitably read by various people.

It begins by recounting that Mr. Adams was born in Boston, in 1807; that, still an infant, he was taken abroad by his father, and that when he was ten years old he was sent home to receive his education in his native country. He graduated at Harvard College in the summer of 1825, and in 1828 was admitted to the bar. At about that day, politics had got down to the Jacksonian level, and the time had nearly come, whose coming has since been so much lamented, when young men of high character and sound learning had begun to decline to become candidates for public

honors and trusts, and Mr. Adams's early manhood was spent among his books. Connected as his family had been with the history of the country, it was next to inevitable that his studies should be in politics and statesmanship. He wrote for the newspapers also, and at one time in his life he even occupied, for a few months, an editorial chair; but publishing a pamphlet would seem to have been his usual way of exerting an influence on his fellow-citizens. Not long after 1840, when Mr. Adams was thirty-three years old, Boston, the capital of the Whig party—the Boston of the Lawrences and Amorys and Winthrops and Everetts and Ticknors, who used to spin cotton and disbelieve in State rights and send Mr. Webster to Washington—began to have two sorts of Whigs. Cotton Whigs was the name of one sort and Conscience Whigs of the other, and to these last Mr. Adams belonged. "The Cotton Whigs," says our author—speaking of the year 1841, when, everywhere, talk had begun to be made about annexing Texas, and when Mr. Adams was in the Massachusetts House of Representatives—"the Cotton Whigs, whose policy was to say little and act stealthily, could scarcely be said to have a leader in the State legislative halls; and if they had it would be scant charity now to revive his name. Of the Conscience Whigs, no name told for more than that of Charles Francis Adams." The essay goes on to give, with some minuteness, the story of the struggle between those Massachusetts Whigs who were opposed to the extension of slavery and those who, for various reasons, some honorable and some not honorable, some neither honorable nor dishonorable except as timidity and want of brains are dishonorable, were earnest that the North should stop talking about the negro and its duty to him; should be charitable in its view of such acts as the South might find it necessary to do for the conservation of its peculiar institution; and, meantime, should itself strictly observe the Constitution.

There was enough of latent hostility between the two sections of the party before 1845, but it was not until that year that there was an open quarrel. The Southern politicians had then not quite carried to a successful termination their plan of annexing Texas, and there was, on the part of certain Massachusetts men, the strongest desire to save, if that were possible, the committal of the party to the scheme dictated by the Southerners. Should it turn out not to be possible, they had pretty well determined that there should be a new party. Mr. Adams, Mr. E. R. Hoar, Mr. Stephen C. Phillips, Mr. Henry Wilson, Mr. Charles Sumner, Mr. Charles Allen, of Worcester, were the Conscience Whigs who had come to this decision; and they by-and-by offered to the Cotton Whigs so incontestable a proof of their sincerity—a proof, indeed, so almost incredible to the Boston of thirty years ago—as gathering together in council with "abolitionists" and the people of the Liberty party. The gentlemen above-mentioned, with one or two more, among whom was Mr. J. G. Palfrey, the historian of New England, met in consultation with Mr. Whittier, Mr. Wendell Phillips, Mr. Garrison, Mr. John Pierpont; and it was decided to raise a committee of fifty and organize meetings which should call out an expression of opinion on the merits of the annexation scheme. This was really the death of the Whig party, and was more or less clearly seen to be such by the Cotton Whigs, who at once began making such an exhibition of "bloodthirsty love of life" as is still very well remembered by every one old enough to remember anything of the politics of that day. In 1847, the Free-Soilers, as the members of the new party called themselves, met in convention at Buffalo, Mr. Adams being put in the chair, and made their first nomination of a candidate for the presidency. It was not a nomination of good omen, Mr. Van Buren's being the name selected; and the Massachusetts men who consented to the choice of that gentleman, saturated as he was with the reek of New York politics, may very likely have bethought themselves of the omen when, a few years afterwards, the control of the party of freedom in Massachusetts was got out of the hands of men like Mr. Adams and Mr. Palfrey and Mr. Hoar by men like Mr. Banks, Mr. Burlingame, and Mr. Wilson. "A worse thing than defeat," says our writer, "befell the generous Free-Soil party of Mr. Adams's State. There was a portion of it too impatient of present ill success. . . . It soon appeared that Mr. Wilson and some others differed from Mr. Adams and some others in respect to the further course incumbent on the baffled friends of freedom. Mr. Adams had great faith in principles, and not so much in expedients, and in some sorts of plausible expedients he had no faith whatever. Mr. Wilson looked more to quick achievement, and was less averse to instrumental inconsistencies and indirections." Rather plainer language the writer uses further on, where he speaks of the time when Mr. Wilson, while the regular candidate of the Free-Soilers for the governorship of Massachusetts, withdrew himself from the service of his party a fortnight before the election, and presently was made senator. Plain language, too, is that which he uses when he speaks of the famous coalition between the new Free-Soil leaders and the Democrats which made Mr. Boutwell governor, and gave us his gubernatorial address in defence of the Fugitive Slave Bill, and which, by the way, did not—as many have said that it did—make Mr. Sumner senator. The Democrats were not true to their engagement, says our author, and Mr. Sumner was elected, after many weeks of struggle, by a change in the vote of a certain Whig representative whose constituents "instructed" him.

However, we are devoting too much space to this instructive essay, which should itself be read. Alike by what it tells of the character and labors of the eminent citizen who has on so many occasions done his country such able service that he has probably the best title to be considered the foremost of living Americans—alike by what it tells of his courageous, high-minded, patriotic life, and by what it reveals of the men who in our most enlightened State have taken the place of him and his like, this essay is to be commended to attention. It will be a good day when we see the last of certain tottering reputations which the people are just now beginning to inspect, and this writer in *Lippincott's* has here done something to bring it on a little sooner. We hope he will do more work of the same kind. He does not tell his name; but it is apparent that he has an intimate knowledge of the means and methods by which their present place was obtained by a dozen or so of men who, for the last fifteen years, have been disgracing our politics. Nothing hurts these men like the out-and-out truth clearly stated. When we see General Butler returned to Congress from the oldest settled part of the country of the Puritan founders, one is ready to abate one's hopes of reform. But still the truth is an overmatch for any of them. And we may profitably remember that if there had not been some plain speaking from various quarters, General Butler would be a good deal surer than he is of being Governor of Massachusetts next winter, and would not be so willing to give up Washington for that purpose.

In the *Atlantic*, Mr. Fields has more to tell about Hawthorne. We confess, for our part, to liking that author less with each month's disclosures concerning him; which is perhaps a confession that Mr. Fields is doing the public a service in making them. It appears to us that Mr. Fields's judgment was sound when nine years ago he suppressed Hawthorne's description of Lincoln. To our mind it does little credit either to its author's taste or his discernment.

Mr. Henry James brings to an end his story, to call it so, of "A Passionate Pilgrim." Like everything else of his, it is done with care and pains, and with literary skill. Perhaps with a literary skill which is somewhat too obvious in some passages to suit some tastes; but to us enjoyable—and often very highly enjoyable. This of the outside merely. We cannot say that we think Mr. James has succeeded with the weightier matters. Clearly it is not skilful in a novelist who would have us believe in the existence of his personages to draw character as the characters of the three Searles are here drawn. The only person who gives the reader the impression of being a probable human being is the man who wheels the Bath chair about. Searle, the passionate pilgrim, is a man with no root of will in him, who at first pursues pleasure with profuse carelessness, and then, having reduced himself to poverty or something near it, allows his later years to slip away, he drifting and dreaming and aimless, tired of himself, and taking a sort of sick satisfaction in confessing to himself that he is a failure, dying slowly from mere inanition apparently, and having, at the time when we make his acquaintance, only this left of his old capacity for enjoyment—that he passionately feels the charm of the old, the settled, the calmly beautiful, that breathes repose into all his being. England, rural England, with nothing to remind one of that stir and stress of life which in new, busy, practical America constantly offends his sense of beauty, and tells him, too, of the failure he had made; England with her green lanes of immemorial age, with its abbeys, with its softer and more sheltering skies than ours, is what he craves. To England he has gone, then, and is there resting his weary soul when the story-teller discovers him. Now in all this there seems to be nothing that does not well reflect a certain state of feeling with which the American, especially if he be of imaginative and artistic mind, is often apt to regard the old country. But Mr. Searle stands for this alone; except this there is nothing of him; he is the mere incarnation of this one human trait. The other Mr. Searle, too, taxes credulity. So, too, are the main incidents of the story improbable, and two or three of them needlessly clumsy in their improbability; as for instance the deaths of both the cousins; the fierceness and unreasonableness of the elder of them; the behavior of Miss Searle.

Miss Searle, by the way, is, in this respect at least, like most of Mr. James's heroines, that the account given of her—we do not mean of her personal appearance, which is, as usual, done with skilful particularity—will not please his female readers. Why not, it would be difficult, but doubtless not impossible, to tell; as it would be difficult but not impossible to explain how it happens that Mr. James's heroines are more recollectable than his heroes. But we have not space to enter on a discussion of these matters here.

"Count Rumford," by Mr. Edmund Quincy, is an agreeable article, which treats of a man who begins to be better known to his countrymen than he has been, and which calls the attention of readers to the excellent work by Dr. G. E. Ellis, who has written and compiled the Yankee Count's biography. Another good article is that by Mr. J. K. Hosmer on Prussia. "The Giant in the Spiked Helmet" is the title of it. We should call it too enthusiastic in its praises. We submit that, after all, we need not insist on all the world turning Prussian just yet.

Mr. "Mark Twain" bids farewell to the readers of the *Galaxy* this month, and will be regretted by a good many of them, ourselves, we confess, among the number. For while, like all other professional "American Humorists"—about as odd a profession, by the bye, as has ever been seen—he was sometimes rather vulgar and rather low, he has on several occasions told some extraordinarily good stories, and said some very good things, and given a deal of not very refined, perhaps, but on the whole harmless amusement to a large number of people. Mr. Donn Piatt takes "Mark Twain's" place. For the rest, the *Galaxy* contains more of Mr. Justin McCarthy's novel of "Lady Judith," another of his regular articles on various European celebrities—Victor Emmanuel being the one this time; some chapters of Major De Forest's "Overland;" something about Mont Cenis; something about Captain Hall and the Arctic expedition which he is now making; and various other articles of the kind usually found in this magazine. The "Types of American Beauty" are no longer to be given, it would appear; and we have in this number a portrait of "Carl Benson." So far as we can judge from the tone of our American exchanges, we should say that there is widespread rejoicing over the discontinuance of the former series of pictures, and a prevalent desire that the editors will stop the latter also, and leave their contributors at peace.

We do not find that the other magazines of the month contain much that is of interest to any but the special readers of each. Mr. John Bigelow had a lucky subject, one would have thought, in "A Breakfast with Alexander Dumas," but makes little of it in *Scribner's Monthly*, the fault being partly in Dumas, it would seem, who did not distinguish himself on the occasion. *Scribner's* has also an illustrated article which may very likely be interesting to those who recollect about the finding of antique silver at Hildesheim one or two years since, and who have not access to any other pictures of the vases. They are here not ill-done. *Old and New* has some agreeable "Reminiscenses of Brook Farm," written by a lady. It has, too, a little story by Mr. F. W. Loring, a young writer of good gifts, and, if "capable of improvement," as they say, capable too of making it, as this story appears to show. The dialogue is handled well and dramatically.

Rehearsals. A Book of Verses. By John Leicester Warren, author of "Philoctetes." (London: Strahan & Co. 1870.)—The intrinsic merit of this volume of Mr. Warren's would hardly entitle it to a word of passing commendation, and that of a negative rather than a positive kind. No more would the merit of that volume of his which next preceded this—"Philoctetes," namely. But the last page or two of "Rehearsals" contain testimony from various influential quarters which is worth the attention of those American readers of "Philoctetes" who are also readers of English critical journals. The *Spectator*, it appears, found that work "a fine poem, beautiful in detail, powerful as a whole; leaving the same impression of sad majesty upon us as many of the finest Greek dramas themselves; combining the self-restrained and subdued passion of the antique style with here and there a touch of that luxuriance of conception, and everywhere that wider range of emotions and deeper love of natural beauty, characteristic of the moderns." In other words, it is an ill-executed attempt at realizing a conception impossible of realization, and which it would not occur to any but a much-mistaken man to try to realize. "It might have been taken for Mr. Matthew Arnold's," the *Spectator* goes on, "but for a less supremely intellectual, a profounder ethical and moral essence, than it usually pleases him to embody." Certainly so far as its tediousness goes, "Philoctetes" might have been done by the author of "Merope"; but Mr. Arnold is a man very greatly the superior of our author in point of ability. "Supremely intellectual," however, is a strange characterization of him. And as for his ever doing much in the way of embodying any "ethical and moral essence" in his literary performances, no one who should read them—say in conjunction with the poems of Arthur Clough—could fail to note the world-wide difference between intellectual dissatisfaction with the world, accompanied by the profoundest and most earnest craving for moral and religious truth, and that intellectual dissatisfaction which is a dilettante sort of playing at despair, and is accompanied by no true moral or religious striving of any kind.

"In careful structure of plot," says the *Saturday Review*, "in classic chasteness of style and language, in nice and exact interweaving of part with part, in finish and completeness of the whole, 'Philoctetes' is worthy to be named in the same day with 'Atalanta in Calydon,' although the latter is entitled to a marked precedence." It is, indeed, entitled to a very marked precedence; for faded as it is now, it did once have in some parts of it a life of its own. "There is fine poetry in 'Philoctetes,'" said the *Reader*, "but it is the song of despair." "That desolate old Greek idea of the hopeless misery of man," said the London *Review*, "and clothed by our anonymous author in language of great beauty and power." The *Athenæum* is careful, and remarks that "with pains and maturer art, the writer may produce what will endure."

In view of these critical remarks, it might be giving sound advice to the British critic of imaginative works to recommend him, before he lays in any larger supply, to get off his shelves some of the score or two of shop-worn poets of recent appearance, who when they were new were each one after the other going to be the coming man and set the world on fire. But our real affair at present is not with British criticism of imaginative works, insufficient, and untrustworthy, and radically disappointing as so much of it is. We wish rather to avail ourselves of this opportunity to remind some of our readers of the worse fault than incompetency and want of insight which is still affecting a good deal of English criticism of American books. What explains the *Athenæum's* recent notice of Mr. Howells's "Suburban Sketches" as one of the most pleasing books of Italian travel which the *Athenæum's* reviewer had ever had the fortune to come upon? Mr. Howells's two previous books were about the most pleasing books of Italian travel which are to be met with; but the book the *Athenæum* was reviewing deals with what of Italy is to be seen in Cambridge and Cambridgeport and the city of Boston and the neighboring region, and the editor of the *Athenæum* should put that reviewer to his purgation. Or what explains this performance of the *Saturday Review's?* Some years ago, Little & Brown, of Boston, undertook to prepare a thoroughly good edition, in English, of one of the famous books of the world, "Plutarch's Morals." Professor Goodwin, of Harvard, choosing as a basis a certain noted London edition as the best extant, set to work upon it, and by dint of much hard labor, extending over many months, he succeeded in reducing to order and intelligibility an English text probably as corrupt as any ever set up by English compositors. The original translation had been the work of many "hands"—tutors and fellows of English universities, hack translators in Grub Street garrets, gentlemen of the Inns of Court—and represented many degrees of carelessness and ignorance as well as much good scholarship. Mr. Goodwin's careful handling of it, his preservation of the good and amendment of the bad, produced out of the London hodgepodge a very valuable work, whose appearance in its new dress was something of an event in the scholarly world. The *Review*, in briefly noticing it, regrets that Messrs. Little & Brown found it necessary to employ several hands! "Rather a Yankee sort of a thing to do"—is that what the reviewer means to imply?

As for Mr. Warren's "Rehearsals," which we were to speak about on this occasion, we have little to say. The poems are elegantly phrased, but they are in few and unimportant respects better than the general run of the ordinary verse-maker. The latter has usually had less education than Mr. Warren's working up of Greek themes, such as "The Death of Heracles," "The Nymph's Protest," "Pandora," and the like, shows him to possess, and Mr. Warren's taste has been somewhat more chastened than is usually the case with the poets among whom we place him. But he shares with them the ability to saturate himself now with Swinburne, now with Browning, now with Tennyson, and to give us, for many pages, a weak solution composed of himself and one or the other of those authors. He shares, too, his brethren's capacity for sad, bitter, and sarcastic partings with the beloved object; and also their liability to melancholy views of the future; and a way they are getting to have, when they decide on

being "objective," of going out into the fields and making inventories of pretty or trivial natural objects. In short, Mr. Warren gives proof sufficient that journals more truly friendly to him than some from which we have quoted, would have told him that he was capable of making smooth and elegant verses, perfectly familiar, but very tedious, and certain to be often enough made whether he puts himself to any trouble or not.

Travels in Central America; including Accounts of some Regions unexplored since the Conquest. From the French of the Chevalier Arthur Morelet, by Mrs. M. F. Squier. Introduction and Notes by E. Geo. Squier. (New York: Leypoldt, Holt & Williams. 1871. 12mo, pp. 430, with illustrations.)—Though the author of these travels returned to France in 1848, and printed the account of his journeyings for private distribution, it has still been thought worthy, at this late date, of translation. Mr. Squier, to whom M. Morelet is indebted for a new lease of fame, has done good service to geography and the literature of travel in introducing to the American public one of the most interesting books of travel we have read for a long time. The author's style is agreeable and engaging, and recalls the quick sympathy with nature and sensitiveness to every impression from without of our great sentimentalist among writers on natural history, Audubon. The chief value of the book, aside from the vivid pictures of life and nature in Central America, is in giving us a good general knowledge of a portion of Guatemala which had not before been visited since the time of the Spanish conquest. So that we now have, after the labors of Waldeck and Stevens in Chiapa and Yucatan, and of the latter traveller with Mr. Squier and others in Honduras, San Salvador, Nicaragua, and Costa Rica, a complete view of the geography of Central America.

Incited by the love of travel and the zeal of a naturalist, Chevalier Morelet gives us perhaps the best and most extended sketches of the plants and animals of this region that we possess. He adds little to our knowledge of the antiquities and geology, his allusions to the rock formations being too scanty. His descriptions are evidently truthful, as he seems penetrated with the true scientific spirit, which consists in seeing things just as they are; and the minor exaggerations now and then noticeable may be rather attributed to the influence of a sprightly style than to the arrangement of his facts. His route was from Campeachy, where the principal food of the inhabitants is sharks' flesh, by coasters to the Island of Carmen, in Lake Terminos; thence to the famous ruins of Palenque, of which he tells us nothing new. He then strikes up the largest river in Central America, the Usumasinta, whose headwaters drain the heart of Central America, inhabited by the fierce, unconquered Indians, chiefly the Choles, of whose towns and national energy and hardihood the wildest rumors have found their way to the coast on either side of the Isthmus. Leaving the river, he skirts the unknown country of the Choles, reaching Lake Itzac; thence striking southwards across the country to the City of Guatemala.

In all these journeyings, he does not fail to bring out in clear relief the great and sudden differences between the torrid plains, the savannas, and the more mountainous portions, and the influence of the climate, the soil and its elevation, on the character of the aborigines; the dull, brutal, slothful, degraded Indians inhabiting the lowlands always giving way before the quicker-witted, more energetic, and more civilized highlanders. Always alive to the value of ethnographic studies, M. Morelet makes occasional reflections of great interest in relation to the relics of the ancient civilization, which, as he hints, have no analogy to Egyptian architecture. He does much towards removing the mystery of the origin of the structures whose ruins are now scattered over the country. "Admitting that, in the year 1524, these ruins existed nearly in their present condition in the forests of Chiapa," he believes that "it by no means follows that a fabulous age and origin should be ascribed to them. When first discovered, Yucatan was a flourishing and populous country, abounding with public edifices built of hewn stones laid in mortar, the extent and beauty of which greatly impressed the Spaniards." These monuments were "of the same general style of architecture, and constructed on the same principles, and in conformity with the same rules of art," as those of Palenque. He suggests that "the analogy can no longer be denied between these ruins and the monuments of Mexico, which tradition attributes to the Toltecs." These people, "in the middle of the seventh century, were in possession of Anahuac, where civilization peaceably developed itself. Later, about the year 1052, they abandoned this region and emigrated in a southeasterly direction—that is to say, into the provinces of Oaxaca and Chiapa," and about this time he believes Palenque to have been founded. This Toltec race, "whose gentleness of character and whose religion remained long unchanged, even under the influence of the Aztecs," is not yet "extinct in Guatemala, where it constitutes, in the mountainous regions, a proud but, nevertheless, laborious and industrious population, which glories in its ancient origin."

Morelet adds a word of caution as to overestimating the degree of civilization of these races who had no written language—"who did not understand the use of iron; who possessed neither flocks nor beasts of burden." He adds "that the ruins of Palenque have been, perhaps, too much eulogized. They are magnificent, certainly, in their antique boldness and strength; they are invested by the solitude which surrounds them with an air of indescribable but imposing grandeur; but I must say, without contesting their architectural merit, that they do not justify, in their details, all the enthusiasm of archæologists. It is the descendants of these partially civilized Toltecs, who are considered as lower in the scale of humanity than the negro, who are steadily driving the Spaniards out of Central America."

With the Lacandones or Caribs our author had but slight experience. They are said, by Waldeck, to be idolaters, intense liars, and, in former times, to have been cannibals, the priests now confining them to a monkey diet, as being the next best thing. Morelet also does good service by effectually disposing of the rumors widely entertained by the people of Guatemala and Chiapa, as well as Yucatan, and occasionally bruited about by returned Central Americans, of the existence of a mysterious city, inhabited by the Indians who still live in the centre of Peten, as they did of old, pursuing all their ancient habits and practices. The story is, of course, a pure invention.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
American Agricultural Annual, for 1871, swd.	(Orange Judd & Co.) $0 50

Second American Edition Now Ready.

THE "BAB" BALLADS;

OR, MUCH SOUND AND LITTLE SENSE.

BY W. S. GILBERT.

With 113 illustrations by the author. Square 12mo, cloth extra, gilt edges, illustrative gilt side, price $1 75.

From the New York Tribune.

. . . . . "But everybody who likes to laugh, and counts that man as friend who wins it forth, will enjoy the 'Bab Ballads,' and warmly welcome their appearance in an American reprint. A perfect carnival of fun riots through its pages. Fresh fun, too—none of the stage grin and old wearisome mask. It is like a child's rollicking mischief; but it is a child thoroughly acquainted with men and manners as the little charmer depicted in page 95. . . . . The little wood-cuts which illustrate the volume are extremely comical."

Philadelphia, Pa.

M OR **N.**

A NOVEL.

BY J. G. WHYTE-MELVILLE,

AUTHOR OF

"THE GLADIATORS," "DIGBY GRAND," ETC.

8vo, paper, 75 cents.

MORELET'S CENTRAL AMERICA. $2 50.

SQUIER'S HONDURAS. $2.

PUMPELLY'S TRAVELS. New and cheap edition. $2 50.

TAINE'S ITALY. New and cheap edition. 2 vols. in 1, $2 50.

HOLT & WILLIAMS,
25 BOND STREET, N. Y.

NOTICE.—We have had in preparation during the past two years, and now approaching completion, the most complete Atlas of the Entire World ever issued in this country, containing the most recent discoveries and territorial alterations.

A GREAT ATLAS of the WORLD

IN PREPARATION,

And to be issued in 25 parts, at 50 cents each, all parts beyond these gratis to subscribers, AS A COMPANION TO ZELL'S ENCYCLOPEDIA, commencing in March, 1871, and to be completed by about January, 1872.

This will be

The Most Artistic, The Best, The Most Reliable, and The Most Recent.

No Atlas in this country can approach it in beauty, finish, and reliability.

The first number will contain the Map of the World, and the Map of England and Wales, the former upon Herschel's Projection, showing the ocean currents, the new steamship lines to China and elsewhere, all beautifully colored.

Each map will have with it an

ALPHABETICAL INDEX, containing every CITY, TOWN, COUNTY, RIVER, CAPE, LAKE, BAY, etc., etc., which occurs upon the Map,

with directions whereby, in a moment, any place may be located upon the Map. There will also be added

A GENERAL INDEX OF ALL THE NAMES UPON ALL THE MAPS,

so that they may be easily found upon the Atlas, thereby doing away with the vexation of hunting in vain for any place.

The value of this addition, prepared after over two years of careful toil, cannot be overestimated, and it is, we believe, the first time such an Index has ever been prepared and sold in this country.

That portion pertaining to the United States will be issued last, so as to include the Census and all other information of 1870, which, not now ready, will be, however, before the maps of this country will be reached. The maps also of France and Prussia will not be issued until the change in boundaries, if any, are determined upon. That of Africa will contain recent discoveries not to be found upon any other atlas.

Especial attention will be given to the latest territorial changes of the U. S. These maps have not yet been prepared, but will be made entirely new for this Atlas.

The whole printed upon fine, heavy paper, in the best manner, issued in handsome covers.

Zell's Popular Encyclopedia

IS NOW COMPLETE.

It makes Fifty-nine Parts, or Two Large Quarto Volumes, and is served to subscribers in bound volumes, or parts, as they may desire.

It is universally conceded that this work meets a want of the intelligent portion of the community which has long existed.

Specimen copies, containing 40 pages, sent post-paid for 10 cents.

T. ELLWOOD ZELL,

17 and 19 South Sixth Street, Philadelphia; 5 Beekman Street, New York.

"THE BEST OF LIVING STORY-WRITERS."

Messrs. GEORGE ROUTLEDGE & SONS, 416 Broome Street, New York,

Take pleasure in directing the attention of the reading public of America to the

Works of George MacDonald, LL.D.,

Whose Writings in Devotional and in Juvenile Literature are unexcelled, and whose Works of Fiction, already published, have secured him the right to be entitled, by almost unanimous critical opinion,

THE RISING NOVELIST OF ENGLAND.

The Miracles of Our Lord.

Crown 8vo, cloth, $1 25.

"It is not only exhilarating to come in contact with such fresh views of Scripture as we here receive from Mr. Macdonald—it is blissful. . . . The method of his appeal is that of the poet, rapt in the absorbing sweetness of spiritual contemplation; and in these days of overstrained intellectual activity, when at the same time an imperative need is felt for human and intimate readings of Scripture mysteries, his manner of teaching is most effective."—*Nonconformist.*

The Disciple, and Other Poems.

Crown 8vo, cloth, $1 75.

"Year by year Mr. MacDonald is winning his way to a high place among contemporary poets. Each new volume reveals fresh powers. The present volume contains, we think, the finest pieces he has written. It is both broader and manlier in tone and sentiment, and from an artistic point of view it shows an increased mastery of language and clearness of thought."—*Westminster Review.*

Unspoken Sermons.

Crown 8vo, cloth, $2.

"In George MacDonald's company the very air seems impregnated with love, purity, and tenderness. We seem to be under an Italian sky; and the harshness, whether of individual or national temperament, is wonderfully checked. A loving heart reveals to us the heart which is the fountain of love, and sends us away ashamed of our harsh and bitter feelings, and praying to be able to love more both Him who is love and those who ought ever to be dear to us for his sake."—*Dr. Guthrie's Sunday Magazine.*

Annals of a Quiet Neighbourhood.

Crown 8vo, cloth, $1 75.

"It is as full of music as was Prospero's Island: rich in strains that take the ear captive and linger long upon it."—*Saturday Review.*

"A true and noble work."—*London Daily News.*

"Whoever reads this story once will read it many times: it shows an almost supernatural insight into the workings of the human heart."—*Pall Mall Gazette.*

"This story is one that only a man of genius would have written."—*Examiner.*

The Seaboard Parish:

A Sequel to "Annals of a Quiet Neighbourhood." Crown 8vo, cloth, $1 75.

"There is no literature better than this."—*Illustrated Times.*

"A story of the very highest order: full of deep and healthy truth, told in the most genial way: a story to be read thoughtfully, slowly, lovingly."—*Birmingham Daily Post.*

"Uses his captivating pen for the dissemination of some of the richest truths of the Christian system."—*Christian News.*

"Written in the author's own quiet yet forcible style, full of deep, true, Christian feeling."—*Oldham Chronicle.*

At the Back of the North Wind.

With 80 illustrations by Arthur Hughes. Square 12mo, cloth, full gilt and gilt edges, $2.

"In 'At the Back of the North Wind' we stand with one foot in fairyland and one on common earth. The story is thoroughly original, full of fancy and pathos, and underlaid with earnest but not too obtrusive teaching. Mr. MacDonald knows well how to give his fancies that air of *vraisemblance* without which even fairy tales are but idle words in children's ears."—*London Times.*

Ranald Bannerman's Boyhood.

With 36 Illustrations by Arthur Hughes. Crown 8vo, $1 75.

"Mr. MacDonald's special genius at this moment consists in a real understanding of boy-nature, and he has in consequence produced a capital story, judged from their standpoint, with a true ring all through which insures its success."—*Spectator.*

Dealings with the Fairies.

With Illustrations by Arthur Hughes. Square 16mo, cloth, gilt edges, $1 25.

"Mr. Hughes has illustrated these Fairy Tales with much skill: and the charming little volume, if it did not make us wish to be young again, did more, for while we were reading, so great was the magic of the enchanter's wand, we became young once more, and clapped our venerable hands over the tears of the Light Princess, and the groans of Mr. Thunderthump."—*British Quarterly Review.*

In the Press, and preparing for Immediate Publication, Two Novels by George MacDonald, viz.:

I.—THE PORTENT.

II.—ADELA CATHCART.

Messrs. G. R. & Sons would direct attention to the following extract from an estimate of Mr. MacDonald and his Works which appeared in *Scribner's Monthly*, in which magazine his new story, "Wilfrid Cumbermede," is now appearing:

"The books are of their own kind. One cannot read them without being stimulated to something nobler and purer, for they may honestly be called both. They are a mine of original and quaint similitudes, and their deep perceptions of human nature are certainly remarkable. . . . On the whole, Mr. George MacDonald is a power already, and will soon be a greater one. . . . Let it stand to his credit that, in an age of loose literature, he is, like Scott, and Dickens, and Thackeray, pure-minded. He writes better English (because more imaginative and loftier) than Charles Reade, or any of that ilk. And while Wilkie Collins outdoes him in plot, he outdoes Wilkie Collins and the rest of the plotters in delicacy and sweetness of touch. Should George MacDonald rise hereafter above this present point, high and good as it is, he will merit and receive distinguished praise. And, as a man hardly at the entrance of middle life, there is no reason why this should not be. His hand has not lost its cunning, and his eye is still undimmed."

HURD & HOUGHTON,

13 ASTOR PLACE, NEW YORK;

THE RIVERSIDE PRESS, CAMBRIDGE, MASS.,

Have nearly ready:

I.

THE STORY OF MY LIFE. By Hans Christian Andersen. With a Portrait of the Author. In 1 vol. crown 8vo, cloth, price $2.

The American edition of Hans Christian Andersen's "Story of My Life" will have special interest as containing an addition to the Danish version of the past fourteen years, written out by the author for his American readers, and now first translated into English. The entire book, indeed, is new in its present form; for the little volume called "The True Story of My Life" is only a translation from a brief German sketch, and this is a full translation of the complete work. As Andersen's early life was full of curious romance, and his maturity has been spent roving about Europe among the literati, the book will contain abundant material of a lively nature.

II.

THREE SUCCESSFUL GIRLS. By Julia Crouch. 1 vol. 12mo, price $1 50.

A bright, animated novel of three young girls leaving a Connecticut home to try their fortune in New York, as three young men might do. The fortunes of a year are told, and the reader is let into the secret of their success. They are no angular, uncomfortable girls, these three; but lively, irrepressible, and genuine girls of character and pluck. Every one will agree that they earned their success by pretty hard rubs.

III.

THE LIFE OF NATHANAEL GREENE, Major-General in the Army of the Revolution. By George Washington Greene, author of "Historical View of the American Revolution." 8vo. Volume II. Price $4.

IV.

SOUTH'S SERMONS. Sermons preached upon several occasions by Robert South, D.D. Vols. IV. and V., completing the work. 8vo, cloth, price per vol., $4.

V.

CULTURE AND RELIGION IN SOME OF THEIR RELATIONS. By J. C. Shairp, Principal of the United College of St. Salvator and St. Leonard, St. Andrews. In 1 vol. 16mo, price $1 50.

This book is a fresh and most readable contribution to a literature which is growing up about the new schools of which Huxley and Arnold are special prophets.

LATELY PUBLISHED:

CLEMENT'S HANDBOOK OF ART. $3 25.

ANDERSEN'S STORIES AND TALES. $2 25.

FROM FOURTEEN TO FOURSCORE. $1 50.

HOWELLS'S SUBURBAN SKETCHES. $1 75.

THE CHILDREN'S CRUSADE. Gray. $1 75.

☞ Any of the above sent by mail, postage paid, on receipt of prices annexed.

"Secresy, Accuracy, and a Saving of from 50 to 400 per cent. in the Transmission of Telegraphic Messages."

Now ready for delivery in America,

BOLTON'S

Celebrated Telegraph Code.

A Telegraphic Dictionary of the English Language, forming a Complete Code for the Transmission of Telegraphic Messages on every subject, adapted to every branch of business, and suited for use in any language.

BY MAJOR FRANK BOLTON,

Late Instructor of Army Signalling at the School of Engineering, England.

The economy to be effected by the use of this Code will be seen by the following certificate:

"We have witnessed several trials of Bolton's system of coding messages.

"These have been transmitted through the Atlantic Cable, first by the Morse Alphabet in full, and then codified.

"The messages have been correctly transmitted, and the time occupied in doing so through the Cable has shown a saving in favor of Bolton's Code, for messages of ordinary character, varying from 50 to 400 per cent., according to the nature of the message.

(Signed) "C. F. VARLEY,
"CYRUS W. FIELD,
"WILLIAM THOMSON."

Large 4to, over 1,100 pages, strongly bound in half-roxburgh, price $40.

Sold by subscription, and to be obtained only of the Publishers or their authorized Agents.

☞ A number of the largest merchants in New York City have already subscribed for the work.

A DEFENCE OF HOLY ORDERS

IN THE CHURCH OF ENGLAND,

Including the Statutes, Documents, and other evidence attesting the validity of Anglican Orders. With a facsimile of the Record of Archbishop Parker's Consecration, Photozincographed. Printed in Latin and English. Edited by the Rev. T. J. Bailey. Folio, cloth, price $15.

"I know of no treatise on the Orders of the English Church that can at all take the place of Mr. Bailey's noble work. It is simply invaluable."—I. Williams, Bishop of Connecticut.

"This work is a luxury for the Library, and a most valuable supplement to all that has been written on the Orders of the Church of England."—A. Cleveland Coxe, Bishop Western New York.

"The 'Defence of Holy Orders in the Church of England' is a timely and valuable book."—Wm. Crosswell Doane, Bishop of Albany.

"A copy of this work should be in the hands of every Bishop, and in the Library of every Church, College, and Theological Seminary in our land."—George F. Seymour, Professor of Ecclesiastical History, General Theological Seminary, New York.

"Of this invaluable work, as an instrument of light and power in the advancement of the Catholic unity, we know not how to speak without seeming oversanguine. We bespeak for it a place in the library of every Bishop and Priest, College, and Seminary in the land."—Church Journal.

"Mr. Bailey has, with almost superabundant pains, given us not only the whole documentary account from the Lambeth Registers, both in Latin and English, but also a Photozincographic fac-simile of the documents themselves."—Saturday Review.

"We owe thanks to Mr. Bailey for this handsomely printed and great effort to lay the case fairly before Foreign Churches."—Guardian.

"The whole sum and substance of the controversy upon Anglican Orders is arranged with documentary proof in the sixty-five folio pages of the English portion of this beautiful Monogram."—Church Review.

ATHENS.

VIEWS OF THE ACROPOLIS.

The undersigned publish for the author an Album of photographic views, entitled "The Acropolis of Athens, Picturesquely and Architecturally Illustrated, by W. J. Stillman," printed in carbon by the Autotype Company, London.

These indestructible photographs are from 8x10 inch negatives, taken by Mr. Stillman during the winter and spring of 1869, and include all the views which are necessary to give the most complete idea of the existing ruins on the Acropolis, and their relation one to the other. They were taken with architectural lenses correcting the perspective distortions, and so that the proportions of the buildings may be measured as to scale, on any given plane; and most of them by Dallmeyer's wide-angle rectilinear lens, by the aid of which views never before successfully photographed have been rendered.

Of the twenty-five subjects, sixteen have not been taken by any other photographer, and the negatives used are selected from not less than 300 taken. The picturesque views show the Acropolis from five exterior points of view, and the architectural show those characteristics of Greek architecture which contribute to its unexplained as unapproached perfection—the curves of the horizontal lines, pitch of the columns, etc.

They are mounted on board about 13x22, with a page containing description opposed to each print; the whole bound in substantial and elegant style. Nothing finer of the kind, it may be safely asserted, has ever been offered for sale in this country. Edition limited to 100 copies.

Price, delivered at the *Nation* office, 3 Park Place, New York, $25.

Orders received by

E. L. GODKIN & CO.,
March 16, 1871. Office of the *Nation*, New York.

SINGLE VIEWS.

Enquiry having been made for single copies of the photographs contained in the Album, Mr. Stillman, while unable to furnish these in autotype, offers for sale a few duplicates printed by the ordinary silver process, along with other views enumerated below. The duplicates are marked with an asterisk:

VIEWS OF ATHENS (8x10):—Plain of Athens, from the East.—Valley of the Ilissus.—Mars Hill.—The Parthenon, from the South-east.—Columns of the Propylæa.—Tribune of the Caryatides.—Interior of the Propylæa.—Western façade of the Propylæa (*).—Eastern façade of the Erectheum (*).—Acropolis, from the Turkish town (*).—Acropolis from the Ilissus (*).—*Fragments of Sculpture;* Victory untying her sandals.—Victories with bull.—Victory elevating an offering.—Metope from the Parthenon.—Fragment of frieze from the Parthenon (Aeginetan school); do. do. (Attic school).

CRETAN VIEWS (8x10):—Bridge of Kalepa (Venetian).—Village of Kalepa.—View from Kalepa.—Convent of St. John (exterior); do. (interior).—Convent of the Holy Trinity: Olive-tree avenue; Cypress avenue; From the olive-trees; From the cypresses; The interior and church; The Cloisters.—Canéa: The city and plain; Ruins of the citadel (Venetian); Fortifications; Doorway of ruined palace (Venetian); Court-yard of a mosque; Marina and dogana; Gate of the Castelli.—Town of Platania (ancient Pergamos).—Statue of Minerva found at Kisamos.—Ravine of Theriso.

VIEWS IN AND NEAR ATHENS (7¾x4½):—Port of Peiræus.—Secret Port of ancient Peiræus.—Ruins of the Long Wall and Plain of Athens.—Ruins of the Temple of Jupiter Olympius.—Acropolis, with columns of the temple of Jupiter.—Choragic monument of Lysicrates.—Theatre of Bacchus; A bar from ditto (4⅛x3⅜); Choragic monument above ditto (4⅛x3⅜).—Arch of Hadrian.—Temple of Theseus (three views).—Pnyx.—Way of the Enneapylæ (footprints of the sacrificial animals).—University of Athens (modern).—Byzantine church (4½x3⅜).—Temple of the Winds (4⅛x3⅜).—Portico of Hadrian 4½x3⅜).—Bed of the Ilissus.—Two views on the Cephisus.—Town of Aegina and Temple of Venus.—Two views of the Temple of Minerva (Aegina).—Plain of Marathon and mound of the Greek dead.—Athens from Plato's Academy.—Acropolis from Mars Hill.—Grotto of Pan.

AMERICAN VIEWS (7¾x4½):—Glen Ellis fall (White Mountains).—Glen Ellis, with fall in the distance.—Crystal cascade.—Glen below the Crystal cascade.—Two views of Mt. Kineo (Moosehead Lake).—Forest study.—Moosehead trout.

Price of the large views (8x10)—mounted, $1; unmounted, 85 cts. Of all the rest—mounted, 60 cts; unmounted, 50 cts. Payable in advance, together with postage on orders for less than six, viz.: for one to five large photographs—mounted, 30, 35, 40, 45, 50 cents; unmounted, 20 cents. For one to five small ones—mounted, 15, 20, 25, 30, 35 cents; unmounted, 15 cents. Orders to be filled in the course of thirty days after receipt.

The Nation.

NEW YORK, THURSDAY, APRIL 13, 1871.

The Week.

THE San Domingo Commissioners presented their report last week. It describes the country as exposed to "revolts" and "petty civil wars," "which sometimes ripen into revolutions" under "ambitious leaders;" with a penal code of some severity, rendered necessary by this state of things. The government is in full control of the whole territory, except on the Haytian frontier, where it is kept out of its rights by "insurrectionary leaders," "Haytians," and "political intriguers and emissaries, congregated at various points on the neighboring islands." Baez it represents as an able and popular magistrate, with a title to power which had in its origin "technical defects," but is now at least as good as anybody else's. Under his sway, however, which has lasted just three years, the revenues of the government are unequal to its expenses, and the country is constantly "harassed with incursions and attempts at revolution." Cabral heads an irregular force in constant revolt against Baez, but he is, the Commissioners say, simply "a bandit stained with crime." Luperon is another partisan leader who "overruns" another portion of the territory of the republic, but "he seems to have the strength of a desperado, and nothing more."

So much for the governing powers of the republic. As regards the causes of this distracted condition of affairs, the Commissioners say they are three in number: 1. The jealousy between the inhabitants on each side of the central chain of mountains, which it appears has been so strong as "to cause revolutionary leaders to arise." 2. The existence in the interior of a considerable number of "petty military chiefs, about whom has grown up a peculiar system of clanship." These gentlemen are, it seems, continually fighting each other, and rank according to the number of their retainers, and are employed now by one and now by another of the persons "engaged in getting up revolutions;" and it appears that the influence they acquire in war lasts in peace, and would, we should think, make a popular vote in those parts a very funny affair. It is gratifying to learn, however, from the Commissioners, that "the people of the country clearly understand that these disturbers of the peace are public enemies." 3. The presence of "insurrectionists and destructionists," who "hatch plots" in the islands around San Domingo, and "invest in prominent revolutionists as a matter of business," and "forge proclamations and documents." Were these three causes of disturbance, not to say anarchy, removed, the Dominicans would be a happy and united people.

The inhabitants are of mixed blood, poor and ignorant, but peaceable, temperate, and polite, fond of gambling, without prejudice of class, race, or color, and are nearly all proprietors of a small quantity of land, but the area of cultivation is small, owing, say the Commissioners, to the prevailing "uncertainty who may reap the crop." The Commissioners give very formally two reasons for believing that there are no "parties" in various sections of the country "ready to resort to desperate measures against annexation:" 1. Because no attempt was made to assassinate the Commissioners, during the night, as they lay unguarded in their lodgings at Santo Domingo. 2. Because no attempt was made to assassinate them while making excursions unarmed in the interior of the island. It seems to us, however, that this proves nothing except that the opponents of annexation were not born naturals. The feeling in favor of annexation the Commissioners represent as strong and general; and the public liabilities they estimate, after as careful enquiry as they could make, at $1,565,831 59¼. Of this, curiously and significantly enough, $600,000, or over one-third, is for "unpaid salaries," which may account for the eagerness of the official classes for absorption into the Union. The Commission adds little or nothing to our knowledge of the topography, climate, or products of the island.

Along with the report, the President sent in a message to Congress, explaining the circumstances under which he became an advocate of annexation. The idea was suggested to him first soon after his inauguration, by an agent of President Baez; some time afterwards it was again forced on his attention by a "second gentleman from San Domingo," and after hearing them he felt bound at least to make enquiries, and sent a Commissioner in whose "capacity, integrity, and judgment" he had and has "the most unbounded confidence." He then sketches the history of the controversy which followed, explains the despatch of the late Commission, whose report, he says, fully vindicates the purity of motives of those who undertook the negotiation, and now "hands the whole subject over to the judgment of the American people and their representatives in Congress assembled," but suggests that "in view of the difference of opinion on the subject, no action be taken at the present session beyond the printing and dissemination of the report," and declares that he has no policy to enforce against the popular will. He concludes with an attestation of the purity of his own motives, and strongly insinuates that the attacks made on him are "the censures of disappointed men."

The Shellabarger Ku-klux Bill has, at this writing, passed the House, and is now before the Senate, where it will probably be acted on speedily. It would be difficult to mention an objection to a statute of its kind which may not be made to it. It provides that any two or more persons conspiring to overthrow the United States Government, to oppose its authority, to hinder or delay the execution of its laws, or to seize its property, or to prevent, by force or intimidation, a person from taking office under it, or injure, or annoy, or drive him away from performing his duties, or intimidate witnesses or jurors in United States Courts, or deprive any person or class of persons of the equal protection of the laws, or hinder the State authorities from according such protection, or injure or molest State officers, for affording it, shall be deemed guilty of a high crime, and on conviction, pay a fine of $5,000, and go to jail for six years with or without hard labor; in addition to which the injured parties shall have their action. But this is not all, or nearly all. Section 3 gives the President the power of judging whether insurrections, domestic violence, unlawful combinations, or conspiracies in any State "have obstructed the execution of the laws, so as to deprive *any portion* or class of the people" of their rights, privileges, and immunities as citizens of the United States, and whether the State authorities are unable to protect them, or, being able, have failed or neglected to do so; and if he decides in the affirmative, to use the army and navy, *or other means, as he may deem necessary* for the suppression, etc. Section 4 goes further, and authorizes the President to decide when these combinations are so powerful as to overthrow or set at defiance the State or Federal authorities, when the State authorities are *in complicity with* or *connive at* these combinations, and when the convictions of the offender and the preservation of the public safety *have become impracticable*, and then, in his sole discretion, to suspend the habeas corpus. We have italicized the passages which make this bill monstrous. No such powers were ever before bestowed on an executive officer in a free country; no such powers can be bestowed on any man without seriously weakening the popular respect for law; and the fact that they are only to last till June, 1872, will not prevent the measure, if enacted, proving a precedent of the most shocking kind, which bad men, in bad times, will not hesitate to use, and which a Democratic majority in Congress, aiding a Democratic President, might use to bring about such a suppression of "insurrectionary combinations" at the South as occurred in Jamaica in 1865. We shall reserve further comment on it, however, until after its fate has been decided in the Senate.

The arguments adduced in its favor in the debates have been of the usual kind, deductions from certain abstract notions of justice, fitness, and what not, of about as much bearing on the case as

snatches of poetry. The reliance of all its advocates on brute force as a remedy for deep-seated social disorders seems to be about as strong as that of old Haynau or Radetzky, and their contempt for the lessons of history even deeper. Few or none of them make any mention of amnesty or conciliation, or any other civilized cure or palliative. An amnesty bill, has, however, been introduced by Mr. Hale, who cleverly anticipated Mr. Butler with it, and has passed the House, which removes everybody's disabilities, except those of officers who left the army and navy of the United States to engage in the rebellion, representatives and senators who resigned their seats for a similar purpose, and the members of state conventions which voted ordinances of secession. This is very good as far as it goes, but it still leaves disfranchised a large body of the most influential men at the South, whose assistance in restoring order is of the last importance. The continuance of their disqualification at this late date, can only be prompted either by a desire for vengeance—which is no basis for civilized legislation—or by the hope that it will deter them from doing the like again. But no rational man supposes that the fear of being disfranchised, if it did not succeed, would now prevent any Southern man from engaging in another rebellion. The true test of the goodness or badness of all legislation about the South at this moment, supposing it to be constitutional, and therefore not dangerous to the rest of the country, is its tendency to pacify the disturbed States. Any measure that has this tendency is good; any measure which has it not is bad. It is, however, ridiculous to suppose that the denial of political rights to a body of greatly respected and influential men in every State, can have any such tendency, or can produce anything but irritation. Most of our proscriptive legislation has been more worthy of an old Aulic councillor, advised by an old archduchess, an old Dominican monk, and a colonel of dragoons, than the legislature of a free people, which owes its greatness and strength most of all to kindness and confidence in human nature.

Governor Alcorn, of Mississippi, has written a letter to the *Tribune*, defending himself and the civil administration of the State from the charges brought against both since the Meridian outrages. It is a document calculated to make a strong and a favorable impression on candid minds, as we may say, indeed, of all that we have read from the Governor's pen. He recurs to the fact insisted on in his annual message, viz., that the civil rule began only last July, after the new legislature had adjourned; and allowing two months for it to get fairly into operation, he compares the period, October, 1870—March, 1871, with each period of six months preceding from April, 1869, to show the increasing number of murders under the military, and the diminished number under the civil, régime. He asserts the same fact as to riots and mob violence, both in regard to frequency and to loss of life, and says that "there is not a county in the State in which any attempt to resist the law cannot be crushed by the sheriff's posse." Against United States officers, as such, there is no opposition; but most of them hold also one or more State offices, and it is in the latter capacity that they are molested, if at all. Col. Huggins was a pluralist of this kind, being Assistant Assessor of Internal Revenue and, at the same time, County Superintendent of Public Schools, and suffered, says Gov. Alcorn, because he was looked upon as responsible for the maladministration of the school-funds of the State, which has been the cause of very burdensome taxation. Had the *Tribune* read that part of Gov. Alcorn's recent message to the Legislature which relates to this educational extravagance, it would hardly have pretended, in reply, that the mob outbreaks were directed against the school system itself, on the old-fashioned Southern grounds. Louisiana is in a similar condition to that of Mississippi, from the arbitrary and excessive measures of a Board of Education with too great powers; and it is due to the truth not to confound the causes of popular discontent at the South.

The message just mentioned asked for authority to repress Ku-klux lawlessness by measures which attest Governor Alcorn's earnestness. He had been authorized to organize and equip the militia, including a regiment of cavalry, but in the absence of a specific appropriation to meet this expense, the State Auditor refused to pay out money on account of it. The Governor asks that this officer's scruples may be removed, and that the cost of subsisting the cavalry in their operations against "masked assassins" be levied as a special tax on the county infested by the latter. He asks further that the rewards offered for the detection of the Ku-klux may likewise be made a special tax on the county tolerating them; and, with the right on the part of the State to change the venue, he anticipates no difficulty in putting down disorder. Not content, however, with these arrangements, he reminds the Legislature that "severe economy in the administration of the affairs of the State is one of the first conditions of effectiveness in all our measures for a vigorous repression of crime." Nothing could be truer than this sentiment, as the state of things in South Carolina amply proves, and it is in illustration of the evils which an opposite course must inevitably produce that Governor Alcorn exposes the imprudent management—to say the least—of the public instruction in Mississippi. On this head one example will suffice. The Northerners charged with introducing the blessings of common schools to the State have adopted the standard of the most advanced communities; and have not only, among a people thirsting for the rudiments of knowledge, been very strict in examining the teachers, but have paid them wages far in excess of those which prevail at the North, and have prematurely saddled the State besides with costly school-houses, furniture, and apparatus.

We have again to call attention to the fact that the season is closing—indeed, we may say, has closed—without a single voice having been raised against "Caste." As far as our observation has gone, not one lecture has, during the winter, been devoted to this foul disease. We must not be told that it has passed away. It cannot have passed away if half what we were told in the winter of 1869–70 about its virulence was true. "Caste," we were told, was eating the vitals out of our society. It was the one danger of American politics. Ignorance, mendacity, and corruption were nothing in comparison. A turbulent and haughty nobility was showing itself in Boston, and beginning to pull noses. General Sherman was trying to get himself and some of his friends made dukes and barons in Washington; whites were in every direction refusing to marry colored people; and, in fact, nobody seemed to know where the movement was going to end. If the danger is all over, and the pest stamped out, all we can say is, the lyceum has achieved one of the greatest triumphs of the age. If so, we think some of the orators ought now to take up the vices of telling lies, and taking bribes, and cheating, and swindling, and extirpate them in like manner.

Apathy and dulness pervade all business circles. The general trade of the country continues fairly active, but without any feature of interest, beyond the extraordinary magnitude of our importations, which it is impossible to account for satisfactorily in face of the already liberal stocks of most descriptions, and the general quiet of trade. The excitement on the Stock Exchange has died out, even the brief activity in the funding process has waned away, the Scranton disturbance refuses to be magnified into a first-class riot, and neither Senator Morton's speech nor Mr. Grinnell's removal has been able to raise a ripple of animation in any of the markets. The crop prospects everywhere are unusually good, and there is every probability that the export demand for our breadstuffs and meats will continue. There has been some slight improvement in real estate, and a little more activity in building. But in all branches of trade the prevailing July weather seems to be accompanied by the corresponding July dulness. Nothing but this universal apathy could prevent the present condition of our foreign trade and of our domestic banks from exciting serious uneasiness. As it is, everybody and everything appear to "float lazily with the tide."

The Germans produced in this city on Monday the greatest procession, we venture to say, and the most effective, it has ever witnessed. They defiled for four long hours before the City Hall, and made a wonderful display, as regards numbers, money, taste, and enthusiasm,

and respectability in the best sense of the word. We ought to add that there was unprecedented consumption of lager bier, and no drunkenness. Seeing what a tremendous force, political and social, German New York is, and knowing, as we do, that the Germans are not mixed up in the local corruption, one cannot help wondering how it is that they do not with their immense vote sweep the Ring and its minions to perdition. Thrown in combination with the decent Republicans, it could completely redeem the State and City. But it is all thrown away, and the Germans are left in isolation or indifference to City and State politics, by the outrageous management of the Republican party, which is base as base can be; by the difference of language, and by the absence of all attempt on the part of the Americans to reach and influence them; and by the strength of the feeling among Americans in the party ranks on the subject of beer-drinking, and Sabbath-breaking—two points on which the Germans also are very sensitive.

The Cable dispatches of this week throw little additional light upon the engagements before Paris of the 3d and 4th. The rout of the insurgents, however, appears to have been complete, and the death of Flourens and Duval remains uncontradicted. A considerable division, under Bergeret, was cut off, and driven northward towards Colombes and Gennevilliers, and a redoubt at Châtillon, south of the city, was captured, with two thousand men and its commander, General Henry. The fate of this hero of the Commune is the theme of a number of contradictory reports. According to some, he was killed by a shell; according to others, he was executed by his captors; and still others have it that he stabbed his guard and escaped to Paris. In the night of Wednesday, the 5th, the Parisians made an attack on the bridge of Sèvres, held by a detachment of the Versailles army, but were repulsed. On the following day considerable cannonading took place between the southern forts, Montrouge, Ivry, Bicêtre, and Charenton, and batteries erected by the Government troops at Châtillon, and positions further east. The Government forces also made a vigorous assault on the insurgents at Courbevoie and Neuilly, and, aided by the fire of Fort Mont Valérien, pressed them back towards the Seine, at the same time baffling the attempts of Bergeret's troops to pierce their lines and return to Paris.

On Friday, the 7th, fighting was resumed by the Versailles army at Neuilly with renewed vigor. The insurgents were forced to retire behind the bridge, which they barricaded. The assailants then shelled and demolished the barricades, inflicting heavy loss on the defenders, and throwing them into temporary disorder. The latter succeeded, however, in extricating their cannon, and took up sheltered positions on the east bank of the Seine. After an artillery duel from the opposite banks, the Versailles troops pushed across the bridge, and, in spite of new barricades erected in their way, on the Neuilly avenue, and a brisk fire from the guns of the Paris ramparts, ultimately drove the insurgents out of the suburb and compelled them to retreat to the foot of the *enceinte*. The Versailles Government states the loss of the Parisians to have been immense, but admits that its own was serious, and names three of its generals among the killed and wounded. The chief command was held by Marshal MacMahon, and the whole army of investment was divided into four corps, of which one was in reserve, under General Vinoy. Who commanded the insurgents in the engagements of the 6th and 7th, is not stated. Subsequently, however, we find a Garibaldian officer, the Pole, Ladislas Dombrowski, "appointed to succeed General Bergeret in command of the National Guard," the latter having been "arrested for military failure and insubordination."

On Saturday, the 8th, Fort Mont Valérien and the advanced batteries of the Versailles army began the bombardment of the Maillot Gate, of the *enceinte*, between Neuilly and the Arc de l'Étoile, their shells falling beyond the latter in the Champs Élysées. The cannonade was continued throughout the day, during the night, and also all Sunday, brisk firing being simultaneously kept up between the southern forts and the positions opposite them. Everywhere the Government troops gained ground. They advanced almost to the *enceinte*, occupying Boulogne, Sablonville, and Longchamps. The drawbridge and floor of the Maillot Gate were broken. The Nationals momentarily evacuated the Champs Élysées, seeking shelter in the adjacent streets. Subsequently, however, they reinforced their artillery at the Maillot Gate, as well as at the adjoining Porte des Ternes, and threw up huge barricades in the Champs Élysées, the Place de la Concorde, and their environs, opened a cannonade upon Courbevoie and Puteaux, and made some desperate sorties to the south and southwest. The southern parts of the city were, even on Monday the 10th, so much annoyed by the bombardment directed against Forts Montrouge, Issy, and Vanves, that an election appointed for that day, to fill vacancies in the Commune, had to be postponed. At the western gates, however, the fire slackened on Monday, and the Versailles troops fell back to some distance, MacMahon determining, as was believed, to make the main attack on the city from the southwest, with the co-operation of a flotilla of iron-clad gunboats on the Seine. At last accounts, the insurgents were in possession of Asnières, near Courbevoie, on the west bank of the river.

While all these more or less bloody contests were going on, the Reds of Paris, in the Commune and out of it, indulged in the luxuries of an imitation Reign of Terror. The fainter shades of Red had to yield the field to the more pronounced, Assy, Blanqui, Gambon, and Bergeret being imprisoned, and twenty-two members of the Commune driven to resign. All men between the ages of seventeen and sixty-five, then all unmarried citizens, and finally all between nineteen and forty, were called under arms, and domiciliary search was made for the fugitives. Houses of "aristocrats" and churches were pillaged, and the prisons filled with "suspects," especially priests and nuns. The Archbishop of Paris was among the first to be incarcerated, and his life is said to be threatened. Several attempts to bring about a termination of this state of affairs by negotiations with the Versailles Government were made during the week, but without vigor, and consequently without success. Thiers is believed to be accessible to the mediation of loyal citizens; he shows himself, however, determined to save the prerogatives of the Government at all hazards, and has carried the rejection by the National Assembly of an article in a new bill granting the election of mayors to all cities of France without distinction. The Government will appoint all mayors in towns of over 20,000 inhabitants. The majority of the Assembly seems to grow impatient of his leniency and hesitancy, while the radicals of the Paris delegation occupy a position almost bordering on disloyalty. The tranquillity of the provinces is a little too frequently announced by the Executive.

It is not a little singular, considering what horror the German siege of Paris excited in many people's minds, that a second siege of it, following close on the first, by the French themselves, should meet with so little reprobation from French sympathizers. The French army is, however, not only besieging it, but bombarding it, without notice, and without giving any opportunity to the women, and children, and aged and infirm persons to withdraw. This beats the brutal Bismarck and the canting William hollow. Nor do we hear one word now about the risk run by the museums and libraries which the German barbarians came so near destroying. What makes the performance all the more discreditable is, that the persons whom the French army are now shelling, and otherwise annoying, are the sensitive lambs whose feelings Bismarck and his Junkers would insist on wounding by marching their hordes into the city, and who, if the Prussians had only let them alone after Sedan, would at once have settled down to their industry and their studies, after having forgiven all their enemies. As it is, all they want is to be allowed to work their own sweet wills; while the Germans, on the other hand, as we all knew they would, have gone home drunk with blood and beer, and raging for more conquests, and so demoralized with "requisitions" that property at Berlin is no longer safe. Why do none of our sages of last September step forward now and bear their testimony against this last abominable attack on the Holy City?

"WHAT ARE WE GOING TO DO ABOUT IT?"

THERE was a great meeting on the subject of political reform held in this city last week, of a kind that will probably be by no means uncommon hereafter in various other cities and States, for the evils which it took into consideration are unhappily no longer confined to New York. The house was crowded by one of the most intelligent and respectable-looking audiences we have ever seen. The feeling was evidently very deep, and the speaking was very fine. Henry Ward Beecher, in particular, effective as he always is, was probably never more effective than in his exposition of the evils which would probably befall the community in this city if the scheme on foot at Albany for the endowment of sectarian schools was carried out. Dr. Bellows, Mr. Evarts, and Judge Barrett were all strong and eloquent in their denunciations of the rule of the Ring; and the last-named gentleman opened up, perhaps, one of the most startling prospects of the day, when he drew attention to the probability, which no reasonable man doubts, that one of the objects which Tweed and his abettors have in view in securing for the four Ring leaders the disposition of the city taxes during the next two years, is the appropriation of large sums to influence the Presidential election. That the ambition of the gang now goes far beyond the rule of this city and State, there is little question. The work of corruption here is too easy. Like all restless and energetic spirits, they long for a task calling forth all their powers. There is no "sport" any longer in spoiling us, or ruling the wretched band of prostitutes who compose what once was the Legislature of the great State of New York.

Nevertheless, we believe we are warranted in saying that few, if any, left the hall with the feeling that anything had been done for reform. Everybody felt more comfortable, doubtless, at having listened to and been roused by a few stirring protests against corruption; but nobody felt that the Ring was either shaken or seriously threatened; or that Tweed and Sweeny would read the report of the meeting with anything but amusement; or that what had been said or done really paved the way to serious action. A report was spread through the newspapers, for which we believe Mr. Evarts was in no way responsible, that he would propose a practical plan of reform. He, however, had no such plan to propose. When he described the effrontery with which the Ring listen to denunciations of their misdeeds, and with which they ask the honest men whom they rob—"What are you going to do about it?"—there was a moment of deep silence; for most people expected to hear a practical answer to this insulting but, it must be admitted, very puzzling question. No answer, however, came. When he said, "They will find out," there was a laugh; but it was not by any means a joyous laugh. It was the laugh which men laugh when they find it is the best thing they can do, and in this laugh there is always a good deal of bitterness. In fact, not one of the speakers had anything better to propose than the ancient remedy—that "good citizens should go to the polls and attend the primary meetings."

Now, it is with no desire to throw cold water on honest efforts to rouse the public conscience to a sense of the great danger—greater than it has ever faced—which is at this moment impending over American society and government, that we say what we are now going to say. In fact, a feeling has been already aroused on this matter of corruption which we do not believe it is in anybody's power to abate, were he never so well disposed. What we are about to say is intended simply to promote that recognition of *the facts* of the case without which no effort for reform can do any good, or amount to anything but sound and fury. The first fact of importance in the case is, that though good citizens may be got to the polls, and, we think, generally do go, they cannot be got to attend primary meetings or otherwise devote themselves to what is really of far more importance than going to the polls—working the political machine by which the votes are prepared and furnished with an object. We last summer likened their reluctance to do this to their reluctance to bathe off the city piers on warm afternoons. We are satisfied that this comparison, though strong, was not incorrect. We should be as much surprised to hear that the class of men who attended the meeting at the Cooper Institute last week, or whose names appeared on the call, were actively engaged in local politics, and were prominent at ward meetings, as at seeing crowds of merchants and bankers taking "headers" into the North River off the bulkheads in July or August. There is a very large body of persons in New York who desire good government, and who are willing to work for it, and who are shocked and alarmed by the present state of things. They do vote, or would vote if they had the least expectation that their voting would produce any effect—and they give money freely; but more than these they will not do, for various reasons. The chief of these reasons we shall endeavor to point out, and, though they are familiar enough to everybody who has seriously considered the subject, we venture once more earnestly to call the attention of reformers to them.

We are making an attempt in this city, and we may be said to be making it in all cities, to use for the government of dense, complex, wealthy, mercantile communities, composed largely of persons without property, the machinery by which small, simple, agricultural democracies, composed either of idle slaveholders or farmers with long winters to get through, have successfully governed themselves. The moment that machinery is applied to such communities it becomes in the highest degree intricate. To get the power necessary to run it, and to apply it to the million wants of a vast social organization like ours, the members of which have the slightest possible connection or acquaintance with each other, it has to be converted into an enormous apparatus of "management," with numerous elections, swarms of unknown candidates, and a huge and unwieldy mass of legislation. To understand it thoroughly and make it go, therefore, necessarily becomes the work of a lifetime—a profession, in short. Nobody who proposes to do it can do anything else well. For instance, if you live in a New England village, and want to have a good justice of the peace, you can prepare the way for electing one in the course of ordinary association with your neighbors. You know them, and they all know you, and you can influence them in your odds and ends of leisure, without the slightest interference with your regular avocations. In the police justice of the district in which we write at this moment in this city, however, we have not a particle of confidence. We know that if a politician or a politician's protégé took it into his head to "whale" us, we could not get him punished. This is a dreadful state of things, no doubt, for a civilized man to contemplate. But what must the respectable inhabitants of the district do, to oust him, and substitute a good man? Why, they must to a great extent neglect their business, and give up their days and evenings to cultivating the acquaintance of a large body of unknown people, and attending meetings in close rooms, at which they will be assailed with insults and, it may be, with blows, by roughs and criminals. In other words, they must cease following the callings for which they were bred, and by which they are making provision for their children and old age, and endanger the interests of their creditors, and engage in a most repulsive pursuit for a result which is, after all, doubtful. Now, this is really what reformers and ministers are constantly asking the respectable classes in New York to do; and, human nature and human life being what they are, it is no wonder that "the respectable classes" now laugh heartily when they hear the time-honored exhortation to give their attention to politics.

These exhortations are all based on a totally false view of the relations of government to the individual; that is, they are based on the theory that man was made for government and not government for man. Government, it must be remembered, is a means—not an end. I want government that I may be enabled to exercise my faculties in peace and quiet, and be secure in the enjoyment of the fruits of my industry. To ask me to abandon my industry, and forego the exercise of my faculties and the gratifications of my tastes, merely to make the government better, is asking me to go back to barbarism; or, in other words, to surrender for the sake of life all that makes life worth having. No wonder, therefore, that the best men of the community refuse to listen to you, when you invite them to "go into politics," or smile when you denounce them for their devotion to their business and professions. Their business and professions are the principal work of their lives. Every man feels this, and it is essential to the permanence of civilization that he should feel it. Therefore, finding it impossible to get good government without giving up his whole time to it, he bears with bad government as long as he can; and as soon as it becomes

intolerable, he moves away into some district where he has reason to believe the state of things is better. In the meantime, the political work is taken up by a class which has no regular occupation, which dislikes steady industry, and which is not troubled with scruples, and it makes and administers the laws. This is the process which is going on in this city and State at this moment, and which begins to be witnessed in a greater or less degree in other States and cities.

Now, what is the remedy? Simplify the political machinery. Take into account the enormous difference there is between the life of the American citizen in 1871 and the life of the Athenian citizen or the New England farmer, and even between the life of the city man now and that of the city man of the year 1820; the fearful pressure which all pursuits exercise on all of us; and the terrible difficulty with which we make our brains and muscles answer the demands of modern industry, commerce, law, charity, and social intercourse. Consider how hard the ablest and strongest of us finds it to attain what every true man feels in his secret soul—and long may he feel it—is the great end of life, success in his calling; the success that comes of patience, skill, and faithfulness. It is on the strength of this feeling more than on any form of government that civilization depends.

The thing to be done, then, is to adapt the government to the peculiar condition of the community to be governed, and, startling as it may sound, there is no doubt that Cæsarism—that is, despotism based on universal suffrage—contains the germ of the plan on which democratic government must be fitted to the needs of modern society. That is, we must get rid of the cumbrous machinery inflicted on us by the movement of 1846. The best portion of the people—which is the busiest portion—cannot look after so many elected officers. They have too much else to do. We must elect a few men, at longer intervals, and hold them responsible for the working of the whole administrative machine. To the election of one or two men, in this city, say once in two years, the busiest man would pay attention, and be willing to make preparations. The machinery necessary for nominating a mayor all could look after; into the character of two or three candidates for such an office all could enquire. In short, if the respectable citizens did not pay attention to politics under a régime of this kind, it would argue utter baseness and readiness for a master.

This is not a new idea. It has been frequently produced in the discussion of the problem of New York City and all city government. But it has not been produced, as it ought to be, at reform meetings and in reform organizations. There is little use in any longer denouncing the Ring or exposing their baseness. Everybody is conscious of it. What is wanted now is a remedy, and agitators of real power to advocate it. The suggestion of the *Tribune*, that men like Mr. Evarts, Henry Ward Beecher, and Dr. Bellows, should not only speak at indignation meetings, but go down into the arena for a brief season, and take part in the fight, rouse the public conscience by repeated appeals, and offer to lead along the more excellent way, is well worth their consideration. Doubtless there is behind all the political corruption and political apathy more or less moral weakness, if not disease, but these have to be combated by other means than laws or meetings, and need not be considered here.

"LA COMMUNE."

To understand rightly what is passing in Paris at the present moment, and what the insurgents mean by "the Commune," and why they want "the Commune," and what significance there is in this rising against the national government, we have to go back to 1848. Prior to that year, the Socialists were only a comparatively small sect, and propagated their doctrines by means of secret societies. The revolution of 1830 was a political revolution purely, but it was probably the last purely political revolution that Paris was ever to see. The government of Louis Philippe was overthrown also by a kind of surprise on a political issue; but the minute the ground was cleared, the Socialists rushed in to occupy it, and obtained a strong representation in the Provisional Government, and really had made it subservient to their designs before the bourgeoisie had recovered from their stupefaction. Indeed, we find in its earliest acts the very ideas which the Communists of 1871 are fighting for.

One of the decrees issued the day after its instalment ordered the raising of a large popular national guard, to be paid a franc and a-half a day, and clothed by the Government; another, the next day, ordered all articles pledged in pawnshops to be restored to the owners at the public expense; another made the Tuileries an "asylum for invalid workingmen;" another formally guaranteed employment to all citizens, and "restored to the ouvriers to whom it belonged" the million of florins just falling due on the Civil List. The issue of these proclamations was forced on the Provisional Government by the state of things in Paris. The streets were still full of barricades; the ouvriers were armed, and, as now, refused to abandon the barricades and go home until they had been fully assured that the Government was not going to "betray" them. Even the presence of Louis Blanc and of Albert, "the Ouvrier," as he called himself in the Government, was not sufficient to reassure them; so that the sane members of the Government were really obliged to let Louis Blanc and Albert have their way, in order to gain time, and the programme of these latter gentlemen was as yet only half-revealed. To them the Republic meant what Louis Blanc called "the organization of labor," that is, the establishment of Government workshops for all branches of industry, in which all persons who chose could find employment, and would receive equal rates of pay; the establishment of Government banks, at which all citizens could get their bills discounted; and, in fact, the complete destruction of the present relation of capitalist and laborer, this being in Socialist parlance the "exploitation of man by man." The Provisional Government was actually compelled to recognize the soundness of all these principles by public proclamation, but, to escape or postpone the consequences of its concessions, it appointed a "Government Labor Commission," put Louis Blanc and Albert at the head of it, and sent it over to the Luxembourg Palace to hold its sittings; and to this flowed the enormous processions of workmen, or "manifestations," as the French called them, to which the laboring class gave itself wholly up in those days, thus giving the other members at the Hôtel de Ville time to attend to the more serious and pressing affairs of the nation. The discussions at the Luxembourg Palace probably surpassed in folly and absurdity anything in which civilized human beings ever engaged; and one would read the reports of them now with amazement and even incredulity if the talk of the Communists at the present day did not so closely resemble them.

But now was first revealed that dislike of the Paris population, and indeed of the republican party, to allow the country districts to have any control over the capital, which is one of the most striking and important phenomena in French politics, and which has proved the proximate cause of the present disasters, and found such strong and unfortunate expression in Gambetta's policy during the late war. The majority of the Provisional Government were naturally very anxious to summon a National Assembly as soon as possible to relieve them of the responsibility they had assumed after the revolution. But the Socialists were fiercely opposed to anything of the kind. They knew that the majority of a legislature elected by the country at large would put a speedy end to their attempts to reorganize society, and it was with extreme difficulty that the elections were at last ordered. They wanted the "Commune"—that is, the government, not of Paris only, but of the whole of France, by a body elected by a majority of the Paris voters; and they excused this desire to impose the will of the minority on the majority by a metaphysical process, on which we have already commented in the *Nation* (Dec. 1, 1870), which is peculiar to the French school of politicians, and without careful attention to which nobody can thoroughly understand French politics. We mean the process of abstraction, by which an ideal, or collection of attributes, is made to take the place and play the part of concrete objects in political reasoning. We pointed out how, in this way, "the People" and "the Republic" had come to be treated as something quite different from, more excellent and strong and wise and fruitful than, the actual population of France, or the system of administration set up by it; just as Woman is in this country, in like manner, coming to be used by certain agitators as the name of a *force* of extraordinary power and virtue, rather than a general term descriptive of persons of the female sex, such as we all know them and

see them. So, also, "Paris" has assumed in the eyes of Parisians, and particularly the Communists, the position of an ideal being of superior might and wisdom, and entitled to rule by virtue of this superior might and wisdom, and by no means a collection of houses, inhabited by a large body of ordinary men and women. This curious fancy found frequent expression during the late war in the defiances hurled at the Germans. Victor Hugo predicted, just as the siege was beginning, and doubtless expressed the sentiment of hundreds of thousands, that the enemy would, in some mysterious manner, be blasted when he arrived before the walls. "Paris," he said, "awaits you, the thunder in her hand." All through the siege this strange faith remained strong as ever among the Socialists. The defeats and the prolongation of the blockade were due to "treason." So was the entrance of the Prussians. The city could not be taken by fair means. "The eye of Europe" somehow could not be bunged up by barbarian hands.

Now, here we have a complete justification of the plan of having France ruled by "the Commune." Paris ought to govern the country—the 500,000 to govern the seven millions, because she is "Paris." The coming together of deputies from the provinces to take charge of the Government was, therefore, an outrage and a folly. The notion was only beginning to take possession of the popular mind in 1848; the events of the last twenty years have helped to spread and strengthen it, and we saw in Gambetta's persistence in carrying on the war, in virtue of authority derived from a Parisian mob, and refusing to take the sense of the country at large, a striking illustration of the strong hold it had taken even of the minds of educated men of the radical school.

When the Assembly met, in 1848, it found the Government workshops in full activity, and the whole working population of Paris asserting "the right to labor." The Government had 6,000 men in its employ the 15th of March; by the end of the month, 30,000; and by the end of April, 100,000, and the numbers were increasing with frightful rapidity. The private factories were all deserted; swarms of lazy and idle men began to pour in from the country districts. Even the co-operative associations stopped their own work and went off to live at Government expense; and large numbers of students, artists, and writers followed their example. All that anybody had to do to get enrolled was to give his name and calling and address. At first there was some attempt made to find them something to do. Parties were even detailed to plant "trees of liberty;" but of course it became impossible to find work, and all pretence of finding it was abandoned, and the huge and motley host was actually divided into "squads" and "brigades," under leaders, and marched up to draw its pay, over which there were continual fights. When the Assembly met, it found nearly two hundred thousand men living in idleness on the public, the treasury empty, business totally suspended, and society on the verge of dissolution. It speedily stopped the influx into Paris, abolished the Luxembourg Commission, ordered the workingmen to prepare to go to the country to work there, and directed all idle men between seventeen and twenty-five to enter the army or go about their business. The Reds at once rose in arms, and fought the three bloody days of June. The Assembly had taken the place of "the Commune," put an end to the great efforts to abolish "hereditary poverty," and, in short, had "betrayed the Democratic Republic;" and the Assembly, of course, represented the ignorant, brutal, degraded provinces. The Empire again, which overthrew the Assembly, and reigned in its stead, was also the product of the provincial vote, and, in keeping down Socialism, was carrying out the will of the peasants.

Now, if we bear in mind that the ideas about property, and government, and labor, and capital, which found expression in the Socialist experiment in 1848, have been gaining ground pretty steadily, under cover of the ignorance and silence and repression which the Empire created and maintained, and that side by side with them has been growing the worship of the goddess, "Paris," the centre of enlightenment, and the fountain of progress, under the influence of the continued increase of population and luxury wrought by the Imperial régime, we shall be able to understand the frame of mind in which the vast body of ouvriers, whom the downfall of the Empire had thrown out of employment, and whom the loafing during the siege with arms in their hands and high pay had utterly demoralized, witnessed the appearance of another Conservative Assembly at Versailles. To their leaders it meant the disappointment of the fierce hopes of years; and to the men, a return to the old round of toil; and to both, the subjection of Paris once more to the degrading yoke of the "rurals," as they call the country people.

This term "rurals" is, in the mouth of a city Frenchman of any class, an expression of the bitterest contempt, and the mention of it brings in one other phenomenon of French politics which has had much to do with bringing about the revolt against the Assembly. The town population despises and dislikes the country population, and will not be governed by it if it can help it. This feeling is found in all the great towns, but, of course, is stronger in Paris than elsewhere. Its origin is partly historical. It was one of the marked characteristics of the ancien régime, and at that time found a show of justification in the brutality and degradation of peasant life, and would probably have to some extent survived the transformation of the peasant's condition effected by the Revolution, even if there had been no very marked difference between the two classes in our day. But the difference in character between the Frenchman of the city and the Frenchman of the country is now one of the most striking features of French society, and it is made all the more striking by the fact that it shows itself very soon in the ouvrier who has come in from the farm after having reached manhood, almost as markedly as in the native Parisian. It would take more space than we have at our disposal to describe it fully, but it may be summed up by saying that the peasant is cautious, timid, grave, unenterprising, suspicious, frugal, laborious, conservative, religious, full of reverence for property and family, and all established institutions; while his brother in the city is rash, gay, excitable, adventurous, pleasure-loving, extravagant, without faith in God or confidence in man or woman, full of contempt for marriage, very licentious, a hater of law and of property, and of all sorts of restraint and discipline, and having impatience of labor and passion for equality as his most powerful springs of action; gullible, fickle, capable of acts of the loftiest generosity and of the vilest cruelty within the same half-hour, and swept like the chaff before the wind by every gust of feeling that runs through the incoherent mass to which he belongs. One of the Socialist members of the Constituent Assembly, in 1848, well described the mental and moral condition of the town population when he said, "The days of obedience are past; men feel themselves to be on an equality, and desire freedom. This is now the condition of their minds: they no longer believe, and they wish to enjoy." This provoked from La Rochejacquelein, a Legitimist deputy, the biting retort, "That's the condition of the beasts, too."

THE LATEST PHASE OF THE COAL TROUBLES.

When, after a thirty days' strike, commencing in December last, the working miners of the anthracite coal regions in Pennsylvania offered to resume work for a large number of mine-owners and operators who had agreed to the terms demanded by the men, the mine-owners and operators, who were only too anxious to resume, found themselves unexpectedly prevented from sending their coal to market by the railroad companies, who had suddenly raised their freights to nearly three times their former figure. The railroad freight at all times constitutes a very large proportion, generally (in New York) more than one-half, of the cost of the coal; so that, when the freight was nearly trebled, the selling price of the coal was more than doubled. The advance was so great that no coal could have been sold for less than $12 at wholesale, and, as a consequence, the attempt at resumption was immediately abandoned. What was the object of the railroad companies in thus driving away traffic from their roads?

The great railroad companies are at the same time themselves the principal mine-owners and mine-operators, and had the same issue with the workmen that the other mine-owners had; but the railroad companies were unwilling to grant the men the same terms which other operators thought satisfactory, and hence were unwilling to resume work. If the railroad companies did not work their mines, but other mine-owners worked theirs, it was evident that the other mine-owners would get all the trade, and would reap all the advantage of

the rise in price which had taken place in consequence of the suspension, and the railroad companies would either have to let their mines lie entirely idle, or else grant the conditions asked by the men as the others had done. This the railroad companies were determined not to do, and they had a perfect right so to determine, if they thought best. Up to this point their action was perfectly right and proper. No one can judge, or has a right to judge, between the workman and his employer on a question of wages or of conditions of work that are settled exclusively by agreement between the parties. But when the railroad companies sought to dictate the terms upon which *other* employers should deal with *their* men, by preventing them from sending their products to market so long as they granted the men better terms than those laid down by the companies—when they sought to do this, and they converted their control over the only accessible means of transportation into a control of the whole relations between other mine-owners and their men, then they were clearly in the wrong; and this wrong was in no wise diminished by the roundabout way in which they sought to accomplish their ends by raising their freights to a prohibitory point.

The facts in connection with the coal troubles are doubly important, because they illustrate better than any other recent event the tyrannous and overbearing spirit in which railroad corporations use their enormous power over the community, utterly regardless of the rights of others. The bare position of affairs should, therefore, never be lost sight of. The railroad companies, as mine-owners, are unwilling to grant to their workingmen such conditions as other mine-owners consider perfectly satisfactory, and seek to prevent the other mine-owners from granting these conditions by practically refusing to carry their coal. That this statement of the case is the only correct one, no one familiar with the facts will venture to deny. That it is utterly indefensible in morals is absolutely beyond dispute. The most inveterate apologists of the companies do not attempt to justify it. The companies themselves have boldly and defiantly abandoned the ground of equity, and have placed themselves upon the ground of their legal rights. It is on this ground, selected by the railroad companies with a full knowledge of the consequences, that the battle is now being fought. It must now be evident to every thoughtful person that this coal trouble is about to assume a different aspect from what any one has heretofore anticipated, and is about to force upon the country an involuntary and unforeseen discussion and settlement of the entire railroad problem, and is likely to take precedence in the public mind over every other question of every nature whatsoever.

As soon as the position taken by the railroads began to be fairly understood, the first question raised necessarily was, whether companies could legally exact prohibitory rates of freight over roads chartered by the State; Governor Geary, of Pennsylvania, in the early part of February, demanded the official opinion of the Attorney-General of the State, which was decidedly adverse to the railroads, which was strongly endorsed by the Governor himself, and transmitted to the legislature, then in session at Harrisburg. The message and opinion were referred to the Judiciary Committee of the Senate, with instructions to investigate the whole subject and report. After a protracted enquiry, the examination of numerous witnesses, and long arguments from all parties interested, the investigation has closed, and the committee has reported. Its conclusions support the railroads, and announce that there is no legal limit to the rates which the companies may charge for the transportation of freight over their lines. Disappointing as this result must be to all friends of right, since it gives to the railroad companies power surely never contemplated by law, such as, in the instance under discussion, the power to dictate the conditions upon which other mine-owners shall engage their workmen, it nevertheless loses much of its force when it is understood upon what the conclusion is based.

When the original charters were granted to the companies, it was intended to limit the rates of fare which they were to be allowed to charge; but in the charters themselves, instead of using the word "fare" or "freight," unfortunately the word "toll" was used, and although there can scarcely be a doubt as to the meaning or intention of the word at the time, yet it is equally undoubted that it is susceptible of two different interpretations. The correct meaning of toll is a tax, a charge, generally levied by the State, for the permission to pass, and having no direct connection with the cost of transportation. For example, on the State canals a "toll" is collected by the government on the boats as they pass; the boats themselves collect from the shippers of merchandise the "toll" charged by the State, and their own "freight" charges for transportation. Or the owner of a hired carriage driving over a turnpike road collects from his passenger the "toll" charged for passing over the road and the "hire" of the carriage itself. Had the question arisen for the first time in this connection, it is highly probable that the common-sense interpretation would have prevailed, but as the same issue had been raised before under different circumstances, and had been definitively settled by the Supreme Court of Pennsylvania by a decision establishing the right of a railroad to charge both "toll" *and* "freight," we may give the Senate Committee credit for having decided at least according to the law. Their decision then is this: The law places a limit on the toll the railways may charge, but not on the freight, so that, practically, the roads may charge what they please.

This investigation, then, from which so much was expected, ends, like many another legislative investigation before it, in leaving matters precisely where they were before. If anything, it is rather a triumph for the railroads, whose position is apparently confirmed. But it is, nevertheless, a step forward, for it must necessarily remove from the public mind the last remnant of the delusive hope heretofore entertained by many, that redress was to be looked for from the exercise by the State legislatures of the power of control, which they inherently possess, over all corporations created by charters from the State. To attempt to prove that no different result was to have been anticipated must appear superfluous to all who have watched the career of any one of the State legislatures during the last three years. They have invariably proved themselves the shameless and corrupt tools of every railroad corporation that possessed the means and the disposition to control their votes. The action of the Pennsylvania Senate Committee need, therefore, surprise no one.

It is true, the committee could not so far stultify themselves as to deny openly the unfairness of the action of the railroad companies. While refusing to interfere themselves, they recommend that the law officers of the State proceed against the companies by a process known to lawyers as a *quo warranto*, a demand upon the companies to show by what warrant or right they commit certain actions. In pursuance of this recommendation, and under instructions from Governor Geary, who had already previously announced his determination to pursue this course, the Attorney-General of Pennsylvania has filed his complaint against the chief offenders in the Supreme Court, and Judge Sharswood has issued writs requiring them to appear at Harrisburg on the 1st of May. What the result of this proceeding will be, it is difficult to foretell. That it will be materially influenced by the precedent just referred to in a former judgment by the Supreme Court, that the law places no limit on the "freight" charges of the companies, must not be too hastily assumed. For though the Court may have decided that a certain charge, in a certain specified individual case, however apparently unreasonable, is not illegal, it may decide very differently when a number of companies are charged, as is now the case, with combining and conspiring to extort or demand *prohibitory* rates, "entirely disproportionable to the service rendered, and utterly destructive of the rights and interests of all the people of the commonwealth." But whatever decision may be arrived at, there can be no doubt that it will be of the utmost importance in determining the issue of the entire dispute between the railroad companies and the people, and should receive the careful attention of all those New York merchants whose protest against the action of the Central and Hudson River Railroads we recently referred to.

This Supreme Court suit must necessarily hereafter constitute an independent and separate issue in the complicated problem of the coal troubles, reducing all other questions to a position of minor importance. Nevertheless, the latter, especially as affecting the prospect of an early supply of coal at reasonable prices, must not be lost sight of.

The Reading Railroad, which is as a large owner of mines—which it does not, however, work itself, but leases to other operators—has induced the Anthracite Board of Trade, consisting chiefly of its lessees, or of operators who send their coal over that road, to offer a compromise to the working miners of the Schuylkill district, coupled with the promise to reduce its transportation charges if the compromise is accepted. But the proposition has been rejected on the ground that its acceptance would constitute a positive acknowledgment of all the wrongs that the workingmen have been, as they claim, unjustly charged with. In the meantime, some riotous proceedings have taken place at Scranton, where members of the Miners' Association are charged with preventing non-union men from working, and although the earlier accounts were evidently exaggerated through timidity, love of sensation, or from interested motives, yet it cannot be denied that the struggle is becoming more embittered and more dangerous. The prospect of the action of the Supreme Court may possibly make the companies more disposed to moderation, but, on the other hand, it is equally likely to elate the workingmen, and to tempt them to increase their demands. As matters now stand, a final settlement seems more remote than ever.

THE "RULES OF EVIDENCE."

THE *World* undertakes to show that the position taken up by the *Nation* and the *Law Review*, about the rules of evidence which the Bar Association should observe in trying any charges brought against its members, is erroneous. We have maintained, and still maintain, that any investigation conducted under the rules of procedure in force in the courts of law in this country and in England will be farcical, and that the result will be contemptible, and that the Association in trying a member for professional or other misconduct sits as a court of honor, and its rules of evidence should be the laws of the human mind. This the *World* controverts in the following fashion:

"We presume that it must be unnecessary for us to say that here is an utter confusion of the facts that are to be found, or the charge that is to be investigated, with the modes of proof that are to be resorted to. Do these writers mean to contend, because there is to be an investigation in a 'court of honor,' not in respect to the commission of a legal crime but in respect to offences against professional propriety, that the law of evidence is not the best and the only safe rule to follow? Because the result is not to be the State Prison, but is to be a sentence in a court of honor, which to a man of honor may be worse than civil or natural death, is a conclusion to be reached on hearsay testimony or on secondary proofs when primary proofs are accessible, or by a rejection of the safeguards which that body of rules known as the law of evidence, and approved by the wisdom of ages, has established against the chances of error? What are 'the laws of the human mind' which these writers would have adopted by a 'court of honor' investigating a charge of moral delinquency? Let a 'court of honor' throw aside the law of evidence as it is administered in other courts, and adopt what these writers call 'the laws of the human mind,' and no member has any fixed standard of belief by which to regulate his judgments, and it will be the easiest thing in the world to destroy the reputation of the most innocent man alive.

"The value of the law of evidence which is administered in courts of law consists, as we have always understood, in this: that it is a body of rules framed with special reference to the laws of human belief, as those laws have been developed by the action of cultivated and disciplined minds. Rightly stated and applied, the laws of human belief are and ought to be the same, whether the investigation relates to a matter of history or science, or a charge of crime, or a charge of moral delinquency. Whenever a state of belief is to be reached on any subject whatever, that belief will be the more trustworthy in proportion as the enquirer has applied to the investigation a system of rules that embraces in the largest degree the means of forming sound and safe conclusions. In this respect we suppose it to be true that what lawyers and all other logicians call the law of evidence—by which we do not mean the technical proofs assigned to the proof of particular technical issues, but the great and comprehensive body of rules which mark the rightful methods of all investigation—is the most philosophical, and, at the same time, the most practically just system of procedure that can be applied to any form of human judgment, whether the investigation involves human conduct or an alleged fact in history or in science. So we imagine all intelligent laymen would regard this matter, as well as all intelligent lawyers; and we have no more expectation of seeing a body of lawyers, because they are sitting as a 'court of honor,' proceed without regard to the law of evidence than we have of seeing their verdict 'received with derision by the world outside' because they have followed the only method of investigation that can be applied with any safety or propriety to any charge whatever that is to affect the reputation of one of its members."

Now, we do not like to seem discourteous, especially to an opponent who usually conducts discussions of this class with great ability, but we must confess we suspect the writer of the above of not knowing what he is talking about.

"The rules of evidence" in use in the courts of Great Britain and the United States are, in the first place, not formed solely "with reference to the laws of human belief"; and, in the second place, they are not in use, and never have been in use, in the courts of any other civilized country. The field of evidence, from the point of view of the psychologist or logician, is the whole field of knowledge. That is, all facts, of whatever nature, which have any relation, however remote, to the question under investigation, are admissible. Such facts have different degrees of probative force, but they all have *some* probative force. Under the laws of the human mind, it is absurd, for instance, to exclude hearsay evidence, or the evidence of a wife against her husband, or an accused's confessions made under threats or promises from a police officer, or to refuse to examine an accused person, or to forbid a party to discredit his own witness, no matter whether you have other testimony or not. Whatever, in short, to use Livingston's definition, "brings or contributes to bring the mind to a just conviction of the truth or falsehood of any fact asserted or denied, is evidence"; it may be weak or strong, but it is still evidence, and in the courts of Continental Europe is received as evidence. When a man is arraigned before a French court, for instance, not only is he himself closely examined, but *everything* that can throw light on the charge against him is collected and submitted. On this the judge passes as a logician, and not as a pleader. For instance, at the Pierre Bonaparte trial, a report of a conversation overheard between two unknown persons near the scene of the murder, on the day of the murder, the prisoner not being present, was offered and received. This, we need hardly say, is the *natural* mode of seeking after truth, and it has been maintained in all countries in which issues both of law and fact are tried before trained judges. It is on this system that any other body whose *sole* object is to get at the facts conducts its proceedings, and on this system a court of honor must, and always *does*, conduct its proceedings.

The common-law rules of evidence, on the other hand, about which the *World* talks in such a wild way, are an artificial system, framed to meet the necessities of trial by jury. The Anglo-Saxon court is a composite body, with one judge to pass on the law and twelve other judges to pass on the facts. These twelve judges are, and have been from the earliest times, for the most part, persons of limited education and no training, and utterly unequal to the task of sifting a great mass of testimony thrown before them in the lump. Partly, therefore, as a safeguard against their ignorance, and partly to lighten their work, the judges learned in the law took upon themselves at a very early period to exclude totally whole classes of facts of which they considered the jurymen unfit to estimate the probative force. In addition to this, they, and the legislature combined, excluded other classes of facts out of mercy to the accused, and under the influence of the humane presumption of the common law that everybody is innocent till he is found guilty; and they then excluded certain other classes of facts on general grounds of policy—that is, they refused to admit certain kinds of testimony, no matter how much light they might throw on a particular case, lest the practice of receiving such testimony should on the whole in other directions work mischief to society. The result is that the rules of evidence in use in our country are not "the laws of human belief" at all. They have been greatly improved of late years, and are, on the whole, well suited to the habits of the people and to the nature of our tribunals, but they are an exceedingly imperfect mode of discovering truth. Consequently, they are never used by tribunals whose procedure is not prescribed by law, and whose judges are men of trained mind, and whose object is to discover not whether there are certain previously defined traces of a thing having occurred, but whether it really did occur.

A court of honor has no power to send for persons or papers. Under the rules of evidence, however, failure on the part of the defendant to produce what the plaintiff has no power to call for does not prejudice his case. Nevertheless, under the laws of the human mind, the refusal of an accused man to explain whatever seems suspicious is a fact which tells against him. Indeed, the human mind is so constituted that an acquittal under such circumstances would do him no good. And what we say of the Bar Association is, that, not being legally bound to follow the rules of evidence, it is of necessity bound to follow the laws of human belief. It has no choice or discretion in the matter, and, if it reaches its decision under any other laws, that decision will be received with ridicule and contempt.

A body of "rules of evidence" might be framed which, though technical in form, would really be based on "the laws of human belief,'

but they would be very unlike anything in use in our own courts. They would contain only one cause of exclusion—irrelevancy—and would consist entirely of tests for ascertaining the probative force of different kinds of testimony and of written documents. The germ of such a system is perceptible in our "presumptions of law."

Notes.

YALE COLLEGE is to be congratulated on having secured for its mineralogical cabinet the very extensive collection of pseudomorphous crystals belonging to Professor Blum, of Heidelberg. This collection is understood to be the largest of the kind in Europe, and has served as the basis of the various researches and many works of Professor Blum, the principal investigator in the department of mineralogy which it illustrates. A timely gift of three thousand dollars from Mr. Joseph Sampson, of this city, enabled the College to effect so desirable a purchase. —— "A Critical Greek and English Concordance of the New Testament" is in the press of J. B. Lippincott & Co. It has been prepared by Charles F. Hudson, under the direction of Horace L. Hastings, editor of the *Christian;* and it has been revised and completed by Dr. Ezra Abbott, of Harvard University, who touches nothing that he does not improve.

—It frequently happens that after we have gone to press with the *Nation*, something turns up to make us regret it. This was particularly the case with our last issue. Our remarks on the mischievous practice of signing newspaper articles would have been much more complete if we could have used the illustration which we now give from the Chicago *Republican* (of April 3), and which seemed as if made to order, except that it came an hour too late. The reader will not fail to observe that the desire to get at Smith of the *Armchair* (to recur to our own illustration) is not diminished by Smith's holding his tongue:

"Mr. Fawcette, the ignorant ass who writes the real-estate article for the *Sunday Tribune*, omitted, in the issue of that journal yesterday, to say anything about the 'imported Bohemian' who edits the *Republican;* or to make any of the many indecent personal allusions wherewith he has been wont to season his ungrammatic stupidity of late. This was a very grave oversight on his part, and shows him to be as great a blockhead as he is a blackguard. Evidently, when he left the steamboat business, he spoiled a good roustabout to make a very poor journalist. We advise him to take advantage of opening navigation, and return to his old vocation."

—Doubtless, the day will come when "a gentleman" from British America will privately approach our then President and offer him the rare chance of purchasing that territory; followed by another "gentleman" who repeats the offer. And it being understood that the King of the Cannibal Islands is bidding for it, and will get it if we don't, the end will be another San Domingo Commission to learn all that there is to be known of the country, with instructions to report in thirty days. It is only the present generation, therefore—which has no immediate intention of annexing the North Pole—that can be interested in studying what has already been written and published about America north of the 49th parallel; and to them we can heartily commend a handy pamphlet of about 200 pages, entitled "The Red River Country, Hudson's Bay and Northwest Territories, considered in relation to Canada" (third edition—Montreal: G. E. Desbarats). The author is Mr. Alexander J. Russell, civil engineer and inspector of Crown timber agencies in Canada East and West. He has had a very large experience of all parts of these two provinces, especially those thrown open to settlement in the past forty years; while in regard to that vast region formerly controlled by the Hudson's Bay Company, he has collated the most reliable information from all sources, and presents with surprising minuteness the physical geography, climatology, material resources, and capacity for colonization of the northern half of the continent from Labrador to British Columbia. The object of this manual is avowedly to stimulate the Dominion Government to open up communication with the now isolated interior, in order to turn thither the stream of emigration which now leaves Canada for the United States, and eventually to build up a continuous line of settlements from the Gulf of St. Lawrence to Vancouver's Island. The best and most favorably situated lands in Canada are all surveyed and disposed of, and nothing remains to attract emigration on a large scale as formerly. But the Dominion has at its back and within easy access (following Mr. Russell's divisions) a tract as large as Scandinavia and Lapland together, and about equal in soil and climate to the latter country; a tract south and west of Hudson's Bay about double the extent of Finland, and quite equal to it for the support of human existence; the tract known as the Arctic Desert or Barren Ground, possibly rich in minerals; the McKenzie River country, of no little value for the whale fisheries; the Pelly River country, comparable to Sweden and Norway, though inferior in climate; and, finally, the Red River or Central Prairie Land, equal in area to France and Germany, with Belgium and Switzerland thrown in, and of which it can be said that "it has on an average as suitable a climate for agricultural occupation, while it greatly exceeds Canada in the proportion of arable land it contains; much of which is of the richest quality known." This region is the one chiefly dwelt on, as it is the only one which can in any way compete with the United States for immigrants. The question of connecting it by rail and by water with Ottawa is discussed in detail, and also the project of a through Pacific railroad to British Columbia. What is stated in regard to the small depth of snow on the Red River prairies will be reassuring to those who have entertained serious fears for the practicability in winter of our Northern Pacific enterprise. Mr. Russell's compilation is remarkable for its conservatism and the absence of a *parti pris* in the arrangement of its facts. His book, indeed, which has a fair map and numerous illustrations, might be used quite properly as a text-book in American geography for the ground it covers; and anybody possessed with the spirit of a Livingstone or a Schlagintweit will learn from it of a number of choice fields for exploration, which still await description and a nomenclature.

—A London paper having stated that Capt. Joseph Howard Cromwell, of Cincinnati, is a lineal descendant of the great Oliver, was taken to task by a correspondent of the *Times*, who declared that "the historic name of Cromwell has had no living representative since 1799." One J. G. C. (Cromwell), however, writes to the *Athenæum* of March 18 that the *Times* writer placed unwarranted dependence on the authority of the Rev. Mark Noble, who composed the "Memoirs of the Cromwell Family" towards the close of the last century; the said "worthy but somewhat weak clergyman" having considered all the male descendants of Oliver whose history he could not trace to have died—for his purpose at least. J. G. C. professes to be the grandson of one William Cromwell, who in 1786 "was enrolled in the Guild of London Masons, and of whose existence Noble apparently had never heard." This ancestor was born somewhere between 1755 and 1765, dying in 1837 at the age of seventy-nine, as he reckoned it, and giving his sons to understand that "in their veins ran the blood of Oliver Cromwell." Possibly, as his grandson conjectures, he was "a child of one of the numerous sons of Major Henry Cromwell, who died in Lisbon, on foreign service, in 1711." And this remark seems to have some weight: "If the persons in England and in America who now bear the name of Cromwell are not descended from Oliver, as they themselves by tradition have received, then from what branch have they come? The name is a very uncommon one, and is not likely to have been assumed by any one in the seventeenth or eighteenth centuries, for it could only have led the bearer to incur obloquy and contempt." The *World* recently asserted, on the word of "a trustworthy informant," that Earl de Grey and Ripon, of the High Commission, has the Lord Protector's blood in his veins.

—When the necrology of the present year shall be completed, it is hardly probable that any month will exhibit such distinguished losses to literature as the March just elapsed. On the 17th died Robert Chambers, and on the 18th Professors Augustus de Morgan and George Gottfried Gervinus. They were all born in that nineteenth century of which the last-named was destined to be the illustrious historian, and within a few years of each other; so that they were contemporaries in the strictest sense. In the intellectual and moral struggles of their age they were still further connected as members of the liberal party however named. For what we have to relate of the first two we are immediately indebted to very full notices in the *Athenæum* of March 25. Robert Chambers was born at Peebles, on the Tweed, in 1802, the second son of a muslin weaver whose business was subsequently ruined by the competition of machinery, which compelled the family to remove to Edinburgh. From early youth he was passionately fond of books and reading, and at the age of sixteen he undertook to support himself by bookselling. In this business he soon joined himself to his elder brother William, who had started as a printer and bookseller, and a weekly miscellany called the *Kaleidoscope* was the first and least permanent literary production of their life-long partnership. Of this Robert was the editor, and from it he passed to the composition of books. His "Illustrations of the Author of Waverley" had the benefit of the popularity of those novels, then at its height, and was followed by "Traditions of Edinburgh," which has had a constant sale ever since its first appearance. "Walks in Edinburgh;" a his-

tory of the remarkable fires in that city (written to alleviate the sufferings caused by the fire of 1824); "Popular Rhymes of Scotland;" the "Picture of Scotland" (a sort of tourist's guide); five volumes of Constable's Miscellany, consisting of "Histories of the Scottish Rebellion" and a "Life of James the First;" "Scotch Ballads and Songs;" "Biographical Dictionary of Distinguished Scotsmen;" and a handy "History of Scotland," represent the works which, chiefly composed for other publishers, endeared their author to his countrymen. The publications of his own house, which circulated wherever the English language was spoken, giving knowledge and pleasure to millions of eager minds, were of later date. The first number of *Chambers's Edinburgh Journal*, projected by William, was issued on Feb. 4, 1832, and had such a prodigious success that "all Edinburgh proved to be equal only to produce the Scotch edition, one of the largest printing-offices in London being employed to work off the supply for England and the colonies." Here again Robert became the editor, as, afterwards, with Mr. Carruthers, of the useful "Cyclopædia of English Literature." We have not space to mention the numerous works of education and popular information which have made the name of Chambers a household word the world over. Nor can we more than allude to the "Vestiges of Creation," which was attributed to Robert Chambers, and has also been ascribed to his wife, but of which at all events he bore the brunt of the theological odium. His investigations as a geologist, which had won for him scientific distinction, of course gave strength to the allegation that he was the author.

—A scarcely less voluminous writer was Professor De Morgan, who was born at Madura, in Southern India, in June, 1806, of a family distinguished in the military service. His mother's grandfather, however, who was a mathematical teacher of some eminence, may be supposed to have predetermined his career. In 1827, he gained at Cambridge the first place in the mathematical tripos of that year, but declined to subscribe to the religious tests necessary to obtain either the degree of M.A., or a college fellowship. In 1828, he accepted the professorship of mathematics in the London University, the principles on which that institution was founded being in accord with his religious independence; and he abandoned this position in 1866 when, as he thought, in violation of those principles, James Martineau was refused a professorship on account of his theological opinions. In the service of the London insurance companies, "he raised the actuary's vocation to the dignity of a profession," and was almost to his last day the confidential adviser of several associations. His "Essay on Probabilities," "Elements of Algebra," "Formal Logic, or the Calculus of Inference Necessary and Probable," and "Differential and Integral Calculus," are among the works which made him distinguished, but which show but a small part of his intellectual activity. He was a constant contributor to various periodicals, to the *Athenæum* from 1840; and by no means on mathematical subjects alone. "His contributions to Knight's *Penny Cyclopædia* are a considerable proportion of the entire work. "He passed for diversion's sake from one arduous study to another;" but found time to acquire a good degree of proficiency as an instrumental performer, and was a habitual and eager reader of novels, especially of humorous novels. As a mathematician he had the rare merit of not overestimating his favorite science, though he proved by his "Formal Logic" that it was not incompatible for a mathematician to be also a logician; and he was accordingly one of the weightiest adherents that Spiritualism has ever won over. A treatise of his on these manifestations, entitled "From Matter to Spirit," was written in 1863. As a writer and a teacher, he was one of the clearest minds that ever gave instruction, while his genial and hearty manners in private and in the school-room strongly attached to him all who came in contact with him. He was a man of full habit, much given to snuff-taking; and those who have seen him at the blackboard, mingling snuff and chalk in equal proportions, will not soon forget the singular appearance he often presented.

—Gervinus was born May 20, 1805, in Darmstadt, and as De Morgan originally studied for the bar, so he was bred, against his tastes, to mercantile pursuits. Devoting himself, however, to the study of history, he became professor first at Heidelberg and afterwards at Göttingen, and acquired great repute by his "History of German Literature," which was begun in 1835. In 1837, as one of seven he protested against the King of Hanover's infractions of the constitution, and was in consequence deprived of his professorship and banished the country. Improving the interval for study and travel, he reappeared at Heidelberg as Professor of History and Literature in 1844. Patriotic still, in 1848 he was one of the deputies to the National Parliament at Frankfort; and the strength of his republican feeling may be judged by the grief he lately expressed at the consummation of German unity and the re-establishment of the Empire through so much bloodshed and as the result of arbitrary and illegal administration, when in 1848 all might have been peacefully accomplished had the King of Prussia accepted the proffered opportunity. He withdrew, after some months of active participation in the Assembly, to continue his studies, and produced his masterly works on Shakespeare and Händel. These were followed by his great "History of the Nineteenth Century," concerning which and the author's rank among the writers of the present day we hope to speak more at length on another occasion.

THE DESCENT OF MAN,*

EQUALLY noteworthy with the candor, the modesty, and the earnestness which characterize the author of the "Origin of Species" is the self-control which has not only led him to avoid anything like an answer in kind to the many violent attacks upon him, but has also enabled him to defer for so many years an application of his theory to the creation of man: he feared that he "should thus only add to the prejudice against his views," and wished that "Natural Selection" should be considered and judged upon its merits as a scientific theory alone. But it was not to be expected that a sensation-loving public, and those who write for it, would exercise an equal discretion; and soon attention was called to a passage near the close of the "Origin of Species"—"Light will be thrown on the origin of man, and on his history"—with others in which the belief is expressed that "all animals are descended from four or five—perhaps a single progenitor;" and since the human body is unquestionably animal, vertebrate, and mammalian, the conclusion was inevitable that these "ancient progenitors" were the remote ancestors not merely of dogs, of horses, and of monkeys, but likewise of man himself. Nor was this all. The gradual narrowing of the supposed "great gulf" between man's body and that of the apes has slowly forced upon shrinking humanity the probability that our nearest relatives, not only zoölogically, but genealogically, are the so-called anthropoid and tailless apes—the orang, the gorilla, and the chimpanzee—which are, if not themselves our ancestors, at least the less developed descendants of some ancient, ape-like, and now extinct progenitor. The storm raised by these ideas has not yet ceased; even now, the clergy are called upon to stop the progress of the heresy, and are asked: "What is the use of your asserting, Sunday after Sunday, that man was made only a little lower than the angels, when right under your noses are a set of anatomical miscreants who contend that he is only a little higher than the monkeys?"

For all such objectors this last work will be evidence of its author's own total depravity and foreordained eternal condemnation. But to more liberal minds, it will appear the most lucid and impartial exposition of the present state of scientific opinion respecting the origin of man and his relations to the lower animals. But here a very essential qualification should be made. The word "man" includes three very different ideas: one is of the human body, which, whatever its first origin, is now regularly developed from a germ which is to all appearance identical with the germ of a fish or a serpent—even at a much later period the human embryo is undistinguishable from that of a dog, and the fully-formed individual differs less from the higher apes than they do from the lower monkeys. The second part of man is the animal mind and instinct and intelligence which we surely possess in common with the lower animals, and which, perhaps, as Darwin holds, may be only a higher development of their own. But the third and essential idea of man is of his immortal soul; and although some hold that beasts, too, are immortal, and although Darwin concludes that even conscience and the religious sentiment with belief in a creator are not inherent with man (vol. ii., p. 377), yet on the following page he implies that at some stage in his upward progress he did "become an immortal being," though, while admitting the impossibility of determining that stage, he suggests that it is really of no more consequence than it is to determine the exact period when the forming germ receives the immortal soul in the development of a single individual. At any rate, we accept what he here says as warrant for the exclusion of the immortal part of man, with all its powers and capacities, from the discussion of his present and past relations to the lower animals. With the above qualification, we may let our author speak for himself, from the concluding chapter of the "Descent of Man," admitting that he presents his view far better than any one can do it for him:

* "The Descent of Man, and Selection in Relation to Sex. By Charles Darwin, F.R.S., etc." With illustrations. 2 vols., pp. 409. New York: D. Appleton & Co. 1871.

"The main conclusion arrived at in this work, and now held by many naturalists who are well competent to form a sound judgment, is that man is descended from some less highly-organized form; . . . the grounds of facts upon which this conclusion rests will never be shaken; . . . the close resemblance of the embryo of man to that, for instance, of a dog—the construction of his skull, limbs, and whole frame, on the same plan with that of other mammals—the occasional reappearance of various structures which man does not normally possess, but which are common to the quadrumana, and a crowd of analogous facts—all point in the plainest manner to the conclusion that man is the co-descendant with other mammals of a common progenitor."

"Judging from the habits of savages and of the greater number of the quadrumana, primeval men, and even the ape-like progenitors of man, probably lived in society" (vol. i. p. 148). [According to most accounts, however, the anthropoid apes are *not* very social.] "There can be hardly a doubt that the inhabitants of these countries, which include nearly the whole civilized world, were once in a barbarous condition" (p. 176). "The highest form of religion, the grand idea of God hating sin and loving righteousness, was unknown during primeval times" (p. 175, p. 62). [And he further argues that all morality and conscience sprang by "natural selection from purely selfish sources" (p. 157).] "It would be impossible to fix upon the stage when ape would become man through a series of connecting forms, and it is a matter of very little importance" (p. 226). "The problem of the first advance of savages toward civilization is at present much too difficult to be solved" (p. 161).

"By considering all these things, we can partly recall in imagination the former condition of our early progenitors, and infer that man is descended from a hairy quadruped, furnished with a tail and pointed ears, probably arboreal in its habits, and an inhabitant of the Old World. This creature, if its whole structure had been examined by a naturalist, would have been classed among the quadrumana as surely as would the common and still more ancient progenitor of the Old and New World monkeys. The quadrumana, and all the higher mammals, are probably derived from an ancient marsupial animal, and this, through a long line of diversified forms, either from some reptile-like or some amphibian-like creature, and this again from some fish-like animal. In the dim obscurity of the past, we can see that the early progenitor of all the vertebrata must have been an aquatic animal provided with branchiæ, with the two sexes united in the same individual, and with the most important organs of the body (such as the brain and heart) imperfectly developed. This animal seems to have been more like the larvæ of our existing marine ascidians than any other known form."

We may here remark that the omission of Birds from this genealogical tree is less a defect than at first appears; for, although we are far from being willing to give up the old class of Aves and consider Birds as only outlying and rather aberrant members of the new combination Sauropsida (which includes turtles, lizards, alligators, pterodactyls, and ichthyosauria), yet their whole organization brings them so near to the higher reptiles that it is easier to regard them as a divergent branch from the stem which afterward produced the mammalia, and at last man.

A careful study of the "Descent of Man" has added many to the general and special difficulties of natural selection which arose during the examination of the "Origin of Species;" but we have space for only a few cases. Our author gives no sufficient grounds for his belief that our "ape-like progenitor" possessed a caudal appendage. Man has a rudiment of a tail which in the embryo projects like that of a dog; but since it does not increase, the subsequent development of the legs throws it into obscurity, whence it but rarely emerges as a "small external rudiment of a tail" (i., p. 45). "No explanation has ever been given of the loss of the tail by certain apes and by man;" but the "great diversity in its length (consisting in some monkeys of five, and in others of twenty-five vertebræ) indicates that it is of not much importance to them, and, therefore, apt to become more or less rudimentary" (i. p. 144). But how, then, can we account for the great length of the tail in some Old World monkeys (with whom it is not prehensile as with the New World species), since we are further told (p. 145) that "modifications which are of no service to an organism cannot have been acquired through natural selection;" and again, if, "being of little importance, they are likely to become rudimentary," they become exceptions to the other general rule given in vol. ii., p. 370: "Modifications formerly of importance, but no longer of any special use, will be long inherited." Our author seems to base his conclusion that our ape-like progenitor possessed a tail, only upon its occasional reappearance as a rudiment ascribable to reverson; but surely a few more generations back can be no obstacle, since he thinks the human nose had its commencement in the Hoolock Gibbon (which is less man-like in other respects than the noseless gorilla and chimpanzee), while it is carried to a ridiculous extreme in the *semnopithecus nasica*, a yet lower monkey, which possesses a tail of considerable length.

These, and other cases which we must omit, are not given as in any way militating against the general hypothesis of Derivation, but only to show the inconsistencies into which we are led in the effort to account for the origin of organisms by means of natural selection of "minute infinitesimal variations."

In the "Origin of Species" two pages were devoted to that kind of selection which is called "sexual;" but the conviction of the necessity of some auxiliary to natural selection, together with the accumulation of evidence of its importance, has led our author to devote the greater part of his last work to the elucidation of sexual selection, and to conclude that of all the causes which have led to the differences between the races of man, and, to a certain extent, between man and animals, it has been by far the most efficient. The terms "natural" and "sexual selection" are defective, as our author admits, since both are natural, as contrasted with artificial selection by man, but they are defined as follows:

"Natural selection depends on the success of both sexes, at all ages, in relation to the general conditions of life; sexual selection depends on the success of certain individuals of the same sex in relation to the propagation of the species" (ii. p. 380).

The latter is further defined:

"The sexual struggle is of two kinds; in the one, it is between the individuals of the same sex, generally the male sex, in order to drive away or kill their rivals, the females remaining passive; while in the other, the struggle is likewise between the individuals of the same sex, in order to excite or charm those of the opposite sex, generally the females, which no longer remain passive, but select the more agreeable partners" (ii. p. 380).

The result is summed up as follows (ii. p. 384):

"Courage, pugnacity, perseverance, strength, and size of body, weapons of all kinds, musical organs—both vocal and instrumental—bright colors, stripes and marks, and ornamental appendages, have all been indirectly gained by the one sex or the other through the influence of love and jealousy, through the appreciation of the beautiful in sound, color, or form, and through the exertion of a choice."

It would appear, then, that selection is through love or through war, but that in either case the successful competitor is the more likely to perpetuate whatever individual peculiarities he may possess as to strength, weapons, or ornament, and thus originate a new variety which, by wider and wider divergence, will, in course of time, be entitled to rank as a new species, and may finally differ generically as to family, ordinal, class, and branch characters from the parent stock. Supposing this to be true, Darwin is right in denying the existence of anything like species, genera, etc., excepting as more or less different varieties ("Origin of Species," 62, 155, 432, and 433); and this is totally incompatible with the view so forcibly stated by Agassiz: "Individuals alone have a *material* existence; species, genera, and all higher groups exist only as categories of thought in the supreme intelligence; but as such have as truly an independent existence, and are as unvarying as thought itself after it has been once expressed."

Let us glance, however, at some special difficulties of the theory of "selection in relation to sex." The male salmon fight with each other for the females, and the larger may naturally be supposed to have the advantage, yet the males are *smaller* than the females (vol. ii. p. 7), as is generally the case with fishes, and Darwin admits that this fact is surprising. In some cases, even, there is antagonism between natural and sexual selection; for instance, "stags are loaded with an additional weight of many pounds, and will be greatly retarded in their flight from wild beasts." . . . . "Male birds have sometimes acquired ornamental plumes at the cost of retarded flight, and at the cost of some loss of power in their battles with rival males" (ii. p. 248); and although our author would account for these and other cases by assuming that these spreading antlers enabled the stags best provided with them to overcome their rivals, and that this was of more consequence than the ability to escape their pursuers, yet the admitted and inexplicable facts of caprice on the part of the females of many species (ii. p. 256), causing them to prefer some other than the conqueror, make the explanation less satisfactory. A still more difficult case is that of the "spike-horn bucks," which seem to be increasing in number among the Adirondacks. "The spike-horn is a more effective weapon than the antler in combat of all kinds, and far less likely to hinder escape from beasts of prey. Undoubtedly the first specimen was merely an accidental freak of nature. But his spike-horns gave him an advantage, and enabled him to propagate his peculiarity" (vol. ii. p. 245). Now, when the remote ancestors of these deer first began to acquire horns, it is more likely, upon any kind of hypothesis, that the horns were spiked or simple than branching. If they are more useful now, why were they not then? and how did antlers originate and become the rule? Again, if the other kind of sexual selection be appealed to, we must assume that the females had an inherent admiration for antlers, and

selected such individuals as had them. But aside from the general difficulty of accounting by natural selection for any such latent preference, why is it not equally operative at the present day? In fact, our author acknowledges the difficulty in these cases, and we recommend a careful study of the explanation given for the long and backward-curving horns of the oryx leucoryx (on page 241 of vol. ii.), as an instance of the unsatisfactory nature of all reasoning from natural selection when applied to particular cases. Everywhere some other condition is required, for which no sufficient cause is assigned.

Darwin not only ascribes to selection the power of producing men from monkeys, but also of originating all the many shades of difference as to color, length, and distribution of hairy covering, form of features, limbs, and skull, which distinguish the human races—differences which some regard as specific in their character. But he seems to make it harder than is necessary for us to agree with him, by holding that all these race distinctions have arisen since the birth of the first human beings, whereas more time would have been allowed by supposing that several "ape-like progenitors," in different parts of the world, produced as many races of men. We are led to say this because Mivart is inclined to doubt whether even the millions of years which geology allows would be sufficient for the production of the human races by the slow process of selection.

As to color, if we suppose black to have been gained by sexual selection (ii. 365), what was the original color? and if, "with the lowest savages, the people of each tribe admire their own characteristic qualities" (p. 367), how can we account for any divergence from the original color of the skin so as to form races? The same inconsistency between the above general law and the existing facts is found in respect to all the characters that distinguish the races of men, for since these race distinctions are confessedly of no value in respect to ordinary natural selection, we can only account for the preservation and perpetuation of differences in color, length of hair, etc., by assuming an inherent preference in the minds of the women for things which had not previously existed, and in direct contravention of the rule above given.

We will not discuss in detail the difficulties which Wallace has found in the way of the production of human beings through the unaided operation of selection, but refer the reader to his most instructive work.* Darwin alludes to these objections, and attempts to refute them, in which we do not think he is successful; on the contrary, we are more than ever inclined to believe that selection is insufficient not merely for man, but for all other organisms, and would call attention to the following remarkable admissions of our author:

"Variability is the necessary basis for the action of selection, and is wholly independent of it (ii. 381). With respect to the causes of variability, we are in all cases very ignorant (i. 107). The laws of inheritance determine the manner of transmission of sexual characters (ii. 381). These laws, from unknown causes, are very liable to change (i. 286). Stripes may be due to the action of some unknown cause (ii. 291). An unexpected residuum of change, perhaps a large one, must be left to the assumed uniform action of those unknown agencies which occasionally induce strongly marked and abrupt deviations of structure in our domestic productions (i. 148, and i. 240). In the greater number of cases, we can only say that the cause of each slight variation and of each monstrosity lies much more in the nature or constitution of the organism than in the nature of the surrounding conditions, though new and changed conditions certainly play an important part in exciting organic changes of all kinds" (ii. 371).

Here is almost all that is required by Mivart, and is, as was said by him of admissions in the later edition of the "Origin of Species," "nearly tantamount to a change of front in the face of the enemy;" and as most of these admissions occur in connection with the attempt to apply the doctrine of selection to a single species, and that the highest, it may be said, without intending a pun, that the theory is disproved by the "argumentum ad hominem." Surely, if Darwin is obliged to fall back upon unknown agencies, and upon such vague hypotheses as pangenesis, to furnish the means of originating species by natural selection, why should we not, like Mivart, ascribe to them the sole power of producing species, and restrict selection to the preservation of favorable individual variations within the species?

It is objected to the view of Mivart that it is merely giving a name to a hypothetical principle, and means no more than to say that "opium is narcotic because of its soporific quality." Why not? There are many things of which we merely know that they are such and such, and do so and so. The progress of science simply lessens their number, but can never do more than reduce them to one, the invisible First Cause. Hence, if the origin of species requires the co-operation of any unknown law or force, as Darwin himself admits, there are reasons for supposing that some such unknown law is the principal cause, and that selection merely aids it. At any rate, it is no more inconceivable that, by the operation of such unknown laws, a fox should produce a dog, or an ape a man, than that, from equally unknown causes, a human being should give birth to a hideous monster; and the brains figured by Vogt in his "Microcephaly," of idiots who were unquestionably human beings, were simply as much smaller than those of their parents as the first man's brain may have exceeded in size those of his "ape-like progenitors."

* "Contributions to the Theory of Natural Selection."

KING AND HAGUE'S MINING INDUSTRY.*

THE book before us is the third in number (though the first issued) of five volumes, describing the "Systematic" and "Descriptive Geology," "Mining Industry," "Zoölogy and Palæontology," and "Botany" of the country adjacent to the 40th parallel of latitude, between the eastern boundary of California and the eastern base of the Rocky Mountains. The geological and topographical survey of which this report is the first-fruit was authorized by Congress, and, although placed under the direction of the engineer department of the U. S. army, the execution of the work was confided to a civilian, assisted by civilians. The volume now issued, which is devoted to the mining industry, is a large quarto of 624 pages, printed in large and clear type, on heavy, slightly tinted paper, and followed by a good though not wholly satisfactory index. It contains thirty-seven plates, illustrating the mining and metallurgical processes and vein-phenomena of Nevada and Colorado, and is accompanied by a folio atlas of fourteen maps, depicting, on a large scale, and correlating the underground works and geological structure of the various parts of the Comstock lode, and the geology of the Toyabe mountains and of the White Pine district.

The ten chapters composing the volume are separately written by Clarence King, geologist in charge, and the members of his corps, J. D. Hague, S. F. Emmons, and Arnold Hague. In the chapter on the Comstock lode, Mr. King gives, first, a description of the geology of the Washoe district, with a careful and valuable study of the lithology, and then proceeds to an elaborate analysis of the structural and mineralogical characteristics and the vein-phenomena of the famous vein which in one decade has contributed over $100,000,000 of bullion. In the next two chapters, Mr. Hague treats of the mines on the Comstock lode from the standpoint of a mining engineer. In a style of description which is remarkable for its clearness and conciseness, as well as for its adaptation to the comprehension of the general reader, the methods and difficulties of mining in Washoe, and the machinery and metallurgical processes used, are explained and illustrated by engravings. Mr. Hague furnishes information of the first importance to all interested in mining, in a series of well-discussed, analytical, statistical tables, showing in minute detail the experience of these mines in regard to production, cost, and profit. As for the future prospects of the Comstock lode, we gather from Mr. Hague that, to say the least, they are not brilliant. The great wedge-mass lying above the line of intersection of the two walls of the vein has been quite thoroughly explored, except in a few points where it extends below the workings, and even there its limit may be foretold from the convergence of its sides. All the economically important features of the lode appear to be intimately dependent upon the exceptional conditions existing in this portion of the vein—conditions which, in their turn, appear to have been rendered possible only by comparative proximity to the surface. That part of the vein which lies below the wedge has not thus far given promise; it is shrouded in the uncertainty that envelops an entirely unexplored deposit. But although the great wedge-mass has yielded up the greater part of the rich, concentrated bodies of ore, Mr. Hague holds out hopes of a continued product from the poorer portions of the same part of the vein:

"Whatever good or ill fortune may attend the explorations of the lode in depth, there is still much hope for a long-continued bullion production and remunerative mining industry in the existence of large bodies of ore near the surface, that, until now, have remained undeveloped by reason of their low value, being too poor to pay for mining and milling, at prices hitherto existing, but offering a margin of profit under conditions that seem possible for the future."

These conditions are in part already promised in the decrease of the cost of labor and materials by the construction of railroads.

* "United States Geological Exploration of the Fortieth Parallel. Clarence King, Geologist in Charge. Vol. III. Mining Industry, by James D. Hague. With Geological Contributions by Clarence King."

A chapter on the "Chemistry of the Washoe Process," by Mr. Arnold Hague, throws a great deal of light not only upon the remarkable metallurgical processes of that region, but also upon the "ways that are dark" of "process-venders." This chapter is based upon observations at the mills, and upon a considerable amount of original experimentation in the laboratory: and we could wish that Mr. Hague and Mr. Daggett, who aided him, had carried their investigation further into the obscure, but for us highly-important, domain of amalgamation.

In Chapter VI., Mr. J. D. Hague describes the mines, metallurgy, and economical results of the industry in Western Nevada, Reese River, and White Pine. In other sections of the chapter, the geology of the Toyabe range and Egan Cañon district, and of the White Pine district, are described respectively by Mr. Emmons and Mr. Arnold Hague in a manner which indicates very careful and well-balanced observation. In the following chapter, Mr. King describes the "Green River Coal Basin," giving a very graphic explanation of the topography of the region, and a very clear general exposition of the geological history of an exceedingly interesting coal-field—one that is already feeding the engines of the Union Pacific Railroad at a cost of only $1 75 per ton. This great area of coal deposits extends from the Wahsatch range eastward, and certainly from New Mexico to Dakota, though its northern and southern limits are unknown. One of the earliest indications of its existence was discovered by Dr. Newberry in exploring the cañons of the Colorado. Seams of coal, five to fourteen feet thick, are now being worked, which yield a fuel of very fair calorific value.

The succeeding chapters, by J. D. Hague, are devoted to the mining industry of Colorado, a country which has hitherto been equalled only by Missouri in the difficulty of obtaining trustworthy information concerning its resources. Mr. Hague gives an elaborate description of the typical gold and silver mines, of the essential and temporary difficulties under which the business is conducted, of the mining machinery used, the processes of mechanical preparation and metallurgical treatment of the ores, together with detailed statistics of cost, production, and profit. Concerning the present condition of mining industry in this territory, we learn, that, "although the annual production of bullion is less than the reported products of the earlier years, while the rich placers were being worked, the business, based as it is chiefly upon the development of mineral veins, and only to a slight extent upon the readily exhaustible alluvial deposits, is assuming a more permanent and reliable form." . . . "The methods of mining are gradually improving; the costs of labor, materials, and supplies are being steadily reduced; metallurgical processes, adapted to the several classes of ore, have been introduced into the region and successfully applied to their purposes, and the business is slowly but surely establishing itself on a permanent and healthy basis." The bullion product of the territory, up to 1866, probably amounted to somewhat more than $30,000,000. During the two years, 1868 and 1869, it was $6,500,000 coin value—a little more than one-half of which is to be credited to 1869.

The volume by itself is a scientific manual of American precious-metal mining and metallurgy, and an invaluable work of reference concerning the mode of occurrence of gold and silver; and it is most fortunate that it has been so beautifully prepared as to invite the reader, and rescue it from the general mass of public documents, which either grow dusty on library shelves or play an important part in the commercial transactions between the wives of country "constituents" and the rag-man.

Elements of Astronomy. Accompanied with numerous illustrations, a colored representation of the Solar, Stellar, and Nebular Spectra, and Celestial Charts of the Southern Hemisphere. By J. Norman Lockyer. American edition. Revised and adapted to the Schools of the United States. (New York: D. Appleton & Co. 1870.)—The admirable "Elementary Lessons in Astronomy" of Mr. Lockyer bear the same date as this reprint, and afforded no reasonable pretext whatever for the work of revision and adaptation to which, according to the title, it has been subjected. The only important additions to the text which have appeared, on a tolerably careful comparison of the original and reproduction, consist: first, in extending and altering the title unwarrantably; second, in additions, mostly trifling and of a verbal kind, on a few pages in the body of the book; third, a poor reproduction of the celestial charts in Arago's "Popular Astronomy;" and, fourth, a history of astronomy in two and a-half duodecimo pages, together with a few pages of mathematical definitions telling the nature of a straight line, a circle, etc. Greater liberty has been taken with the illustrations. Those in Mr. Lockyer's book are carefully selected, and of the most admirable execution; many of these have been omitted in the reprint and their place supplied by others of inferior workmanship and illustrative value. We miss, for instance, in the reprint of the illustration of the star-clusters, the beautiful cluster in the Crab given in the original; while that of Hercules, which is reproduced, and the five others which are added, are so poorly drawn that we cannot feel compensated by the liberality. In the illustration representing the appearance of the double double star in Lyra under different magnifying powers, the reproduction utterly fails to represent what the original shows so beautifully. The seventy-eight illustrations in the original have been swelled to one hundred and eleven by the introduction of various figures and diagrams; but as the reader has no clue to those which have or have not had the approval of Mr. Lockyer, he is necessarily left in doubt as to whether he is getting the opinions of a renowned observer or of the unknown hack who has been muddling his work.

Another addition of very doubtful value is a set of questions at the foot of the page, in deference to an absurd and, we are sorry to say, in the main, American custom of helping an unintelligent pupil or teacher by supplying interrogations in the text above. And apparently these changes entitle the publishers to a copyright—a hardship for the author which is aggravated by the fact that his book is by far the best of its kind in our language. It is rare, indeed, that the great masters of a science can be induced to pause in their work of research to help the beginner over his difficulties by writing a text-book. It is, moreover, of the greatest interest to education that these works should be written by masterly hands, and not in the perfunctory way of the professional compiler. Our science is moving so rapidly that, if we wait, as we generally do, until the discoveries get from the memoir to the encyclopædia, and thence through the uncritical hands of the text-bookmaker to the public, we shall remain a generation behind the discoverers. On the other hand, Mr. Lockyer has doubtless reckoned upon the returns from this laborious work of popularizing the discoveries in which he has borne so noble a part for the means to carry further the researches with which all educated men are deeply concerned, and the chance of considerable success very likely depends upon the reception of his book by the people of this Greater Britain, to which he has in all justice a right to look for support.

So much has been said about the republication that little space can be given to the original work. The well-made plate representing in colors the spectra of the sun, two fixed stars, and a nebula, which serves as a frontispiece, is a characteristic and important feature of this work, the spectroscope and its results figuring largely in the researches described by Mr. Lockyer. The chapter on the physics of the sun is admirable; the plates particularly exceed in beauty anything which has for a long time appeared in a text-book. The paragraphs on the moon are also excellent; and the plate representing Copernicus, one of the craters in that body, is a real masterpiece of drawing and engraving. One point only presents itself for criticism. Mr. Lockyer holds to the Herschellian view of the relation between our galaxy, or the stars included in the Milky Way, and other similar galaxies or universes, as the author singularly enough calls them. Although the existence of many galaxies may in time be proved, there can be no doubt that Mr. Proctor has thrown great doubt on the old view. We are on this account a little surprised to find no qualification in the statement of it here.

Honduras: Descriptive, Historical, and Statistical. By E. G. Squier. (London: Trübner & Co. New York: Leypoldt, Holt & Williams.)—A great interoceanic highway, a railroad across the Central American Isthmus, will be completed next year (1872). Commencing at Port Cortez, better known as Puerto Caballos, on the Bay of Honduras, it runs nearly due south across the continent and wholly through the Republic of Honduras to the Bay of Fonseca on the Pacific. This line of communication will of itself invest Honduras with new interest and importance. There are but few authors of books of travel who possess as fully as does Mr. Squier a long and intimate acquaintance with the countries they describe. From extensive travel and long sojourn in the countries of the American Isthmus, Mr. Squier brings to his task a wealth of observation and a mass of information on the subjects treated not exceeded by those of all the writers who have preceded him. His book fully answers to its promise of being descriptive, historical, and statistical. The chapter on "The Aspects of Nature" presents a lifelike picture of the country. Another on the precious woods and one on the mines give us the best and clearest idea of these peculiar resources of Honduras we have ever had; and the description of the growth and harvesting of the

mahogany, the rosewood, the lignumvitæ, the fustic, Brazil, and Nicaragua woods, the copaiba, liquid amber, and copal trees, the Palma Christi, ipecacuanha, caoutchouc, and the various gum- and medicine-producing shrubs, forms a chapter exceedingly interesting even to the general reader.

As information increases concerning these countries, we find ourselves compelled greatly to modify our impressions concerning their climates. The earliest travellers, seldom penetrating into the interior, truthfully reported that they saw low coasts covered with dense forests kept in rank vigor by constant rains, where marshes and lagoons, sweltering in a fierce sun, generated deadly miasmatic damps. But they could tell us nothing of the high plateaus in the interior, where the rains are light, the country open, and the climate relatively cool and salubrious. Thus Mr. Squier states (p. 96) that certain valuable gold and silver mines of Honduras are not largely worked "for precisely the reason which is most likely hereafter to commend them to American and European enterprise. The natives cannot be induced to establish themselves in their vicinity, *on account of the coldness of the climate.*" Mr. Orton, in his work "The Andes and the Amazon," makes a statement quite as new to us in saying that the entire vast valley of the Amazons is throughout healthy and the climate temperate. Mr. Squier's work is accompanied by that *sine quâ non* of a book of travel—a good map of the country described.

Appleton's European Guide-Book Illustrated. (London: Longmans; New York: D. Appleton & Co.)—As may be supposed, this book is of English authorship, and, like most of the publications from the Chiswick Press, is well printed and on good paper. It contains the usual current information as to routes, hotels, etc. American travellers in Europe well know that the perfect guide-book has not yet appeared. For some it would include only France and Italy. For others, it should confine itself to Germany. While for a large class, whose foreign lingual progress, like Napoleon's Russian invasion, is stopped by the elements, and who care to hear nothing but their beloved English, a good foreign guide-book shbuld tell us of no country but Great Britain. The judiciously prepared guide-book must then, perforce, make of its pages partition as far as possible among the various countries sought by tourists—due regard being had to their relative attractions and to the number of places of salient importance. Measured by this standard, the book before us credits Americans with too slight an interest in Italy and Germany, in giving one hundred and eighteen pages to Italy and but one hundred and eight to all Northern and Southern Germany, Hungary, and Bohemia, while one hundred and seventy pages are devoted to Great Britain with patriotic leaning towards local detail. It is really of no possible interest to us to be told that "the castle on the river at the east end of the town is the residence of Sir Denham Norreys." Only with feeling of surprised disgust can the American traveller receive the information (p. 47) that Paul Jones was a "pirate." And if we needs must have whole pages of Burns quoted at us, we might at least be spared the long inscription on the tomb of the father of Burns, and the superfluous information that "the last line is copied from Goldsmith's Deserted Village."

We cannot help thinking, too, that the large amount of space occupied by the one hundred and twenty "illustrations" of the work might be filled to better advantage by necessary information. The tourist who visits the places or monuments thus pictured has no need of their counterfeit presentments when standing before them, and if he should desire pictures as souvenirs or for preservation these would be far from answering that purpose.

John Wesley. By Julia Wedgwood. (New York: Macmillan & Co.)—A plain, zealous Methodist, who stood looking at the elegant marble church of that order on Arch Street, Philadelphia, as sorrowfully as if it were some whitened sepulchre built in honor of the prophet by the Pharisees who had derided him in his life, seeing Bishop S. approaching, exclaimed with a sigh, "Ah, Bishop! what would John Wesley say if he could look upon such a thing as this?" The Bishop, surveying the edifice as if for the first time, replied: "If he had travelled as extensively as I have in the country, he would say this is decidedly the finest specimen of church architecture in the Connection!" The layman did not for a moment suspect that it was himself that was running Methodism into the very formalism against which its origin was a protest—that ignorance, poverty, baldness were the accidents of the system at the first, and the attempt to perpetuate these as essential features of the system, or to propagate the system by these, must be fatal to the church as a spiritual power. The Bishop had the sagacity to perceive that the future of Methodism in the United States will depend quite as much upon flexibility and power of adaptation in the externals of the system, as upon coherence in its vital principles; that an educated ministry and a communion of growing intelligence and refinement may disfavor the noisy demonstrations and the emotional excesses of primitive Methodism, and yet conserve the marvellous consolidation and the administrative efficiency of the system. Not dress, manners, modes, places, but doctrine and duty, discipline and devotion, were the points about which Wesley constructed his system, using quite as much the circumstances of the time as any faculty for organization within himself. It is these circumstances and conditions, rather than the personal biography of Wesley, with which Miss Wedgwood's clever and instructive volume is chiefly occupied. It is a book of topics rather than a history. What she aptly styles "the Evangelical reaction of the eighteenth century" is her leading theme, and Wesley its most conspicuous representative. The book is written in a candid spirit, and with no special enthusiasm for Wesley as a hero; indeed, the author quite dissents from the eulogium of Macaulay, "that he had a genius for ecclesiastical government not inferior to that of Richelieu." The class system, the fiscal system, the itinerancy, the conference system, which give to Methodism its unity and energy, were not original parts of a scheme devised by Wesley, but were adopted by him, item by item, as occasion demanded or suggested them. "On the one hand was a man of iron will, profound conviction, a single aim, and all the advantages of a learned education. On the other, was a set of half-educated or uneducated people, not remarkable in any way. The only position in which they could stand to him was that of subordination." Wesley was in reality the founder of an order; and time only makes more patent the unwisdom of the Church of England in suffering such an order to be divorced from her communion.

Second American Edition Now Ready.

THE "BAB" BALLADS;

OR, MUCH SOUND AND LITTLE SENSE.

By W. S. Gilbert.

With 113 illustrations by the author. Square 12mo, cloth extra, gilt edges, illustrative gilt side, price $1 75.

From the New York Tribune.

. . . . . "But everybody who likes to laugh, and counts that man as friend who wins it forth, will enjoy the 'Bab Ballads,' and warmly welcome their appearance in an American reprint. A perfect carnival of fun riots through its pages. Fresh fun, too—none of the stage grin and old wearisome mask. It is like a child's rollicking mischief; but it is a child thoroughly acquainted with men and manners as the little charmer depicted in page 95. . . . . The little wood-cuts which illustrate the volume are extremely comical."

THE LIBRARY;

OR, SOME HINTS ABOUT

WHAT BOOKS TO READ AND HOW TO BUY THEM.

With Lists of Standard and Essential Books in every Department of Literature,

Containing the prices and descriptions of the various editions published, and hints as to which are the most desirable to purchase.

By AN OLD BOOKSELLER.

☞ Harper & Brothers will send any of the above works by mail, postage prepaid, to any part of the United States, on receipt of the price.

The *Nation* says of

Morelet's Travels in Central America:

"One of the most interesting books of travel we have read for a long time. The author's style is agreeable and engaging, and recalls the quick sympathy with nature and sensitiveness to every impression from without of our great sentimentalist among writers on natural history, Audubon. . . . Perhaps the best and most extended sketches of the plants and animals of this region that we possess. . . . His descriptions are evidently truthful, as he seems penetrated with true scientific spirit. . . . M. Morelet makes occasional reflections of great interest in relation to the relics of the ancient civilization. He does much towards removing the mystery of the origin of the structures whose ruins are now scattered over th country."

Price $2.

HOLT & WILLIAMS,

25 Bond Street, New York.

NEW BOOKS.

I.

Literature and Life.

By EDWIN P. WHIPPLE.

1 vol. 16mo, $1 50.

Contents.—Authors in their Relations to Life; Novels and Novelists—Charles Dickens; Wit and Humor; The Ludicrous Side of Life; Genius; Intellectual Health and Disease; Use and Misuse of Words; Wordsworth; Bryant; Stupid Conservatism and Malignant Reform.

This is a volume of remarkable value and attractiveness, on subjects relating to Literature and Life. It displays happily Mr Whipple's genius as a critic and a literary artist, his large and sound observation, his comprehensive and clear-cut thought, and his vigorous intellectual and moral health.

II.

A Woman's Poems.

1 vol. 16mo, cloth, $1 50.

Some of the poems in this book have appeared in periodicals, and won no little attention by their subtle vein of thought, profound sentiment, and lyrical expression. These, with several poems never before published, form a volume which will be recognized as a valuable addition to American poetical literature.

III.

Something to Do.

A NEW NOVEL.

1 vol. 8vo, paper, 75 cents; cloth, $1.

A story of to-day, picturing characters, scenes, incidents, and accidents of the passing hour. Its rapid movement, interesting and varied conversations, and graceful style will make "Something to Do" very popular with readers of the best modern fiction.

*** For sale by all Booksellers. Sent post-paid on receipt of price by the Publishers,

BOSTON.

Late Ticknor & Fields, and Fields, Osgood & Co.

CASSELL'S POPULAR EDUCATOR.

COMPLETE IN SIX VOLUMES.

Price, $15.

"We have gone over its pages with sentiments of rea wonder. We know no work like it. It has occupied and filled up a field of education vast and most important to the community."—*Dublin University Magazine.*

CASSELL, PETTER & CALPIN,
596 Broadway, New York.

SHILOH;

OR,

WITHOUT AND WITHIN.

By W. M. L. JAY.

Third thousand. 12mo, 488 pages, $2.

"It is a sweet, simple story of New England country life, showing what one earnest worker for Christ and his Church can do to build up the waste places and kindle into a flame the smoldering fires of devotion and work. A city girl, from considerations of health, chooses to spend her summer at Shiloh, a country village, rather than at Saratoga, the fashionable watering-place; and this is the history of her life, as written to her distant friend. The story is well told; the characters are well delineated; the pathetic and the humorous are skilfully blended; and we have both laughed and wept in reading it. We look forward with great pleasure to the future products of the author's pen, and are very sure that her place will be an exalted one among the writers of our time."—*Maryland Church Record.*

BY THE SEA.

By MRS. SOPHRONIA CURRIER,

Author of "Alice Tracy."

Second thousand. 12mo, $1 75.

A prominent critic writes of it: "A story of very unusual interest. It is full of exciting incident, and yet elevated by pure purpose. The characters are well drawn and sharply individualized, and the descriptions are vivid."

"A religious novel, and assuredly one of the best of that class which has ever fallen into our hands."—*New York Herald.*

Full list of our publications, including 100 beautiful books for children, sent free on application.

For sale by all Booksellers, or sent by mail, postage paid, on receipt of price.

E. P. DUTTON & CO., Publishers,

713 Broadway, New York.

A DEFENCE OF HOLY ORDERS

IN THE CHURCH OF ENGLAND,

Including the Statutes, Documents, and other evidence attesting the validity of Anglican Orders. With a facsimile of the Record of Archbishop Parker's Consecration, Photozincographed. Printed in Latin and English. Edited by the Rev. T. J. Bailey. Folio, cloth, price $15.

"I know of no treatise on the Orders of the English Church that can at all take the place of Mr. Bailey's noble work. It is simply invaluable."—I. Williams, Bishop of Connecticut.

"This work is a luxury for the Library, and a most valuable supplement to all that has been written on the Orders of the Church of England."—A. Cleveland Coxe, Bishop Western New York.

"The 'Defence of Holy Orders in the Church of England' is a timely and valuable book."—Wm. Crosswell Doane, Bishop of Albany.

"A copy of this work should be in the hands of every Bishop, and in the Library of every Church, College, and Theological Seminary in our land."—George F. Seymour, Professor of Ecclesiastical History, General Theological Seminary, New York.

"Of this invaluable work, as an instrument of light and power in the advancement of the Catholic unity, we know not how to speak without seeming oversanguine. We bespeak for it a place in the library of every Bishop and Priest, College, and Seminary in the land."—Church Journal.

"Mr. Bailey has, with almost superabundant pains, given us not only the whole documentary account from the Lambeth Registers, both in Latin and English, but also a Photozincographic fac-simile of the documents themselves."—Saturday Review.

"We owe thanks to Mr. Bailey for this handsomely printed and great effort to lay the case fairly before Foreign Churches."—Guardian.

"The whole sum and substance of the controversy upon Anglican Orders is arranged with documentary proof in the sixty-five folio pages of the English portion of this beautiful Monogram."—Church Review.

Borrow's Works. The Bible in Spain, Romany Rye, Lavengro, Wild Wales, Gypsies of Spain. 12 vols. half-morocco, gilt, gilt top. A very nice copy. London: Murray. $35.

The Royal Gallery of Art. Ancient and Modern Engravings from the private collections of her Majesty the Queen and his Royal Highness Prince Albert, and the art heirlooms of the Crown, at Windsor Castle, Buckingham Palace, and Osborne. Edited by S. C. Hall. 4 vols. folio, bound in two. London: Colnaghi. $200.
This is truly a royal book. Fine impressions on India paper. About 150 most exquisite steel engravings, with letterpress descriptions. Superbly bound in red morocco extra, richly tooled borders, gilt edges, binding fresh and bright. This is one of the most elegant and attractive books ever made. It should forthwith depart from our shelves, and grace some gentleman's drawing-room.

Hamilton. The Memoirs of Count Gramont. 3 vols. 8vo, calf, fine plates. Clean copy. Good margin. $14.

Edinburgh Review. A fine set. Newly bound in half-morocco. 136 volumes. Offered at about price of binding. $175.

Watts, Henry. A Dictionary of Chemistry and Allied Sciences. 4 vols. 8vo, $32. London, 1863.

Copeland, James. A Dictionary of Practical Medicine. 4 vols. 8vo. half-calf, gilt, $24. London, 1858.

NOTICE.

An entirely New Edition, containing

NINE THOUSAND NAMES IN ALL,

Differing from last year's issue largely by giving over Two Thousand Changes and Additions.

DINGMAN'S DIRECTORY

OF

PUBLISHERS, BOOKSELLERS, STATIONERS, NEWS-DEALERS, AND MUSIC DEALERS IN THE UNITED STATES AND CANADA,

FOR 1870-71.

Giving the exact Class or Branch of Business of each Firm, with an Alphabetical Index of every Firm Name in the Directory.

A new feature is added, by appending to the above a List of nearly Two Thousand Public Libraries, with the dates of their Organization and the number of volumes contained in each. The information given is that furnished by the Librarians themselves, and is therefore positively accurate and official. (This list alone is worth the price asked for the whole book.)
Besides the above, the work contains:

I.—THE NEW COPYRIGHT LAWS

of the United States, as Revised, Consolidated, and Amended by Act of Congress, approved July 8, 1870; together with the Directions for securing Copyrights issued by the Librarian of Congress since the passage of the above Act.

II.—THE DOMESTIC AND FOREIGN

POSTAL REGULATIONS, and the Table of Rates of Postage to Foreign Countries, etc. One large vol., handsomely bound in brown cloth, with bevelled edges. Price $8 net. When sent by mail, 30 cents additional must be forwarded for postage. Please send early orders to

JOHN H. DINGMAN,

654 BROADWAY, NEW YORK CITY.

The Publishers' Circular says: "Dingman's Directory is as absolute a necessity to the members of the bookselling fraternity as are the ledgers in which their accounts are kept. It is a book to which every member is constantly referring, and which never fails to give the desired information."

BOOK-BUYERS.

NEW BOOKS

BY

CARLTON & LANAHAN,

805 BROADWAY.

THE PROBLEM OF EVIL.

Translated from the French by M. Ernest Naville.

BY PROF. J. F. LACROIX, M.A.

12mo. The only authorized edition. Price $1 50.

This great work was delivered in a series of lectures to popular audiences, and is marked by the eminently French transparency of style. It will be found clear and attractive to the most ordinary thoughtful reader.

THE PRINCE OF PULPIT ORATORS.

A Portraiture of

REV. GEORGE WHITEFIELD, M.A.

Illustrated by Anecdotes and Incidents, with a Likeness.

BY REV. J. B. WAKELEY, D.D.

16mo, pp. 400.

Price.....$1 25.

The reader will find a condensed story of Whitefield, the cream of his history, the marrow of his biography, an epitome of his life and character, illustrated by striking anecdotes and thrilling incidents.

OUR BOOKSTORE

IS THE

ONLY ONE ON THE LINE OF BROADWAY, BELOW SPRING STREET,

Where can be found a well-selected stock of the

BEST ENGLISH LITERATURE.

Business men and others located down-town who are gradually forming libraries, and seek books of permanent value, are invited to call at our store and examine our stock.

We offer liberal inducements to those who will entrust their orders to us, feeling confident we can give satisfaction. We give special attention to this department of our business, and bring to it an experience acquired during a period covering twenty-seven years in the "trade" in this city.

DE WITT C. LENT & CO.,

PUBLISHERS AND BOOKSELLERS,

451 BROOME STREET,

A few doors West of Broadway.

ANCIENT AND MODERN BOOKS.

PRICED CATALOGUE No. 19

Just issued, and will be forwarded free to any address.

PRATT'S Astral OIL. Not the cheapest, but the best illuminating oil ever made. Does not take fire or explode if the lamp is upset and broken. Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have occurred from it.

Oil House of Charles Pratt, Established 1770 New York.

The Nation.

NEW YORK, THURSDAY, APRIL 20, 1871.

The Week.

THE Senate amendments to the Ku-klux bill, which the House cannot swallow, are of a most extraordinary kind. As the bill stood, it made it a high crime "to interfere, by threats or violence, with the person or property of a United States officer on account of his discharge of his duty;" but the Senate made it read, "while engaged in the lawful discharge of his duty," thus making United States officers, including all persons in the service of the Government, a privileged class. Another amendment authorizes the President to use the army and navy whenever the conspiracies or combinations shall seem to him "to obstruct the equal and impartial administration of justice." Think of leaving such a point to be decided by one man, and giving his decision such momentous consequences. Besides allowing him to use the army and navy, however, he is also to be allowed to use "such other means as he may deem necessary" for the suppression, etc. Under which clause he might seize and confiscate live stock. Twenty Senators, headed by Mr. Morton, actually voted for entrusting him with these amazing powers till March, 1873, or in other words, till after the next Presidential election, in which he will probably be a candidate; but this was a little too much. The country is indebted to Messrs. Trumbull and Schurz in the Senate, and to Mr. Garfield in the House, for the strong and able opposition to this reckless and unscrupulous legislation. The bill will perhaps pass, but if any attempt is made to enforce it, the only effect will be to cover its authors with even deeper disgrace than that under which they now labor.

We have commented elsewhere at some length on the main features of this extraordinary bill, the passage of which would certainly, were it not for the strong hold which legal habits still have on the great body of the people, reduce the Constitution to the level of the constitutions of France—that is, make it a mere expression of the opinion of the majority for the time being as to what is convenient or what is in accordance with the eternal fitness of things. Mr. Sumner has distinguished himself in this debate in the Senate by more than ordinary absurdity. We use the term in its logical sense, and not as a mere term of abuse. He has spent a good deal of time of late denouncing the President as a "colossus of ignorance," and various other colossal things; he has arraigned him formally in the Senate, too, within one short month, as guilty of no less usurpation of power than declaring war on a friendly State, without the knowledge or consent of Congress; and with having contracted obligations, in the nature of treaties, with foreign powers, through the medium of agents unknown to the Constitution and the laws; and with having, in short, to use Mr. Sumner's own language, in "Naboth's Vineyard," "offered violence to Dominica, violence to Hayti, violence to Public Law, including the violence to the Constitution of Dominica, and also to a treaty between Dominica and Hayti, crowned by violence to the Constitution of the United States." More recently still, he has denounced him as the "head of a Ku-klux" operating against the Dominican blacks. It seems scarcely credible, after this, but it is nevertheless strictly true, that Mr. Sumner, the author of this denunciation, has, within a week, in the Senate, voted for a bill conferring on the dangerous, unscrupulous person whom he thus denounced the right of suspending the habeas corpus and proclaiming martial law in any part of the Union, for a variety of vague and ill-defined reasons, of the existence of which he, "the colossus of ignorance," is to be the sole judge.

The speech in which this remarkable vote was defended was enough to make the orators of the Folies-Bergères, including Citizen Blanqui himself, turn pale with envy. As "to the cry of centralism or, it may be, of imperialism," he scorned it. "These are terms," said he, "borrowed from France, where this abuse has become a tyranny, subjecting the most distant communities even in the details of administration to central control." "No such tyranny is proposed among us, nor any interference of any kind with matters local in character. The nation will only enter the State as the safeguard of rights national in character, and then only as the sunshine, with beneficent power and, like the sunshine, for the equal good of all. As well assail the sun because it is central—because it is imperial. . . . Give me the centralism of liberty! Give me the imperialism of equal rights!"

We do not hesitate to say that, if oratory of this kind on a great constitutional question really affected any considerable portion of the people or shook their ancient and priceless respect for the forms of law and fixed rules of interpretation, we should know that the reign of loafers, blackguards, and visionaries, in every city in the Union, was not far off, and that Tweed, and Fisk, and their like would, before long, have Sumner, and Phillips and their like, chopping logic, under a strong guard of "brutal mercenaries," in the Dry Tortugas, or some other place of security. There was a time, in the old days of corporal punishment, when an upright and well-informed pedagogue would have soundly whipped any boy of over fourteen who stood up before him and professed to believe that centralism, or its product, imperialism, was introduced in France, or any other country, for its own sake; or that, wherever these exist, they were not begun for precisely the same reasons as are now urged in defence of the Ku-klux Bill—that is, for the protection of life and property in disturbed districts, or, as it is called in Continental Europe, "the maintenance of order," and for the preservation of, or strengthening of, national unity. It was for the sake of union that centralization began in France, and it was for the sake of order that she placed her neck under the heel of a blood-stained imperialism.

That noble old pedagogue would have again chastised the boy if he had professed to believe that any government which undertakes the policing of a region can long avoid undertaking all other details of administration. Police is the basis of government, and surely draws all other things after it; and, to police thoroughly, you must, sooner or later, take all the rest of the machinery of government into your hands. So has it been everywhere and in all ages; so will it be here, if the crazy theories on which it is now proposed to pacify the South receive the support of the American people. Mr. Sumner might as well cry, "Give me the sunshine of the dungeon; give me the purity of the brothel; give me the logic of the lunatic asylum; give me the agility of old age and the experience of extreme youth," as cry, "Give me the centralism of liberty and the imperialism of equal rights." There is only one short way of characterizing such talk, and to that we do not choose to resort. The *Tribune* says he supported this bill "with fire," meaning thereby to pay him a compliment. It might as well compliment an oculist by saying that he removed a cataract in a burst of passion, or of a doctor that he amputated at the hip-joint with oaths and execrations. The work of legislating for the South requires, above all else—we might almost say to the exclusion of all else—patience, calmness, and common sense. More delicate or momentous work mortal brains have never gone about. It is not the life and limbs of the negroes of the South that it concerns, but the liberty and progress of countless generations yet unborn of both blacks and whites, and the success of the greatest push for happiness the race has ever made.

There has been a decided reaction in the President's favor since the publication of his last message, leaving the San Domingo matter to the judgment of Congress and the people. That it should be possible for him to win "golden opinions" simply by abandoning a course which the public had all but unanimously condemned, and which had come near splitting up the party hopelessly, and which he had per-

sisted in for nearly two years, shows how easy it is for the President to retain popular favor. As might have been expected, however, the Administration organs are trying to get more out of the reaction than it contains, and would fain have us believe that the San Domingo scheme is gaining ground in the public mind also. So we are assured that everybody except a few disappointed politicians are very anxious for it.

The United States Supreme Court decided a year ago that the Legal Tender Act was unconstitutional as to contracts made before its passage, but as only seven judges sat on the bench when the case was heard, and the decision was given by only a majority of one, Attorney-General Hoar moved for a rehearing as soon as the two vacant places were filled. We presented some of the political objections to this at the time (April 7, 1870), and we presume most of our readers were relieved when the Court was soon after prevented passing on the application by the withdrawal of the appeal. The matter is now coming up once more before a full bench of nine judges, and the Court has ordered the question both of the constitutionality of the law as to contracts made before its enactment, and as to contracts made after its enactment, to be argued by the Attorney-General and Mr. Clarkson Potter. The rehearing on the first point—the constitutionality of the law as to contracts made before its passage—is an acknowledgment by the Court of the soundness of the arithmetical view of its powers, namely, that the claims of its decisions to popular respect depend for their validity on the number of judges who concur in them. Considering that Congress has the right to increase the number of judges at pleasure, it is hardly short of suicidal for the Court to give any countenance to the notion that nine judges have power which seven have not, or that a majority of three can give weight to a judgment which a majority of one could not give it. We therefore look on the reopening of the question of the applicability of the Legal Tender Act to contracts made before February, 1862, as a great misfortune.

The Florida carpet-bagger, if not typical of the species, is one of the most formidable competitors for this distinction, as good judges, who have had experience, will readily admit. There has been a falling out between two of the most conspicuous—the present United States Senator Osborn, and the Hon. C. M. Hamilton, Representative of Florida in the Fortieth and Forty-first Congresses, who incurred Osborn's enmity by successfully resisting a railroad subsidy scheme in which the latter was heavily interested. Hamilton makes affidavit that he was approached with all sorts of the most tempting bribes by the Osborn ring to secure his influence in passing the necessary bill through Congress, and he prints three letters from Osborn's brother—said to be a doctor of divinity, residing in Brooklyn—which should become classic in the literature of political swindling. Hamilton was invited to choose between half-a-million of stock in the "Great Southern Railroad Company," a readjustment of the Federal offices and reapportionment "to his better satisfaction," his return to Congress, and support in all his measures there, and permanent attorneyship of the road at such salary as he might name—all this on the one hand, and political ruin on the other. The Governor's name is freely used by the writer as one of their accomplices, and the leading politicians who are not to be reckoned among them are few indeed.

A curious incident marked, during the week, the usually dull and uninteresting routine of legislation at Albany. During the whole session, Tweed has had everything his own way, the Democrats furnishing him with the constitutional majority without question or murmur. One of them, however—Irving, an ex-pugilist—took it into his head to punch the head of a brother member, which roused the sensibilities of the country Democrats to such a degree that Irving, dear as he is to the city Democracy, had to resign to avoid expulsion. This deprived Tweed of his necessary majority, and the Republican members of Assembly, sixty-four in all, then drew up a declaration, which they all signed, solemnly pledging themselves to oppose three or four of Tweed's most nefarious measures then pending. Now, we venture to say, not ten men of ordinary intelligence in the State expected that they would hold out to the end, particularly after it was announced that Tweed was ready to give $75,000 for a vote. The principal subject of curiosity was, who would first give way. In a day or two, a sinner named Winans, an employee of the Erie Railroad and a member from Chautauqua County, was found ready to vote with the Democrats as often as they asked him; and he has done so. Tweed has got all his bills through. One does away with the registry law in this city to all intents and purposes; the other gives the complete disposition of the taxes to four Ring-leaders for two years certainly; and so on. The whole thing is a shameful farce, and nothing in it is more of a farce than the spasmodic attempt of the Republicans to be virtuous.

The position of Winans, the sinner who has got the money, if one was to believe the *Tribune* and the *Times*, is one of frightful disgrace. But Winans knows better. The worst that can happen him is not to get a renomination; but this is as likely to happen to a pure man as to him, and even more likely. Moreover, all through Western New York there are plenty of cases in which farmers and lawyers have gone to Albany as legislators for one winter, and come back rich, without meeting with any social reprobation. The charge of corruption made against a man by the newspapers does not hurt him much, because it is made against the best men, when they displease the party, and was made against even such men as Trumbull and Fessenden during the impeachment trial. So our advice to Winans is, to be of good cheer, put on a bold front, subscribe handsomely to charities, and buy two big diamonds, one for the forefinger of his off-hand, and the other for his shirt front, and eat good hearty food, and drink nothing but water. In this way, he will be able in about twelve months to hold his head as high as anybody.

The movement begun by the Hamilton County Association in Ohio seems to have spread to St. Louis, where a similar organization has been formed, calling itself the "Liberal Republican Executive Committee of St. Louis." It has published a platform demanding "quality of citizenship," a general amnesty, and supremacy of constitutional government; condemning the President's commission of acts of war against Hayti; denouncing the committal to the President's hands, as proposed in the Ku-klux bill, of the right to proclaim martial law, and suspend personal liberty, even in a condition of actual war; opposing all protective tariffs, or taxation for any other purpose than the raising of "the needed revenue;" advocating an immediate return to specie payments, and opposing an effort to compel the present generation to pay the principal of the public debt; and calling for reform in the Civil Service.

The coal miners and operators have at last erected machinery of arbitration in the shape of a council made up of delegates from both sides, and they have jointly chosen an umpire in the person of Judge Elwell, of Pennsylvania, and it is to be hoped that in this way an arrangement will be reached which will cause an early resumption of labor. The success of the experiment is to be desired most earnestly, with regard to future differences as well as with regard to this one, for it is the civilized, as distinguished from the savage, mode of ending disagreements between employers and employed.

A Mr. John Stiles, of Washington, being applied to by the Secretary of the Free Trade League, a few weeks ago, under the impression that he was a free trader, for facts showing that it was not the tariff which caused emigration from Canada to the United States, wrote him a saucy letter, overwhelming the League with a solemn opinion that it was the tariff and the tariff only that drew population over the border. This Mr. Stiles sent to the *Tribune*, which published it conspicuously, and must have laughed over the League. It now turns out, however, that the wretched Stiles was, one short year ago, a free trader, and applied to the League for the beggarly sum of $50 or $75 a week, to enable him to carry on a "thorough free-trade paper," named the *Saturday Evening Visitor*. The League refused the money, and soon after Mr. Stiles's "views" seem to have undergone a change, and he has since evidently made a careful study of Mr. Greeley's

writings, as his last letter had an amusing amount of that "plain but wholesome" savor which so strongly characterizes Mr. Greeley's economical disquisitions.

Business shows no signs of increasing activity, although the distributing trade continues fair. Dry-goods have been rather firmer, and the sales as a general thing more satisfactory. In other branches the complaint is general of accumulated stocks and tendency to lower prices. The export trade continues dull, cotton about steady, in spite of uninterrupted heavy receipts, the English market absorbing the supplies with unexpected readiness. Breadstuffs continue firm, the European demand is good, and stocks on the coast are light; but in the interior a large stock is believed to be on hand, and, with the early opening of canal navigation, will soon be in market. The diminished exports and continued large imports keep our foreign exchanges at the specie-shipping point, and one or two important parcels of American coin have again gone forward; but gold, which alone seems to resist all speculative influences, has advanced barely one-half per cent. In the stock-market the great bull-combination have things all their own way; but although the brokers have pretty much all turned speculators, from the dearth of legitimate orders, there is no increase to the participation of outsiders. Money is easy, the banks being free lenders, and prices of all securities are very high. But there are not wanting persons of judgment who anticipate a further great advance in figures. Governments dull and steady; the funding progresses slowly. Failures, defalcations, etc., are again the order of the day. The affairs of the Commonwealth Fire Insurance Company, recently closed by the Superintendent from Albany, disclose, in addition to mismanagement, apparent fraud and indifferent supervision on the part of the directors.

"The more than ever heroic city of Paris," under her more than ever illustrious Commune, has had another week of revolutionary and military glory, such as all other cities emulous of the sublime may justly envy her. She has confiscated the silver plate of the ministerial residences; ransacked or taken the inventory of churches—and that in accordance with a decree separating the church from the state; decreed pensions to widows and orphans—legitimate and illegitimate—of her fallen heroes; organized a system of requisitions; re-established the syndicate; founded a general metropolitan court-martial; judged heroic warriors and sublime world-regenerators—like Bergeret and Assy; refused passports to women and children, while causing hundreds of thousands of her citizens to fly out of her walls; ordered the demolition of monuments; erected batteries, barricades, and earthworks in her principal thoroughfares; thundered from all her forts; and driven her sons to the ramparts and out of them to earn by Spartan deeds—under a Sarmatian commander—the immortalizing praise of that hero of two worlds, Cluseret, the friend and disciple of George Francis Train. And all this she did while still mourning her revolutionary darling, Flourens, who was cut down with a sabre before achieving the necessary disguise after the flight from the battle-field of April 2, and his worthy fellow-commander, Duval, who, before he was the chief of an army, had attained the rank of chief of *claqueurs* at the Beaumarchais Theatre.

Not all the original heroes of the Commune, however, had met with a glorious death in the grand manœuvre of April 2. General Bergeret survived the shock of defeat and returned to Paris—to be brought before a military commission for coming back neither with his shield nor on it. General Granier or Ganier, the shopkeeper and commander of Montmartre, had fortunately resigned his high command before General Flourens and General Duval led the hosts of the Commune against Versailles. General Lullier, the ex-marine, was then luckily laboring under a momentary eclipse, being regarded by some as a traitor to the cause, and by others as cracked; he has, however, revolted and set up a republic of his own, consisting of himself and "200 determined men." General Eudes—this turns out to be his right name, he being not a Spanish Lafayette, but an *émeutier* of the "La Villette riot" of August last—also remained among the living, and probably General Brunel too, the "*ouvrier*," who, in the earliest days of the present revolution, formed with the *émeutier* aforesaid and with *chef de claque* Duval a military triumvirate, but has since vanished from the foreground of the scene. All these having one way or other deserved the thanks of revolutionary Paris for not despairing of the Commune, a live Polish officer, Ladislas Dombrowski, volunteering to hold the chief command, and Cluseret volunteering to organize victory in the capacity of a Carnot, even without the financial support of George Francis Train—not gratis, however, we suppose—it is quite natural that war *à outrance* was again and again lustily proclaimed from the barricaded Hôtel de Ville, with the approval of that leading citizen, Bourset, the liquor-dealer, and amid the applauding screams of mistresses decreed to be wives and expectant of pensions.

Fortunately this splendid but rather bloody game of civil war, the last scenes of which are too contradictorily reported to be spoken of in detail, threatens to be more short-lived than the Commune would like to make it for the benefit of an admiring world, and that for very prosaic reasons. The common people of Paris, and among them some who have to do the fighting, are getting hungry again, and have besides lost all relish for siege-food, such as horse-flesh, donkey, rats, and cats; Prussians occupying and reinforcing the forts to the North and East of the city, and Versailles troops operating on the West and South, cut off almost all communication with the country; distrust, fear, and despondency gradually creep into the hearts even of the heroic citizens and "citizenesses"—in the language of "a besieged resident"—as they see that all the admiration they meet with is not sufficient to create armies of relief or imitation insurrections in the provinces, the stupid "rurals" continuing to prefer Thiers and the National Assembly to Blanqui and the Commune; reinforcements are steadily arriving both for the Prussians and the forces of the Versailles Government, for the latter also from Germany; MacMahon, Ladmirault, Vinoy, Ducrot, Cathelineau, and Charette, are all in full earnest, in spite of checks and difficulties; Thiers listens to no proposals of a treaty made to him in the name of the "free and sovereign municipality of the Universal Republic," though he is ready to purchase a surrender at the price of rather exorbitant concessions; and Paris—revolutionary Paris herself—is getting tired of the affair. She has shown great apathy in her supplementary Communal elections, and she even delays the demolition of the column at the Place Vendôme. It looks as if she were going to betray "venerable" Blanqui, Lycurgus Assy, Hector Dombrowski, Carnot Cluseret, and the shades of "le grand Gustave" Flourens and Claqueur Duval.

Following close upon the admirable self-restraint which the Germans have shown in their peace rejoicings, comes the Reichstag's address to the throne, in which the peaceful disposition and mission of the new Empire are asserted in the most solemn manner. It thanks Kaiser William most of all for having guaranteed the German people against further attacks from France, whose present calamities, it says, only enforce the truth—"which has never been disregarded with impunity"—that the mightiest nation may be dreadfully led astray if it does not prudently confine itself to the full development of its inner life. Germany itself, it adds, has suffered most from this intermeddling with the affairs of its neighbors; but now, armed only for defense, it cannot be diverted from the works of peace. Without being influenced by prepossessions or prejudices, it freely concedes to every nation its progress to unity, and its constitution in the form which suits it best. "The day of interference with the inner life of other peoples, under whatever pretext and in whatever mode, is, we hope, gone never to return." Such, with a few words as to the legislation necessary for temporary and permanent necessities, and the prospects of a successful reabsorption of Alsace, was the substance of the address, the debates on which, however, were, by the reinforced Catholic delegation, turned almost exclusively upon religious matters, as if the immediate and urgent question were how to postpone or how to provoke a war with Italy.

THE FORCE BILL.

ITS MILITARY FEATURES.

In passing the statute popularly known as the Ku-klux Bill, Congress has confessedly entered upon a new field of legislation, in that it has assumed for the first time to take cognizance of and provide for the punishment of acts of violence to the persons and property of private citizens. The bill is artfully drawn, and its intent is veiled in language purposely vague and verbose; but still its design is plain. It means that persons guilty of homicide, robbery, arson, mayhem, assaults, and the like, may be brought within the jurisdiction of United States courts and be punished by United States authorities: it means this or nothing. We are familiar with its historical origin, with the avowed purpose of its authors, and with their diligent care to conceal and yet to accomplish their end by the tricks of language. In the light of these facts, it is our design to examine into the validity of this statute.

Before proceeding to discuss the central idea of the whole legislation, and the essential features in which this idea has been expressed, we must dispose of certain other portions which are rather auxiliary than necessary. The first section is practically of no importance. It is logically the statement of a truism. It substantially enacts that whoever violates the Constitution shall be amenable to certain penalties; but it does not descend to particulars and describe the acts and defaults which shall constitute such violation. If the statute consisted only of this section, it would be equally harmless and valueless. The second section contains two different provisions relating to different subject-matters, and depending upon different principles, although they are grammatically united in one sentence. The first declares that certain enumerated acts of resistance and hostility to the authority of the United States, to its laws, and to its means and measures of administration, shall be crimes, and that the offenders shall be liable to indictment, trial, and punishment in the national courts. This clause is, beyond all question, valid and proper. It is to be ranged in the same class with the statute which makes it an offence to obstruct the transportation of the mail. It has never been doubted that, so far as Congress may legislate, it may enforce its laws and protect the officers of the Government in their administration by penal enactments.

Although the statute under consideration is entitled "An Act to carry into effect and to enforce the Fourteenth Amendment of the Constitution," the third section must be partially, and the fourth section wholly, referred to other portions of that instrument. We here collect all the constitutional provisions to which they can by possibility relate, and which can by possibility be considered as their foundation. "Congress shall have power to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions" (Art. I., sec. 8, § 15). "The United States shall protect each of [the States] against invasion, and, on application of the legislature, or of the executive when the legislature cannot be convened, against domestic violence" (Art. IV., sec. 4). "The privilege of the writ of habeas corpus shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it" (Art. I., sec. 9, § 2). The third section under review enables the President, under circumstances therein described, in case of "insurrections, domestic violence, unlawful combinations, or conspiracies in a State," which are to be directed against the authority of that State, to suppress the same by the military, or otherwise, as he may deem proper. For all this there is no support in the clause above quoted from the eighth section of Article I. That clause provides in terms for enforcing laws of the United States by the militia, this statute provides for the enforcement of State laws by the military under the direction of the President; the insurrections spoken of in that clause are, from the context and from the express provision found in Article IV., plainly to be those against the United States, while this statute purports to arm the President with power, on his own motion, to suppress insurrections against a State.

But there is a difficulty of far greater magnitude—a violation of the fundamental law far plainer and more dangerous. This third section enables the President to suppress not only "insurrections," but "domestic violence, unlawful combinations, and conspiracies" by means of the military. These latter terms were not inserted without a design. They describe something less than insurrections; they descend in magnitude and criminality until they end in conspiracies, which may perhaps be attended by no overt act, no outbreak of violence. While, therefore, the Constitution only permits a calling out of the militia to suppress insurrections, which are, in fact, incipient wars, Congress has gone to the length of empowering the President to use the military in time of peace in putting down mere domestic violence and in breaking up conspiracies. It is plain that this section of the statute finds no warrant in the clause quoted from the first article of the Constitution, although it is probable that the ingenious author of the bill artfully chose his language, so as to make it appear, by the use of the word "insurrections," that there was a solid basis of validity for his proposed enactment. Nor can this section be rested upon the IVth Article of the Constitution, although that article does not require that an insurrection should be in progress, but makes it the duty of the United States Government, under certain circumstances, to protect a State against mere domestic violence. This duty, however, can only arise upon the happening of one or the other of two contingencies: either the State legislature must apply for aid, or the State governor, when the legislature cannot be convened, must apply for aid. This parenthetical and conditional clause means something; it is the key to the whole position; it describes the sole occasion on which the National Government may interfere with the function of maintaining domestic quiet which normally belongs to the States. We remark, in passing, that it is only by giving full and affirmative force to another and similar parenthetical and conditional clause that Congress acquires the right to suspend the writ of habeas corpus under any circumstances. Congress has utterly ignored this necessary limitation, has treated the constitutional provision as though it did not exist, and as though the article read "the United States shall protect each of the States against domestic violence." There could be no plainer departure from the fundamental principles of the organic law, no clearer violation of its express prohibitory clauses.

The fourth section of the statute is evidently based upon the clause of the Constitution relating to the suspension of the writ of habeas corpus. As there is no pretence of an invasion, Congress has undertaken to define a rebellion. Rebellion is a word well known to all writers upon public law; it has a well-ascertained and precise meaning, and describes a positive fact and not a theory or supposition. Congress, however, has now declared that several different circumstances or conditions, not united but each separately, shall constitute a rebellion—namely (1), when any of the "insurrections, domestic violence, combinations, or conspiracies" already mentioned shall be so powerful as to be able to set at defiance the authorities of the State or of the United States, or (2) whenever the authorities of the State shall be in complicity with, or shall connive at, the purposes of such combinations, and the public safety in such State shall thereby become impracticable. In each of these alternatives, the combination, violence, or conspiracy shall be deemed a rebellion against the United States, and the President may suspend the privilege of the writ of habeas corpus. The Constitution uses the word rebellion in the sense recognized by all jurists. Congress cannot change this meaning, because it cannot change a fact; it cannot make that a rebellion which is not a rebellion. Rebellion is war—war no longer incipient, but actual; it is a condition in which all civil administration is suspended or overthrown, and the nation must, for the time and in the district infected, employ its military arm alone to overcome the insurgent enemies of the Government. It should be remembered that Congress cannot inaugurate a civil war. That state of hostilities must be commenced by the rebels, and must have developed itself into a war, before the peculiar military powers conferred by the Constitution become operative. But this statute contemplates no such state of active hostilities. It makes, among other alternatives, domestic violence, unlawful combinations, or conspiracies, with the purposes of which the State authorities are in complicity or at which they shall connive, a rebellion against the United States. No war is described here, nor even any resistance to the national authority as such, because the combinations, violence,

and conspiracies spoken of are to be in opposition to State laws alone. It needs no further analysis of this section to show that it cannot be sustained by the constitutional provision which declares under what circumstances the writ of habeas corpus may be suspended. Congress cannot, by any mere array of words, make that exist which does not exist in fact.

It has been asserted that these several provisions were copied from an early statute, passed in 1795, authorizing the President to call out the militia in certain cases, and that the Supreme Court has decided, in a case arising under it, that the President possesses an unlimited and final discretion over the whole matter of employing the military force. Nothing could be more untrue. The statute of 1795 was carefully drawn, so as to comply with the very letter of the Constitution. It simply declared that "whenever the United States shall be invaded, it shall be lawful for the President to call out the militia," etc.; also, "in case of an insurrection in any State against the government thereof, it shall be lawful for the President, *on application of the legislature of such State or of the executive when the legislature cannot be convened*, to call out the militia," etc.; also, "whenever the laws of the United States shall be opposed or the execution thereof obstructed by combinations too powerful to be suppressed by the ordinary course of judicial proceedings, it shall be lawful for the President to call out the militia," etc. All this was plain, accurate, and in exact conformity with the organic law. The case referred to was Martin *v.* Mott (12 Wheaton's R., 19). The President, during the war of 1812, having called out certain portions of the militia, a person subject to the call refused to appear. Being tried by a court-martial and fined, he brought an action against the officer who collected the fine, alleging that there was no necessity for the President's action. The Supreme Court decided that, under the statute, the President alone could determine whether a call of the militia was necessary, and that his discretion over this particular subject was absolute and final. The statute did not assume to define an invasion nor an insurrection, nor did it confer upon the President any such function; much less did it authorize him to decide that to be a rebellion which is no rebellion. The Court went to no such absurd length. It simply and properly held that when the United States shall be invaded, the President alone, by virtue of this particular legislation, must judge whether the use of the militia is necessary. How different from all this is the statute under review. Our President is not now called upon, during the existence of facts patent to all men and which cannot be controverted, to determine simply whether the employment of the military and the suspension of the writ of habeas corpus are expedient; he is to pronounce upon the nature and effects of the domestic violence, combinations, or conspiracies, and to decide whether the State authorities are unable or have failed to protect the people, and whether they are in complicity with or connive at the unlawful purposes; he is to pass judgment upon the acts and defaults of State governors, judges, sheriffs, and juries, and find them to be aiders and abettors of violence, directed not against the authority of the United States, but against their own local laws; by his fiat, he is to raise this domestic violence to the dignity of an insurrection or a rebellion against the nation; he is to make that a war which is no war, and to follow up his decision by the extreme measures only designed for the suppression of actual hostilities; he is, in fact, to be a dictator. Never in the political history of the country has so direct a blow been aimed, under color of legal authority, at the supremacy of the Constitution, or a precedent been established so dangerous to free institutions.

ITS CIVIL FEATURES.

We are now prepared to examine the central idea of the whole legislation, and the essential features in which that idea has been expressed, to which the portions already described, however important and startling, are auxiliary rather than necessary. This central idea develops itself into a plan by which the United States courts may exercise full criminal and civil jurisdiction over any and all acts of violence to the persons and property of private citizens; by which, in short, Congress and the national tribunals may assume and wield a complete police power throughout the States. This is evident from all the remaining clauses of the statute. They all provide, under many artful involutions of language, that conspiracies and combinations for the purpose of depriving persons of their rights and privileges, or of the equal protection of the laws, shall be crimes against the United States punishable by its tribunals; and that, when any violence or injury is done to person or property in the furtherance of such a conspiracy, the offender may be sued for damages in the United States courts. The third section, in terms, enacts that in all cases of such conspiracies or combinations, if the State authorities shall be unable, or shall refuse, to protect the people in their rights, "such facts shall be deemed a denial by such State of the equal protection of the laws," and the President may thereupon employ the military, and the offenders arrested shall be delivered to the civil authorities of the United States, to be dealt with according to law. All this can only mean that the ordinary crimes of violence committed throughout the States, and the ordinary trespasses to person or property, are justiciable in the national tribunals. The extreme care with which the word conspiracy is everywhere used does not change this result. A conspiracy is in no way essentially different from an offence done by one, or by many, without concert. A conspiracy to murder, if consummated, is only murder; it simply involves more than one guilty person, and, after the union in criminal purposes has been established, makes each participant responsible for the overt acts of the others. There is no legal magic in the word conspiracy, no power to confer jurisdiction, and no strength is added to the statute by its use. If valid now, it would have been equally valid had its penalties been applied in terms to acts of violence done by single persons.

The main argument which has been employed in support of the measure is the following: The supreme government in every nation must be assumed to have full authority to protect its own citizens in their lives, persons, and property, for that is the final object of all good government. The United States is no exception to this rule. Even if the Constitution contains no express grant of power, such power must be implied in the very existence of the nation and its government, and can only be wielded by the national legislature. It would be a contradiction in terms to say that while the United States may legally use all measures to protect its citizens abroad, it is powerless to afford them any protection at home. It is now conceded that the very idea of a nation involves the power to use, and the necessity of using, all means for self-preservation, and for the same reason, and to the same degree, does it involve the power and necessity of using all means for the protection of citizens. The statute is based upon, and is fully supported by, these political truths. We have thus fairly given the argument, and have certainly not diminished its force by our statement. The premise upon which it rests we fully concede. It is an axiom of political jurisprudence, that the government which exercises sovereignty in a nation must have authority to protect the citizens at home and abroad, and the United States is no exception to this rule. But the difficulty in the argument—a difficulty which cannot be obviated, and which destroys its entire force—is that, by the Constitution of our own country, no single government is clothed with the complete functions of legislation or of administration; none exercises the complete sovereignty which the people alone as an organic whole possess, and which they alone can delegate. The exercise of a large part of this sovereignty, and, so far as national purposes are concerned, the most important part, has been exclusively committed to the national government. The exercise of another large part, which peculiarly relates to all domestic matters, the rights of person and property, has been in like manner exclusively committed to the governments of the separate States. Within their respective spheres, these two classes of governments are as independent as though they represented different nations. The Supreme Court has repeatedly affirmed this doctrine in the most solemn and effective manner, and only within the past few weeks has reiterated it with an emphasis which cannot be mistaken, and applied it to abridge the national attribute of taxation. It makes no difference with the truth or the application of this principle what theory we adopt as to the origin of the Constitution and of the nation: whether we consider the nation as a union between originally independent States, and the organic law as an assemblage of powers delegated by them; or whether we consider the people as from

the first a sovereign unit, and the national and the State governments as equally their handiwork, the same practical result must follow. Because the United States Government is the sole representative of the country to the whole world, the function of protecting the citizen while abroad was exclusively confided to it. On the other hand, the function of protecting the citizen at home, of preserving personal security, property, and order, by legislation, and of enforcing these laws in the courts, was exclusively confided to the government of each State within its own territory. For that territory, and for its inhabitants, it was made the sole depositary of the people's sovereignty so far as respects the private rights of life, person, and property. This is confessedly the theory upon which the Constitution is constructed, and from this theory the Supreme Court has never departed, and the Congress had never departed until now. It is not claimed that without the Fourteenth Amendment there exists any clause of the Constitution which, either directly or impliedly, authorizes the legislation under review, and we now see that the argument which finds the authority in the very notion of a supreme government is a fallacy, because in regard to this very matter of internal protection the national government is not supreme.

We are brought therefore to the Fourteenth Amendment, and, in order to discover its legitimate effects, must first ascertain its design and the evils it was intended to remove. Prior to its adoption, classes of citizens within a State might be exposed to injustice and oppression from the local legislation. The comprehensive bill of rights contained in the first eight amendments applied to the action of Congress alone, and did not control that of the States. If oppressive and discriminating statutes were passed by the State legislatures and upheld by the State courts, the injured parties were remediless, because the Supreme Court of the United States could only expound these laws under the guidance of the construction put upon them by the local tribunals. This was a great evil, and there was danger lest it might become greater. To remedy it, the Fourteenth Amendment was adopted. This was the sole design of that most just and beneficial change—a change which brought harmony and unity to our entire governmental system. The amendment says, in a few plain words which admit of no nice and technical construction, "No State shall make or enforce any law which shall abridge the privileges and immunities of citizens of the United States, nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws." The State is here directly addressed and limited, and not its private citizens nor its constituted authorities. How can a State violate these prohibitions? Certainly in no other way than by an organic act, and the legislature, being the supreme power in a State, is its sole organic representative. In other words, the only way possible for a State to violate this amendment, the only way possible for the amendment to be violated by any one, is by the passage of a law in conflict with its mandates. The sole effect of the amendment upon such a law is to make it utterly null and void. This particular provision of the organic law needs no legislation to enforce it; it enforces itself; its effects are felt directly and at once; it is exactly similar in this respect to the clauses which forbid the States from passing bills of attainder, or *ex-post-facto* laws, or laws impairing the obligation of contracts. The only department of the Government which it can ever call into action is the judiciary.

We must now compare this result with the statute which Congress has seen fit to pass. This statute is not directed against any State laws, and is not based upon the assumption that they are improper, unjust, or void. On the contrary, it concedes their correctness and validity, and aims all its penalties against private citizens who break them. It has to do with acts of private violence, and declares them to be not only a denial to the parties injured of the equal protection of the laws, but a denial made by the very State whose authority is outraged. In one portion it is expressly said that if the constituted authorities of a State —that is, the governor, judges, sheriffs, etc.—shall fail or be unable to protect the people, such fact shall be deemed a denial by such State of the equal protection of the laws. The other portions require no such official default, attempt no such definition, and are aimed exclusively at wrongs done by individuals. It is a monstrous perversion of legal language and legal thought to maintain, as this statute does, that any violence or wrong done by private citizens, either singly or in numbers, either with or without concert, can constitute the denial of the equal protection of the laws contemplated by the Fourteenth Amendment. Every crime done to person or property is, so far as an injury is committed, a denial to the party molested of the protection which the laws afford. If, therefore, the position assumed in this statute be correct, Congress and the national courts may, with equal propriety, draw to themselves jurisdiction over all crimes, and become the sole guardians of order, the single depositaries of the police authority. Nay, they may, according to well-settled rules of constitutional construction, oust the State governments and State tribunals of all jurisdiction over the subject-matter, and thus establish a centralized administration. In fact, such is the logical and necessary tendency and result of the statute. It is no less monstrous to impute to a State in its organic character the defaults or incapacities of any of its executive or judicial officers, and to enact the falsehood that such defaults shall be a positive denial by the State of equal protection. Constitutional authority and jurisdiction cannot be thus acquired by a lying quibble.

The foregoing careful analysis was necessary to demonstrate in a clear manner the invalidity of all the important and practical provisions of this new measure. To sum up the results: The statute violates the letter of the Constitution by declaring that to be a rebellion against the United States which is nothing more than violence to individuals, and by permitting the writ of habeas corpus to be suspended in time of peace; by authorizing the President to employ the military forces in repressing opposition to State laws without any application from State authorities; by extending the prohibitions of the Fourteenth Amendment to cases of private wrong; and by clothing the national courts with jurisdiction over ordinary crimes and with the function of ordinary police repression. It violates the entire spirit of the Constitution by conferring upon the President in time of peace a military discretion which belongs to him only as Commander-in-chief in time of actual war; and by destroying the separate—although subordinate—independence of the States within their appropriate spheres, which was firmly established in the Constitution as an essential feature of our institutions.

SEX IN POLITICS.

Owing to the interest excited by the condition of the city and State of New York, and the condition of the South, and by the condition of France, all of these countries being nominally governed by a numerical majority, and all badly governed, the foundations on which democratic government rests are receiving a probably more serious and thoughtful examination than they have ever received before, much talk as has been expended on them in various ages. There is this enormous difference between the discussion of democracy which is now raging and all discussions of it which have been carried on heretofore, viz., that the debaters have their subject before them. Hitherto, democracy has been discussed in very much the frame of mind in which men speculated on the form and habits of dragons or the scenery of the Hesperides. All propositions laid down about pure democracy were strictly *à priori*, and one was, consequently, about as defensible as another, and the argument furnished an admirable means of sharpening the wits, as there was no earthly means of bringing it to a conclusion. Now, however, we have at last got the thing itself under our very eyes, and the debate has—and one might almost say suddenly—assumed a gravity, and even a solemnity, it has never before had. It used to be a pleasant exercise for clubs and speculative philosophers; it is now shaking society to its centre. We used to wonder what its effect would be on manners and clothes and public conveyances and literature. We are now considering what effect it is likely to have on property and marriage, or, in other words, on the two things which are to every man and woman the most serious interests of this mortal life.

The time of rest and tranquillity which the more ardent spirits are constantly promising themselves as the result of this or that change in the government or in the social organization is either never to come, or its coming is so far off that for us it has no more practical

interest than the probable duration of the supply of coal or of the sun's heat. Under monarchy, life was stormy and full of trouble; under democracy, it will be stormy and full of trouble too; but our duties are much the same under both; and foremost amongst them is the duty of thinking before acting. The heavy reformatory work of the next century will probably consist largely in educating people into taking large views, and especially *long* views, of public policy. That this is going to be a tough job, there is no denying. Anybody who considers seriously what is meant by the conflict between labor and capital of which we are only just witnessing the beginning, and what is to be done to give money legitimately that influence on legislation which it now exercises illegitimately, must acknowledge at once that the next generation will have a thorny path to travel.

This leads us to ask whether this is just the time to add one more to the sources of distraction—and distraction here means confusion—by bringing the influence of sex into play in the political arena. We have once or twice called attention to the extent to which the woman's suffrage champions escape the grand difficulty of their position by treating sex as simply a physical difference, in no way affecting character. Mr. Mill started this theory by the extraordinary assertion that the differences between men and women were no greater than would exist between lord and (male) serfs who had been kept systematically for ages in the same state of subjection as women. His disciples in this country have improved upon it, and now invariably treat the exclusion of women from political life and certain employments as a pure piece of tyranny, having no better foundation than selfishness. In nearly all their discourses, the sexual passion is either ignored altogether or treated as a vice which is not worthy of consideration at the hands of politicians, and which will either disappear altogether as society grows in moral culture, or else simply incline men and women to sensible and happy matrimony. They take it for granted, as an axiom of social science, that in the natural state of things men and women could meet together for business on precisely the same basis as men, and discuss, vote, and co-operate with perfect freedom from all disturbing influences, other than those which operate on assemblies or companies of one sex only. They would have us believe, for instance, that if half the Assembly at Albany were composed of women, although measures might be carried under the influence of corruption, as now, votes would not be influenced by sex; and that though the power of evil might triumph, it would not triumph through the aid of female fascinations.

Now, we are not going to argue directly here against female suffrage. If the men and *women*—for, assuredly, so tremendous a change should not be introduced without taking the sense of the women on it also—of the country desire it, we know of no reason why they should not try the experiment. What we insist upon is, however, that they shall go into it with their eyes open, and after full discussion, so that we shall not, twenty years hence, hear such wailings and lamentations as we now hear in this State over the elective judiciary with which people saddled themselves in a burst of rashness in 1846. We protest most earnestly against women's being admitted to the franchise by driblets, and dodges, and surprises, under the policy which the suffragists are now pursuing in various parts of the country, and which consists mainly in bullying or seducing solitary or timid or muddleheaded registers or inspectors of election, in remote districts, on unimportant occasions, into letting women enrol themselves as electors, or drop their ballots into the box. Their idea doubtless is, that if this is done often enough, and over a sufficiently wide area to familiarize people with the spectacle of women's voting, and to make it seem illogical not to let them all vote, the suffrage will at last be conceded, on the ground that whatever the general merits of the question may be, it is too late to resist. Now, it may be that the admission of women to the franchise would be a great gain, but it may also prove a tremendous evil, which would positively throw civilization back a century or two. Women have thus far played so small a part in the heavy and active work of life, that the materials for prediction as to the part they would play in politics are very scanty. The arguments in favor of their admission are, thus far, all *à priori*, and it must not be forgotten that the women most busily engaged in the advocacy of it are picked specimens of their sex—that is, either women of great vigor or of a singularly masculine type of mind, or very slenderly influenced by what we may call the sexual side of character. To act on any argument which has yet been laid before the public, and in that profound darkness in which we now sit as to women's capacity, would be, we do not hesitate to say—no matter what its results might prove—one of the most stupendous pieces of folly of which any community was ever guilty. It would resemble, in many respects, the conduct of the young women in the country districts of whom we read in the papers every now and then, who marry plausible, good-looking adventurers on a week's acquaintance. No doubt, in many of these cases, the match turns out well; but in a large number the husband runs off with the bride's trinkets and money, after a few days' of honeymoon; and no apostle has ever yet risen up to proclaim that because there was a chance of the stranger's proving an honest man, this was a wise way for a young woman to enter the gates of matrimony. We mean nothing disrespectful to the woman's suffragists by this comparison; we simply intend to show that there are certain great rules of human conduct by which communities no less than individuals are bound to walk, and in disregard of which no enduring happiness is to be found.

We confess for ourselves that there is nothing which has inspired us with as much distrust of the movement as the persistence with which its promoters ignore the influence of the sexual passion on nearly every field of human activity. No people can safely heed the political counsels of persons who take no note of this most tremendous of all the social forces. Let us go back ever so far into the night of ages, and we find it there, shaping nearly every one of the problems by which the race has ever since been vexed. Go down as far as we can into the recesses of human character, and we find it there, it may be enriching and elevating, it may be dwarfing and degrading, but still active and potential. There is no custom or habit which it has not originated or colored; no war or migration which has not owed something to its instigation. It has had to do with the building up and the downfall of great empires, and with the fighting of great battles. It has blasted some of the greatest names of history and adorned others. It has been, in short, the source in all ages of the greatest virtues and the foulest vices. In fact, if history as well as individual experience teaches us anything clearly, it is that no system of society or government which does not take note of its tremendous energy can hope for a long or prosperous existence. No man can tell what would be the effect on such persons as now compose our legislatures of the accession of a body of the kind of women who, *in all probability*, as soon as the first excitement and novelty was over, would devote themselves to the work of politics. They might be Motts, Howes, and Livermores, but, reasoning from experience, the great mass of them would be—but we will not mention names; and we should then have added to the corruption of money, which is bad enough, a deeper, and darker, corruption still.

What has passed in Washington, in the case of the Vinnie Ream statue, is enough to set thoughtful people thinking very hard. We know of nothing against Miss Ream's character, but there seems to be no doubt that the serious business of making a statue to a public man—the honoring of whom, at this moment, is a solemn duty—was in her case committed by legislators to a young person, and a large sum of public money voted to pay her, who had never made a statue in her life, in disregard of the claims of a dozen American sculptors of established reputation, under the influence that comes from curls, and bright eyes, and the pats of a pretty hand, and the beseeching tones of a soft voice. In other words, legislators did what legislators have done a thousand times before, made asses of themselves under the influence of what are called "female charms," but which, for the purposes of this discussion—which requires exceedingly plain speaking—we shall call by its proper name, the sexual passion. Suppose this influence to be organized and systematized in the person of a large body of female members of Congress, and brought to bear on land-grants, subsidies, tariffs, charters, and public offices, what kind of thing would our legislation be? What kind of place would the republic soon become if every State capital was a stage on which female adventurers could push their fortunes, cheek by jowl with the Irvings, and Tweeds, and Morrisseys? A

curious and striking illustration, too, of the constant preoccupation of the lower order of female suffragists, with the probable influence of this passion on all relations of men with women, is found in the fact that they account for hostile comments of a leading newspaper on their own performances, or those of their favorites, by ascribing them to the editor's having offered his hand and heart unsuccessfully to divers female agitators, lecturers, authors, and poets. Fancy the Washington correspondents, who now so freely ascribe base motives to the opponents or supporters of this or that measure, telegraphing long speculations as to the probable influence of Mr. Smith's *liaison* with Miss Brown on their both voting against the San Domingo annexation or the duty on pig-iron, and we shall have some idea of the sink of iniquity into which a false step in this matter might convert the capital.

THE EDUCATION OF MINISTERS.

ONE meets every now and then with statements very like the following, which we cut from a recent number of the *Christian Union:*

"Prof. Seeley, in an article in his volume of Miscellanies, every page of which is valuable, draws the attention of the English people to the great defects of 'the church as a teacher of morality.' He draws a very dark picture of the unpractical, indirect, dogmatic, formal character of the teaching of the English Church. We cannot think that the American pulpit, in any considerable portion of it, deserves the serious strictures he lays upon the English. But we are convinced that morality, supported by religious sanctions, needs to be taught in all American pulpits with far more system, far more detail, far more urgency, and far more study on the part of the preachers. If, in place of so much general speculation, poetic discursiveness, ingenious discussion, and vague sentimentalism, much more of mere dogmatic iteration of truths that lose their meaning in their familiarity, we could have Honesty discussed in its principles, its trials, its temptations, its specific, practical difficulties, would there not be found a draught on religious faith which would make it much more real than when faith is discussed without reference to actual life? Mrs. Opie on Lying, or something better, needs to be reproduced in the pulpit. People's attention must be directed to their duty to their children in their education, government, dress, manners, and morals. We want, too, our social and political duties treated in some other way than by spasms of eloquence in moments of great social sins or political campaigns. If morality were treated systematically, all things would come up in course and in due place, proportion, and order. In our judgment, there is more religion than morality about, and religion is often made a convenient substitute for morality. Prof. Seeley says that the only morality the church teaches enough is that of alms-giving. Certainly, between church-going and alms-giving American religion is now somewhat too exclusively divided."

It is somewhat remarkable that a writer who sees so clearly what the proper work of the agency known as "the pulpit" is, and how far short it falls of doing it, should have let the subject drop without going one step further, and enquiring why the pulpit fails to do its work. There is no doubt whatever that every commercial community has undergone a serious deterioration as regards that branch of morals included under the term *bona fides*. In other words, there is more lying, cheating, and stealing, in proportion to population and in proportion to the temptation that comes from want, than there used to be. We believe even the most ardent admirers of "the age we live in" do not deny this. If we go to a lecture, or take up a magazine article in which its superiority to past ages is insisted on, we find that in the selection of points of comparison, common honesty is usually carefully avoided. The orator and writer shows how much more comfort we have in our houses; how much more easily we travel; how much kinder we are to prisoners, and captives, and paupers; how much less flogging of children we do, and so on: but he never says we are more truthful, and just, and scrupulous in our dealings, less prone to tell a good profitable lie, or sand the sugar, or stick bits of lead to the bottom of the scales. In fact, fraud is generally acknowledged to be the vice of our time, *par excellence*. We cheat in buying and selling, in the administration of justice, in the election of public officers, in the passage of laws, in the transportation of passengers, in the insuring of lives, in the administration of trusts. We help even the noblest causes by downright lying. We lie for the propagation of our pet ideas, and for the promotion of our pet charities. It is indeed one of the curious signs of the times, that the temperance advocates should be amongst the most unscrupulous of orators, and that temperance papers should be amongst the most dishonestly managed periodicals in the country; or, in other words, that the extirpation of a vice of which the root is beyond question largely physical, and the prevalence of which is, therefore, undoubtedly likely to be temporary, and its influence on society in the long run slight, should be sought by numbers of earnest men through the practice of another vice, which is wholly moral, and eats out all that is best in human character. It has taken all but complete possession of the two great classes into which the community is now divided—the capitalists and laborers. The capitalists are cheating in the management of their great combinations known as corporations and in the corruption of legislatures, and the laborers are imitating them by refusing to do good work, and using all their powers to deprive society of the means of making them do it. Flimsiness, brittleness in structure, evanescence in color, slovenliness and coarseness in detail are acknowledged, not only by Jeremiahs like Ruskin, but by the soberest and most hopeful observers of our industrial progress, to be the characteristics of articles of modern manufactures, compared with those of even a century ago; and the worst of it is that society encourages them by an enormous demand for cheap imitations of good things, and places its greatest glory in the wide diffusion of these imitations through all classes of the community.

Thomas Carlyle about thirty years ago seemed likely to bring about a powerful reaction against this state of things by his denunciation of "shams," and his exhortations to honest toil and truthfulness, and did produce a deep impression on the young men of that generation, who forthwith began to "emancipate" themselves as fast as they could from the bondage of various social and religious ideas in which they had been bred. But the movement never produced much, if any, effect on practical life, and, indeed, seems never to have gone beyond the process of "emancipation." Many people, having once begun it, were so delighted with "emancipation," that they have gone on "emancipating" themselves ever since, and their mode of leading a new life consists in periodical meetings with persons of their way of thinking for the purpose of hurling defiance at the "old theology," and mentioning the particular portions of it that they consider peculiarly monstrous and absurd; and they have apparently as much confidence in this performance as a means of discipline as if they knew that familiars of the Holy Office were waiting outside for them with the boot and thumbscrews.

The one solid and real effort against the vice has come from the body of art reformers known and ridiculed as the "Pre-Raphaelites." We have nothing to say here of the purely artistic merits of their work. But there is no question that their devotion to truth, and the enormous importance they attached to representing things as they are, whether as they seemed or not, however faulty the artistic result may have been, gave it a very great ethical value, and has exercised, as far as it has extended—which is a very little way, we are sorry to say—a more healthy influence than any reformatory movement we know of on morals. This influence, too, has become more marked, and more valuable, as they have extended the application of their theory to furniture, dress, and the construction and decoration of houses. The pertinacity with which they insist on reality and solidity, or the preservation of the idea of utility and naturalness even in ornamentation, and fight against veneer and shabby imitation, cannot but have, and have had, a healthy influence on the morals both of manufacturers and customers; but then as regards range, it is hardly worth mention. If we look around for any other real fight against lying and cheating, we find uncommonly little to comfort us. The press is supposed to be a great exposer of shams and impostures; but then it is too much of a commercial enterprise not to be something of a sham itself. The omniscience of the editor, the ubiquity of the reporters, the grim determination of the publisher to give Satan no quarter, are all unfortunately for sale; and when things are for sale one never knows how they may turn out.

The only body of men in modern Christendom which can be said to be expressly devoted to the work of reform, without being open to the suspicion of carrying it on as a commercial venture, are the ministers of the various religious denominations. It is melancholy, but true, that the ministry is the last surviving "profession," using the term to indicate a calling pursued purely for its own sake, and with little or no reference to its pecuniary returns. Of the great mass of the community in this and every other country, it is safe to say that they draw from attendance on religious worship the sole reminder they receive that there are such things as questions of morals, that good wages or fair profits are not the great ends of existence, that the opinion of one's fellows does not always settle the question of right or wrong, and that the man who never asks himself, Why am I here? whither am I going? and why do I this, and not that? does not lead a really human life, but that of a dexterous brute. Never since the world began were

questions of morals so perplexing as they are now; never was the rule of conduct, even to the eye of the conscientious man, hidden under such a load of circumstance, and distinction, and allowance, and custom. It is easy to see, therefore, that anybody who sets up to be a teacher of morals in our day must be a skilful casuist; and no man can excel as a casuist whose knowledge of affairs is not very extensive—that is, for the skilful application of moral rules to given states of fact, familiarity with affairs is almost as necessary as for the skilful application of legal rules; and this brings us, though late, to the topic which stands at the head of this article.

Here is Professor Seeley, a thoughtful and religious man, and here is the *Christian Union*, a thoughtful and religious paper, both calling on the clergy for the inculcation, from the pulpit, of practical morality, "for the discussion of honesty and its principles, its trials, temptations, its specific practical difficulties," or people's duty in the matter of "the government, dress, manners, and morals of their children." Now, just consider for a moment what this means. Consider what are the trials, temptations, difficulties, of a broker, or lawyer, or merchant, or railroad man, or banker, or commission merchant, in our day. Their name is legion; to understand them and weigh them, one would need not only to have considerable knowledge of human nature, but a wide practical acquaintance with the political economy and customs of many trades and manufactures and of the money market, and a fair acquaintance with the practice of the courts and with legal history and legal principles. To advise a man of his duty in the matter of "the government, education, manners, and dress of his children," one would have to keep one's self not only perfectly familiar with all that is going on in the educational world, but with the tendencies in society and business which help to make or mar a young man's career; and to prevent one's opinions on all these subjects, even supposing the sphere of one's personal observation to be never so large, and one's experience of life never so great, being crude and narrow and incomplete, one would have to keep up a fair acquaintance with a wide and growing body of literature of various nations. Even if a minister had all this and more, he would, as a teacher of morals in our day, labor under considerable disadvantage as long as he had not himself had a varied and long experience of life and its trials. There is a wisdom which rarely comes but with years, and often only comes with sorrow and disappointment, without which the best equipped philosopher, or student, or observer will, after all, to a great body of persons perplexed by life's problems, be but an indifferent adviser.

But it would be difficult to imagine poorer preparation for such a field of duty as is here traced out than is afforded by most of our theological seminaries. The course of education in most of them is still that which would fit a man to deal out dogmatic theology to a simple agricultural community seriously occupied about doctrines, and sincerely believing in them, and deeply respecting the minister and his office, and rarely brought face to face with problems of morals of which the Ten Commandments did not afford an easy solution. The student is, perhaps, well grounded in ecclesiastical history and literature, in Biblical exegesis, the topography of the Holy Land, Eastern manners, moral and mental philosophy as taught by one school, and homiletics, and he is then sent out into the world to help men to wrestle successfully with the moral difficulties of a commercial society of extraordinary complexity and considerable corruption, which is fast losing hold of its old faith and uncertain or unconcerned by a new one. No wonder his preaching consists largely of "general speculation, poetic discursiveness, ingenious discussion, and vague sentimentalism." What else can it, in the large majority of cases, consist of? Why, it is almost in the power of any lawyer in his congregation to persuade him that a proper regard for the independence of the bar and the due administration of justice requires that a counsellor should occasionally help his client to commit a burglary if he asks him, because nobody can tell, till the case is carried into court and the judge has ruled on it, whether it is really a burglary or not; or for a railroad president to persuade him that playing tricks with the stock of his own road is a pious and laudable operation, which managers of corporations occasionally have to resort to to save the estates of the widows and orphans invested in it; or for a politician to satisfy him that, when he receives a large bribe for putting through a land-grant or subsidy operation which he really believes to be a good thing, he is only doing his solemn duty to his "common country." We venture to assert that there are not ten ministers in the country who are able to collar a knavish lawyer or operator in their congregations, and drive him into a corner, and put him to shame, or to meet a skulking, lazy, and tonguey trades-unionist on the labor question and show him that, so far from helping his class by making the shirking of work the great object of the laborer's ambition, he is ruining it body and soul. No man can, in short, be a successful moralist in our day who is not a good deal of a jurist, and of an economist, and of a business man and scientific man; and what is done to give ministers even an inkling of jurisprudence, or political economy, or finance, or natural science? We may say almost nothing. Canon Kingsley, in an address to the clergy in England, the other day, called loudly for an infusion of natural science into clerical education, to enable the pulpit to hold its own; but natural science is not enough. As ministers go out into the world now, they are a singularly helpless class. The wealthy knaves pet and subsidize them; the feeblest little huckster that measures out tape by the yard feels himself qualified to disregard their opinion on all matters not appertaining to doctrinal theology. So that, no matter how often a minister is brought in contact with a man whose doings seem to him suspicious, he is fain to follow Dogberry's advice to the constable: "to take no note of him, but let him go, and thank God he is rid of a knave."

ENGLAND.

LONDON, March 31, 1871.

WE are just now in a holiday mood. The weather is delicious; parliamentary debates have become wearisome; and in a few days we shall be welcoming the spring, after our fashion. To-morrow the whole of London will turn out at nine in the morning to see whether the Oxford or Cambridge lads can row the quickest. A very exciting race is expected, and from east to west, from what Macaulay describes as "bleak Hampstead's swarthy moor" on the north to "Surrey's pleasant hills" on the south, there is scarcely a haberdasher's shop that has not its show of light and dark-blue ribbons, or even a cabman who does not tie a bit of his favorite color to his whip. The young gentlemen who are the centres of attraction would scarcely change their position for a seat on the Treasury bench, and to-morrow will form an epoch in their lives, often to be remembered in country parsonages or at the mess of legal circuits. The worst of it is that the gentlemen who have ruined the morality of horse-racing are beginning to take their parts in the rising excitement.

On Wednesday last a great gathering took place to witness a ceremonial of a very different kind—the opening of the great Albert Hall. I fancy that I have mentioned that remarkable edifice to you already. It is enough to say that it is the biggest of all rooms in London—that it resembles in appearance the Colosseum of Rome, built of red brick, reduced in all its linear dimensions to one-half, and crowned by a dome of glass and iron. About 8,000 people occupied it, the other day, to hear the Queen pronounce it "open," and to listen to a performance upon the biggest organ in the world. At least 7,999 of the audience had not the faintest notion of the purposes to which this gigantic room is to be applied; and there is only, as far as I can make out, a sort of *à priori* impression that, as there is a very big room in the midst of a huge population, it must be possible to make some use of it. The Bishop of London prayed that the designs of its founders might be fulfilled, and that it might not be applied to immoral purposes. The last is a modest petition, which we may hope to see fulfilled; the first requires a certain amount of faith, not only in Providence, but in Mr. Cole, the energetic ruler of the little cluster of museums and schools of art which is growing up at South Kensington. In one way or other he has done so much, in spite of a good deal of abuse, that, for my part, I hold that he will make something of the Albert Hall. But my faith is of the unreasoning kind, and is not shared by all men. Meanwhile, it is safe to say, that if the Hall, and the gorgeous memorial which is rising opposite to it in Kensington Gardens, be taken as measures of the popular enthusiasm for the late lamented Prince Consort, no hero of our own, or indeed of any other time, has ever excited such intense feeling. We have been at work some fifteen years in erecting a monument to the Duke of Wellington, who was a popular man in his day; and, so far from being completed, it has just come to a stop, amidst vehement recriminations between the artists employed and the officials, who won't pay for unfinished work. Indeed, putting together the Duke and Nelson, and all generals, admirals, and royal personages of the last generation or two, their memorials would not be half so conspicuous as the buildings which are to express our enthusiasm for the Prince's memory. Some people say that it is not so much the memory of the dead as the ambition of the living which has been consulted; but the Prince was really a sensible and useful man in his day, and it is a pity that his memory should be "exploited" after this fashion. We shall end by thinking that we have heard enough of him.

The mention of this memorial reminds me that the marriage of the Princess Louise to the Marquis of Lorne took place a few days before, and that one great inducement to be present was the pleasure of seeing the newly wedded couple. The *Times* and the *Telegraph* were fairly unmanned by the performance of the ceremony. They indulged in such beautiful flights of language and effusions of rose-colored sentiment, in short, so many variations on the well-known tune of "Bless ye, my children!" that I feel I ought not to tread in the same steps. I can only beg your readers to refer to the articles in the *Telegraph*, which decidedly maintains its pre-eminence in the style of which Mr. Sala is regarded as the author. We used to laugh, we still laugh sometimes, at American "buncombe;" and we may have occasional pretexts for amusement; but I think we may fairly boast that the British article which most nearly corresponds to it can now be produced at home on such terms as to defy foreign competition. Poor Mr. Matthew Arnold has run some tilts at the *Telegraph;* and has, indeed, lately collected some of his letters into a little book called "Friendship's Garland," of which it is the purpose to prove that his countrymen in general are fools, and that the *Telegraph* is their teacher. I don't think it is in his happiest style of humor; he is hampered by an elaborate fiction about Grub Street and Arminius von Thunder-Ten-Tronckh, and so on; and scarcely writes with his usual delicacy of satire. But Mr. Matthew Arnold, at his best, must feel that he has an up-hill battle to fight. The *Telegraph* has been recently informing us that it has an average daily circulation of over 190,000 copies; and I fear that the immense majority of those who buy it are cased in manifold armor against any weapons suitable to the hands of refined scholars. If they sympathize with the floods of unctuous rhetoric poured out upon the heads of the devoted Marquis and his bride, the British constitution should be safe for centuries.

Meanwhile, to return to the point from which I started, Parliament feels the languor of the approaching season. A debate on the Conference occupied last night, and few less lively entertainments have ever been produced on those boards. Sir Charles Dilke moved a censure upon government for having consented to the Conference. In his view, it was a humiliating concession to the unwarrantable demands of Russia, and, in fact, was simply a sham procedure, meant to cover the readiness with which we swallowed the leek. It is curious to look back upon the feelings with which we regarded the question a few months ago, and the utter indifference with which these remarks were received. Then we felt that we might be on the brink of a war, and a war which, however just, was to be waged for objects about which we cared as little as possible. Now there is only one sentiment which survives in the matter; it was pretty well summed up by one of the speakers in the remark that everybody was glad of the conclusions reached by the Conference, whilst nobody was proud of them. Sir Charles Dilke labored in vain by producing Russian newspapers and passages from official correspondence to prove that we had truckled to Russia, that we had alternately cajoled and bullied the French, that we had given up points in which we were deeply interested, and that we had every reason to be ashamed of ourselves. No member of government even condescended to answer him; and, after a perfunctory debate, he was refused leave to withdraw his motion, and it was negatived without a division. Mr. Bernal Osborne expressed the general feeling when he complained of having been called down on the eve of the Easter holidays "to preside at the flogging of a dead horse;" and he hoped that the result would be a warning to patriotic young members not to come down to the House with their fine sentiments, and then to slink off with their tail between their legs. And so the Russian Conference will be buried fathoms deep in the waters of oblivion, and we shall be able to go to sleep for a time and forget all about it. All that will survive is a homily or two which will be treasured up by politicians with long memories; but it would be difficult to exaggerate the indifference to the whole question which at present pervades the country at large.

And thus we have drifted on in one way or another to the Easter vacation. The cumbrous machinery of Parliament has been creaking along with rather fewer remarkable performances than usual. Government has probably rather lost than gained in public opinion; they have suffered one or two defeats on minor matters; they have on other occasions only carried motions by the help of their opponents, and their radical supporters have grown rather more mutinous than they were ten months ago. Nor has any great amount of work been actually done. The wheels of the machinery already show the customary symptoms of being clogged, and we are beginning to calculate what parts of the burden will have to be thrown aside. On the other hand, the main proposals of the government have been so far carried, and there seems to be little doubt that in one way or other they will be converted into law by the close of the session. The measure of army reform will be carried, in spite of a good deal of hostile criticism from all sides, and it must be admitted that, though far from being all that could be desired, its terms indicate a rapid advance in public opinion. The mere mention of the abolition of purchase was scouted as a visionary and absurd proposal a very few years ago, and now any serious opposition is seen to be hopeless. After all, we live fast in these days, and, when one watches the rate at which ancient landmarks are left behind, it is difficult to say how far we may find ourselves on the way down "the Falls of Niagara." Some of our enthusiastic reformers have apparently been encouraged by such reflections to anticipate the speedy construction of an English Republic, and the workingmen have been accordingly getting up republican clubs in some of the large towns. People who wear black coats are not in a very favorable frame of mind towards such agitations, inasmuch as the present state of Paris is rather discouraging to the class with something to lose. Whether the agitation really means much is a question which must be decided by time, and meanwhile I will only remark that two causes contribute to it at the present moment. The first is the comparative effacement of the Royal Family of late years, and the marked diminution, for one reason or other, of any warm personal loyalty. The second is that an agitation in France always spreads by sympathy to certain classes in England. The International Society is a machine for spreading the contagion of revolutionary sentiment. There is, of course, no want of people to be impressed by the success of the Commune. Prof. Beesly, for example, the most fanatical of the Positivist school, has written a letter to the *Beehive*, the organ of a large number of workingmen, taking up their cause, and extenuating the crimes of which they are accused. Undoubtedly there is a certain stir of republican feeling, which may become of importance if circumstances should favor its growth. For the present, I don't think it is of much significance; and, though the word "republic" is pronounced more frequently than has been hitherto the case, it does not seem as yet to indicate any very vehement or generally diffused sentiment. The symptom, however, is rather novel, or, at least, we have heard little of such things since 1848; and, seeing the rapidity with which the old order now yields place to new, it is perhaps worth while to make a note of it.

Correspondence.

SENTIMENTALISM APPLIED TO CONSTITUTIONAL LAW.

To the Editor of the Nation:

Sir: In your comments of the Week, in your last issue, you refer to the "Ku-klux Bill," so-called, which is now a law, as a measure which, if passed, will prove "a precedent of the most shocking kind, which bad men, in bad times, will not hesitate to use." I am inclined to think you would never have ventured on this criticism had Mr. Sumner's speech on this bill been made before your issue of the 13th went to press. "Give me the centralism of liberty. Give me the imperialism of equal rights." In this noble formula is, I take it, included a final and conclusive answer to your objections to this bill. It is a measure in furtherance of the good cause, and from it no precedent can be drawn in favor of any bad cause. You intimate an intention of further commenting on this measure. Should you do so, I hope you will consider this fundamental distinction.

Neither our Constitution nor any written law ever was intended, or, in the nature of things, could have been intended, to do either of these two things: 1. To hinder the doing of that which is right; or, 2. To protect and perpetuate that which is wrong. Knowing, therefore, as they do, that what they desire is right, and knowing also that what they desire to put a stop to is wrong, the friends of the Ku-klux legislation feel that the constitutional restrictions do not, and were never intended to, apply to them. Was our Constitution meant to protect midnight ruffians? The very suggestion carries its own negative. But you, and the large class of halting brothers whom you represent, continually urge upon us the precedent thus created. Will not bad men claim the same exemption from law should they obtain power? For one, I am very weary of this argument, if, by courtesy, it may be called so. Once for all, we, the good men, *know* we are right; the bad men know they are wrong; constitutional limitations were intended to protect good men from bad men; and when the bad men are in power, then these limitations will become effective. To argue otherwise is to place good and bad on an equality; to allow nothing to

that spirit of liberty towards which Burke was so tolerant; to say that one law applies to him who wishes well to the race and to him who wishes ill.

Let me suggest a case in point. Wendell Phillips, a few days ago, declared that we should never have peace until half-a-dozen wealthy Southerners were "shot" by order of a "drum-head court-martial." A few years ago, Mr. Phillips was protected by constitutional and legal provisions from continually threatened violence, and pursued the good work in safety under the very eyes of an enraged majority, lashed almost to frenzy by his unceasing denunciations. Now, in protecting Mr. Phillips, the Constitution and the laws only fulfilled their functions, for he was and is a good man, engaged in a good work; when, however, that Constitution and those laws shelter the Ku-klux, they are perverted from their noble design, and should not be allowed to stand between the miscreant and the "drum-head court-martial."

So also of Mr. Sumner. A few years ago, an infamous Supreme Court, through the Dred Scott decision, endeavored to create a centralism of slavery—an imperialism of caste. Zealously and successfully did Mr. Sumner appeal to the Constitution to stay the tide. He was right; and the Constitution stayed the flood. Excuse me for saying that I really cannot understand how a reasoning being, such as in many points you undoubtedly are, can fail to see why a man may strenuously resist a centralism of slavery and an imperialism of caste, and yet strongly advocate a centralism of liberty and an imperialism of equal rights. To me the distinction is too obvious to admit of argument; it is at least as well defined as the evident difference in Wendell Phillips's mind between mob-law as applied to himself, and drum-head court-martials as applied to his opponents.

I do not think any constitution can eradicate the difference between right and wrong—the mastery, innate in the eternal fitness of things, of the good man over the bad man. Every one must on these points evolve a decision for himself out of his own inner consciousness. That honestly done, and himself knowing that he is right, he cannot but be exempt from technical limitations, obviously intended only to restrain the evil-doer or the uninformed. Sumner and Phillips have passed through this process; the precedents they create can never apply, except in the case of men equally good and equally certain they do right. Such are not likely soon to appear again, and to all others the constitutional restrictions apply. In view of this obvious limitation of the effect of the precedents we are now erecting, I fancy you will dismiss from your own mind, and from those of your readers, all further apprehension on this score.

A Sentimentalist.

Boston, April 15, 1871.

Notes.

The third volume of Prof. G. W. Greene's "Life of Nathanael Greene" is among the announcements of Messrs. Hurd & Houghton. "In the Hartz Mountains, and Pictures of Sweden," forms part of the Hans Christian Andersen series. Haliburton's "The Clockmaker: Sayings and Doings of Samuel Slick of Slickville," is to be revived for the series known as the Riverside classics. The same firm have in preparation several juvenile works: "Little Jakey," by Mrs. S. H. De Kroyft; "Tables of Pilpay;" and "Little Folk-Songs."——Messrs. D. Appleton & Co. have in press and will shortly publish the recent lecture on "Lawyer and Client," by William Allen Butler; Dr. O. W. Holmes's "Valedictory Address," delivered last month to the graduating class of the Bellevue Hospital College; a "Treatise on Diseases of the Nervous System," by Dr. Wm. A. Hammond; "Psychology, or the Science of Mind," by Rev. O. S. Munsell, President of Illinois Wesleyan University; "The Antigone of Sophocles," edited by Prof. M. J. Smead, of the University of Georgia; and the following reprints from English works: Dr. Andrew Combe's "Management of Infancy;" Stricker's "Manual of Human and Comparative Histology;" "Fragments of Science for Unscientific People," being essays, lectures, and reviews by John Tyndall; and "Metaphysics; or, The Philosophy of Consciousness, Phenomenal and Real," by Henry L. Mansel.

—The *New York Observer Year-Book and Almanac for* 1871 will be found useful for its very full lists of preachers and officers of the so-called Evangelical denominations, and for its tables of particulars concerning the higher institutions of learning, in the United States, as well as for its copious political and commercial statistics. The feature which will probably do most to ensure its preservation beyond the current use for it is the reprint on pp. 175–187 of the greater part of the first directory ever published in this city. It bears the date of 1786, and is a striking evidence of the paucity of inhabitants and contracted area of New York ten years after the Declaration of Independence. This instrument had not yet been forgotten, it seems, as the names are given of the President (Hon. John Jay), Vice-President, Treasurer, Secretary, and Standing Committee of "The Society for promoting the Manumission of Slaves, and protecting such of them as have been or may be liberated," which met "at the Coffee-house" in Wall Street. This was one year before Franklin was made president of the revived "Pennsylvania Society for promoting the Abolition of Slavery," etc., first organized in 1775. The antiquity of our May movings is seen in the advertisement that "The New York Directory will in future be published every twentieth day of May in each year."

—Some one whose motives admit of considerable speculation has collected in a quarto volume those singular "Letters on the Whipping of Girls, addressed to the *Englishwoman's Domestic Magazine*," which at the time of their appearance made even Englishmen blush for the average British matron. Scarcely any domestic practice could seem, to American families of equal breeding, so unnatural, not to say degrading; and an American mother might find it hard to imagine that these letters could be republished by one not in sympathy with the writers, as a contribution to the history of the manners of the age. The manners of the fifteenth century are amusingly if rather broadly set forth in the "Diary of an Embassy from King George of Bohemia to King Louis XI. of France," which has been literally translated from a contemporary manuscript in the Slavonic tongue, by A. H. Wratislaw. Still other recent English publications, historical or antiquarian, are: the second volume of "The Mansions of England in the Olden Time," by S. Stanesby; "Rambles of an Archæologist among Old Books and in Old Places," by Frederick William Fairholt, which consists of papers on art in relation to archæology, painting, art decoration, and art manufacture, illustrated with a great number of engravings; "The Songs of Scotland Chronologically Arranged," with an introduction and biographical notes; "Was Shakespeare a Lawyer?" on the strength of certain passages selected from "Measure for Measure" by "H. T.;" "The House of Argyll and the Collateral Branches of the Clan Campbell, from the Year 420 to the Present Time;" "The Land of Lorne, including the Cruise of the *Tern* to the Outer Hebrides," by Robert Buchanan; "The Secret Documents of the Second Empire," translated from the papers found in the Tuileries, by T. Curry. Of books of travel, "Ten Years North of the Orange River," by John Mackenzie, has a present interest, though it treats chiefly of life among the South African tribes; "My First Year in Canada" is by Bishop Oxenden, of Montreal; "Pau and the Pyrenees," by Count Henry Russell, is, as surely as there are invalids, certain to be read; and so is "Turkish Harems and Circassian Homes," by Mrs. Harvey. Three biographies are worth mentioning: "Life and Travels of George Whitefield," by James Paterson Gledstone; Mark Boyd's "Reminiscences of Fifty Years;" and the "Life and Adventures of Count Beugnot, Minister of State under Napoleon I.," edited from the French by the indefatigable Miss Yonge. Two political titles, whose authors are anonymous: "Words of Weight on the Woman Question;" and "Cumulative Voting, its Nature, Operation, etc.;" and, to conclude: "Critical Miscellanies," by John Morley, mainly reprinted from the *Fortnightly Review;* and "On International Reform," by Frederick Seebohm.

—The library of Mr. Kirkup, of Florence, well-known to most residents there during the past few years, has been sent to London for sale. It includes manuscripts of great value, amongst others four copies of Dante's "Commedia," viz., an octavo of 1368, written, therefore, within fifty years of Dante's death; another with a commentary of the end of the fourteenth and beginning of the fifteenth century; one with the commentary known as the false Boccaccio; and a fourth of the fifteenth century, on paper, but unfinished. Besides these is a rare collection of old and curious books, amongst which are many on Spiritualism, in which Mr. Kirkup has taken a great interest. The sale will probably take place in July, but we shall endeavor to give due notice of it as soon as determined, with particulars as to the works, etc. Another bit of interesting intelligence which we receive from England is to the effect that Professor Owen will criticise Darwin's last work through the medium of the *Edinburgh Review*. It is expected that his opinion will be other than approving, the more as Darwin has not spared Owen in his book, the general reception of which in England has been very favorable.

—We need not apologize for adding to the sketch we gave last week of the late Professor De Morgan a few remarks of a more critical nature. Among mathematicians he was distinguished more for the completeness of his logic than for analytical facility. His pupils speak of him with warm admiration, but it may be presumed that they gained from him even more of general skill in accurate reasoning than of specific mathematical power. His elementary books, which are not enough known, are excellent, especially for students who have no natural turn for mathematics; and his work on the calculus is unusually complete, and its demonstrations particularly instructive. Of his researches, one of the most noticeable is his paper on triple algebra, which traces out the consequences of certain definitions of symbols in a manner much like that of his formal logic; but for this difficult subject De Morgan's analysis was not sufficiently subtle, and he can only be said to have started the enquiry without having arrived at any valuable results. His best contributions were to mathematical logic. In his controversy with Sir William Hamilton, in 1847, both disputants fought in the dark, because Hamilton's system had never been published, and Hamilton had never patiently examined De Morgan's. All the points of Hamilton's attack were, however, completely disproved. Upon the publication of Hamilton's works, De Morgan renewed the controversy with Mr. Spencer Baynes, who, after an unconditional pledge to produce proof of his position, was compelled to abandon the field. Since that time Hamilton's once celebrated system has fallen into neglect, while De Morgan's commands more and more respect. In point of fact, Hamilton's system, like De Morgan's, is mathematical, but is the work of a mind devoid of mathematical training. It would be premature to try to say what the final judgment of De Morgan's system will be, but it may at least be confidently predicted that the logic of relatives, which he was the first to investigate extensively, will eventually be recognized as a part of logic. The best statement of De Morgan's system is contained in his "Syllabus of a Proposed System of Logic," but his fourth and fifth papers on the syllogism are of later date. De Morgan was a deep student of the history of the sciences to which he was devoted. He wrote many biographical notices of mathematicians in the "Penny Cyclopædia" and the "English Cyclopædia," as well as a bibliography of arithmetic. Indeed, the amount of his writing upon various subjects in the two cyclopædias, in the *Athenæum*, in the *Companion to the British Almanac*, in seventeen or more separate books, and in various scientific periodicals, including the *Journal of the Philological Society*, is enormous, and it is all very pleasant reading for its perspicacity, vigor of thought, wit, and a certain peculiar flavor of style. The last qualities are well seen in his "Budget of Paradoxes," published in the *Athenæum*.

—The curious phenomenon in the construction of the Greek temples of the better epoch, of a universal curvature of the horizontal lines and a convergence towards a hypothetical point, high above the structure, of the columns, has given rise to a great many hypotheses. The latest and perhaps the best of these has been contributed to a London journal by Mr. W. J. Stillman, who, in photographing the Acropolis as an architectural study, has viewed it probably from more, and more unusual, points than any living person. After remarking that the stylobate (the marble floor on which the bases of the columns rest) of the Parthenon has a curvature so decided as to be easily perceptible even in front, and that all the horizontal lines sympathize, while the columns fall slightly inwards, he gives it as his opinion, that this is done simply to produce an exaggeration of the perspective lines, thus increasing the apparent magnitude of the building. All horizontal lines seen above the eye droop at the extremities, and all parallel vertical lines seem to converge by the natural effect of perspective. If, then, we give the former an actual curvature in the same direction, and the latter an additional convergence, we make the perspective seem to be greater, and produce that variation from the right line which would be given by a building longer and higher. This seems what the builders of the Parthenon wished to do, and the minor differences confirm the theory. The lines of the architraves, which, being higher above the eye, have more *apparent* curve, are given less *real*. Then, as the perspective diminishes the apparent distance between the columns as they recede from the eye, the architect has diminished the distance between the ex treme columns, giving greater effect of recession. But this only on the end façades; on the long flanks, the effect produced by the actual perspective is sufficient.

—In due time we may expect of the Prussian General Staff a professional history of the late war such as it made of the war of 1866. On the French side, not only is there no corresponding organization, but if there were it could not possibly pass in review its own shortcomings and incompetency. The papers found in the Tuileries, and of which presumably only those which best served the political objects of the Provisional Government were published, are valuable for the light they throw on the defects of the French military system, and on the blind and ignorant self-confidence of its chiefs, the Emperor included, before the war. But for many important particulars of the operations of the first two months, which cost France its armies and its government, we must depend on personal memoirs, of which thus far the number has been very small. Indeed, the first we can name since Bazaine's official report concerning the surrender of Metz is the "Histoire de l'armée de Châlons, par un volontaire de l'armée du Rhin," which has just been published in Brussels. The work is divided into two parts, one giving the history of the French Seventh Army Corps, and the other the history of the Army of Châlons and the campaign of Sedan. We lack the necessary space for an abstract of this narrative, and in fact for more than a few remarks on the first part of it. Of the Seventh Corps less was hitherto known than of any of the others. It was the last of all to receive its orders and a commander. Its artillery was gathered at Rennes, and as preparations were made at the same time at Brest for a camp of 45,000 men, and the marines were held in readiness to transport large bodies of troops and quantities of munitions to the North, it was inferred that the Seventh Corps was intended to make a diversion from the side of Denmark. On the 18th of July, however, the artillery and engineer staffs were ordered to rendezvous at Colmar, at the opposite extremity of France from Rennes, and it then appeared that the Seventh Corps was to form the right wing of the French army of invasion, holding the line from Mulhouse to Strasbourg, and prepared to co-operate with MacMahon at a moment's notice. The Corps found itself at the beginning of its march supplied with no more camp equipage than would suffice for a single regiment, but trusted to be fully provided at its place of destination, and only feared to be behind the rest in crossing the Rhine. The railroads being overtasked, they lost a whole day at Mulhouse. At Colmar, no provision was made for quartering them, since everybody thought of the advance; nor for feeding and paying them, since the Corps intendant was still in Algiers. They were thus for eight days without organization or unity, and at last learned that their commander was Gen. Félix Douay, with headquarters at Belfort, and that he was astonished that the artillery and engineers had been sent to Colmar. Further delay was caused by Douay's making a trip to Paris, where he was, against his entreaties, detained a week. The result was that the Corps was separated from the Army of the Rhine, prevented from co-operating with it, and reduced to the rôle of a reserve. When MacMahon was threatened at Frœschweiler, it could send him but a single division, without artillery.

—Two recent French publications, "De Froeschwiller à Paris," by Émile Delmas, and "Paris assiégé," by Jules Claretie, are valuable and extremely interesting contributions to the history of the recent war. The author of the first is an Alsatian who, as a volunteer medical assistant, saw many of the battle-fields of the first period of the war, for, with the neutrality which his position gave him, he was able to pass within the lines of both armies. His account is written with the utmost simplicity, there being not a trace of the bombast which one is accustomed to find in Frenchmen who have to write about their country's failures. He exposes the manifold shortcomings of the French soldiers and officers with a calm sorrow that is affecting; and he speaks of the Germans with an intelligent admiration that one seldom gives to one's conqueror—and which, one might fancy, augurs but ill for those prophets who expect Alsace and Lorraine to be so much of an ulcer in the side of Germany. In the beginning he describes the rout of the French army after the battle of Froeschwiller, or, as it is better known, of Woerth. Here a characteristic example of the manner in which the French managed the war met his eyes; he found the captured French surgeons treated as prisoners. Although France had signed the convention establishing the neutrality of those commissioners who wore on the arm a red cross on a white ground, it would seem that the French army was ignorant of the significance of the badge, and in consequence of this ignorance the French surgeons had been considered as ordinary prisoners of war. Some of them had forgotten that there had been such a convention, others had never heard of it. Of course, when their profession was discovered by the Germans they were allowed to tend the wounded; but as their ignorance had cost them the loss, in the general rout, of most of their material, they were able to be of far less service to their suffering countrymen than they should have been. The author himself and his companions had

been mistaken by their own army for spies or *francs-tireurs;* by the Germans they were everywhere treated with the utmost respect and courtesy. It is to this astonishing ignorance rather than to brute ferocity on the part of the French that is due the fact that they often shot at the Prussian ambulances. We also find in M. Delmas' work a long list of telegrams, sent to the Ministry of War from Metz, Strasburg, Verdun, and other places, in the last week of July and the first week of August, in which the officers of the army complain of the lack of certain articles of food and of equipage, and the absence of proper assistants in the Commissariat and the Quartermaster's Department. Another proof of almost incredible incompetence is the fact that the most curiously useless maps were sent to the army, as, for instance, maps of the coast of France to the troops who were to go to Berlin. To the fleet none at all were sent; and in the "Paris assiégé" we find that, with a bitter irony of accident, maps of the Rhenish frontiers were distributed among the army for use in one of the sorties from Paris. M. Claretie exposes also the latest falsehoods of the Imperial Government, which gave to the country no other information of the battles before Metz than an apocryphal account of the driving of Steinmetz's army into the quarries of Jaumont, and of the complete destruction of Bismarck's white cuirassiers. He spares neither the weakness of the Government, the incompetence of the officers, nor the demoralization of the men. Perhaps as striking as any example of the terrible mismanagement of the French is that afforded by M. Delmas' account of the fate of some supplies which he saw almost given to the German army. After the battle of Sedan, Gen. Vinoy, who was retreating with his corps upon Paris, telegraphed to Laon that he had arrived at Marle, only ten miles distant, and asked that bread and grain be at once sent to his army, and that some empty cars should be run down for his disabled soldiers. Six car-loads of supplies were immediately sent on, our author accompanying them. On arriving he finds no one to receive them. He makes his solitary way to the town, which is full of drunken soldiers. No one can direct him to General Vinoy. He meets another general, who regrets that it is not his business, but sends him to some one else. With another he has the same luck. In despair he returns to the station, and with his friends unloads the grain from the cars. Soon a few soldiers appear and carry off half a wagon-load of bread; but the grain they refuse to touch—"it is not their business." M. Delmas returns to Marle and beseeches an officer whom he finds in authority to take some measures to remove the supplies; "the train must leave; the Prussian scouts have been signalled." The officer declines, however; "that is not his business." The train returns with the greater part of the rejected supplies, and the Germans the next day take possession of what grain was unloaded.

—"Paris assiégé" is the title of a journal kept throughout the siege of the city by M. Claretie. He entered the city with Victor Hugo, and by virtue of his position was able to see many of the members of the Government during the whole of that time. He is an ardent republican, and indeed a friend of the Commune, but he was able to oppose the effort of the Reds to mar the harmony of the defense by civil war. Under the date of Nov. 16 he records the death of Mérimée, and mentions a work of his which had been found among the papers of the Empress. It was a little volume containing a story of adultery, called "La Pantoufle bleue," written and illustrated by Mérimée's own hand. In speaking of the heroine, he says: "Her clothing smelt of vanilla. She adored the favorite perfume of the Empress." The story is signed: "Prosper Mérimée, fool in ordinary to Her Majesty the Empress."

—The latest amusement of the ex-Emperor at Wilhelmshöhe was the composition, in January last, of a work on the German military system, which Baron Stoffel's reports, if they had been read when received, would have saved him the trouble of writing. A brochure of 85 pages besides a preface, which alone is of special interest, it is entitled, "Note sur l'organisation militaire de la conféderation de l'Allemagne du Nord" (Brussels, 1871). Enumerating the lessons of the war, the author is unsparing in his reproaches of the military chiefs of France, as if his former influence or authority with them, or responsibility for them, amounted to nothing; and he pretends to have been one of those who were well aware and insisted that the military organization of his country bore no relation to its political condition. The Prussian army, "composed not of hirelings but of the flower of the nation, and resting on the principle of authority, which is not in conflict with the rights of the citizen," he pronounces the strongest safeguard a nation can have. The weakness of the French soldier is expressed in his favorite boast: "I serve no man, I serve my country;" a mere pretext, says Napoleon, for faithlessness, scepticism, and perjury.

THE STUDY OF THE CIVIL LAW.*

THERE is, perhaps, nothing more remarkable in modern "progress" than the tendency of the various nations of the civilized world to assimilation, not in manners only, but in legislation. As the power of custom and tradition declines, there is, of course, a general disposition to draw more and more of the principles of jurisprudence from the fountain of "right reason," and this disposition naturally enough is bringing into prominence the Roman Law as the most wonderful application of the rules of "right reason" to human affairs in existence, and perhaps, whether we consider its history or the nature and extent of its services to European society, or its influence on the thought of the Western world, one of the most striking achievements of the human intellect. Its history is marvellous, and the part it has played in our civilization hardly less so. It was built up in the ancient world by the labors of thirty generations of jurists; its growth and its supremacy as a rule of conduct continued through a thousand years of Roman wars and revolutions, and under every form of government. It doubtless, as Mr. Maine maintains, had a strong influence on the formation of the theology of the Western Church; and it was bequeathed by the dying Empire to the barbarians as the best and greatest of its treasures. It presided at the foundation of all the modern states on the Continent; held its place in men's memory and reverence during the dark ages; and formed, on the revival of learning, the object of the eagerest study in the principal universities. It has since then furnished the groundwork of their jurisprudence not only to the "Latin states" of the Continent—France, Spain, Italy—but to Germany and Scotland. More than this, it has supplied the canonists with the principal portion of the instruments by which the great corporation, known as the Catholic Church, has been built up and perpetuated; it has furnished the principles by which nearly all civilized states regulate those great departments of human affairs included under the terms marriage and testamentary disposition; and it has given England and America the basis of their commercial law, and has furnished international law with nearly all its leading rules and with much of its terminology. If the great tribunal of which so many of us now dream, which is to decide all controversies between states and put an end to war, is ever set up, it will be in the Roman Law mainly that the advocates will find the materials for their arguments and the judges the reasons for their decisions.

It is no wonder, then, that as the barriers between nations erected by local custom and by tradition, and by difference of manners and ideas and language and religion, begin to fall away, the great storehouse from which so many ages have drawn legal wisdom should begin to be more and more resorted to. In Germany, as our readers know, the Civil Law is already the subject of an extraordinary amount of study at the universities, not only for its relation to the jurisprudence of the various German states, but as a means of mental culture, and for its use in ethical, historical, and classical studies. In England, after having been neglected for centuries, it is rising once more into importance, under the influence of the general alienation from the worship of precedents so long the most striking phenomenon of English politics and society, and growing power of utilitarian views of legislation.

Mr. James Bryce, already well-known in this country as the author of "The History of the Holy Roman Empire," and now professor of the Civil Law at Oxford, has opened his course by the lecture before us, which is attracting a good deal of attention from the English public, and in which the claims of the Civil Law on the attention not only of the lawyer and politician, but of the man in search of general culture, are asserted with great force and lucidity; and he lays down the proposition, which, doubtless, will startle many, but which can hardly be questioned, that such is the value of an acquaintance with a system of *principles* to any man entering even on the study of the English Common Law, that of two students, one of whom goes to work in the usual way at English law alone, and the other of whom begins with the study of the Civil Law and constructs from it a foundation on which his case law is afterwards to be built up, the latter will, at the end of three years, "prove to be not only a better jurist but as good an English lawyer." "The conspicuous merit of the Roman Law is," says Mr. Bryce, "that it is clear and intelligible. It is a system, instead of a mere congeries of rules and dicta—a system which, although it cannot be exhausted by the labor of a powerful intellect during a long life, may be mastered in its outline and leading principles in six or eight months of properly directed industry. A philosophical mind is at-

* "The Academical Study of the Civil Law. An Inaugural Lecture, delivered at Oxford by James Bryce, D.C.L., Regius Professor of Civil Law in the University of Oxford." London and New York: Macmillan & Co.

tracted by its symmetry; the taste is pleased by the graceful propriety of its diction; the learner's interest is kept awake by watching the skill and subtlety wherewith its technical rules are manipulated and kept in harmony with the dictates of equity and common sense."

The study of the Civil Law, out of Louisiana and Lower Canada, is, we need hardly say, scarcely known on this continent. In the general decline of interest in legal and political science which the last twenty years have witnessed, it could hardly be expected to obtain much recognition. In Philadelphia, we believe, a few faithful disciples keep the old lamp burning in the midst of the general indifference. Here, where some of our ablest jurists are absorbed in the task of fighting the battles of thieves and ruffians before judges whom they have corrupted, the Pandects, we need hardly say, have little chance of attention. Indeed, we doubt whether the Civilians to be found in the whole Northern States might not be counted on one's fingers. There are, however, signs of a better day. Professor Hadley, of Yale College, has, for some time past, lectured on the Roman Law to his own classes, and, we are glad to say, has now been invited to deliver a university course at Harvard, which, we trust, will have the effect of rousing the interest of young men in this splendid application of pure morality to the tangled web of human affairs.

THE NORTH AMERICAN REVIEW FOR APRIL.

THE first article in the current number, called "An Erie Raid," is by Mr. C. F. Adams, Jr., and ought to be read in connection with the fifth, on "Lawyer and Client," by Mr. Albert Stickney, of the New York bar. Lawyers have found in General Barlow's letters to the *Tribune*, what the laity may find in these articles, an exposure of the most terrible system of organized fraud, corruption, and violence that what we are pleased to call the civilized world has ever seen. Most of the facts recounted in the *North American* have already appeared, but these two articles put them in a novel and interesting light. Mr. Adams gives, in "An Erie Raid," a pictorial or dramatic form to events which elsewhere have been produced only in their legal or historical order, while Mr. Stickney explains for the benefit of the public the legal transactions connected with the Albany and Susquehanna conflict, in a manner which brings out more clearly than has been elsewhere possible the true nature of these transactions. Our space prevents us from giving our readers any adequate idea of the scope of these articles, and we are obliged to content ourselves with a single extract from Mr. Stickney's, which strikes us as particularly well put. After giving an account of the well-known writ of assistance which was telegraphed from New York to Albany by Mr. Shearman, he says:

"But how far is this to go? You can obtain your writ with the evidence at one end of the telegraph, and the writ at the other end. You can execute your writ with the original at one end, and the sheriff with the copy at the other end. Why not do away altogether with the two useless elements, the evidence and the original writ, and get on with copies alone? Or may we make our own originals? Or may we have our writs and orders signed in blank? Among the glorious inventions of the nineteenth century will be recorded that of obtaining process of court without evidence, and executing process of court without having it. The name of the inventor is unknown; but the glory of the invention lies, as far as yet appears, between Mr. Thomas G. Shearman and Mr. David Dudley Field.

'Non nostrum inter vos tantas componere lites.'"

The question of the title to this invention has not yet been settled, though it may be inferred from Mr. Shearman's anxiety to defend his use of the telegraph that he, at least, is willing to "go to the country" on the merits. In a letter which has appeared since "Lawyer and Client" was written, he says that service of process by telegraph is no more novel than the introduction of written process must have been to those who had from their youth been accustomed to oral orders. This question ought to be discussed by the Bar Association. The introduction of telegraphic service would be welcomed by lawyers all over the country; every lawyer could have his own galvanic battery; and few such criminals as Ramsey would escape, if not condign punishment, at least an injunction or arrest.

Ernest Gryzanovski, a gentleman whose name is new to the American public, writes a valuable article on the "Origin and Growth of Public Opinion in Prussia." Without showing what is generally known as a scientific turn of mind, it is distinguished by two excellences which are in their way quite as serviceable in political writing—remarkable descriptive power and great impartiality. No one can read this article without finding a great deal that is new and interesting; among other things, a justification of the Prussian interference in Denmark which will convince any candid American that he may as well, once for all, admit that European politics are unintelligible to him. If there is one thing that almost all thinking people in this country have been agreed upon, it has been that the Prussian descent upon Denmark was an act of ruthless wrong. The belief probably came, like most of our beliefs about Continental politics, indirectly from the English newspapers; but wherever it came from, it was entertained with all that devout conviction which opinions received on authority commonly engender. It is curious to see what Mr. Gryzanovski says about the Denmark war:

"The Prussian interference in Denmark was fully as just and as righteous as the interference of France against Austria in 1859; or, if the one was wrong, then the other was equally so. That foreigners cannot speak of this Danish war without crying, 'Fie for shame!' is a perfectly unintelligible fact. If the doctrine of nationalities is a fallacy, its enforcement in Lombardy was as wrong as its enforcement in Schleswig-Holstein. The incorrigible and persistent cant about 'poor Denmark' shows how vicious and how worthless contemporary opinion is apt to become when those who shape and influence it indulge in loose or lazy habits of thought."

Such is the conclusion of an impartial spectator, whose opportunities for understanding the question have been undoubtedly greater than ninety-nine-hundredths of the editors who formed public opinion upon it on this side of the Atlantic. The sentence we have quoted shows Mr. Gryzanovski's keen and pure style. The most curious thing about the article is the excellence of its English. Perhaps, taking everything into account, less fault could be found with the English of this article, written by a Prussian Pole, than with that of any other in the number.

The literary matter contained in the *Review* is that embraced in the "Critical Notices" and in Mr. Charlton Lewis's essay on Mr. Bryant's translation of the Iliad. Mr. Lewis makes a very good article, in which he puts clearly and forcibly the argument against believing that the Iliad, let alone the Iliad and the Odyssey together, was the work of any one man, and discusses with acuteness the various theories of translation upon which various translators have acted. "The reasonable demand upon a translator," says Mr. Lewis, "is that he shall give, in the worthiest metrical form he can command, a faithful expression of Homer's thoughts, telling the story he tells, and setting before us the characters he describes in every situation in which he placed them. He must give us, in noble English poetry, such a picture of the manners, culture, morals, and belief of the heroic age as Homer gives." By "noble English poetry" Mr. Lewis means a metrical form which is in itself fit to express the noblest sentiments, and which has been so used for this purpose by English poets as to be imperishably associated in our minds with the best imaginative products of our literature. Now, what metrical form is this, we would ask? It is not the ballad form, which was the choice of Professor Newman when he undertook the Iliad, for that is associated with all that is low, vulgar, and commonplace in the national mind. Nor is it the English hexameter, for while the Homeric hexameter is more musical and less like prose than any form of metre of which our language is capable, the English hexameter is precisely that one among our metres which resembles prose most closely. Nor is the English heroic couplet, fine as it may be, a measure into which we can put the easy flow of the noble Homeric songs. It is Miltonic blank verse, says Mr. Lewis, which most nearly answers the requirements of a translator who tries to convey to us not only Homer's thoughts, and the culture, morals, and manners of the age in which he lived, but also to produce upon us the impression which was produced upon the Greek who stood by and listened while the minstrel sang of the wrath of Achilles or the madness of Ajax. Probably this is so; and English blank verse will be in the future, as it has been in the past, the metrical form to be most favored by those who attempt English versions of the Iliad. But the more like poets the translators are, the readier will they be to confess, even in the presence of a version great as Mr. Bryant has made, that between a metre "most nearly answering the requirements of a translator" and a metre which shall enable the translator to give not only the Iliad's thought, but the Iliad's poetic charm, the distance is infinite. Metres have not so much to do with it after all. Perhaps it would be a safe thing to say that, next to a prose translation, a translation into that metre which exacts least distortion of the thought is the best. That our English blank verse merits this praise seems to us the reason why it is most to be praised as the metre for rendering any poetry for which it is not too weighty.

Of the critical notices, all are good, and two or three excellent with a high degree of excellence. Such are the reviews of Westphal's "Methodische Grammatik" and March's "Anglo-Saxon Text-Books." Of the review of White's "Words and their Uses" we may take occasion to say something at another time.

Second American Edition Now Ready.

THE "BAB" BALLADS;

OR, MUCH SOUND AND LITTLE SENSE.

BY W. S. GILBERT.

With 113 illustrations by the author. Square 12mo, cloth extra, gilt edges, illustrative gilt side, price $1 75.

From the New York Tribune.

. . . . . "But everybody who likes to laugh, and counts that man as friend who wins it forth, will enjoy the 'Bab Ballads,' and warmly welcome their appearance in an American reprint. A perfect carnival of fun riots through its pages. Fresh fun, too—none of the stage grin and old wearisome mask. It is like a child's rollicking mischief; but it is a child thoroughly acquainted with men and manners as the little charmer depicted in page 95. . . . . The little wood-cuts which illustrate the volume are extremely comical."

THE LIBRARY;

OR, SOME HINTS ABOUT

WHAT BOOKS TO READ AND HOW TO BUY THEM.

With Lists of Standard and Essential Books in every Department of Literature,

Containing the prices and descriptions of the various editions published, and hints as to which are the most desirable to purchase.

BY AN OLD BOOKSELLER.

Printed on toned and laid paper, royal 16mo, paper covers, price 10 cents.

THE HOMŒOPATHIC DOMESTIC MEDICINE.

BY JOSEPH LAURIE, M.D.,

Licentiate of the Royal College of Surgeons, Edinburgh, etc., etc.

Edited and revised, with numerous important additions, and the introduction of the New American Remedies, and a Repertory,

BY ROBERT J. McCLATCHEY, M.D.,

Formerly Professor at the Homœopathic College of Pennsylvania, etc., etc.

First American from the Twenty-first English Edition.

BOERICKE & TAFEL,

NEW YORK:
145 Grand Street.

SAN FRANCISCO:
234 Sutter Street.

PREFACE TO THE AMERICAN EDITION.

The publication of an American edition of "Laurie's Homœopathic Domestic Medicine" was commenced about two years ago, in the *Homœopathic Sun*—a family Homœopathic Magazine—published in New York, under the editorial management of Professor F. W. Hunt, of that city. As the work appeared with the monthly parts of the magazine, it attracted great and deserved attention, and was pronounced the best and most comprehensive treatise on homœopathic domestic practice that had been issued in this country. Messrs. Boericke & Tafel, the successors of Mr. Radde, determined to discontinue the publication of the *Homœopathic Sun*, but were induced by the repeated demands for the "Domestic" to go on with that work; and, subsequently, placed it in my hands for completion. At the cost of considerable time and labor, the task has been accomplished; and I trust that the value of the original work has been greatly enhanced by the efforts made to perfect it. Chapters have been added on comparatively new diseases, and the "New Remedies" have been introduced whenever definite and accurate indications for their use could be given. The numerous alterations and additions have been prompted solely by a desire to render the work more available for domestic use; and a Repertory, or key to the remedies, has been added with the same view.

The merits of "Laurie's Homœopathic Domestic Medicine" are best attested by the popularity of the work in Great Britain, where upwards of twenty thousand copies have been sold to the most intelligent portion of the community—homœopathic families there, as well as in this country, belonging almost exclusively to the educated class of society. For the simple and ordinary ailments of life, it will be found to be all that is required in a medical treatise, while for more dangerous maladies, acute or chronic, where the services of a competent homœopathic physician are unattainable, it will prove to be perfectly clear, exact, and reliable, in the description of diseases and of their proper homœopathic treatment.

ROBERT J. McCLATCHEY.

PHILADELPHIA, February 1, 1871.

8vo, 1034 pp., price, well bound, $5.

May be ordered through any Booksellers, or will be sent, postage paid, on receipt of price.

NEW BOOKS.

I. The Journal of John Woolman.

With an Introduction by JOHN G. WHITTIER. 1 vol. 16mo. Uniform with the Merrimack Edition of Whittier's Works. $1 50.

"Get the writings of John Woolman by heart."—*Charles Lamb.*

All thoughtful readers will thank Mr. Whittier for introducing them to this unique and most suggestive Journal, which has so deeply impressed persons of all creeds by its profound earnestness and beautiful spirit. The illustrious Dr. Channing declared it "beyond comparison the sweetest and purest autobiography in the language." Rev. Edward Irving pronounced it "a godsend." Henry Crabb Robinson in his "Diary" calls it "a perfect gem," and says of the author: "He writes in a style of the most exquisite purity and grace. His moral qualities are transferred to his writings. His Christianity is most inviting—it is fascinating."

II. Marquis de Villemer.

By GEORGE SAND. Translated from the French by RALPH KEELER. 1 vol. 8vo, paper, 75 cents; cloth, $1 25.

This story is characterized by those qualities of thought and sentiment which have won for George Sand an unquestioned place among the great masters of modern fiction.

III. Writings of Edwin P. Whipple.

A new uniform edition in six volumes, including

ESSAYS AND REVIEWS. 2 vols.
CHARACTER AND CHARACTERISTIC MEN.
LITERATURE OF THE AGE OF ELIZABETH.
SUCCESS AND ITS CONDITIONS, and
LITERATURE AND LIFE.

Price $1 50 a volume; $9 a set, in a neat box.

These six volumes rank among the best in English literature for critical acumen, vivid perception of character, discriminating appreciation of literary and personal qualities, and for vigor and purity of style.

*** For sale by all Booksellers. Sent post-paid on receipt of price by the Publishers,

A RARE BOOK! A CHARMING BOOK! A BEAUTIFUL BOOK!

SHILOH;

OR,

WITHOUT AND WITHIN.

By W. M. L. JAY.

Third thousand. 12mo, 488 pages, $2.

"'Shiloh' is a twofold success. The contention between Bona and Mala constantly evokes valuable truths which strike us in a quite original light, and the social and natural features of rural life in New England have rarely been more pleasingly presented. The style is really charming, and pays the reader the compliment of care in the choice of epithets and the arrangement of the thoughts."—*N. Y. Evening Post.*

BY THE SEA.

By MRS. SOPHRONIA CURRIER,
Author of "Alice Tracy."
Second thousand. 12mo, $1 75.

"A quiet story, in the main, though it has some stirring incidents. There are many attractive sea-side pictures scattered through its pages. The style is pure and graceful, and the characters well drawn."—*Commonwealth.*

"Two or three of the characters are superb. It inculcates sound religious truth."—*Albany Journal.*

"A religious novel, and assuredly one of the best of that class which has ever fallen into our hands."—*New York Herald.*

Full list of our publications, including 100 beautiful books for children, sent free on application.

For sale by all Booksellers, or sent by mail, postage paid, on receipt of price.

HANOVER, N. H.

PRATT'S Astral OIL. Not the cheapest, but the best illuminating oil ever made. Does not take fire or explode if the lamp is upset and broken. Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have occurred from it.

Oil House of Charles Pratt, Established 1770, New York.

NEW WORKS

ISSUED BY

SCRIBNER, WELFORD & CO.,

654 BROADWAY, NEW YORK.

I.

SYNONYMS DISCRIMINATED:

A Complete Catalogue of the Synonymous Words in the English Language, with Descriptions of their various shades of Meaning, etc.

Illustrated by Quotations from Standard Writers.

By C. J. SMITH, M.A.,

Christ Church, Oxford; Vicar of Erith, and late Archdeacon of Jamaica; author of "Synonyms and Antonyms Collected and Contrasted," etc.

1 vol. demy 8vo, $6.

II.

PEOPLE'S EDITION OF THE

WORKS OF THOMAS CARLYLE.

Messrs. Scribner, Welford & Co. have the gratification of announcing that they will shortly commence the publication (by special arrangement with Messrs. Chapman & Hall, London) of the

PEOPLE'S EDITION OF THE

WORKS OF THOMAS CARLYLE.

The volumes will be issued monthly.

In form they will be small crown 8vo, and they will be handsomely printed in clear type, with good paper, and cloth binding.

The order of issue, price, and all other particulars will be duly announced.

Specimen copies of the People's Edition of Carlyle's Works may now be seen.

RARE AND VALUABLE

LONDON BOOKS,

BOTH

ANCIENT AND MODERN,

Suitable for Public Institutions and Gentlemen's Private Libraries, in all departments of Literature.

Now ready, CATALOGUE No. 61. A Descriptive and Priced List of a collection of Rare and Curious as well as Useful and Valuable Books, mailed gratis to any address on application.

The Oldest and Cheapest Importing House.

Established 1840.

IMPORTATIONS BY WEEKLY STEAMERS.

A. L. LUYSTER,
LONDON, AND 138 FULTON STREET, NEW YORK.

The following for sale at prices annexed, and forwarded on application:

Madden (Richd. R.), The History of Irish Periodical Literature, from the End of the Seventeenth to the Middle of the Nineteenth Century; its Origin, Progress, and Results. With Notices of Remarkable Persons connected with the Press in Ireland during the past Two Centuries. 2 vols. large 8vo, new cloth. Lond., 1867. $4.

The Seven Curses of London. By James Greenwood, the "Amateur Casual." 8vo, new cloth. Lond. Pp. 460. $2.

London Characters, and the Humorous Side of London. 8vo, new cloth. Lond. With upwards of 70 illustrations. Pp. 344. $2.

The Terrible Sights of London, and Labors of Love in the Midst of Them. By Thomas Archer. 8vo, new cloth. Lond. Frontispiece, pp. 500. $2.

Kelly (W. F.), Curiosities of Indo-European Tradition and Folk-Lore. 8vo, cloth. Lond., 1863. $1.

The Nation.

NEW YORK, THURSDAY, APRIL 27, 1871.

The Week.

THE session of Congress closed in the House with a more than usually repulsive row between Mr. B. F. Butler and two of his enemies, Messrs. Beck and Farnsworth, brought on, as is so often the case, by "a personal explanation" on Butler's part. The origin of the trouble was to be found in a previous row of the same estimable citizen with Garrett Davis of Kentucky in the Senate, occurring a week earlier; and the way in which this one was treated by the Republican press goes far to explain much of Butler's bad eminence and mischievous activity. Davis might be—what we understand, however, he is not, but the contrary—a quarrelsome and ill-mannered man, but he is old, and is entitled to speak in his place in the Senate without annoyance or insult as long as he observes the rules of that body. He was speaking in a perfectly proper and inoffensive manner when Butler strolled into the Chamber, planted himself close to him, and right in front of him, and began to gaze fixedly at him. Now, Butler's expression of face is not prepossessing, and when turned on an enemy is not soothing or exhilarating, and Davis hated him—he knew he hated him, and doubtless meant to annoy him, and did annoy him very effectually—so effectually that Davis began to curse and swear and made preparations to pummel him; whereupon Senator Wilson interfered, and led Butler gently away. A more inexcusable outrage has rarely been perpetrated in a legislative body, or in fact any deliberative body whatever, than Butler's performance was under the circumstances; and yet the majority of the Republican papers came down far harder on Davis than on Butler; in fact, as far as our observation has gone, few, if any, seemed to think Butler was to blame. Davis, as might have been expected, made a subsequent attack on him in the Senate; this led Butler to make a "personal explanation" in the House; and this led Beck to reply, by bringing up a story of one of Butler's "frauds," and there then followed a bout of billingsgate, in which Farnsworth of Illinois took part, and in which Butler got horribly mauled, and lost his temper, and was reduced at the close to the necessity of telling Farnsworth that he was "not a white man," the House all the while roaring with laughter.

When we consider that there is probably not a man in the United States that would say he respected Butler, or had the slightest confidence in him, that his attempts at legislation have all displayed wickedness and folly in about equal proportions, and that he has probably done as much to debase the tone of public life at Washington as any ten of the worst men who have ever made their appearance in Congress, the tender indulgence with which the press treats him is highly discreditable, and very mischievous as well. It is bad enough, in all conscience, to have such a man returned by a Massachusetts constituency, but when the leading papers of the party of moral ideas always treat him as a simple oddity, and his tricks and dodges as the playful gambols of a rich and exuberant nature, they help greatly to lower the public standard of statesmanship, and open political life to charlatans and rogues of all degrees. The *Tribune* has at last, apropos of this last affair, spoken of him as he deserves. If the respectable Republican press would only give him his due, the task of finishing him might apparently be left to Mr. Farnsworth, who is evidently too much for him, and rejoices in hunting him with a savage joy.

The Supreme Court has, it is now positively announced, decided—five against four judges—that the Legal Tender Act was constitutional; that is, reversing the decision of the court last year, which denied the applicability of the act to contracts made before its passage. Of course, if constitutional with regard to these, it is *à fortiori* constitutional with regard to contracts made since its passage. Judges Miller, Swayne, Davis, Bradley, and Strong are said to form the majority—the Chief-Justice, whose health we are glad to say is nearly restored—and Judges Nelson, Clifford, and Field dissenting. There will be two opinions published, of course, but not till December. The act will now be sustained by the same majority—that is, one—which in the former decision overruled it, and it is certainly as ridiculous to allow one man to mulct all the creditors in the country in February, 1862, of from twenty-five to fifty per cent. of their dues, and shake confidence in all contracts, and reverse a decision of the Supreme Court, as to allow one man to set aside the construction placed by Congress on a clause of the Constitution. The present action of the Court is to be deplored, (1) because this sudden reversal of a former judgment, which had been maturely considered after full argument, will weaken popular respect for all decisions of the Court, including this last one; (2) because the value of a judgment does not depend on the number of judges who concur in it—judges being weighed, not counted, and because the rehearing of a cause in consequence of the number of judges having been increased is peculiarly, and for obvious reasons, objectionable, where the number is dependent on the will of the very body whose acts the Court has to review, and which in this very case it is reviewing; and (3) because the judges who have been added to the bench since the former decision are men who were at the bar when that decision was rendered, and were interested professionally and personally in having a different decision. We do not mean to insinuate that this has affected their judgment, but we do say that it is not enough for a judge to be pure; he must be likewise above suspicion; that is, he must not only be honest, but must give no man any reason for thinking him otherwise than honest.

It is rumored that the High Commission has completed its work, and provided machinery of some kind—what kind no outsider seems yet to know—for the settlement of all the outstanding controversies between Great Britain and the United States, viz., the *Alabama* claims, the fisheries, the San Juan boundary, and the British claim for damages sustained by British subjects during the war. If it be true that they are all to be included in one treaty, it must be regarded as unfortunate, inasmuch as some are much harder to settle than others. It seems a pity to provide that if all cannot be settled, none shall be. What will be the fate of the treaty before the Senate, it is useless to try to predict. There are several powerful influences adverse to any settlement at all. One is sheer hostility to England, and desire to have her on the hip somehow; another is the extravagance of the expectations which have been excited as to the sort of satisfaction which America ought to exact, and England ought to give, in the *Alabama* matter, but which there is no chance of any treaty meeting; another is the extreme lowness of the figure which the *Alabama* damages reach when put down in dollars and cents compared to what the popular mind fancies them to be; and, still more, the fact that the money will nearly all go to insurance companies, some of which are English. In fact, it will be very difficult for Mr. Sumner, for instance, to vote for any plan the Commission is likely to have to offer without palpable loss of dignity; if he does, it will bear a little too strong a resemblance to the course of the gentleman who asked the President to appoint him to the Paris mission, but contented himself finally with a suit of old clothes. Still, it is not well to take too despondent a view of the matter. It is said, however, that he has been made acquainted with what has been done, and approves. The United States has been well represented in the negotiation, and it is not likely that the American Commissioners have made any concession which is not capable of vigorous and effective defence before the American public. We have only to repeat the expression of our belief that if it can be shown that differences so grave between two such nations can be settled in this way, the gain to peace and civilization will be worth double their whole shipping, and more, as it will make war hereafter impossible.

The Democratic party has long been accused of want of principle, but it would seem, if we may judge from the address just issued by the Democratic members of the House and Senate, as if their greatest want just now was want of brains. No feebler state paper has made its appearance in the United States for some time. They might, if they had a man of even fair literary or dialectical skill amongst them, have made out a pretty strong case against the Republican party on various grounds, but its errors have apparently been of no use to them whatever. They charge it, in the style of a third-rate editorial article in a party organ, with the unprecedented multiplication of offices; the subordination of "moral worth" (this, it must be confessed, is tolerably barefaced) to "dishonorable compliance" in the selection of officers; with dishonesty in the collection of the revenue; with the unnecessary retention of taxation; with causing the shipping interest to "languish"; with "prostrating" the agriculturists by protective duties; with waste in the disposal of the public lands; with having conferred despotic powers on the Executive, and overthrown local self-government; with having done everything a "malicious ingenuity" could suggest to "irritate" the people of the Southern and Middle States, and having accompanied hostile legislation by no word of reconciliation. They warn their constituents not to aid the Radical partisans in stirring up "strife in the land," and accuse the party in power of having spent in the five years following the war, for ordinary purposes, a sum within $200,000,000 of the aggregate amount spent for the same purposes, in war and peace, during the seventy-one years preceding June, 1861—a curiously fallacious statement, which has not even the merit of ingenuity.

The framers of the address might have done much for constitutional government, and, above all, for local self-government, by a few words of remonstrance and warning addressed to their friends at the South on the subject of Ku-klux operations, but not a syllable of this kind does it contain. How necessary something of the kind is has been strikingly proved by a remarkable letter—in fact, the most remarkable piece of evidence about the condition of the South we have seen of late—which appeared in the *Tribune* on Tuesday, from a Mr. Luce, who went down to North Carolina to farm and establish iron-works—and, in short, appears to have been exactly the kind of Northern immigrant the South wants and is constantly clamoring for. He abstained from all meddling in politics, went diligently to work to develop the resources of the country; but, being in thinly-settled region, opened a church on his land, and got an Episcopal minister—an ex-Confederate officer, by-the-way—to officiate in it, and set up a Sunday-school for negroes, but carefully excluded politics or anything relating to it from the course of instruction. The school was attended with great eagerness, and all going well, when Ku-kluxing began in every direction around him. The negroes were flogged and shot at. He appealed to the leading Democrats in the neighborhood, and they refused to do anything for him, and he was finally warned that he would be hanged if he persisted in teaching negroes, and his family were so terrified that he had to shut up his church and Sunday-school.

Coming North on business, "the neighbors" put their heads together in his absence, and had him adjudged an absconding debtor, without any proper foundation in fact, and his goods and works seized. Thus ended an industrial enterprise of great promise, and of just the kind the South wants, the inhabitants of the district in which it was started showing themselves little better than a parcel of howling barbarians. Some of us here think this sort of disease can be cured by martial law, and that when the President issues his proclamation declaring the district in rebellion, and sends down soldiers, the people will rapidly begin to love education, justice, equality, and negroes, and to help to build up churches and schools. We suppose this delusion must run its course; but that we should have to wait for it to do so is sad enough. The cure for it all is education and experience of the material misery that comes from Ku-kluxery. A vote of money by Congress to enable all persons who were desirous of doing so to quit disturbed districts and settle elsewhere, would, we have no doubt, do more to pacify the South than an army of 100,000 men, and if Federal money is going to be spent in this work of pacification, it is in some such way it ought to be spent. It is in this way—that is, by the loss of population and money through local disorders—that the South must learn wisdom.

[Miss Hosmer, the sculptor, has written a singularly ill-judged and angry letter to the *Tribune* in defence of Miss Vinnie Ream, insinuating that the attack on Miss Ream and her statue are due to mean male spite and jealousy. The *Tribune* replies that "every sculptor of repute" condemns the statue, which may or may not be true, but does not affect the most important question. Miss Ream is not the first sculptor who has made a bad statue—even sculptors of repute have done so. The scandal and shame of this case are that Congress, having to erect a monument in the National Capital to one of the two most famous Americans—the one perhaps whose name is most widely known and will be longest remembered—passed by a dozen American sculptors of well-earned eminence, and gave the work to a pretty girl, who wanted to be a sculptor, but had never made a statue at all, and of whose ability nobody could tell much if anything.

Domestic trade continues moderately active in dry goods and groceries, but quiet and unsatisfactory in most other branches. The decline in prices of raw materials and in wages has, however, caused a revival in some of our exports of manufactured goods, and in several branches manufacturers are employed on foreign orders, a circumstance unknown for some years past. The cotton receipts continue on a liberal scale, and prices are about steady under large export orders and great strength in the Liverpool market, in spite of the heavy stocks. Breadstuffs and meats are both lower, the former yielding gradually under the prospect of large receipts from the interior, where heavy stores are accumulated, and of bountiful crops this season, which so far promise exceedingly well—the latter falling considerably, owing to the breaking-up of a great speculative movement in this city, which has held the price unnaturally high ever since the new crop came in. Fresh meat keeps cheap, and butter and cheese have likewise again declined, though city consumers scarcely as yet get the full benefit, owing to the great scarcity of really good dairy products of every description. There is no decided change in the situation of the coal region. Many of the iron furnaces have gone out of blast, and the iron men have held three or four meetings to agree upon an advanced scale of prices; but the limited demand helps them but little.

Financial affairs are marked by continued excitement among the professional habitués of Wall Street, where the cliques have again put up the prices of all leading stocks from two to five per cent. without rhyme or reason, and without attracting the large outside public, to whom they hoped to sell. Money continues extremely easy. Greenbacks are coming in from all quarters where dull business renders them useless, and general inflation is the order of the day. But neither the Treasury influence nor the reckless bank management seems to affect the ordinary course of the majority of people, who pursue their legitimate trades without being led away as during past years. Erie has furnished another brief excitement by the announcement, forced from them by the disclosures now going on before the Master in Chancery, that they have issued and sold three millions of new stock without giving the previous thirty-day notice required by the New York Stock Exchange, which should deprive them of the right to have their stock dealt in. But the Exchange, for some mysterious reason, has not yet stricken Erie from the list. The funding proceeds by dreary driblets. The specie exports to Europe have been large.

The only recent occurrence of moment in the French civil war is the fight at Asnières, April 18. At that place, situated on the left

bank of the Seine, in the Gennevilliers peninsula, half-way between the forts of St. Denis and Mont Valérien, the insurgents had erected considerable defensive works, consisting chiefly of huge barricades armed with mitrailleuses. These works were destined mainly to cover the various approaches to the bridge over the Seine, which they held. Having no cavalry, however, the insurgents were unable to reconnoitre, and ignorant of the fact that MacMahon's troops had erected heavy batteries against them at Gennevilliers and Colombes, north and northwest of Asnières. These opened suddenly a terrible fire upon their right flank and front, while two attacking columns advanced against their positions. The Parisians answered the cross-fire only by one volley from their mitrailleuses, and soon began a hasty retreat across the Seine. Their commander, Dombrowski, sent for reinforcements, and vigorously renewed the contest, leading a desperate assault in person, but in vain. They were forced from their positions on the left bank, with heavy loss. It appears, however, that the Versailles troops did not occupy the village of Asnières, but entrenched themselves west of it, on the railroad leading to Colombes, thus securing their left flank in their operations at Neuilly, which, on the 20th, became the scene of an obstinate fight, without decisive results. The insurgents continue to hold their barricades in front of the Maillot Gate, in spite of the shells from Mont Valérien, but the Versailles troops are in possession of both banks of the Seine from Château Becon to Suresnes. Further south, cannonading alone seems to be the order of the day.

From all before us it seems clear that the forces of the Versailles Government, though making but very slow headway, have had the advantage in almost all the conflicts with the insurgents since the beginning of hostilities. Cluseret, however, has his official say to the contrary about every single fight, and, to hear him, nothing can be more admirable than the behavior of the insurgent National Guards under fire. But this the insurgent National Guards themselves have excellent reasons to doubt, and somehow they have also begun to doubt the admirable qualities of their improvised Minister of War, Cluseret, himself. He appears to them rather slow in organizing victory, and the suspicion has arisen that his doings and omissions are prompted by a desire to make himself dictator—a dignity for which there is, in Paris, no lack of candidates, we presume. The Montmartre battalions of the National Guard, we are told, have, besides, their separate grievances; they complain of excessive work and defective arms, and of encroachments on the part of the Belleville battalions. Dissatisfaction is rapidly becoming general within the domain of the Commune. The late partial elections have disclosed this fact beyond doubt. Disgusted with their result, the great Félix Pyat threatens to resign. Tolain, on the other hand, is rejected by the Internationals as a "traitor to the working-classes." And against this general dissatisfaction even the new court-martial, "with summary powers," is unable to prevail. We therefore notice a considerable falling off of revolutionary pluck in the doings of the Commune. Churches have been allowed to be reopened and suppressed journals to reappear; imprisoned curés have been released, and funds robbed from the gas company restored with an apology—reactionary proceedings unworthy of "Paris once more laboring and suffering for the regeneration of France."

The spirit of revolution thus waxing milder from day to day—the increasing scarcity of provisions may have something to do with it—Paris, we hear, is inclined to treat with "the assassins of Versailles" on the following basis: "The maintenance of the Republic; the granting of communal rights to Paris and other cities, and the autonomy of the National Guards; the dissolution of the Assembly, and the election of a National Communal Representative Assembly in its stead; the formation of *ad interim* governments for Paris and Versailles," etc. And it is not unlikely that even more modest terms would now be acceptable to the somewhat tired and hungry followers of Blanqui, Ranc, Grousset, Eudes, Cluseret, and Co., though possibly not to those eminently patriotic and unselfish leaders themselves. Thiers, however, obstinately refuses to recognize the Commune as an authority to treat with, though declaring that his generals had power to grant a military truce whenever it should become necessary. According to a late report, a suspension of hostilities has actually been arranged at Neuilly, but only for a transient purpose. Hostile preparations continue to be made on both sides, the Versailles troops steadily receiving reinforcements from the provinces, and the insurgents augmenting and strengthening their barricades and batteries both within and without the *enceinte*. The Germans, who still occupy the forts north and east of Paris, show little disposition to favor the insurgents; but they are also inflexible in demanding the strictest execution of the preliminaries, which delays both the definitive conclusion of peace and the return of the French captives from Germany. Marshal Canrobert has joined MacMahon. General Ducrot has resigned, and Félix Douai takes his place.

The affairs of the Catholic Church seem to be reaching something very like a crisis in Germany, where the Ultramontanists are beginning to show themselves as a distinct political party, mustering about sixty strong in the Imperial Reichstag, and making the duty of the Empire to interfere in Italy for the restoration of the Pope the cardinal article in their creed. On this point they divided the chamber in voting the address in reply to the Emperor's speech. They are, however, by no means an influential body, and their following out-of-doors is small, and mostly confined to Eastern Prussia and Bavaria. They were beaten on various grounds, but most markedly on the ground that the creation of the Empire, and the bloody war which had preceded it, were distinct and solemn declarations of the duty and expediency of non-intervention in the affairs of other states. Another striking sign of the times is a division among the Poles on the Papal question, an anti-Papal party having sprung up among them at last, and the lower clergy in Bohemia are said to be rapidly going into opposition to the Papacy also under the pressure of the National Czech movement.

The most exciting incident in German politics, however, and indeed we may say in European politics (for the civil war in France has lost most of its political interest), is the attitude taken up by Dr. Döllinger, the famous Catholic theologian—we might say the greatest living Catholic theologian and scholar—towards the Pope. The latter has called on him to submit himself to the decisions of the late Council, and particularly to that touching Papal infallibility. This Döllinger has, in a long and able, and even threatening, letter flatly refused to do, both as Christian, theologian, historian, and citizen, and he insists on being summoned before a council of German bishops—which there is talk of convening at Fulda—or before a conference of theologians at Munich, where he offers to prove that the doctrine of infallibility is opposed to the teachings of the Scriptures, and to the first thousand years of Christian tradition, and to have been introduced into the church by shameless fraud. He declares, moreover, that the doctrines which are now put forth with regard to the relations of church and state would, if an attempt were made to apply them to the new German Empire, either prove fatal to religion or to society, and he refuses to accept or advocate them. The Council of Bishops is certainly to meet, and is to take into consideration the coercive measures proper to be adopted against laymen and priests refusing to acknowledge the Pope's infallibility; the relations of the church and the new empire; the convocation of a synod composed of the Austrian, Hungarian, and Polish bishops next fall, and the establishment of a new Catholic university at Fulda. It is already freely predicted that this council will resemble the famous Diet of Worms in more ways than one. Dr. Döllinger, we are sorry to say, is over seventy years old, but he has plenty of vitality, and will probably live to fight this fight out. The commencement of it is one more illustration of the wonderful way in which Germany is becoming the scene in which some of the most interesting problems of European government, and osiety are to be studied, if not solved.

POLICE DUTY.

THE Force Bill has been passed, and has received the President's signature, and is now a law, and, though it has undergone some modifications since we discussed it in detail last week, its most objectionable features have been retained, and particularly that which enables the President to suspend the habeas corpus and declare martial law whenever the occasion seems to him to call for it. The course of a considerable portion of the Republican press with regard to it has been so discreditable, and the readiness of the public—owing to the general confidence that the powers with which it arms the President will not be abused—to let it pass without protest is so widespread, that we cannot help calling attention once more to one or two of the remote dangers with which this legislation threatens us; and it will be seen that they constitute reasons of the strongest kind why the act should be repealed by the Republican majority as soon as Congress meets.

On the 13th of February, 1866, the Joint Committee on Reconstruction reported through Mr. Bingham the following amendment to the Constitution:

"ARTICLE —. The Congress shall have power to make all laws which shall be necessary and proper to secure to the citizens of each State all the privileges and immunities of citizens in the several States; and to all persons in the several States equal protection in the rights of life, liberty, and property."

If this had been adopted and ratified, it would have afforded justification for that portion of the Force Act which charges the General Government with the policing of the States, though not that portion which makes the President a dictator. But it was not adopted. It was found impossible to get Congress to recommend such a sweeping change in the Constitution, and the consideration of it was postponed indefinitely a fortnight later by 110 to 37. A month afterwards the present Fourteenth Amendment was reported, and for the above section the following was substituted:

"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

This, it will be seen, is a prohibition imposed on the States with regard to a certain kind of legislation, and the effect of it simply, as we pointed out last week, is to make all such legislation null and void, and empower all persons aggrieved by it to appeal to the courts to have it set aside. The majority in Congress has, however, actually gone to work and legislated as if the amendment which was rejected had been adopted and ratified, and as if the powers of police which the Constitution reserves to the States had been transferred to the General Government, although it had previously, by the Civil Rights Act of 1866 and the Enforcement Act of May, 1870, as amended by the act of February, 1871, exercised all the power of legislation for the enforcement of the new amendments which anybody until now ever claimed or pretended that it possessed.

We freely concede that General Grant is not the man to abuse his dictatorship. We have no doubt that when he uses it he will use it honestly for the protection of life and property, but we refuse to treat this as a serious argument in defence of such a measure. It is one of the stock arguments by which imperialism justifies itself, and ought never to be heard issuing from the mouth of an American. That so many Americans should use it shows how rapidly people have been losing hold, under the influence of the excitement of the last few years, of the principles on the supremacy of which free government has always and everywhere depended, and, it is safe to presume, will always and everywhere depend. We acknowledge, too, that it sounds well to talk of "putting forth the whole power of the Government to protect the downtrodden and oppressed," and that if the whole power of the Government is put forth there will, as long as it is put forth, probably be some diminution of Ku-kluxing at the South. But the danger is, that if we do this long enough to bring the negroes and Unionists of the South any real relief, we shall destroy completely in the minds of the people of the Southern States all sense of responsibility for the local preservation of order, and this once destroyed, centralization becomes a matter of necessity. We ought not to forget that it is not to the goodness of the laws that the success of republican institutions on this continent has been due, *but to the habits of the people*, and notably to the habit which every man has of looking on the work of local police as his personal affair. This is the distinctive feature of American society. It is in a less degree a distinctive feature of English society, and the result of it is that government in America and England is free and successful, while government in France and Spain and Germany and South America is either not free or not successful. The contrivance by which the framers of the Constitution sought to preserve this habit, and at the same time build up a great central authority, was, perhaps, one of the happiest displays of the application of wisdom and experience to the work of politics ever witnessed. The present attempt, therefore, to undo their work, and destroy, root and branch, what they did all they could to preserve and foster, must be pronounced one of the greatest pieces of self-stultification ever witnessed. It makes all the difference between the success and failure of free institutions, whether, when my house is robbed or my life attempted, I and my neighbors join the sheriff to hunt down the criminal, or whether we shut our doors, and go about our business, and wait for the Minister of the Interior to send gendarmes and a prefect to work the case up. Even the feeling which sends men—as it often does at the West—disguised to the jail when there seems likely to be failure of justice, take out a thief or murderer and hang him up, is one which no wise man would weaken. It contains—wild, and reckless, and lawless as it is—the foundation on which alone any sure and lasting combination of law and order must rest. Things can never in any community go far wrong as long as the men of each county and each State say and think, "It is our business to see that the high-roads in this region are safe, that men sleep securely in their houses, and go tranquilly about their lawful affairs; that the people's writs run freely, and that the course of justice is not hindered." Destroy this way of talking and thinking, and teach men to look to Washington or any other capital for order and safety, and you will, under favorable circumstances, and as the best you can expect, get a government like that of France; under unfavorable circumstances, such as a division of population into two races and the prevalence of turbulent habits, you may expect a government like that of Mexico; and this, too, is the best you need expect.

But what if the people of the locality will not preserve order, and if a large proportion of the population, and that the most powerful and energetic, are actually engaged in the commission or encouragement of acts of violence against person or property? We answer, that if we found this to be the state of things, and if we had made up our minds, as the majority in Congress seems to have done, that we would sacrifice anything, even our liberty or the supremacy of the laws, in order to put an immediate stop to it, and were ready to appoint a dictator with full power to deal with it as he thought proper, as the majority in Congress has done, we should, without hesitation and in full confidence in the principle on which the American Government has thus far been administered, send for the Ku-klux and other malcontents, and hand the government of the disturbed State over to them bodily. If immediate peace and quiet be all we want—and we are determined to have them at any cost—this is the thing to do, and it is the only thing to do which will give us what we seek without fatally weakening the habit of self-government. For to all its other defects, the plan now resolved upon adds the capital one of being certain to fail. We venture to assert that not a man of those who voted for it believes in his heart that the expiration of this outrageous act will leave the colored people of the South one whit better off than it found them.

There is one other consideration to which it is impossible to do full justice in an article like this, but which few thinking men need to have discussed at length. Anybody who reads attentively the ablest and most influential of the papers which zealously support the Republican party—say the New York *Tribune* and *Times* and *Harper's Weekly*—will find that they justify their support largely by pointing out the dreadful consequences which would probably result from the accession of the Democrats to power. Judging from all one can see and hear, their apprehensions are well founded. We know of nothing

in the sayings or doings of the Democratic party to make its supremacy wear any other appearance than that of a great misfortune to the nation. The papers we have mentioned, above all things, denounce it for its unscrupulousness, its indifference to constitutional obligations, and its close alliance with or patronage of the worst and most dangerous elements in American society. But, then, they acknowledge, too, that its accession to power is by no means a very improbable contingency. The South is Democratic, and becomes daily more so; there is a very powerful Democratic vote in nearly all the Northern States, except Massachusetts and Iowa. The liquor interest, and that now most portentous of all the "interests" which threaten the basis of American society and government—the Catholic interest—and in this State the criminal and corrupt interest, look to the Democratic party as the one which is to give them what they want, and swell its ranks every day. In the meantime, the Republican party grows sensibly weaker under the decline in importance of the questions on which it rose into power, and under the steady rise of others in which its members are greatly and increasingly divided. Under these circumstances, the disaster with which Republican journals are constantly threatening us, and to avert which they are incessantly beseeching us to pardon the faults and shortcomings of the party, may any day overtake us. No man can tell how soon he may see a Democratic majority in Congress, and a Democratic President in the White House, and Tweed and Sweeny installed in Washington as "the power behind the throne." Now, when this comes to pass, what shall we have between us and all we most dread but the restrictions of the Constitution and the popular reverence for it and for the courts which interpret and enforce it? What is to prevent the nullification of the reconstruction legislation, the relegation of the negroes to serfdom, the repudiation of the public debt, the appropriation of money for church endowments, and the suppression of obnoxious minorities by military force, except the general acquiescence in and general fidelity to the principle that the Constitution is something higher than the will of the majority for the time being—something not only more sacred, but more valuable, than the idea of any man or body of men of abstract justice or truth or humanity? Is it not, with this prospect looming up, be it never so remotely, little short of madness to go to work to forge weapons which, harmless or useful as they may be in the hands of Grant, Blair or Sweeny or Wood might yet wield; to cultivate for the gratification of vague metaphysical notions about the powers and duties of government that disregard of contracts and conventions, and decisions and conventional obligations, which has thus far done more than all else to make good governments rare and short-lived?

WHAT WINANS'S REPLY OUGHT TO HAVE BEEN.

"Dear Brethren inside Politics:

"I was at first greatly surprised by the show of indignation made by you over my recent action in the Assembly. I acknowledge that I have been bought up by Tweed at a pretty good price, and that my conduct, on the whole, has in this matter been, judged by the standard in use among some people, very disgraceful. But then I did not, from what I know of you, expect *you* to take a severe view of it. You are practical men; I am a practical man; and you must, therefore, feel that it is rather funny to have you calling me, as you have been doing, 'a traitor, perjurer, and rogue,' 'a stench in the nostrils of all honest men,' 'a shameless scoundrel,' 'a poor, small-souled scoundrel,' 'a poor wretch,' 'a contemptible political traitor,' 'a prime scamp'; and to say of me, as you have been saying, that 'I shall be spurned from all decent association'; that, 'like Cain, I shall be a wanderer on the face of the earth'; and that, 'unless I am as cowardly as I am base, I will go out and hang myself'; that 'my descendants will curse my memory'; that, 'in that delightful fraternity inaugurated by Judas Iscariot, and in which figure Mr. Benedict Arnold and other honored gentlemen who have sold themselves body and breeches for pieces of silver, I shall find congenial companionship'; that 'my best plan is to cross the seas and live in exile'; that 'nothing of a political nature has so stunned the country since the dark days of the Revolutionary War as my base betrayal of the highest interests of the State.' I was, too, rather startled to hear from one of you that, when hereafter I go to a hotel, and write down 'my infamous name' in the book, 'the gentlemanly clerk will turn pale with scorn as he assigns me a room, and that a crowd will instantly gather round to gaze at me,' and that 'if I ever enter a house of worship, the whole congregation will gaze at me with horror, and in Christian pity will mumble a prayer in my behalf.' When I first read all this I was disposed to get mad over it; but I took it over to Bill Tweed, and we went through it together, and it gave us a good laugh, I assure you; for Bill was certain you were joking, and I am now persuaded myself that you were; but lest the public at large should not see the point, he advised me to put down on paper two or three of the reasons why I don't care what you say about me, and why your abuse of me sounds very ludicrous to those who know you as well as I do.

"In the first place, brethren, you never expected me to be incorruptible; and your pretending to be as much shocked and astonished by it as the disciples were by the treachery of Judas Iscariot is—forgive me the expression—very impudent on your part. You know very well that I have been for many years, and still am, an employee of the Erie Railroad, and that I was elected last year to my place in the Legislature by the influence of the road. You know, too, that when the present Erie managers allow one of their men to go to the Legislature, and do everything they can to get him returned, it is not with the view of having him set the other members an example of probity, or pass his time in prayer and meditation. You had, in fact, every reason for believing that I went to the Legislature to help out their schemes, and that I would help them out whenever it was necessary, at whatever cost; so that your now pretending that you thought me a rock of integrity, though a joke, is too much of a practical joke to be really good. If you were all to gather round Satan, and weep and wail because you had found him cut in a lie, you might think it good sport; but he would certainly consider it insulting, and resent it. I find, also, the immense importance you pretend to attach to my calling myself a Republican as an aggravation of my offence, a little too ridiculous for my taste. The fuss you are making is all based on the theory that Republicans are all incorruptible, and that when a Republican member of the Legislature takes a bribe, it is like the fall of an angel or of an apostle.

"The fact is, brethren, that if, the day before Jim Irving hit Weed in the face, you had been asked how many members there were in the Assembly who would not take a bribe, there is not one of you who would have put the number at more than ten, all told; nevertheless, you barefacedly pretended to believe that the whole sixty-five who signed the pledge to vote against Tweed's bills could in no way be induced to give way—whereas not one of you expected them all to hold out, and each of you was wondering which of them would have the pluck to surrender first and claim the money.

"You are well aware that the Republican members of the Legislature have for years past been as corrupt as any; and that, without this, the Tammany Ring could never have got possession of the State as it has done; all of which makes your horror over me very clever, but not genuine. Your display of it is made all the more comical by the fact that a large proportion of the active members of the party in New York city are, and have long been, as I am now, in the pay of the Tammany Ring, and are well known in all your ward meetings, caucuses, and conventions as 'Tammany Republicans,' and work steadily for Tammany interests. Your wondering over me, therefore, as if I was an ornithorhynchus, or a dodo, is simply absurd. You are as familiar with my kind of politician as you are with the common domestic turkey or goose of the barn-yard. Considering the kind of people, too, the hotel clerks assign rooms to without growing pale, and the kind of people church members take the communion with, I doubt very much whether my appearance in hotels and churches will make such a sensation as you are pleased to predict.

"Shall I now tell you plainly why I do not care two straws for your abuse of me, and why I even enjoy it? It is that you have no penalties left in your possession for the punishment of such offences as mine, and that you are estopped by your own acts from treating me as a really bad or dishonored man. You have, brethren, for some years

back, been trying to manage the party on the theory that a person may be a very estimable politician and yet a very great scoundrel. You have, consequently, elevated to high places and honors men whose lives have been stained by every description of infamy and vice, whose word no man believes, and the mention of whose honor would excite laughter wherever they are known. You have done this simply because, after a long career of rascality, begun in early youth, and protracted to the decline of life, they joined you when you became the winning side, and there was plainly more to be made by supporting you than by opposing you. Your leading journals, who are now pouring vituperation on me, never speak of these men, I am glad to say, except in terms of respect, and thus they render their own treatment of me perfectly harmless. By suspending the ordinary laws of morality, and setting aside the ordinary tests of character in the interests of the party, you have given me, and the like of me, just the license I need. If it makes no difference what I have done, or what I do, provided I am now 'sound,' I have all the rope I want. You never can get people to put a breach of party allegiance on the same level with theft or arson; and, if this is the worst offence I can commit, I shall speedily get over it, no matter what you say. You cannot maintain that I have damaged my moral character very seriously, because you have again and again ruled that, no matter how much a man may have lied, cheated, or stolen, he can wipe out his past, and become as good and respectable as anybody any day he pleases. Consequently, I shall be a rascal as long as Tweed, Fisk, and Gould wish me to be so; as soon as convenient I shall become suddenly good again, and take up 'a cause,' and you will have to receive me once more into regular standing. You cannot attempt to punish me more severely for a single slip, which you declare took you by surprise, than you have punished others for twenty or thirty years of solid villany. The names you call me do not affect me much, because you have bestowed them from time to time on some of the best men in the country. Newspaper 'Judases' are now as plenty as blackberries, and such of them as I happen to know, look fat, hearty, and comfortable, and seem to like being 'Judases,' and not to fear even a temporary occupancy of the conspicuous position which I now fill, of the Greatest Criminal of the Age."

OUR NATIONAL WEALTH AS REVEALED BY THE CENSUS.

The Census Bureau has so far progressed with its labors as to be able to present us with a concrete statement of the total wealth of the nation, as assessed for purposes of taxation. The figures do not give the true value of the property, as estimated by the census-takers, but they give the sum total of the valuation, as obtained from the local tax assessors of every State, upon which all State taxes are assessed. It may seem at first sight that figures coming from such a source are not of a highly trustworthy character. Indeed, we know that the assessments are very defective from the ignorance of the officials, or from their carelessness. But they are, nevertheless, of the greatest importance. Based as they are upon actual assessments upon which the payment of money depends, open as they are to correction from all injured parties, including, as they do, the whole tax-paying portion of the people, compared with whose vast numbers the intentional cases of false valuation must come to be very insignificant—these tax returns are fully as reliable as, if not far more reliable than, the loose and inconclusive returns from volunteer statements, or valuations obtained by a host of ignorant and, perhaps, incompetent census subordinates. Making allowance for the invariable practice of assessing property for tax purposes at much less than its market value, an undervaluation which is recognized and established by universal custom, if not by law, these tax-returns are considered by competent statisticians far more valuable for ascertaining the wealth of the people than those of the census. But lest exception be taken to this position, which is also denied by many, we propose, in examining the figures just published, to confine ourselves, in all comparisons, to figures obtained from the same source, so that all may be alike affected by the same objection, and the value of the comparison not invalidated.

According to these returns, the total value of property of every description in the United States in 1870, with certain exceptions to be referred to hereafter, was, in round numbers, $13,000,000,000, against $10,500,000,000 in 1860, showing an increase in value of $2,500,000,000, or less than twenty-five per cent. during the ten years. If we compare this increase with that of the previous decade, we find that, from 1850 to 1860, the increase was from $6,000,000,000 to $10,500,000,000, an increase of $4,500,000,000, or precisely seventy-five per cent. In other words, the increase in the previous decade was precisely three times as great as during the last. Prior to 1860 we were getting rich three times as fast as since 1860.

Prior to 1860 we had no debt of any consequence. We now owe, in round numbers, $2,500,000,000. If we deduct what we owe from what we possess, we find that our net possessions are about the same in 1870 as they were in 1860, in other words, that all the people in the country together have no more wealth in 1870 than they had in 1860. But as the number of people in the country has increased during that period from 30,000,000 to 40,000,000, there are now 40,000,000 of people who own no more property to-day than 30,000,000 of people owned ten years ago; in other words, the average wealth of each inhabitant of the United States is to-day twenty-five per cent. less than it was ten years ago.

However much we might be tempted to let these results stand as confirmation of all the arguments for years urged by the *Nation* in refutation of the absurd belief that we were rapidly growing rich on waste, and extravagance, and destruction, we are, nevertheless, obliged to point out that they are not necessarily conclusive as to the condition of the whole country. Although it is impossible for any part of it to be impoverished without all other parts being more or less affected in a similar manner, yet there is a nominal impoverishment which directly affects the owner without diminishing the real wealth of the country. In 1860, slaves were counted as property. Valuing five millions of slaves at an average price of $300, we could at once account for an apparent loss of 1,500 millions of dollars by the act of emancipation. Besides, the loss of the slaves rendered temporarily valueless, or at least much less valuable, great plantations and other tracts of land, which had heretofore constituted a great part of the wealth of some of the Southern States. And in addition, a large part of the loss and destruction of the war of rebellion fell most directly upon the seceding States themselves. If we, therefore, examine separately all the so-called Slave States, excluding Missouri, which was a slave State only in name, and excluding Alabama and Texas, the figures for which two latter are omitted throughout the returns, but including Virginia and West Virginia, we find that the wealth of the nine leading Southern States has actually decreased more than 1,800 millions of dollars during the decade. The South has lost in wealth; the North, East, and West have made not only the entire apparent gain, but have gained enough besides to make up the Southern loss. Separating the two sections, we say that the South has largely decreased in wealth, nearly fifty per cent., while the rest of the country has increased from 6,500 millions in 1860 to 10,800 millions in 1870, an increase of nearly 68 per cent. It will be observed that even this rate of increase falls materially behind that of the previous decade, even when leaving the debt out of consideration. Taking the debt into account, we arrive at the conclusion that the South has lost largely in wealth, while the rest of the country has increased about thirty per cent. during the decade, against an increase of seventy-five per cent. during the previous decade. This is the most favorable result to be deduced from the figures submitted by the Census Bureau.

There are some other results of interest to be derived from these statistics. The assessments separate real estate from all other kinds of property. Heretofore the increase in the wealth of the country has been far largest in the kind of property called personal, which includes railroads, bank and insurance stocks, merchandise, machinery, furniture, cattle, crops, agricultural implements, everything, in short, except the land and the buildings on it; everything that contributes most largely to the production of wealth, is the best evidence of wealth, and constitutes the truest measure of our civilization. In personal property, the increase during the last decade was ninety-five per cent. During the present decade there has been a positive decrease.

But if, remembering that the slaves were formerly counted as personal property, and that it is on this kind of property, too, that the destruction of war generally falls, we compare the position of the non-slaveholding States with that of ten years ago, we find that here personal property in these has increased about forty-seven per cent., against a corresponding increase of ninety-five per cent., or almost double, for the previous ten years. The increase in the amount and value of everything that contributes to the comfort, the well-being, the amenities, and the progress of life, has been just one-half as rapid as during the previous decade. But when we remember that real estate now contributes nothing whatever directly to the expenses of the General Government, or to the payment of interest and principal of the public debt, that, on the contrary, all United States taxes are borne by the consumers or employers of personal property, chiefly in proportion to the personal property so employed, and that the total assessed value of the entire personal property of the country is not equal to twice the amount of the national debt, it must be apparent that the increase in the personal property is not sufficient to affect the national debt.

The real estate valuation of the ten years preceding 1860 increased sixty-four per cent. at the time when the country was truly prosperous, and when personal property increased ninety-five per cent. During the ten years following 1860, when war has destroyed a large amount of wealth, and when personal property has increased only forty-seven per cent., we yet find that real estate has increased seventy-five per cent., or actually eleven per cent. more than during the previous decade. That there cannot be any true foundation for this advance in the value of real estate in a country where territory is unlimited, in a time when a large section of the country has been sunk for years in ruin, and when the true wealth of a country, its personal property, is increasing so slowly, if at all, must be evident to every one who attentively examines the subject. The value of real estate is measured almost exclusively by the prosperity of the community, all theories to the contrary notwithstanding, and for real estate to advance largely while general prosperity is nearly stationary is possible only as a result of gigantic speculation based upon widespread delusion.

The true condition of the country, as shown by the assessment statistics just published by the Census Bureau, is simply this: The progress in wealth of the entire country is not equal to the increase in the national debt, without counting the enormously increased debts of States, counties, and towns. The former slaveholding States have very materially declined in wealth. The rest of the country has advanced in wealth beyond the accumulation of the debt, about one-third as much as in the previous decade; but even this advance is chiefly due to the fictitious rise in the prices of real estate due to speculation.

THE PROSPECTIVE RATE OF INTEREST THROUGHOUT THE UNITED STATES FOR THE NEXT QUARTER OF A CENTURY.

NORWICH, April 20, 1871.

THE average rate of interest which during the next quarter of a century may be expected to prevail throughout the United States for money loaned on varying securities, is a question of no little importance to every business man, Government financier, or corporation—banks, railroad and insurance companies especially—contemplating money engagements in which the future enters as an essential element; inasmuch as the condition of all business, at all times and places, hinges upon the price or worth of capital, or its representative, money, as much as upon any other one contingency. Having recently given some thought to the question as above stated, and thinking that the facts and conclusions arrived at may be worthy of the attention of your readers and the public, I herewith submit the same for consideration.

Writers on politico-economic science are generally agreed that the principles which govern and determine the rate of interest—or, according to the common acceptation of the term, the price at which money can be hired—are, in the main, *three:* 1st, *the productiveness of labor in the community where it is employed;* 2d, *the supply and demand of capital;* 3d, *the safety or hazard of the capital when loaned;* and to these Mr. Amasa Walker, a recognized authority on these politico-economic subjects, adds a *fourth*, viz.: *The soundness of the currency.*

If these assumptions are correct, it is obvious that the answer to the question as to the future rate of interest in the United States must be sought in the application of the principles, as above stated, to the material and social condition of the country; and with this view, it is proposed to ask attention to such an application somewhat in detail:

1st. *Productiveness of Labor in the community where it is employed.* Capital, or its representative, money—which commands all other forms of capital—is essential to labor in the work of production. In fact, the productive power of labor could be carried but a very little way without capital; and, therefore, in every civilized community the two work together, or in partnership, and divide the profits from such conjoined effort between them. The standard according to which such division takes place is a varying one; but it is clear that the greater the profit accruing to labor, the greater will be the amount which it can afford to pay to capital for its use, and generally the greater the amount of capital which it will both desire and be able to use. Now, in the United States the productiveness of labor, or the result of the industry of the people, is greater than in any other country, and consequently capital here obtains its largest reward or rate of interest; while in other countries, like France, Germany, and Belgium, where the returns of labor are small, interest is always comparatively low. Thus, the agriculturist of Europe who borrows at five per cent. is well content if the products of his land and labor afford him a living, and sufficient beside to make good waste and pay the hire of his capital; but in the United States, on the contrary, the agriculturist who pays *ten* or, as sometimes the case, *twenty* per cent. for his capital, not unfrequently pays off all his indebtedness with the proceeds of a single crop, leaving the land and its improvements to represent the profit resulting from his labor and the use of capital borrowed at what may seem an excessive, but which in reality proves to be a comparatively cheap, rate of interest. The question of moment under this head, then, is, How long will the natural resources of the country continue to so abundantly supplement the industry of the people as to make it an object for them to offer large inducements for the loan and use of capital?

That many of these natural resources will ultimately become impaired or exhausted, cannot be doubted; but that any which now materially contribute to the wealth and prosperity of the country are likely to be so affected within the next quarter or half century, does not seem at all probable. Thus, of the land available for the profitable growth of cotton, not *three per cent.* has ever at any one time been put under actual cultivation; of coal, the most available source of motive power, the deposits of the United States greatly exceed the aggregate of those of all other countries, and, at the same time, are more convenient for working, and of greater average value in quality; our deposits of the metals can scarcely be said to have been as yet explored; our area of unoccupied fertile land, free to all actual settlers, is yet in excess of a thousand millions of acres; while the varieties of climate, soil, and crops are such as to ensure the United States from what in all other countries is ever a source of anxiety, viz., a deficiency of food. So long, moreover, as fertile land can be had for mere occupation, or can be purchased by the acre for less than a day's wages, pauper labor, although much talked of, can neither exist in the United States nor in any other country under similar conditions, except through the ignorance or inertness of the masses—two qualities not characteristic of Americans—and for the simple reason that the possession and cultivation of fertile land is always capable of giving to its owner a generous support; and when less than this is afforded by other employments, the tendency, through obvious self-interest, will be to abandon the latter and embrace the former.

It seems certain, then, that under the above and other conditions, the industry of the United States must, as a whole, continue for a long time to be more productive than that of the older civilized and more fully occupied countries of Europe; that wages cannot here fall below a comparatively high standard; and that labor can continue to afford to pay liberally for the use of capital. So far, therefore, as the resources of the country are concerned, the evidence is complete that there can be no limitation within the next quarter of a century upon the present demand for capital, or of the opportunity to use it under such conditions as will warrant the continued payment of at least the present average rates of interest.

2d. *Supply and Demand.* Let us next consider the application of the second principle to the material and social condition of the country.

With its immense natural resources and powers of production, the United States, from the first settlement of its territory by civilized man, has never been able to obtain from its own population a supply of capital adequate to its desires or necessities, but has drawn largely upon the accumulation of other and older countries—the amount thus drawn

within the last ten years alone from Europe having been at least twelve hundred millions of dollars ($1,200,000,000). But, notwithstanding this immense amount, superadded to whatever during the same period may have resulted from the excess of domestic production over domestic consumption, the supply of active capital in the United States has never been equal to the demand, and no loans have been effected since 1860 for any considerable amount on time, by any corporation or individual in the United States, for less than *six per cent.*; or by any State, or by the National Government, for a lower rate, unless accompanied by some advantage—such as exemption from taxation, payment of interest in gold, etc.—equivalent to from one to two per cent. additional; while, in fact, the majority of the loans made during the time indicated have averaged nearer seven and eight rather than six per cent. We have also shown that the opportunity to use capital advantageously in the United States is certain to be fully as great during the next twenty-five years, at least, as it has been at any time heretofore; and it is in the nature of a self-evident proposition, that when opportunity is presented for such uses, the desire to have with a view to use will not be wanting. The question, therefore, that next presents itself for consideration is, *From whence*, and *on what terms*, is our future desired supply of capital to be obtained?

Taking it for granted that the home supply, however much it may be increased through increased industry, frugality, and wise legislation, will not prove sufficient for our necessities in the immediate future, as it certainly has not in the past, the only other source to look to must be the accumulations of Europe. But the accumulations of Europe are not unlimited, and have been drawn upon to such an extent within the last ten years, that a permanent rise in the European rate of interest for time loans is universally conceded, if, indeed, it has not already taken place. As some indication of the demands recently made upon the loanable capital of Europe, it may be stated that the aggregate of the loans known to have been negotiated in Europe during the year 1870 was in excess of $1,100,000,000, of which considerably more than one-half was for reproductive and useful purposes, and the balance on account of war or military expenditures; while for the present year, the requirements of France for the payment of indemnity, and of France and Germany alike for the replacement of capital wasted or destroyed by war, will independently necessitate the raising of sums equal to the aggregate of the loans of all Europe for any former equal period. We have, therefore, in these facts a guarantee, as it were, that the supply of capital from Europe for new investments is not for the immediate future to be increased, or the rate of interest to be in any degree diminished; and if these inferences are correct, then the prevailing rate of interest in the United States for money loaned is certainly not likely to be any less for the next twenty-five years than it has been during the last quarter of a century.

But, apart from what may be termed inferences and speculations, we have a very sure test of what is to be the minimum rate of interest in the United States for the period named from observing the rate at which loans have been recently negotiated in Europe for a corresponding time on what may be considered the best of security. Previous to the Franco-German war, no nation, in Europe or elsewhere, could borrow in any foreign market at a less rate than five per cent. We use the term "foreign market," since the only nations in Europe (Great Britain, Belgium, and France) which within the last few years have borrowed at a lower rate, have borrowed within their own markets and of their own people. But, of these, Belgium has comparatively no debt; Great Britain is the monetary centre and reservoir of the whole world; while France, whatever she has been, is certain for a long period to come to be financially prostrate. Again, since 1861, the United States has not been able to sell any portion of its funded debt bearing six per cent. gold interest in European markets on terms as favorable as par in gold. In 1860, Prussia was able to dispose of a five per cent. loan at a premium. After the Austrian and Danish wars, which brought to her large accessions of territory, material resources, and population, she could no longer borrow at 5 per cent. at par, but sold her bonds at a discount of 4 per cent. To-day, the 5 per cent. scrip of the North German Confederation, after the most successful war (*i. e.*, with France) upon record, is quoted upon the London Stock Exchange [85 paid in] at 87 *a* 87¾. The "French National Defence" 6 per cent. loan commands in the same market but 86 *a* 87; and, before the war, it is known that the city of Paris paid indirectly for the money borrowed for municipal improvements as high a rate as 7 per cent. The European price of the Russian 5 per cent. loan of 1870 is 84½; of the Spanish 5 per cents., secured by a mortgage on the celebrated quicksilver mines of New Almaden, in addition to the faith of the Government, 76 *a* 77; of Portuguese 3 per cents. of 1869, 32 *a* 33; of Italian 6 per cents. secured by a pledge of the state revenues from tobacco, 87¾; Japanese 9 per cents., 89; Chilian 6s of 1867, 98; Massachusetts sterling 5s, interest and principal payable in London, 93 *a* 95; Louisiana 6s, 61 *a* 63. It will thus be seen that the average rates of interest in European markets on the best Government loans extending over a period of from twenty to thirty years, approximate six per cent. On the other hand, the rate for loans of the best character recently negotiated by corporations or private associations, in the same market, ranges somewhat higher. Thus, Russian railway 5 per cent. mortgage bonds, for which the faith of the Government and the earnings of the roads are pledged, and which are a favorite investment throughout the whole of Central Europe, sell for about 85 *a* 86; Egyptian 7 per cent. railway mortgages, 99 *a* 100; Panama 7 per cent. general mortgage, due in 1897, 93; Illinois and Missouri 1st mortgage Bridge bonds (sterling), 87; Michigan Central 1st mortgage sinking fund 8 per cents, 85; and Pennsylvania Railroad 6 per cent. general mortgage (sterling, due 1910), 91. Furthermore, the London *Economist*, the best European authority on this subject, estimates that the average rate of interest on a majority of the foreign and colonial stocks now owned in Great Britain, is equal to from *six* to *seven* per cent. as a minimum, and places the amount of them at a not less figure than two thousand eight hundred and fifty millions of dollars.

So much, then, for the *present* rate of interest in Europe; while, for the *future*, the indications are certainly not of a character to warrant the expectation of any lower rate, but rather lead to a contrary and opposite conclusion. Thus, the tendency and spirit of the age are more and more towards the undertaking of industrial enterprises of such magnitude and character as require the capital of the world for their support and execution; such for example as the Pacific Railroad, Suez Canal, Mont Cenis Tunnel, and the numberless projected railways in Eastern Europe, Western America, and even India and Western Asia; and contemporaneously with these unprecedented demands for the loan of capital, the extension and use of railroads, steamships, and the telegraph have broken down the barriers of nationalities, and, by bringing people geographically remote into close commercial correspondence and connection, have made, as it were, the whole world one, and caused capital, freed from restraint to tend to a common rate of interest, as water freed from confinement always tends to a common level. And, in addition to all this demand—the result of legitimate industry and progress—the requirement for money by the nations of Europe for military purposes promises to be as large if not larger in the immediate future as it has been in the recent past. The condition of Germany, flushed with victory and conscious of almost irresistible strength, and of France, sullen and panting for revenge, is a perpetual menace against peace, and, as already shown by the action of Great Britain, invites to larger military preparations and consequent greater expenditures.

So far, then, as the financial condition of Europe operates in determining the rate of interest on money loaned to or in the United States, there is not the first particle of evidence tending to show that any lower rates than those now prevailing can for the immediate future be reasonably anticipated.

Coming next to our own country, we find that the new national 5 per cent. loan has thus far been taken mainly by the banks, acting obviously under the motive of thereby averting future legislation hostile to themselves, and has not proved in any degree attractive to the general public, although the exemption of the loan from all local taxation is nominally or really equivalent to an additional one, two, or three per cent. interest; all of which unmistakably indicates that in the opinion of our own capitalists money is not to be commanded in the immediate future on time, and on the very best of security, for any less rate of interest than six or seven per cent., with higher rates for borrowers offering less favorable conditions in respect to security.

There is also another circumstance which has not heretofore been discussed publicly and specifically, which has for years past tended to raise the rate of interest in the leading financial centres of the United States, and which for years to come will continue to operate in the same manner; and that is, the insufficiency of original capital on which industrial enterprises are organized and started in this country. This is particularly the case with corporations engaged in manufacturing, many of which have often their whole paid-up capital, and not unfrequently something additional, invested in permanent fixtures, land, buildings, or machinery, leaving nothing for contingencies in business and as a basis for active operations. The consequence is, that

when times are dull and sales slack, or when a decline in the prices of goods or of raw material renders it expedient that stocks should be carried or purchased, these companies are forced into the market for money at almost any price, and, through the advantage thereby taken of their necessities by brokers and money-lenders, the rate of interest generally is forced up spasmodically, kept higher than it otherwise would be, and everywhere rendered unstable. And for all this there will be no efficient remedy until legislation ceases to encourage industrial growth on any other than a sure and natural foundation.

3d. *Safety and risk of capital when loaned.* No matter how great may be the resources of a country, or how thrifty and prosperous its people, any disregard of law, or of the obligations of contracts, or any taint upon the administration of justice, whether committed with the sanction of the whole or any portion of the community, is certain to be paid for by such people or country in an increased rate of interest upon the capital which they may desire to borrow. And, however disagreeable it may be, it is nevertheless true that the reputation of the United States, either in the past or present, has not been and is not now in all respects what it should be. How repudiation in the past has affected the supply of capital to the United States from abroad is too well known to require restatement, but it should be clearly understood that the present repudiation by the States of Iowa and Minnesota of certain liabilities; the irregularities in the payment of the interest by certain Southern States on their bonds, or the bonds of railways possessing State guarantees—all continue even yet to affect the credit of the whole country, and consequently to enhance the average rate of interest. And this is an influence also the removal of which is not to be effected right speedily.

4th. Mr. Amasa Walker's assertion that the uniformity and general average of the rate of interest in any country depends further upon the soundness of the currency made use of in such country in effecting exchanges, finds indubitable support in the following facts: 1st. That the fluctuations in the rates of interest in the United States since 1832 have been more frequent and excessive than in any European countries in respect to which data are accessible, the average rate of interest in the cities of Boston, New York, Philadelphia, Cincinnati, St. Louis, and Chicago, as computed from the record of public transactions, from 1844 to 1858, having been approximately 10·5 per cent. 2d. That in none of the leading commercial states of Europe has the mixed currency used during the same period been so deficient in value as that of the United States. 3d. That the price of no other commodity in the United States during the same time offered for sale or to hire has in time of peace exhibited any such variations as the price of money. The reason of this last, according to Mr. Walker, is, that commodities are not wanted to pay notes; but in order to respond to pecuniary engagements, money is and must be had, cost what it may. "Under a currency, therefore," continues Mr. Walker, "in which credit is the principal element, the fluctuations in interest are in proportion to the extent of that element; because a mixed currency, whenever there is any panic or distress for money, withdraws from circulation proportioned to its weakness or want of value. Hence the frightful revulsions of the past, and we may doubtless expect that these will increase in force and frequency in the future, since the mixed currency system, once almost exclusively confined to England, France, and the United States, is being extended throughout the commercial world. The risks of credit will, therefore, be greater, and the average rate of interest will, so far as risk is concerned, be advanced."

I have thus briefly presented the evidence which seems to me available for the formation of an opinion respecting the average rate of interest that may be expected to prevail throughout the United States, under various conditions of security, for the next quarter of a century. My own conclusion, from a somewhat careful investigation of the subject, is, that although capital in the United States during that period may be expected to increase greatly, the opportunity and desire alike for the investment and use of such capital will be more than correspondingly augmented through the increase of population and the development of the natural resources of the country; and that in other respects, circumstances do not favor any immediate reduction of the rates of interest. The civilization of the United States, furthermore, in contradistinction to that which prevails in other parts of the world, is a civilization of rapid growth and forced development. That which in other and older countries has required centuries to accomplish—such as the improvement and ornamentation of towns, the construction of roads, harbors, elaborate public buildings and parks; the providing of water supplies and systems of drainage, the incurring and the paying of great debts—we expect to make the work of years. And while such a condition of things prevails, the demand for capital will always tend to be in excess of supply; and industries made highly productive by force of circumstance can afford and will pay for its use most liberally. I am well aware that in a country where the "societary circulation," to use a modern expression, is active, money as an instrument for effecting exchanges, or capital as an instrument of production, produces its results more rapidly than in countries where the social movement is more sluggish; and that this increase in rapidity of use is equivalent to an increase of supply. But taking all this into consideration, I think one would hazard little in predicting that during the next twenty-five years, without such a condition of general disturbance and revolution in Europe as would endanger the safety of investments in that country, the average rate of interest for the United States as *a whole* will not be less than *seven per cent.* If the National or State Governments are able to borrow for less in their own markets, it will be because of the offer of compensating advantages for the reduction, either in the way of security, exemption from taxation, or facility of conversion.

DAVID A. WELLS.

Notes.

MESSRS. J. R. OSGOOD & Co. have added to their regular business a subscription department, under the special charge of H. A. Brown & Co. Parton's "Life and Times of Benjamin Franklin," and Coffin's "New Way Round the World," are to be sold through this channel, while a vaguely-described theological work is in preparation. With the 1st of July Mr. Fields retires altogether from the *Atlantic Monthly*, leaving Mr. W. D. Howells at the head in name as well as in fact.——Messrs. Claxton, Remsen & Haffelfinger have in press a number of tales—"The King's Godchild," translated with other stories from the German; "American Wonderland," by Richard Mead Bache; "Aureola, or the Black Sheep," by Mrs. Adelheid Mackenzie; "Callirhoë," from the French of Maurice Sand; "In a Crucible," by Mrs. E. L. Pugh; and one or two more. Also, A. G. de Cassagnac's "History of the Working and Burgher Classes," published in Paris in 1839, but not without a present interest; "The Transformations of Insects," by Prof. P. Martin Duncan, of King's College, London, profusely illustrated; and "The Engineer's Pocket-Book," by John C. Trautwine, C.E., designed as a useful compendium of necessary information.——A printer's error made us give Pilpay's "Tables" among Messrs. Hurd & Houghton's announcements last week. It should have read "Fables"; and we may add here that the illustrations are from the woodcuts of the famous engraver Alexander Anderson.——"A Life's Assize," by Mrs. Riddell; Dr. William Smith's "Scriptural History;" and Vol. II. of Brodhead's "History of the State of New York," are among the latest announcements of Messrs. Harper & Bros.

—The favorite standard topic of the American press is treated in a friendly spirit by a writer in the *British Quarterly Review* for January, using Maverick's Life of the late Henry J. Raymond for his text. It is such an article as would naturally be written in dependence principally on the information contained in any book, and not from personal experience of this country—erring sometimes as to facts, confounding former periods with the present, and a little mixed in its "perspective." *Harper's Magazine* is described as "an illustrated monthly for the fashionable world"—which, even if such a world exists in the United States, is very wide of the truth in regard to the most popular of our magazines. Bonner's *Ledger* is judged by the contributions of Parton, Beecher, Everett, Saxe, and Bryant, and not by the oceans of trash in which these literary peaks are submerged. The *National Era* and *National Intelligencer* are spoken of as still published in Washington. The former, like the latter, it is said, "has a high position as a literary and political journal." "The literary superiority of the religious press over the secular in America" is gravely accounted for as if a notorious fact. The *North American Review* "is certainly below the intellectual level of the four or five English reviews which are reprinted in New York every quarter, within a fortnight of their publication in England;" though it is "written with great spirit, learning, and ability," and "abounds in profound and original discussions on the most interesting subjects." Its style "is not free from the common sin of affectation." As for the *Atlantic*, it "holds a deservedly high place in American letters, . . . but its influence has always been thrown into the scale against Evangelical Christianity." In accounting

for our failure to produce a respectable comic paper, the *Review* utters a thought which we lately offered in explanation: "The Americans, however, have never had a Tenniel, a Doyle, a Leech, a Du Maurier, or a Keene, to throw off, week after week, the most amusing and instructive of pictorial satires." And strange as it may seem, we believe there is much truth in the remark which follows:

"After all, there is hardly anything the Americans need more than a good comic paper, to moderate the intensity of their politics, to laugh down the extravagant follies of American society, to measure the strength of public men, to register their blunders, and expose their hollowness, to watch over the caprices of fashion, to criticise the press itself, with its coarseness and scurrility, its disgraceful advertisements, and its downright fabrications; taking good care to keep free from those sins which so easily beset satirists—rancor, obscenity, and attacks on private character."

We are glad to say here that the political designs of the St. Louis journal, called *Puck*, whose first issue we lately praised, continue to be by far the best that this generation has seen, or, perhaps, is destined to see from an American draughtsman; and that the German element is likely to add not a little to the national capacity for pictorial humor.

—A much-needed course of instruction in philology has been developed at Yale in the Department of Philosophy and the Fine Arts, that promises to assume the consistency and method of a school, and, as such, may be attended by persons not connected with the college. It will embrace two years of study, for which the yearly fee will be one hundred dollars, and "the successful and duly attested completion of which will entitle the student to the degree of Doctor of Philosophy." Professor Whitney is to teach the general principles of linguistic science, the comparative philology of the Indo-European languages, and the Sanskrit language. Professor Hadley will explain the structure of the Greek language, and, in conjunction with Professor Packard, "will instruct in the more difficult Greek authors," as Professor Thacher will in Latin works not usually read in college; and he will also teach the Gothic (of Ulfilas), Mr. Lounsbury being the instructor in Anglo-Saxon. The modern Romanic languages will be in charge of Professor Coe; the Hebrew and other Semitic languages, in charge of Professor Day; the Chinese and Japanese languages will be taught by Mr. Van Name. Further particulars of this school, which will open at New Haven September 14, may be had of Professor Whitney. There should be no lack of scholars, and we apprehend there will be none. There are few Western colleges that would not gain by giving one or more of their instructors in language a two years' leave of absence, in order to place themselves under the eminent professors just mentioned.

—A noteworthy dedication of a Boston school-house took place last week. The building in question cost upwards of $300,000, and is doubtless the finest of its kind in the country. It is occupied by the Girls' High and Normal School, which originally was designed merely to train women to become teachers, but which has for many years ceased to make an intention to teach a condition of receiving instruction. The course now provides not only for the making of teachers, but for a general education little less than collegiate, with a tendency to anticipate the Simmons Institute in furnishing the necessary preparation for industrial or mercantile pursuits. By far the greater number of graduates do teach school for a shorter or longer period; 233 of them have become instructors in the primary schools of the city, and 310 in the grammar; while 16 have remained in the school itself as teachers. These facts alone would prove the worldly wisdom of the Bostonians in giving the school such ample and costly accommodations, the architectural completeness of which has been supplemented by the gift of certain antique casts from the American Social Science Association and from private citizens. We some time ago spoke of this proposed experiment, and can now refer those who would be interested in the details to the little pamphlet just issued by the Association, and containing a list and brief description of the casts selected for the hall of the Girls' High and Normal School, of other casts equally suitable for a like purpose, and particulars as to the mode and cost of procuring them. Once known, this Boston example can hardly fail to be copied widely.

—A correspondent of the Cincinnati *Commercial*, who witnessed the recent German procession in this city, makes some observations on the physique of the participants, which will not be disputed, we think, by other spectators. He says that the number of "stalwart, big-boned, heavy-limbed, muscular men, handsome, free-faced, and very vital," was about one in nine or ten, which he calls "a fair proportion," and thinks it possibly larger "than could be found in a similar display of an equal number of any European people." Comparing equal numbers in the German and St. Patrick processions, the former seemed to him heavier and stouter men, and "to march more lightly and freely than the latter"—on which we may remark that slippery streets and black broadcloth *de rigueur* must have affected the step of the Irish unfavorably, on the particular occasion referred to. "But as a whole," says the correspondent, "the appearance of the German procession, in its feature of stalwart, vigorous, and aggressive manhood, was not particularly impressive." There was, certainly, in looking at the ranks of leather helmets, a feeling of disappointment, as if they hardly equalled one's exalted conception of the first soldiers in Europe, whom they were supposed to counterfeit; and one who had seen a Maine regiment on its way South imagined how it would have towered without a helmet beside any troop that celebrated the German peace. The writer in the *Commercial* saw what may still be called the greatest review of the century, when the hundred thousand, chiefly Western soldiers, forming Sherman's army, passed in procession in Washington, after their long march through the Southern States. "They were of greater average height and breadth of chest" than the followers of St. Patrick or of King Gambrinus in the recent turn-out. "They were incomparably the best-shaped mass of men I ever saw—muscular, but not fatty, large-boned, but not clumsy, with features determinate and strong. They were light-footed and easy-moving. They seemed pre-eminently natural and American—if these words may be here used as expressive of ideas which, to my mind at least, are distinct enough." Distinct enough, also, we will add, to those who remember the qualities of that remarkable army, and the elasticity of the discipline which made them for fighting, for road-building, for marching, for throwing up earth-works, the readiest and most supple organization the world has ever seen, and in which, perhaps, the soldier counted for relatively more, and the officer for relatively less, than in any other army of equal efficiency.

—Some of us who folded and put away our maps of France, after the withdrawal of the Germans from Paris, have been convicted of too great haste by the civil war which has raged ever since. And we overlooked, too, the extent and probable duration of the German occupation, which, at this moment, employs half a million of men in fifteen departments. A map designed to illustrate the peace boundaries of the war—if we may use the expression—has been published by Brockhaus: "Frankreich und die Grenzgebiete" (New York: L. W. Schmidt). It shows, by means of appropriate coloring and shading, the territory held by the Germans during the armistice, quite a third of France; that portion of it on the left bank of the Seine, evacuated after the ratification of peace by the Bordeaux Assembly; and the three districts to be evacuated successively, upon payment of the first half-milliard, the second milliard, and the remainder of the indemnity. The annexed territory is also distinctly marked, so that, except in minor particulars, the map serves for the whole history of the war. Editors will find it useful for future reference, and its cheapness brings it within the reach of every one.

—The meagre reports from Paris represent the theatres and stalls as open, Punch and Judy shows going on, carriages and omnibuses running up to the Arch, and crowds in holiday attire moving to and fro. "Groups are gathered round and curiously examining the lamp-posts which were struck." The mixture of horrors and frivolity is quite suggestive of the First Revolution. Perhaps the best description that could be given of the scenes inside Paris, is Tacitus's account of the aspect of Rome just before the death of Vitellius (Hist. iii. 83): "Aderat pugnantibus spectator populus, utque in ludicro certamine, hos, rursus illos clamore et plausu fovebat . . . . . Saeva ac deformis urbe tota facies. Alibi proelia et volnera, alibi balineae popinaeque; simul cruor et strues corporum, iuxta scorta et scortis similes; quantum in luxurioso otio libi dinum, quidquid in acerbissima captivitate scelerum, prorsus ut eandem civitatem et furere crederes et lascivire. Conflixerant ante armati exercitus in urbe, bis Lucio Sulla, semel Cinna victoribus; nec tunc minus crudelitatis; nunc inhumana securitas et ne minimo quidem temporis voluptates intermissae." To translate this literally would be difficult. The sense is about as follows: "The people flocked to witness the fighting, and, as if at the amphitheatre, applauded now this faction, now that. . . . The whole aspect of the city was foul and unnatural. While bloody fighting was going on in one quarter, in another the baths and restaurants were in full operation; almost at the very scene of slaughter, prostitutes and their like plied their trade; and the same city, you would have said, exhibited the sum of debauchery and of villany natural to a state either of luxurious idleness or of the bitterest subjection. Armed forces had fought before within the city, Sulla proving victorious, and

Cinna once, nor in those days was there less cruelty; but now there was a brutal indifference, and no intermi-sion of pleasure even for an instant."

—An interesting announcement which we find in the *Academy* is that Mr. W. R. S. Ralston is preparing a work designed to acquaint Western readers with the popular songs, epic poems, and prose stories of the Russians. The first part will give an account of the chief festivals of pagan origin still kept up in Russia, and of the relics of old songs consecrated to them; and will also include a sketch of the fairy mythology, and marriage and funeral songs, charms, and incantations of the people. Next, if not first, in point of attraction for the general reader is to be the third part, in which Mr. Ralston will translate a certain number of the most original tales, and append an analysis of others, "so as to show in what points the Slavonic renderings of the old stories with which we are all so familiar resemble or differ from those which are peculiar to the various other branches of the Aryan race."

—One of the unsettled vexed questions between the manufacturers of books and the readers of them is whether the leaves should be cut or not, before any work is offered for sale. The arguments on both sides are too well known to need rehearsing. We have lately met with a new one, however, which is worth reporting, although it may not have the same weight in this country as in England. The experience of the Messrs. Clark of Edinburgh, and the unpleasant exposure they felt called upon to make of a certain journal or periodical which immediately sold to the second-hand dealers the works received from them for review, may be still remembered. It appears that the practice from which they suffered both annoyance and injury is a quite general one. The London *Bookseller*, of April 3, says that stamping the title-page or writing in the book does little if anything to check it, while reviewers of the better class object to having a book which they wish to keep, thus disfigured. It suggests that "the end the publishers have in view would be gained by their having the leaves cut open with a reading-knife; this would prevent the book from being sold as new, and would also be attended with the advantage of enabling the reviewer to go through the volume"—more at his ease, one might suppose. No, simply "to go through the volume. At present, with some of the journals in question, *strict orders are given not to cut open the leaves;* consequently the glance given by the reviewer is very limited." It might be difficult to say which party to the controversy first mentioned is sustained by the *Bookseller*.

JOWETT'S TRANSLATION OF PLATO.*

(FIRST NOTICE.)

When we expressed a wish† that some attempt might be made to popularize Plato for the benefit of American readers, we did not anticipate that an important step towards its fulfilment was so near. This book is, as Plato himself might have said, a veritable *ἐρμαίον*, and we fondly trust that no important public library will long be without it. We wish we could add the time-honored expression about "no gentleman's library," but we much fear that some of our gentlemen will prefer a basket of champagne (the cost of the two commodities being about the same) to such a "possession for ever" as Professor Jowett's Plato.

The work is remarkable on two accounts. It is the only complete English version of Plato executed by a single translator. Of the two previous, one was commenced by Sydenham and finished by Taylor, while the other (in Bohn's "Classical Series") is the production of three different hands. This fact, which by itself would only prove the industry and perseverance of the writer, is complemented by his thirty years' experience and reputation, of which experience and reputation we cannot hesitate to pronounce the book worthy.

Of course, no English scholar at the present day would put forth a translation on this scale without accompanying it by *some* comment. Professor Jowett's preface is brief, containing little more than an enumeration of his principal authorities, and a few terse references to Grote. He gives no general introduction, but a special introduction to each particular dialogue, combined with an analysis or abridgment. This certainly increases the labor of reading the book understandingly, but a translation of all Plato must always be somewhat hard to read, a book requiring time and thought. When we spoke of *popularizing* him, we did not mean that he was to be or could be brought down to the illustrated-weekly level. The most that we can hope is to introduce him to the *dilettante* class of readers—a class not small and not diminishing in number. There is a great deal of matter and of stimulus to thought in these introductions, and their style is generally very clear, considering the difficult subjects of which they frequently treat and the narratives which they have to abridge. In this respect, Professor Jowett has a great advantage over Mr. Grote, who, though an excellent arguer, is a very clumsy narrator, and far from elegant in his abridged translations. Where so much is excellent, it is hard to select any particular passage for special commendation, but we have taken a great fancy to the discussion of the origin of language in the introduction to the "Cratylus." Here we think the Professor has taken the just middle view among the conflicting theories, namely, that onomatopœia accounts for the rudiments, but only the rudiments, of language; at an early stage of its development and of civilization a higher element comes in.

There are, however, some points on which we are obliged to differ from Professor Jowett. These we shall endeavor to explain, trusting that we may be able to steer clear of both Scylla and Charybdis, of impertinent dogmatism on the one hand and servile assent on the other.

1. He is even more solicitous than most modern commentators to break up the old groups in which the Platonic dialogues were formerly arranged. Even the writers and lecturers of the day generally adopt in practice some system (entire or partial) of grouping. Most Platonists, we suspect, would connect the "Protagoras" and "Gorgias" together, at least for some purposes. Such a connection the Regius Professor almost entirely ignores. The interdependence of the "Theatetus," "Sophista," and "Politicus" (the first three in the series of a projected but never-finished group of four) is so palpable that it cannot be denied. Yet Professor Jowett seems to admit it somewhat grudgingly, and to lay unnecessary stress on his hypothesis that the "Theatetus" was written piecemeal at intervals, and the other two added long after. This, if strictly true, would not interfere with the connection, as we know that even a series of connected fiction, like Cooper's "Hawkeye" novels, may be spread over a period of nearly twenty years. In some instances, he emphasizes the relation of two dialogues more strongly than all Platonists would, *e. g.*, in the case of the "Phædrus" and "Symposium." But, generally, he appears more eager to separate than to join. It is possible that we have misunderstood him, and only found a mare's-nest, but we are bound to give our impression; and we readily admit that the question is of no great practical importance. When we have once admitted that there is no one complete and consistent philosophical system to be extracted from Plato (and since Grote's thorough exposition we suppose every one—at least every Anglo-Saxon—admits this), the connection of two or three dialogues here and there is a matter of small consequence. It will not even help us to discover their dates. All we can do is to note the gradual change (not attempting to draw a sharp line anywhere between two dialogues) from the Socratic, sceptical, and liberal to the Oriental (?), positive, and inquisitorial. But Professor Jowett goes further. He shows a constant tendency to resolve, if we may so express it, the individual dialogue itself. He is continually warning us "not to expect to find one idea pervading a whole work." Now, Plato's *forte* was his dramatic power; and if we allow that he frequently violated the dramatic unity of subject, we deal a blow at his literary reputation. We prefer to explain the *apparent* double subject of several dialogues in this way: The first theme is merely a prelude or prologue, designed to attract the reader's attention, and to introduce the second or real theme, perhaps with somewhat of that element of surprise so common in Plato.

2. He has very justly and acutely separated from the "Sophists" some persons popularly classed among them, such as Callicles, the ambitious and unscrupulous man of the world, neither Sophist nor philosopher, but more opposed to Socrates than any Sophist. He is also careful (Introduction to "Theatetus," vol. iii., p. 327) to inform us "that the Sophists are sometimes in the right and Socrates sometimes in the wrong," notwithstanding which, he has not quite rid himself of the old German phantom of a Sophistic fiend, as Grote not unhappily dubbed that particular evolution of the Teutonic moral consciousness. On this head we join issue with him. Our reasons for doing so are derived partly from recollection of Grote's work (which we have not read for several years), partly from independent sources of information, some of them supplied by the Regius Professor himself.

First, a Sophist was merely a teacher of and lecturer on moral philosophy—giving the term a pretty wide range, as in the *moral papers* of a university examination. Some of these persons were doubtless impostors

* "The Dialogues of Plato. Translated into English. With Analysis and Introductions. By B Jowett, M.A., Master of Balliol College, Regius Professor of Greek in the University of Oxford." In four volumes. London, Oxford, and New York: Macmillan & Co. 1871.

† *Nation*, February 2. Article on "Plutarch's Morals."

and bad men, but to make them all into a class about which we are to predicate everything bad, as we might about a Tammany ring, is no more just than it would be to throw a similar drag-net over all the lecturers or all the clergymen in the United States, or to comprehend all our lawyers in the category of "shysters."

Secondly, the question which ("Introduction to Sophist," vol. iii., p. 450) Professor Jowett so boldly answers in the negative, we as boldly answer with Mr. Grote in the affirmative. Socrates and Plato *were* Sophists to the Athenians, not to the mass alone—the *demos*—but to men who stood high among the *charientes*—the "upper ten." That very intelligent and well-educated gentleman, Aristophanes, took Socrates as the representative Sophist. And yet there does not appear to have been any personal or political enmity between the two men. On the contrary, Plato himself represents them jollifying together at Agathon's house. Aristophanes did, indeed, attribute to Socrates doctrines which he never professed, such as that of Prodicus about the better and worse reason. But this does not show ignorance or malice on the part of the dramatist. It naturally arises from the representative character with which he had invested Socrates.

Thirdly, Mr. Cope and others have maintained that the Sophists were bad men from a Conservative Athenian point of view (*Conservative* here meaning *Democratic*, as in some other times and places), because they were iconoclasts and disorganizers. We suspect the answer to this may be found anticipated in Grote; at any rate, it is easy enough. To the average Athenian, there were no greater iconoclasts and perturbators than the philosophers, Socrates, of course, included. The facts of the case, the condemnation of the master and dispersion of his disciples, show this conclusively.

Fourthly, the Sophists, it is said, took pay for their instruction, which was disgraceful, according to the Greek idea. The philosophers proper, though they sometimes received presents from their pupils and admirers (Plato himself accepted gifts), never made a fixed charge. The difference may have been something like that between the regular faculty and the advertising empiric. We can understand its creating a prejudice against the foreign lecturers; but, according to our modern ideas, they were "worthy of their hire"—*unless* they were bad men and corruptors of youth, which it is hardly fair to infer from their having been in advance of their age on a point of economical ethics.

Fifthly, most of the persons called Sophists were foreigners—that is, not Athenians. When we remember the "Know-nothing" character of the very best ancient communities, we see here another natural ground of popular prejudice. Yet we must not, after all, assign too much weight to this fact. There are several circumstances to set off against it. These "foreigners" were, at any rate, Greeks, and the Greeks, though never lucky enough to attain a real national union, had many national common qualities. Then the Athenians, though falling far short of our *theory* of liberality to strangers, were far superior, both in that quality and in good-breeding, to some other Greeks. The wealthier class certainly lionized and patronized the distinguished strangers, and there are plausible reasons for supposing that motives of delicacy and politeness caused Socrates, rather than one of those strangers, to be introduced in the "Clouds" as the representative Sophist. Aristophanes was in advance of Mr. Bancroft.

Sixthly, Professor Jowett himself bears witness that, in some things which *we* place among the very first elements of morality, the leading Sophists were more virtuous than the leading philosophers. There was nothing in their *practice* that entitled them to be called "corrupters of youth."

Finally, we think he virtually throws up the whole argument when he admits (vol. iii., p. 448) that the Sophist whom Plato is always attacking was no particular Sophist or Sophists, but "an imaginary being"—a "creation of Plato's in which the falsehood of all mankind is reflected."

3. It is about Professor Jowett's remarks on the "Republic" that the reader will probably be most curious to hear. These remarks are not exactly in character with the traditional reputation of an Oxford professor, nor yet are they altogether what we might expect from a leader of that rationalistic demonstration predicted, more than twenty-five years ago, as the inevitable reaction from the Puseyite movement. They are exculpatory, for the most part. Plato abolished private property with as little ceremony as Proudhon; but "are we quite sure that the received notions of property are the best?" He abolished marriage and legalized infanticide, from which recommendations "we start back horrified;" yet, "on the other hand, we cannot deny" that no form of religion or society has yet been able to solve "this greatest and most difficult of social problems." Here our criticism charges him with omissions rather than with positive errors.

First, the scheme of Plato's "Republic" is as much condemned by ancient and pagan as by modern and Christian ethics. This is conclusively shown by Aristotle's acute and complete dissection of it. The commentator who contrasts Plato only with the moderns virtually ignores and conceals this important truth.

Secondly, Plato has anticipated the equality of the sexes. True, but in so doing he lays great stress on the only difference which he allows to exist between them—the physical. He begins by expressing this difference in terms which a Le Motteux or a Walt Whitman would not venture to translate literally—indeed, would not be able to translate literally for want of dictionary words—and much of his legislation is based on this difference, and devoted to the regulation and modification of its natural results. Ought not a commentator to emphasize these facts in some way, when it is remembered that our modern equalizers are, most of them, always trying to elude the consequences of these results?

Thirdly, Professor Jowett allows something for the obstacles interposed by individual attachments and youthful passion, yet admits, negatively, so to speak, and by absence of further investigation, that if these motives *could* be restrained by moral or social considerations, the problem would be solved, in a sense entirely favorable to Plato. In this error he is not solitary, and, looking at the frequency of it, we have often thought that no man was qualified to give an authoritative opinion on the principles of matrimonial legislation (and *à fortiori* to legislate) without some knowledge and experience of stock-raising and turf history. The difficulty of making crosses "nick," the fact that an inferior cross will often nick and a superior fail, the number of technically unsound animals, the apparent paradox, but oft-proved truth, that some unsound animals are better than some sound ones for several purposes, and those not the least valuable—all these phenomena show that if we could make men as subservient to legislation in this respect as the lower animals are to the will of their masters, we should still be a long way off from the promised perfection of propagation.

Fourthly, We think the Professor wrong (though his error is almost universal) in applying the term *community* of goods and women to Plato's "Republic." The proper phrase is *abolition of private property and marriage*. *Community* implies a general license altogether foreign to Plato's scheme.

Fifthly, We differ *toto cœlo* from him when he says that the limitation of this (commonly so-called) community to the guardian class is "not of any real significance." We think it has much significance, that it is in accordance with the usual course of Greek political thought, and with the ideas and opinions advanced in some other writings of Plato, and that it suggests several curious and important speculations.

And lastly, in the interest of Plato himself we object to defending him where he is indefensible. To our mind, a serious vindication of the "Republic" is about as reasonable, and nearly as wrong, as a serious vindication of the classical *παιδεραστία*. In this we may be mistaken; but in one thing we certainly are not mistaken: such misplaced support is sure to provoke reaction. It is like praising Cromwell's wart or John Wilkes's squint. It is certain to raise up men like Potter, who fall upon Plato tooth and nail, decrying him as a mystic and a sensualist, full of all Oriental abominations, deriving what good he originally had from Socrates, and altogether bad when he set up for himself.

While thus speaking our mind freely on some passages of Professor Jowett's great work, we again express our hearty admiration of its general character. Further, we admit the possibility of our having sometimes misunderstood him. His method of treatment, at once broad and terse, is exposed to the danger as old as Horace, *dum brevis esse laboro*, etc., the obscurity in this case arising, not from the style (which, as we have already remarked, is singularly clear), but from the very pregnancy of the writing, which leaves much to be filled up by the reader, the trouble being that different readers, of equal care and honesty, will sometimes differ about the filling up.

Of the manner in which the translation itself is executed, we have as yet said nothing. One great difficulty in translating Plato and Aristotle we remarked upon in a former article;* and we may be pardoned for quoting, in illustration and confirmation of what we then said, the very first words of Professor Jowett's very first introduction:

"The subject of the 'Charmides' is Temperance, or *σωφροσύνη*, a peculiarly Greek notion, which may also be rendered Moderation, Modesty, Dis-

* On "Plutarch's Morals."

cretion, Wisdom, without completely exhausting by all these terms the various associations of the word. . . . In the accompanying translation it has been rendered in different places either Temperance or Wisdom, as the connection seemed to require."

Such difficulties are insurmountable. Making due allowance for them, and for the puns, derivations, etc., which are untranslatable, the version is, in general, all that could be desired. Professor Jowett has followed, with a few exceptions, Stallbaum's text; he appears also to have followed Stallbaum's interpretations, and occasionally gives a meaning to a disputed word or phrase different from that assigned by other English scholars. But these are chiefly differences of taste, about which dogmatism would be unseemly.

JOHN ADAMS.*

It is nearly twenty years since the "Life and Works of John Adams," written and edited by his grandson, were published in ten substantial octavo volumes. They furnished a fitting memorial of one of the most prominent men, and, as we think, on the whole, the most able and serviceable one of our heroic age. We say this in view of the continuousness and the variety of his patriotic labors, which, by a combination of scholarly, intelligent, and personal qualities with true statesmanship, high moral purity, and extended intercourse with many European courts, gave him opportunities of influence and of action exceeding those shared by any of his compeers. The demands on the ability and fidelity of great and good men, in field and council, in our Revolutionary era, exacting as they were, could be met only by a draft on the diversified partitions of gifts and special faculties, for which, according to the law of human endowment, we must look in many directions. Washington, John Adams, Franklin, Jefferson, Hamilton, is, we apprehend, the order on the scale by which our age, after fair and deliberate review, disposes its great men. "The Life of John Adams," when accessible only as one of a series of costly volumes, was out of the reach and even of the knowledge of thousands of readers, by whom, through the agency of town libraries, book clubs, stores, and wayside stalls, it will now be sure of perusal. We should be glad to believe that it will be one of the manuals for the ambitious youth all over our country who have in view politics, or even only law, as the profession of their lives. For, in the compact and attractive form in which the biography now appears apart from the works, it will be likely to have, as it deserves, a wide circulation.

In the interval, during the appearance of the Life in these two forms, there have been published several works of national interest—the biographies of the leading men of the Revolutionary era—the authors of which have had to recognize and to treat, as their wisdom or partisanship might dispose them to do, the more prominent matters of personal and political dissonance and controversy between their respective subjects. Mr. Randall has given us "The Life of Jefferson" in three solid volumes. Mr. John C. Hamilton, in seven more volumes—one of which contains nearly a thousand pages—has swept the field in the assumption conveyed in the title of his work—"History of the Republic of the United States of America, as traced in the Writings of Alexander Hamilton and of his Contemporaries." A feature most characteristic of this work, and exceedingly objectionable and censurable, is the way in which the letters and speeches of many of those "contemporaries" are quoted, in fragments, half-sentences, and passages forced out of their connection. The late Mr. Wm. C. Rives has furnished us with only three volumes of his proposed work on "The Life and Times of James Madison." In the meanwhile, Mr. Bancroft, continuing the publication of his history into the Revolutionary period, has freely, not always judicially, expressed his opinions of the character and course of the leading spirits of the time, and he has had to run the gauntlet of a whole phalanx of grandsons—saving only Mr. C. F. Adams—who have undertaken to vindicate their ancestors against his judgments. It is to be supposed that the grandson of John Adams is acquainted with the contents of the works we have named. And if he has read them, as also the first volume—all that has yet appeared—of "The Life of Timothy Pickering," we admire the calmly-assured, and, as we believe, the reasonable and well-grounded judgment, under the guidance of which he has thought it wholly unnecessary, for anything that they contain, to alter a single word in the biography of his grandfather.

There is something quite unique and suggestive in the title-page before us. We know of nothing parallel with it in literature or in political history. An entail of honors and talents, of the highest classes, through three generations, marks in this New World, in which hereditary titles and privileges are forbidden, a result reached by fortune and merit such as has not been realized in any family history in the Old World, even with all the aid of law and conventionalism. Taking in connection with this fact another, that Mr. C. F. Adams is the father of three sons, each of whom has already given evidence of an inheritance in the family abilities, temperament, and aptitudes for public life, and it seems as if our citizens ought to furnish what help they can through their political canvasses and elections to lengthen out the entail of honors. The services of Mr. C. F. Adams at the British Court, under embarrassments very similar to those which his grandfather encountered, especially from the disdain and superciliousness visited through both of them alike upon the humiliated country which they represented, were of the most signal character, and secured to him the homage and gratitude of this whole people. If he is not chosen in his succession the next President of the United States, the only explanatory reason for the failure will be that humbling confession which seems to rest upon an admitted axiom among us, that eminent personal fitness of character and qualification for that exalted office is proportionally a popular and political disability in the way even of a nomination for it.

During the interval between the publication of the earlier and the present editions of "The Life of John Adams," the grandson, in performing the exacting duties of the diplomatic office just referred to, had many opportunities to reconsider the language quoted from his ancestor, and not softened in additional expressions of his own, about the sentiments and the conduct of England towards this country. In a very admirable and most modest preface to the work before us, the writer says: "The strictures founded upon the course of British statesmen, as well as of the nation collectively towards this country, are left to stand very much as they were." He adds: "This is mentioned in order to preclude any inference that might be hastily drawn, of the intervention of some later cause of irritation to sharpen the language. Whilst my subsequent opportunities of close personal observation have but confirmed me in the conviction of their substantial justice, I should not be willing to give rise to an impression that they had been prompted by any sensibility of my own." This manly statement is followed by a courteous acknowledgment on the part of Mr. Adams for himself, that, considering the nature of his position during a very critical period, the spontaneous and generous testimony of good-will which he personally received, publicly and privately, as a representative of his country, from various quarters and opposite classes, will always claim his grateful recognition. We believe this is the only public reference which Mr. Adams has yet made to his own private experiences and feelings during the period of extreme anxiety and protracted discipline for himself and for our country, when under the forms of official courtesy he knew very well was disguised a desire for our discomfiture and ruin.

Though it may be taken for granted that John Adams was born after the manner of human infants, on a particular day of a month of a year, the biographer having failed to make any statement of the date, the reader may find the deficiency supplied by the inscription on the President's monument copied on the last page of Volume II. "Begun by John Quincy Adams," says the title-page of the book. The second President Adams's share in the work is very small, and we think most readers will be glad that the grandson's pen comes in as soon as it does to relieve the old-fashioned and not brilliant moralizing and references to antiquated lore which burden the first two chapters. Yet, perhaps, it was well that the son should start his father on his career, and leave to the grandson, with his lively and pointed style, and his modernized culture and his acquaintance with the developments which time and experience have so richly furnished, to draw out that long-extended and laborious career.

And what a noble and honorable and conspicuous career it was, how crowded with exciting and exacting surprises, with difficult and emergent occasions, with varied and ever faithfully fulfilled tasks, which required knowledge, virtue, disinterestedness, the loftiest patriotism, and the greatest skill. He seems to have been in training from his youth for the services of his life. Had he known when a college student what occupations and experiences were to engage his manhood, and what sort of mental and moral furniture they would require, he could not have been placed under better circumstances for discipline, nor chosen a wiser method of study and culture. His early reading in law, in ethics, and in the science of government enabled him to make the most desirable contribution to the opening cause of his country just at the crisis when it was most needed, and when he alone was at hand to impart it.

* "The Life of John Adams. Begun by John Quincy Adams. Completed by Charles Francis Adams." Revised and corrected. In 2 vols. 12mo. Philadelphia: J. B. Lippincott & Co. 1871.

We do not wish here to reopen any of the old feuds, nor to rake the ashes of the fierce animosities which were most embittered at the time of Mr. Adams's retirement from public life. Our own conviction is that the development of events proved that, from first to last, he was right in the views which he held and in the course which he wished to be pursued by his country as to its relations respectively with France and England. The great reward and glory of his laborious and honored life came in his protracted old age. The calumnies of his bitterest enemies had been silenced or disproved. The integrity and fidelity of his various public services had been illustrated. His special policy in the matters in which it had been most opposed had been proved wise and right. And when, on the verge of ninety years, he saw his son holding the highest place in the nation, he might well sing his *nunc dimittis*.

Walks in Rome. By Augustus J. C. Hare. (London: Strahan & Co. New York: Geo. Routledge & Sons.)—The change in the political state of Rome makes the book of Mr. Hare likely to be the last, as it certainly is the best, of the many compendiums of the guide-book knowledge of the Eternal City. It is well written, thoroughly studied, and put together with an intelligence of the needs of the flying tourist, without in the least neglecting the wants of those who need historical and topical references. To old residents in Rome this book will be valuable as a repository of the facts, historical references, names, dates, etc., which they may wish to recall; to those who wish to visit Rome, it will illustrate what the author says of such, ("Those will enjoy Rome most who have studied it thoroughly before leaving their own homes,") by showing the force of what seems to us the great secret of the fascination of the city of illusions. There is a fascination in the place that no one escapes, and to which most people yield willingly, as to opium or ether—even those who abhor it and leave it, find themselves, as Hawthorne says, "astonished by the discovery by-and-by that their heart-strings have mysteriously attached themselves to the Eternal City, and are drawing them thitherward again, as if it were more familiar, more intimately their home than even the spot where they were born." It is like the palace of Circe. To many people Rome is repulsive from the beginning, but even to these the fascination comes with time.

"Walks in Rome" has all the places of interest arranged in an itinerary, which ensures the greatest possible economy of time, and to each in its proper place are appended all the references necessary to an understanding of the subject, with quotations from a long list of authors, not so senseless or useless, not to say misleading, as the everlasting quotations from Byron and Rogers with which the guide-books are freighted. They are chosen from authors of all beliefs and all religions, and all to the point, though not all of equal value.

The introductory chapter gives promise of another book on the excursions about Rome, which will not only be a more interesting theme, but one which will task the compiler's (for "Walks in Rome" is not much else than compilation) ability far more than this. The pleasant journeys there are, in the Sabine and the Volsian hills—as unknown to the guide-books as South America, and likely to remain such while the Papal authority kept the police of the country—are more than an average resident of Rome would believe. There are within a few miles of Rome some of the finest examples of Pelasgic wall building in Italy, and some quite unique; and the Campagna itself, the one thing of Rome proper which, in its desolation and lonely impressiveness, is unparalleled in the world's landscape, except, in another way, by the Adirondack woods, and in still another by the open ocean. A guide-book to the Campagna, as far as Filletino, Civita Castellana, Corneto, Porta d'Anzio, and Norba, would include half the world of history, and treat of scores of places of the most romantic interest, after Rome and Athens, in the Old World.

Wild Nature: a series of Charcoal Sketches, by Virgil Williams. Photographed by H. G. Smith. (Boston: Virgil Williams.)—Lovers of outdoor life will find this portfolio a pleasant reminder of vacations spent with rod, or gun, or line; and an incentive to future recreation of the same sort. The twelve views (of which the photographic print measures about 17½ in. x 9½ in.) represent the favorite haunts of trout and pickerel and blue-fish, of woodcock, quail, grouse, snipe, and duck, of hare, deer, and moose, with some action of man or beast suitable to the place. The figure-drawing is rather less successful than the landscape, which, including one sea-view, seems true to nature as we have known her, especially in New England. The scene, for example, in which the interesting group of moose is depicted we recognize as characteristic of the lakes of Maine; and we may mention as equally agreeable in recalling familiar situations the quiet cove of the pickerel fishers, the distant and near view in the quail shooting picture, and the sea swell in the trolling for blue-fish. Nearly all the designs are graceful in composition, and would bear framing. The set is sold at twenty dollars, and will more than repay the purchaser who gets from it, if nothing else, an inspiration to follow its pointings towards health and a rational diversion from hurry and care.

POPULAR NEW BOOKS.

THOUGHTS ABOUT ART.

By PHILIP GILBERT HAMERTON.

Price $2.

Also, by the same author, price $1 50.

A PAINTER'S CAMP.

[From the Atlantic Monthly.]

"They ('A Painter's Camp in the Highlands' and 'Thoughts about Art') are the most *useful* books that could be placed in the hands of the American Art public. If we were asked where the most intelligent, the most trustworthy, the most practical, and the most interesting exposition of Modern Art and cognate subjects is to be found, we should point to Hamerton's writings."

A Visit to my Discontented Cousin.

Price $1.

"The story is of the simplest, reminding us of Thackeray in his smaller pieces, and the reader is led on quite as much by its interest as by the wit and play of thought which sparkle on every page. We can strongly recommend this short tale to all cultivated minds."—*Westminster Review.*

Sold everywhere. Mailed, post-paid, by the Publishers,

ROBERTS BROTHERS, Boston.

HENRY K. VAN SICLEN,

BIBLIOPOLE,

133 NASSAU STREET.

Special attention given to orders by letter.

NOW READY:

Hand-Book of Anglo-Saxon and Early English.

By HIRAM CORSON, M.A.,
Professor in Cornell University.

Post 8vo.....$3.

"The present work is an attempt to furnish the student with such reading material and accompanying aids as will enable him to trace the growth of the English language from the purest existing form of the Anglo-Saxon or Anglish down to the end of the fourteenth century."—*Extract from Preface.*

Prof. Corson's work, besides a great variety of extended selections of Anglo-Saxon and Early English (most of them entire), with Notes, Complete Glossary, etc., contains an Anglo-Saxon Grammar and Old South English Grammar.

HOLT & WILLIAMS,
25 BOND STREET.

NOW READY:

VAN NOSTRAND'S Eclectic Engineering Magazine.

Vol. 4, No. 5—May.

CONTENTS:

Roof Trusses or Trussed Triangle (illustrated); Solar Heat: its Influence on the Earth's Rotary Velocity; The Temperature of the Sun (illustrated); Breakwaters; On the Calculation of Earthwork Tables; On Phonic Coast Fog Signals; On the Ship-Worm and the Means of Preventing its Ravages; The New Wrought-Iron Bridge at Bridgeport, Ct.; Navigation of the Gulf of Manaar; Broken Tires; Purification of Pig-Iron; Ferrie's Blast Furnace; Cast and Wrought Iron in Combination; Light Sea-Cables; The Influence of Intense Cold on Steel and Iron; Zinc and its Manufacture; The Compound Steam-Engine; The Balance Dock Basin at Pola; Erecting Bridges without Scaffolding; Ambiguity in Tests of Iron Work; The Properties of Elastic Tires; Architectural Problems of the Day; Tramways for City Streets; Improved Method of Regulating the Opening and Closing of Cocks (illustrated); Rolling and Swing Bridges; The Corrosion of Iron; Incrustation in Steam Boilers; Centreing; Experiments on the Oxidation of Iron; Report on the Allen Engine; The Mechanics of Flying (illustrated); On Skew Bridges and on the Construction of Falls Bridge over the Schuylkill (illustrated); The Nature of the Earth's Interior; Improvements in the Manufacture and Melting of Iron and Steel; The Resistance of Fluids; A Note on Meteorology.

PARAGRAPHS: Iron and Steel Notes; Railway Notes; Ordnance and Naval Notes; Engineering Structures; New Books; Miscellaneous.

TERMS: Published in monthly numbers of 112 pages, at $5 per annum; single numbers, 50 cents.

D. VAN NOSTRAND, Publisher,

ZELL'S

GREAT ATLAS OF THE WORLD

Is now being issued in parts at 50 cts. each, and will be completed in 25 Parts. Specimen Numbers 25 cts. each. Sent on receipt of price.

The maps of this Atlas are engraved on steel and printed in colors. Their artistic beauty and their correctness warrant the Publisher in saying that the Atlas will be unsurpassed by any yet issued.

ZELL'S POPULAR ENCYCLOPÆDIA

Is now complete and will be served to subscribers in Parts or Volumes. There are 50 Parts, or Two Royal Quarto Volumes.

Specimen Numbers of Encyclopædia, 10 cts.

T. ELLWOOD ZELL,
17 and 19 South Sixth St., Philadelphia.
5 Beekman Street, New York.

BOOKS FROM LONDON.

Bookbuyers will find it profitable to place themselves in communication with

J. SABIN & SONS,

Booksellers and Importers,
84 NASSAU STREET, NEW YORK,
AND 22 BUCKINGHAM STREET, STRAND, LONDON.

They have their own house in London, a direct communication with the great London book market, enabling them to buy, and consequently to sell, at the lowest rates.

They keep constantly on hand some 40,000 volumes of Books, in all departments of literature.

They issue each month the AMERICAN BIBLIOPOLIST, a Literary Register, Repository of Notes and Queries, Lists of New Books, and Miscellaneous Items of interest to the general bookbuyer.

Each number contains a catalogue of a portion of their stock, which, besides offering fine and choice books in elegant bindings, offers a list of very cheap books at $1 and at 50 cents per volume.

Specimen sent gratis. Subscription, $1 a year; printed on cheap paper, 36 cents per year, postage prepaid.

Books imported to order. Old books (books out of print) sought for in London.

J. SABIN & SONS

Have just received a fine lot of Books from London.

SOME OF THE BOOKS FOR SALE:

MUSÉE FRANÇAIS ET ROYAL. Together, 6 vols. folio, $400.

The copy offered is splendidly bound in red morocco extra, with richly-gilt borders and gilt edges. The binding alone would cost $40 or $50 a volume.

WOOD, J. G., THE NATURAL HISTORY OF BIRDS, MAMMALIA, REPTILES, FISHES, AND OF MAN. 5 vols. large 8vo. London, 1868. $45.

This copy is handsomely bound in calf extra, gilt backs.

CHAMBERS'S ENCYCLOPEDIA. A Dictionary of Universal Knowledge for the People. Illustrated with maps and numerous wood engravings. Lond., 1860. 10 vols. large 8vo, splendidly bound, tree calf, gilt backs, $60.

This Encyclopedia, especially in consideration of the price, is superior to all but the "Encyclopedia Britannica."

THOMS, W. J., EARLY ENGLISH PROSE ROMANCES. Lond., 1858. 3 vols. crown 8vo, nicely bound half-morocco, gilt top, uncut, $7 50.

DIBDIN'S BIBLIOMANIA; or, Book Madness. A Bibliographical Romance, in Six Parts. Lond., 1811. 8vo, calf extra, very nicely bound by Bedford, $15.

MERIVALE, CHARLES, HISTORY OF THE ROMANS UNDER THE EMPIRE. London, 1865. 8 vols. post 8vo, elegantly bound in tree calf, $35.

FROUDE. SHORT STUDIES ON GREAT SUBJECTS. 8vo, cloth, $1 35. N. Y., 1871.

HONE. THE APOCRYPHAL NEW TESTAMENT. Being all the Gospels, Epistles, etc., not included in the New Testament. Lond., 1820. 8vo, cloth, $1.

HONE. ANCIENT MYSTERIES DESCRIBED, especially the English Miracle Plays, etc. Lond., 1823. 8vo, cloth, $1.

Send for these remarkable books by Hone. They contain a large amount of exceedingly curious information.

MOORE, THOS., LETTERS AND MEMOIRS OF LORD BYRON. Lond., 1833. 3 vols. 8vo, half-morocco, $7 50.

Send for the NEW MONOGRAM AND ALPHABET ALBUM. 1,000 designs. Cloth, $7 50; half-morocco, $8.

MR. THOMAS CARLYLE'S WORKS.

PEOPLE'S EDITION.

In compliance with urgent applications from large classes of readers interested in Mr. Carlyle's Writings, to whom the existing editions are not accessible because of their price, the London Publishers, Messrs. Chapman & Hall, have obtained Mr. Carlyle's consent to the issue of a

CHEAP EDITION,

Printed from the library volumes which have received his latest revision, and which will appear in

MONTHLY VOLUMES,

Square 12mo, handsomely bound in cloth.

By special arrangement with Messrs. Chapman & Hall, Messrs. Scribner, Welford & Co. will issue the

PEOPLE'S EDITION OF CARLYLE'S WORKS

in this country, supplying the volumes at the very low rate of

90 CENTS EACH.

The series will be handsomely printed in clear type, with good paper and cloth binding, and when completed will make nineteen volumes.

NOW READY, VOLUME I.

SARTOR RESARTUS.

1 vol. 12mo. With steel portrait of Mr. Carlyle. 90 cts.

The above book sent post-paid upon receipt of price by

SCRIBNER, WELFORD & CO.,

654 Broadway, New York.

A NEW VOLUME OF THE

Catena Classicorum

Is now ready.

THE ELECTRA OF SOPHOCLES.

Edited by R. C. Jebb, Tutor of Trinity College, Cambridge. 12mo, cloth, $1 25.

The following volumes of this series have already been issued:

THUCYDIDES. Books I., II. Edited by Bigg. 12mo, cloth, $2.

DEMOSTHENES. The Olynthiacs and Philippics. Edited by Heslop. 12mo, cloth, $1 50.

ARISTOPHANES. The Acharnians and Knights. Edited by Green. 12mo, cloth, $1 50.

"This series promises to be the most useful collection of the Classics yet furnished to the student. The volumes are of a convenient size; the Greek type—a great point—is admirable; the arrangement luminous and simple; and the subsidiary matter of all kinds complete and abundant."—Pall Mall Gazette.

OTHER VOLUMES IN PREPARATION.

Single copies of any of the above books will be sent post-paid to Teachers on receipt of one-half the advertised price.

SEVER, FRANCIS & CO.

Keep constantly in stock a complete assortment of all the various foreign editions of the Latin and Greek Classics and Classical reference books, a full-priced Catalogue of which has just been issued, and will be mailed post-paid to any address.

SEVER, FRANCIS & CO., Publishers,

BOSTON, MASS.

THE ECLECTIC.

CONTENTS OF THE MAY NUMBER:

EMBELLISHMENT: PRINCE FREDERICK CHARLES.

I. Italy and the Republic. By Joseph Mazzini.—Fortnightly Review. II. The Natural Theology of the Future. By Charles Kingsley.—Macmillan's Magazine. III. The United States of Europe. A Lecture Delivered before the Peace Society. By Prof. Seeley.—Macmillan's Magazine. IV. Herve Riel. A Poem. By Robert Browning.—Cornhill Magazine. V. Ocean Currents; Researches in the *Porcupine*.—Contemporary Review. VI. Patty. Chapters XI. to XVII.—Macmillan's Magazine. VII. Daniel Defoe. —Cornhill Magazine. VIII. A Dull Day in a Dull Port on the Mediterranean.—St. Paul's. IX. Studies of Street Life in London. By James Greenwood. I.—London Society. X. A Retrospect of the War.—Blackwood's Magazine. XI. What the Chinese Really Think of Europeans. By a Native Literate.—Fraser's Magazine. XII. A Virtuoso.—St. Paul's. XIII. Locks and Keys.—Chambers's Journal. XIV. Artistic Feelings of the Lower Animals. —Spectator. XV. Literary Notices. XVI. Science. XVII. Art. XVIII. Varieties.

The ECLECTIC should be in every library, on every centre-table, and in the hands of every man who proposes to keep abreast of the intellectual progress of the time.

Terms of the ECLECTIC: Single Copies, 45 cts.; one copy, one year, $5; two copies, one year, $9; five copies, one year, $20. Agents wanted to get up clubs. Address,

E. R. PELTON, Publisher,
108 Fulton Street, New York.

English Chancery Reports.

MACNAGHTEN & GORDON'S

Reports of Cases argued and determined in the High Court of Chancery. Edited, with Notes and References to American Law, and subsequent English Decisions, by

HON. J. C. PERKINS.

Vol. I. 1849—1850.

This is the first volume in our proposed series of reprints from the English Chancery Reports. The Series begins with Macnaghten and Gordon's Reports, and closes with the Reports of De Gex, Jones, and Smith; filling up the entire gap between the second volume of Phillips's Reports and the first volume of the Law Reports. This, and the other volumes which we propose to reprint, contain the reports of cases heard and determined by the Lord Chancellor and the Court of Appeal in Chancery. They are enriched with the carefully prepared and authoritative judgments of some of the most eminent Judges who have ever presided in the Court of Chancery. The great fame of Lord Cottenham, Lord Truro, Lord Cranworth, Lord Chelmsford, Lord St. Leonards, Lord Campbell, and Lord Westbury—all of whom have by turns adorned and illustrated the Court of Chancery during the time covered by these Reports—is a sufficent guaranty of the merit and value of the Reports, and at the same time a full justification of the Publishers in now offering them, in the form adopted, to the legal profession.

These Reports are published entire, without any alteration or diminution of the text or notes. The original volumes had no table of cases cited. Such a table has now been supplied, which includes the cases cited in the notes to this edition.

The notes and references of Mr. Perkins are always at the bottom of the page, and are referred to by figures. Where any references are introduced by him into former notes, they are enclosed in brackets.

The series will be complete in twenty-two volumes issued monthly. Subscription price, $5 per volume.

LITTLE, BROWN & COMPANY,

BOSTON.

SLAVE SONGS OF THE UNITED STATES.

A Unique Collection of Original Melodies—words and music—obtained among the negroes of the South; preceded by an account of these Songs, and an Essay on the Negro Dialect, as observed at Port Royal, by Prof. W. F. Allen, of the University of Wisconsin. Cloth, 8vo, price $1 50.

Sent post-paid on receipt of price. Address

Publisher of "THE NATION,"

Box 6732, New York City.

OUR BOOKSTORE

IS THE

ONLY ONE ON THE LINE OF BROADWAY, BELOW SPRING STREET,

Where can be found a well-selected stock of the

BEST ENGLISH LITERATURE.

Business men and others located down-town who are gradually forming libraries, and seek books of permanent value, are invited to call at our store and examine our stock.

We offer liberal inducements to those who will entrust their orders to us, feeling confident we can give satisfaction. We give special attention to this department of our business, and bring to it an experience acquired during a period covering twenty-seven years in the "trade" in this city.

PRATT'S Astral OIL.

Not the cheapest, but the best illuminating oil ever made. Does not take fire or explode if the lamp is upset and broken. Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have occurred from it.

Oil House of Charles Pratt, Established 1770, New York.

The Nation.

NEW YORK, THURSDAY, MAY 4, 1871.

The Week.

POLITICAL affairs are just now getting a great deal of the earnest attention of the politicians, who are beginning to be busier with schemes and combinations than it is probable they have been since 1860. In 1864, it was too plain for serious doubt that, if the Republicans were to do anything, they must renominate Lincoln; and in 1868, it was as little doubtful that they must nominate Grant; but that there are any such certainties now would not be said by any one, or rather, it is said by some few with an uneasy frequency, which tells as well as the silence of the rest how dubious and confused the political prospect at present is. Senator Morton, whom one would think not the safest of friends for a Western man with aspirations for the presidency, has spoken out the plainest, and he says that General Grant is to be renominated and re-elected, and that in the next presidential campaign the Republicans must make the fight on the old issues. Happening to meet the President at Indianapolis, he found there assembled a large number of his fellow-citizens, "as unexpectedly to himself as to the President of the United States." He then proceeded at some length to give his views of the political situation. The Republican party, he said, could not afford to run off upon any one issue to the abandonment of others; it was national, and its policy must embrace the good of the whole country; it could not afford to make a distinct issue on the tariff, civil service reform, or any other individual measure; it must take its stand on these assertions: the Democrats, if they return to power, will either take away the pensions of loyal soldiers, or else will pension Confederate soldiers also; will, when they have a majority in Congress, quietly allow the Southern States to secede in peace; will tax national bonds and unsettle everything generally. The next Republican candidate must, then, declare that Mr. Boutwell's policy, as Secretary of the Treasury, has been for the best interests of the country, inasmuch as it has already paid one-twelfth of the national debt; that the Ku-klux act, so-called, is constitutional and necessary; and that the United States Government must enforce the observance of the Fourteenth and Fifteenth Amendments, which everywhere in the South the Democrats disregard. This platform the newspapers represent the audience as receiving with applause, and President Grant was received, they say, with enthusiasm. Later, the President went to Lafayette, Indiana, and was welcomed by a convention of Odd Fellows, as they are called, and on this occasion the speech was made by Mr. Colfax. So Grant, not, it must be confessed, in the most dignified of ways, offers himself for a renomination.

But whether he is to get it, and what will be the platform on which he will be placed, seem to be questions that trouble the people at large as little as possible. Indeed, a pessimist, or an American newly arrived from Paris—in May, 1870—or the butler and upper-servants generally of the English Joint Commissioners, or, indeed, a better and wiser person than any of these, might almost be excused for falling into despondency in view of the apparent carelessness or apathy with which the political situation is regarded by the average American. Considering what are the condition and prospects of the Republican party in the Southern States, and what the likelihood of its carrying any two of them; considering the result of the New Hampshire and Connecticut elections, and that by way of replying to them and preventing a like result in Pennsylvania, we have the appointment of Colonel J. W. Forney as Collector at Philadelphia; considering the party's condition in this State; considering the latest action of the Supreme Court, which once was called the most dignified tribunal in the world; considering, also, the fact that we the other day changed our form of government, giving the President dictatorial powers because of Southern disorders of which General Sherman says: "I have probably as good means of information as most persons in regard to what is called the Ku-klux, and am perfectly satisfied that the thing is greatly overestimated;" considering that, as time wears away, and the cotton crop of the South each year exceeds that of the year before and that of old times, "the Negro" gradually fades into dimmer distance, while our taxes we have with us always, and like them none the better for being imposed by philanthropic men who are not great in finance; considering the size and persistency of the Free Trade and Protectionist quarrel, and the possibility that the Democrats may contrive to learn an open lesson of easy wisdom; considering all this, it seems a thing to be desired that the cooler Republican voter should bethink himself of some way to make his party leaders respect the forms of law and the sense of the country, or, failing that, should fall into despair. On the contrary, he troubles himself with neither, but goes on with his business and his money-making, thinking to himself—and not taking pains to tell Mr. Morton either—that when things get a little too bad, he will take hold and set them straight somehow.

That this point is in the immediate future, we ought, one would say, if he lives in this city, to be about this time beginning to think. Especially ought he, if he happens to be a seemly and virtuous member of the New York city press. The late Legislature passed—without reading it (though, to be sure, that would have made no difference)—a bill which now awaits Governor Hoffman's signature, and which, if he signs it, will sensibly abate that vigor of denunciation with which some of us have been treating Judge Barnard, Judge Cardozo, "The Boss," Mr. Sweeny, and others of our protectors. If not, it will probably cause us to spend our July and August vacation kicking our heels in the Ludlow Street jail, while the objects of our vituperation are lying-to off the Isles of Shoals, telling each other little stories, and drinking mixed drinks with ice in them. This law that is to be repeals the existing statutes providing punishments for contempt of court, and restores the common-law rules, which leave the judge much latitude—in fact, leave the offender very much at the judge's mercy. The punishment is to be "in the discretion of the court," and the proceedings are to be conducted "in such manner as the court may direct." So you print your vigorous editorial article relative to Judge Barnard's ruling in yesterday's injunction suit, and by the next morning you have been sent before a referee connected with that magistrate by blood or by affinity, and find yourself condemned to three months in jail, or mulcted in a fine that takes half your year's income. Furthermore, the Supreme Court—Barnard and Cardozo's—is granted the power to remove from the Superior Court and the Common Pleas any suit pending in either. This latter provision is in the interest of Fisk and the Erie gang, and the former is intended for the refractory journalists who may pluck up a spirit to characterize truthfully the performances of these men and their judicial and legal associates. Perhaps respect for public opinion may be at the origin of this new law, for of the men concerned in the recent degradation of our bench and bar some have a respect for public opinion, or at least feel some shame in public disgrace. But we need not gratulate each other too much on this tribute to decency. Jonathan Wild was not more easily superior to soft considerations of that kind than most of these gentlemen. As well accuse a one-armed man of clapping his hands. Indeed, the second part of the enactment, a triumph of insolence, which ostentatiously gives Barnard the right to do all Fisk and Gould's trying for them, is confutation enough of the notion that it is with hard words they are to be stopped.

A brief announcement was made in the *Tribune* of Monday of the purpose of the New York Republican State Committee to reorganize the party in this city and county, and that Messrs. Jackson S. Schultz and William Orton had undertaken to conduct the work. This was followed on Tuesday by a long communication in the same paper from Mr. Sinclair Tousey and three other officers of the Union Republican General Committee, protesting against such a reorganization on the ground that the petition for it came from professional bolters and disorganizers, and was composed "in the main, of counterfeit, spurious, and manufactured names," only 4,286 out of 10,000

turning out to be genuine, and of these, but 1,870 to stand for Republicans. The General Committee also deny the authority of the State Committee to interfere with them in the manner proposed, or that the party here is in any degree the tool of Tammany; and they seem to charge upon the State Committee the odium of the removal of Messrs. Grinnell and Palmer, which was not effected without the aid of Democratic votes in the Senate. We do not intend entering into the merits of this quarrel, on each side of which are men whom we respect; but we are firmly of the opinion that the present condition of the Republican party here is such as to call for some sort of reorganization and resurrection, if it is to be of use to anybody but those who from time to time are its managers. And it is certain that before any overtures can in decency be made to the German voters to come into the Republican fold, it should be thoroughly purged of even the suspicion of complicity or understanding with Tammany. On this field, at least, distinctions of friend and foe based on party names are simply delusive. The men who don't steal and won't steal, who aren't sold and who can't be sold, may pass in New York for Republicans. None others should be admitted or tolerated.

The Milwaukee *Herold*, a German paper, makes a forcible appeal to the Germans of this city to join in putting an end to the rule of Tweed and Sweeny, not only for local reasons, but as an act of patriotism. It says, what is the sober truth, that the gang which, having its seat here, now controls the entire State, is disposing of its plunder with a view to carrying the next Presidential election, sure of the support of all similar rings to which its example has given rise, or, as is very likely in the case of Pennsylvania, of which it is the immediate accomplice. The Germans of New York, therefore, in doing their duty by their own State, will be aiming a blow at corruption in all parts of the country. Their conduct, moreover, will inspire, as nothing else can, the German voters everywhere to throw off the apathy they have heretofore shown, and take their rightful share of political influence. The regeneration of Germany, says the *Herold*, has made the present time auspicious for such a movement. It has rendered the German-Americans conscious of their strength, and it clearly imposes on those in this city the duty of leadership. The visible achievement at Sedan was, in fact, as we have often pointed out, but a small part of that great victory; and the Germans who marched in procession the other day can prove it, if they choose, in the political field to which they are summoned to meet a subtler form of Cæsarism than that just overthrown in France.

There may have been a leakage at the White House, as some have said, and the final result of the labors of the Joint Commissioners may have got out in spite of the thoroughness with which the Commissioners themselves have kept their secrets, and baffled the Washington correspondent—a gentleman who appears dazed at the way in which, for once in his life, he has been treated, and whose lack of "enterprise," under the eyes of foreigners too, is little calculated to impress De Grey with the superiority of our journalism to that practised in his own land. He says, in the *Herald*, that "there is something remarkable" in the anxiety manifested by De Grey lest some morning he should wake up and find in the *Herald* the treaty published in full, and tells us that that nobleman has sent to his Government a telegram in which "the noble Earl advises that no faith should be placed in these newspaper accounts of what the Commission has done, for the reason that they are unofficial, and hence, according to the British view, irresponsible." Schenck is not as bad as that, but still, very little can be got out of him, and in fact all the American Commissioners display singular "reticence towards all outsiders, especially newspaper men." What to make of it is evidently too much for him. Nevertheless, a good deal has leaked out, and he is able to give us a synopsis of the treaty, for which he seems inclined to predict the fate that befell the instrument drawn up by Reverdy Johnson and Lord Clarendon. Two boards of audit and arbitration are to be appointed, one of which shall settle on the amount of the claims of Americans upon England for losses caused by the *Alabama* and other cruisers, and the other of which shall settle on the amount of the claims of Englishmen for all losses, except in slave property, sustained by them at the hands of the United States Government. It is calculated, he says, that the claims of the English will come up to something like 75,000,000 or 100,000,000 dollars, and that as the *Alabama* claims are computed at about 15,000,000 dollars, it is regarded as singularly unfortunate that the Commission had put the two things together and had settled upon the rules of law and evidence which should govern the arbitrators. Next the treaty stipulates that neither we nor the English shall build or fit out ships for privateering, or permit them to be built. As for the Canada inland waters, we are to use them freely, except as regards the regular tolls. The Canadian fisheries our informant is rather hazy about. American fishermen are to be "allowed to fish from headland to headland," and may cure their fish on Canadian soil on payment of a certain fee to Canadian authorities. The San Juan boundary question goes to arbitrators, and in all the boards two members are to be British, two American, and the fifth an umpire appointed by a neutral monarch, of name as yet unknown.

Judge Hoar was jubilant, on the eve of his departure, over the result of the Commission's labors; Schenck said to a senator, "You will like what we have done." Judge Nelson and all his brother Democrats in the Senate would give it a hearty support; Secretary Fish thinks it will go through the Senate easily, and that it is advantageous to this country. But the era of good feeling "is not yet;" much comment is excited in Administrative circles because of the rumor on the avenues that Ben Butler has announced his intention to oppose the treaty on the ground of its not being satisfactory to his constituents, who are Gloucester fishermen, and that Mr. Banks also had declared that he should oppose it with all the vigor at his command, because he thought it not conducive to the best interests of the United States. As Mr. Banks's qualifications for forming an opinion as to what is most conducive to the best interests of the country are of an extremely slender character, and, indeed, are by some held to be non-existent, it is to be hoped that no senator who sees reason to believe that, after long labor by some of our ablest and most patriotic men, a fair conclusion of this matter may be had, will allow his dread of the effect on the people of Mr. Banks's "beautiful baritone organ," lifted up in a speech of great discursiveness, to have any influence upon his vote. The fact is that Mr. Banks's eloquence is of more consequence to him personally and in his own district than anywhere else; and another fact is, that Mr. Banks's Chairmanship of the House Committee on Foreign Affairs has not been improved by him as such a means of enlightening his dense ignorance of everything relating to the right performance of his duties should have been improved. As for Mr. Butler, he may, perhaps, have something to say on behalf of his constituents that will be worth hearing, but everybody knows, too, and it will do no harm to recollect it, when he comes to say his say, that Essex County Yankees, original or adopted, can be sharper than is for the honor of their country, and that Butler is by nature a mischief-maker and an unsuccessful marplot, seldom or never successful except when unresisted.

Next Tuesday, in accordance with a suggestion of the Charleston Chamber of Commerce and Board of Trade, which has been very favorably received, a convention of taxpayers, consisting of two delegates from every county in South Carolina, will meet at Columbia to ascertain the exact amount and nature of the State debt and other liabilities, and what frauds, if any, have been perpetrated, and to protest against any addition to the public debt in the meantime. Politics will be excluded from the deliberations of this convention, which is perhaps unique in the history of our State governments. In Charleston, where the Republicans have a slight but working majority, the newspapers of both parties are recommending an equitable division, without a contest, of the places in the city council, giving the Republicans the Mayor in token of their preponderance. Such an arrangement would do credit to human nature, and the mere proposal of it in South Carolina shows a remarkable progress towards a healthy political condition.

Business in trade circles has been rather more active during the past week, partly owing to a brightening up of country trade, and partly owing to a more general spread of the speculative spirit which, emanating from Wall Street, affects to a limited extent all classes of business. Under its influence, prices of many staples have advanced slightly, cotton has been firm, meats have improved somewhat, but breadstuffs are lower. The general imports continue exceedingly large, swelling the Treasury receipts to very liberal figures, and the exports are well maintained, although, at the prevailing low prices, the returns from our cotton shipments fall materially behind anticipations. Real estate has been uncommonly dull and weak, with a more decided expectation of a further decline than has been witnessed for some time. Many buildings are reported to be left unoccupied, and rents in many localities have had a sharp fall. The general want of prosperity is reflected in a striking manner in the income-tax returns, which are reported as exceedingly meagre.

In the financial world, the feature of the week has been the continued excitement and wide fluctuations in prices on the Stock Exchange. There is an evident increase in the participation of outsiders in the speculation, though not to anything like the extent which the leaders of the movement anticipated. Money is naturally easy, and is aided by Mr. Boutwell to some extent, and Government bonds are firm. But, although the 1862 bonds touched par in gold during the week, the highest price ever reached, the funding process appears to have nearly exhausted itself. Foreign exchange has continued high, and the specie shipment for the week is large, nearly three and a-half millions, the total export for the year, so far as elapsed, being the largest recorded. This fact is the more remarkable, that several railroad and other industrial loans are reported to have been recently taken up on the other side, where confidence in our material growth is practically unlimited. Gold has only slightly advanced under the heavy shipment, mainly in consequence of Mr. Boutwell's supposed determination to prevent it.

The Debt Statement for the month accounts in part for the ease in money, the Secretary having reduced his cash balance nearly six millions, which have, of course, gone to swell the loanable resources of the banks. His currency balance is now reduced to about twelve millions, which is ample for all practical purposes. The six millions of currency have been employed in the cancellation of six per cent. bonds, the same as the surplus revenue of the month, which likewise exceeds six millions. The debt is nominally decreased twelve millions, but half of it by cash already in hand last month. The amount of interest paid or accrued on account of the Pacific Railroad bonds now exceeds nine millions and a quarter, which might better be included at once in the total of the debt, as under the recent decisions it is not likely that the Treasury will ever recover any portion of the amount.

Little fighting has taken place, during the week, in the suburban region west of Paris which was lately the scene of the principal conflicts of the French civil war. Asnières, Courbevoie, the surroundings of the Maillot Gate, and Neuilly—which is more than half-destroyed—have enjoyed comparative quiet, while the attacks of the Versailles troops have been directed, with increased vigor, against the southern forts, Issy, Vanves, and Montrouge, the same which suffered most heavily from the Prussian fire. A furious bombardment was opened against them on Wednesday, April 26, and continued throughout the night, with particular damage to Fort Issy. The barracks of this fort were destroyed, its fire silenced, and a breach made in the walls. On the morning of the 27th, Les Moulineaux, a village in its close vicinity, which offered an important new position, was carried by the assailants. In the night of the 29th, they carried a park and several buildings situated but a few hundred paces from the intrenchments, whereupon the defenders of the fort, half of whose guns were dismounted, were seized with a sudden panic, mutinied, and most of them fled. Cluseret, in the morning, hastened to the front, and succeeded in having the fort reoccupied by fresh troops, under command of "General" La Cecilia. Exposed to a raking fire, and almost surrounded, the new garrison seems to be inclined to capitulate, but the negotiations which were opened with it on Monday have as yet led to no result. The Versailles Government is sanguine of speedy success in that quarter, in which it has now concentrated considerable forces. And speedy success is the more needed, as Germany begins to threaten interference in case the struggle should assume the appearance of an "interminable civil war," endangering the moral and material interests of all Europe. The latest accounts from this theatre of war are more than usually contradictory and confused, but still sufficiently indicate that the Government troops, acting with unwonted energy, are steadily gaining ground, and that the moment of a more decisive conflict is rapidly approaching.

Scarcely had the critical condition of affairs on the southern line of defence become known at the sanctum in which the collective wisdom of the Paris Commune deliberates behind closed doors, when it was resolved to dismiss General Cluseret from the high position he had in vain labored to make use of for organizing victory; thus adding another name to the long list of immortal victims of the ingratitude of republics. Another victim is the international Assy, who has been re-arrested; and another, Rigault, late "delegate for public safety" at the Prefecture of Police, who has also been imprisoned. Dombrowski, however, is left in command, together with many another Polish "General" whose past, like his, is historically rather dim. The Paris Commune is magnanimous enough to overlook, or pardon, all kinds of "records," and it is only "the Prussians of Versailles," the violators of all rules of civilized warfare, against whom the "delegate for foreign affairs," Grousset, directs his shafts—who rake up the dubious past of the Dombrowskis, the Cluserets, and the like, to the disgust of all friends of the Universal Republic. The Commune looks only to the future, which cannot, however, be said to be advanced for them by the municipal elections throughout France. The Reds have carried only some minor towns, such as Narbonne and Le Mans, and their attempts to raise insurrectionary commotions, wherever made, have failed.

The Italian Senate is engaged in discussing the bill passed by the lower House, fixing the Papal guaranties and the future relations of church and state, and will probably make some unimportant amendments to it. Nothing, however, will compensate the Pope for the mortification of owing his protection to the Italian Government; and neither his being left a sovereign in the same capital with another sovereign, his life as sacred, and his court of ambassadors as real, nor his being free to appoint bishops without the royal confirmation, persuades him to accept the handsome terms of settlement. Meantime the religious dissenters are beginning to show signs of activity throughout the peninsula, and a great scandal was caused the Catholics by a party of freethinkers at Pisa, who ostentatiously gave a public dinner on Good-Friday. Protests, signed by numerous respectable citizens, were printed in the newspapers, and the Bishop of Mondovì sent to the Minister of Justice a most urgent entreaty that he would interpose to prevent the desecration, referring him to a statute which had long been a dead letter, and which no government nowadays would presume to revive. So the freethinkers ate in peace, while their countrymen generally, heeding neither them nor their clerical persecutors, went on with those commercial and industrial enterprises which are changing the face of Italian society. Judging from the use of the Suez Canal, however, which Italian muscle had so large a share in excavating, Italian commerce is not so enterprising as the position of the country should prompt it to be. Last year, but one in forty of the vessels that passed through was Italian, though the figures for the first months of the present year seem to show an absolute if not a relative increase. In the east, in China and in India, the kingdom is extending its consulships, and trade will doubtless follow in due season.

POLITICAL PRECEDENTS.

An article which recently appeared in the Buffalo *Express* draws an elaborate comparison between the Fugitive Slave Law and the so-called Ku-klux bill, and justifies the latter statute by the precedent set in the former. The Fugitive Slave Law, it says, was an extreme measure in the direction of centralization; it recognized no limit to the power of the United States Government; it overrode the sovereignty of the States; it authorized the use of the military arm; it extinguished the writ of habeas corpus—and all to protect the slave-holder in his rights of property. The Ku-klux bill, it urges, adopts the same measures, and calls into action the same forces, but with a far different object. It also acknowledges no limit to the power of the United States Government, and overrides the sovereignty of the States, but only to protect citizens in their lives, in their freedom of action and opinion, and in all their privileges and immunities. We shall not discuss the position thus briefly sketched, but simply use it as the text for a few observations which it plainly suggests upon the danger of political precedents.

The writer in the *Express* is so carried away by the comparison he has made between the atrocious design of the earlier statute and the beneficial object of the present law, that he fails to perceive the double nature and retroactive force of his own argument, which is, indeed, a two-edged weapon, wounding friend and foe alike. This argument, in a nutshell, is as follows: Twenty-one years ago the party in power violated the spirit of the Constitution in order to protect property in slaves; therefore we, who are the special champions of liberty and equal rights, may in like manner and by like means violate the spirit of the Constitution in order to protect life and personal security. Two precedents have thus been established in favor of the same measures of violation, although with very different designs. Do not the *Express*, and all other advocates of this legislation, perceive that, when the party which was in power twenty-one years ago, or its legitimate political descendants, shall again control the Government, it will find in this identical example and in this reasoning ample authority for some future fugitive slave law—ample authority by which to defend any usurpations of power for purposes as unlawful and wicked as those sought to be accomplished by the Force Bill are proper and just? The doctrine that evil can be done that good may come has always found subtle apologists. It has often been invoked by statesmen in the administration of public affairs, but invariably with disastrous consequences. Bad political precedents are dangerous in any form of government, but are emphatically so in a government which is restrained by an organic law, whose observance must be to a great extent voluntary, or compelled more by the moral force of public opinion than by material sanctions. A bad political precedent, set up for a worthy, desirable, and beneficial end, is, in the long run, more dangerous than a similar precedent established for an improper, unjust, and immoral end.

Thus the Force Bill which Congress has just passed carries with it the possibilities of more and greater evil consequences than were involved in the provisions of the Fugitive Slave Law. A legislation which not only violates the organic law and the elementary principles of political science, but also aims at a final result which is in itself iniquitous, finds few supporters beyond the ranks of those whose immediate interests are subserved. The common sense of justice is outraged, and an opposition at once springs up which continually gathers strength until it finally becomes successful. On the other hand, a legislation which violates the organic law and the elementary principles of political science, but for a worthy, desirable, and beneficial end, at once finds supporters among large classes of good citizens, who, in their anxiety to reach the final result, shut their eyes to the improper nature of the way and the means. The people gradually grow accustomed to the principle embodied in the unlawful exercise of authority; their opinions are reflected by the legislature and by the courts, until in time the measure becomes a part of the settled administrative policy of the country, and may be used as the base of a new departure.

This process is illustrated by the history of the legal-tender enactment. Prior to the war, no lawyer, nor even an intelligent citizen, would have hesitated a moment in pronouncing against the validity of such a statute. It was adopted as an experiment, under the supposition that it was absolutely necessary. The people have acquiesced and the courts have sustained it, and for aught that appears it may remain a permanent feature of our financial system. But it contains the assertion of a power in Congress to break up and destroy all private contracts and personal obligations, and leaves no safeguard against the exercise of such a power. In this very process lies the great danger which must always accompany the kind of legislation we are describing. When, in the course of time, other measures identical in principle, but seeking to effect some unworthy and immoral objects, are proposed and passed by those who confessedly base their action upon the precedent already set, the better citizens will find themselves estopped from making any opposition; their mouths will be shut, or at least all the force will be taken from their arguments, and their remonstrances will be unheeded. In public as well as in private life, with political communities as well as with individuals, bad practices to accomplish good results must inevitably end in total demoralization, in an entire destruction of the practical distinctions between right and wrong.

It ought not to be necessary to remind any one that the good and wise and virtuous will not always control the administration of public affairs; there must be changes and vast oscillations. We may be sure that when the evil-disposed, the dishonest, and the wicked obtain power, they will successfully push to a terrible extremity the precedents which their predecessors have established for them. The very central idea of a constitutional form of government, and the final reason for the adoption of a written organic law, certain and fixed in all its features, is that restraints may be placed upon the acts of good and bad rulers alike, so that the unwise measures done by the former for a worthy end may not be adopted by the latter and perverted to an evil purpose. Were the wise and good always to be in power, there might be little danger that the rights and liberties of individual citizens would ever be infringed. The government might be paternal and protecting. It is enough to say that our institutions were founded upon no such absurd and impossible assumption. They recognize the certainty of constant changes in society and in those who for the time being control society, and have established safeguards intended to protect the people from any possible evil consequences of these social and political revolutions.

The danger from bad political precedents which we are pointing out is not imaginary. It already lifts itself in imposing proportions, and we stand face to face with it. The events of the past two years show beyond a doubt that as fast as the Democratic party has obtained power in the States, it has been quick to apprehend the nature and force of the precedents which a Republican Congress has repeatedly set for its study and imitation. When the same party reaches the position of ascendancy throughout the nation and grasps the reins of the General Government, we may expect a series of legislative measures, terrible perhaps in their results, but each finding an example and a counterpart in some existing statute. The House of Representatives first used the process of impeachment as a means of punishing a political opponent, and with the avowed purpose of achieving a party success. State legislatures have been eager to copy both the act and the motive; and impeachment, which the Constitution designed as the last sanction by which the discretion of executive and judicial officers might be restrained within just limits, may be considered in future as an ordinary and ready instrument in the hands of a party majority to accomplish partisan ends; nay, the acts of the Arkansas Legislature during the past winter have covered this most solemn proceeding with an odium from which it can hardly be rescued. How meek and tame were the Republican protests against the removal of Governor Holden compared with the thunders which would have been uttered had it not been for the attempt to get rid of Mr. Johnson. Again, the "previous question," which was invented to cut off a factious opposition and to put an end to a discussion which had already been exhaustive, has for several years been used as a whip to gather in and control a party majority and as a gag to stifle all debate. The retribution has already

begun in several of the States, and will sometime doubtless be consummated upon the floor of the House. The appeal to the public made during the past winter by Republican members of the Indiana Legislature who had resigned was throughout a curious document, but no portion of it was more curious or more refreshing than that which bitterly complained of the tyranny of the Democratic majority in the use of the previous question, and in the prohibition of debate upon matters of the highest importance to the States. A vision of Thaddeus Stevens ought to have appeared to the writer of this address and to have stayed his hand as he penned the inconsistent complaint. The readiness with which the New York Assembly rejected the claims of Mr. Twombly and seated a Democratic member in his place, finds many a parallel in the acts of recent Congresses, and the process will probably be repeated upon a larger field.

We have already said that the Ku-klux bill itself may perhaps be made the precedent for some future fugitive slave law, or for some other statute which shall equally violate the Constitution, political science, and good morals. The suggestion was reasonable, and its accomplishment is not at all improbable. If the Democratic party should come into power, it is certainly within the range of possibilities that it should endeavor to uphold and sustain the liquor interest by Congressional legislation directed against State prohibitory and license laws. Such a measure could be easily patterned after the present Force Bill; the State laws could be declared void; the States enacting and sustaining them could be described as "abridging the privileges and immunities of citizens of the United States," and as "denying to persons the equal protection of the laws;" interference with the free manufacture and sale of liquors could be pronounced a crime punishable by the national courts, and resistance could be overawed and put down by the military. In favor of the legality of all this an argument might easily be made, plausible enough at least for all those who should desire to be convinced. The United States is bound and has full authority to protect its citizens in all their rights and privileges; the right to acquire, use, and dispose of property is as sacred as the right to life or liberty, and, equally with the latter, demands protection from the General Government; intoxicating liquors are the subjects of property, which draws after it all the incidents of complete ownership; the Fourteenth Amendment has made the way clear for Congress to interfere; and the State laws which wholly prohibit or partially restrain the free use and traffic in this species of property, are directly opposed to the wholesome provisions of that amendment. This principle has already received the judicial sanction and support of one of the advanced members of the United States Supreme Court. Mr. Justice Bradley has declared a statute of Louisiana null and void which incorporated a company for receiving and slaughtering animals, and gave it certain privileges and immunities which were denied to all others engaged in the same business. According to that learned judge, the Fourteenth Amendment was aimed at all State laws which abridge the rights and privileges of citizens as such, and under its benign protection are included not only the rights to life, liberty, and property, but also what he magnificently called "the sacred right of labor."

If we should object, as we certainly should, that the whole matter of the manufacture, use, and sale of intoxicating liquors was within the purview of police regulation, and that the subject of internal police was committed exclusively to the State authorities, we should be met by the ready answer that all this might once have been true, but that the Fourteenth Amendment, as construed by a preceding Congress, had swept within the domain of national legislation the function of personal protection, and that such protection could not stop at life, liberty, and opinion, but must be extended to property. Such would be the logical result—not to say the *reductio ad absurdum*—of a "centralism of liberty," an "imperialism of equal rights." The Democratic party has long been the champion of the liquor interests; it derives a large portion of its support from those engaged in the traffic; it has uniformly opposed all prohibitory laws; and if it should ever come into power, what is more natural than to expect that the influence which has been so prominent in its councils should be equally controlling in its legislation?

WHY THE FRENCH ASSEMBLY IS SO CONSERVATIVE.

Everybody who paid any attention to affairs in France during the late war must have been perplexed by the meagreness of the intelligence received from every quarter but Paris. Indeed, although Paris was for four months closely blockaded, we knew far more of what was passing within its walls, and of the condition, feelings, and opinions of the population, than we knew of what was going on in the provinces, or of the condition, feelings, and opinions of *their* population. We knew that troops were pouring into Gambetta's armies in great numbers, and that Gambetta himself was carrying things with a high hand, but what the great bulk of the French people, the men who were doing the fighting, paying the taxes, bearing the heavy weight of the invader's hand, thought about war or peace, empire or republic, Louis Napoleon or Léon Gambetta, nobody knew; and, owing to the defects of the French provincial press, and the interruption to communications, and the non-existence of any representative body, there was no means of finding out. The consequence was that numbers of writers and orators, calling themselves "radicals" and "liberals" and friends of popular government, both here and in England, to their shame be it said, availed themselves of this thick darkness to spread abroad the notion that the French people approved of Gambetta's tricks, did not want a representative government, were willing to have a mighty war carried on, and the blood and treasure of France poured out like water, as long as it pleased a young lawyer, elected by a Paris mob, to play the part of a dictator. What is worse than this, however, is, that now that the provinces, comprising the great body of the French people, acting under the influence of events and tendencies of which foreign observers have until now known little or nothing, have elected an Assembly which does not give satisfaction to the Paris mob, plenty of these same "radicals" and "liberals" are found ready to justify or excuse the Parisians in an attempt to wrest from France the city which she has created with her money, and made illustrious by her genius, and set it up in the midst of her territory as a separate republic, ruled by a low order of adventurers and charlatans, and certain to be deserted almost immediately by all men of intelligence and property.

The veil is at last being lifted which has covered the provinces during the past year. Their voice begins to be heard through the press once more, and we are getting a flood of light on the events of Gambetta's administration outside Paris, and on the agencies which led the French people to elect one of the most conservative Assemblies which has met in France since 1830. Perhaps the most complete and instructive of these revelations is an article in the *Revue des Deux Mondes* of March 15, from the pen of M. Leroy-Beaulieu, in which he gives an account of the political and social situation in the provinces during the siege. We shall endeavor to give the substance of what he says, and commend the article to the perusal of all those who wish to understand for what it is the French people are now contending against the Cluserets, and Duvals, and Assys.

The first effect of Sedan on the provincial mind was utter disgust with the Empire. When he surrendered, Louis Napoleon fell unmistakably not in Paris only, but in all France. M. Leroy-Beaulieu compares the feeling of the country people to the rage one feels with a steward or trustee to whom one has long committed the entire charge of one's affairs, and who has suddenly bolted with one's whole fortune. But disgust with the Empire did not prepare them for the *manner* in which the dynasty was overthrown on the 4th of September. If there was one thing in which the provincial mind was more fully made up than another, it was that the *coup d'état* of 1848 should not be repeated; for if, said the "rurals," governments are to be overthrown and set up by an "escalade" performed by a street mob at the Chambers or the Hôtel de Ville, what security can we ever have that any government will last over a week without confiding it, as we have done of late, to the care of a dictator with a large standing army? But they were, considering the state of the country, ready to accept accomplished facts, and, above all, to accept the republic loyally and even enthusiastically. The implied acknowledgment of the illegality of its origin, and of its strictly *de facto* character, made by the new government in calling itself "The Government of National Defence,"

satisfied public opinion, and the provinces waited eagerly for the summoning of a National Assembly. Had that Assembly been elected in October, it would have been wholly republican, M. Leroy-Beaulieu declares. The country was still united, still hopeful, and disgusted with monarchy, and the administrative machinery was still working well, and the popular respect for law still unshaken.

Instead of summoning an Assembly, however, the Government sent two of its members—old and feeble men—down to Tours, and then despatched after them Gambetta in a balloon, and these three began a series of follies which have had perhaps no parallel in history, except in the first Revolution, and have, more than Prussian arms, ruined France.

In the first place, they dismissed *all* the prefects. This, considering what a delicate machine the administration is in France, was a bold step to take in the presence of the enemy. But Gambetta then proceeded to fill up their places, and his appointees were all either briefless lawyers and small newspaper men of the order known to us here as "Bohemians" and "blatherskites," or else "advanced" radicals from the departments, who had passed long years fighting with the local authorities, and who only thought of power as a means of wreaking vengeance on their old enemies. The appearance of these nondescripts on the scene perfectly astounded the inhabitants. Their astonishment was increased, however, when another decree, still from Gambetta, broke up all the old municipal councils which, good or bad, did furnish an organized expression of public opinion, and he left the task of reforming them to the discretion of the new prefects; and as each prefect had his own views, each of the eighty-nine departments had, in a few days, a municipal council got up on a separate and distinct plan. About the end of September, the Government thought of having an Assembly elected, and its very first step towards this was the issue of a circular from M. Laurier, a young and light-headed lawyer, who was acting as Secretary to the Minister of the Interior, instructing the new prefects, in the old Imperial fashion, to "enlighten" the electors as to how they ought to vote.

Soon after, however, the idea of holding an election was given up, and Gambetta proceeded to govern alone. Thereupon most of the great cities refused to obey him, and set up governments of their own, Lyons setting the example. In this city the new prefect began a course of illegality in which a great number of others were not slow to follow. By mere decree he dismissed, without giving any reasons, fifteen justices of the peace. The new municipal council then hoisted the red flag, and confiscated all church property. It was ousted and succeeded by a "Central Committee of Revolutionary Initiative," which locked up the district attorney, and declared that as all military officers were Bonapartists and untrustworthy, "it was the right and duty of military citizens (the private soldiers) to depose such officers from their places." The effect of this on the troops, who were going to march against the "Prussian hordes" and rout Moltke, may be imagined. "The International Association of Laborers" seems to have shared the government with the Central Committee, and decreed "the abolition of the governmental and administrative machinery," and declared that "all civil and criminal tribunals were also abolished," and their "places supplied by the justice of the people;" that the payment of taxes was abolished, except as regarded the rich, and all legal enforcement of contracts prohibited; and for municipal councils were substituted "committees of safety," which were to act "under the immediate control of the people." To crown all, the brave Cluseret, who was roving about, was made general-in-chief. The prefect and various other dignitaries were arrested, including the commander of the garrison, the ecclesiastical schools closed, and the priests forced into the army.

At Marseilles much the same scenes occurred. There the new prefect was the well-known writer, M. Esquiroz, who proved to be as crazy as the craziest of the "Reds." He dismissed all the judges of the civil courts by decree, and all the old police, and substituted special constables of the Red faction, who soon became the terror of the city, arrested any one they pleased, and occupied themselves largely in getting up "manifestations." Moreover, he got up a "Southern League," composed of his own and the neighboring departments, all of which sent delegates to a convention at Marseilles, disowned the Paris government, declared the regular army abolished, and fixed on Lyons as "the centre of organization," Marseilles as "the centre of action," and Toulon as "the grand arsenal," and issued a manifesto calling on all France to rally round the "League," all civil and military authorities "to abdicate their prerogatives," and the other regions of France to follow the example of the South.

At Toulouse there was another crazy prefect, M. Duportal, who also dismissed all the judges by decree, and confiscated all church property, and closed all ecclesiastical schools. At Nice the prefect regulated the rent of houses by decree, and fixed the periods of payment. The prefect of the Haute-Loire, refusing to "smash things" in this way, was summarily dismissed as a "traitor," and an editor of the *Rappel*, a Red sheet of the lowest order, put in his place. In the meantime, the revenues of all these departments, raised by all sorts of irregularities, were passing by the million into the hands of these madcaps and Bohemians—many of whom three short months before were not sure of their dinner on any day of the week—and were spent nobody knows how. The whole system of accounts was everywhere thrown into hopeless confusion.

The grand object of all these organizations, risings, and so forth was, to use their own language, to "prevent the military hierarchy from hindering the action of the people." Accordingly, the unfortunate officers of the regular army, laboring might and main to make head against the awful disasters of the campaign and prepare fresh means of resistance, were in all the great cities mobbed, driven out, imprisoned, and threatened with death. Society was rapidly going to pieces; Moltke was marching on, and Gambetta was decreeing and perorating all over the country, as if the doom of the Germans was at hand. His first step, after leaving the balloon, was to postpone the general elections; and his prefects went to work to suppress newspapers also by decree. They suppressed the order of the Jesuits, and banished the members from France, and were performing other extravagances, which, to do Gambetta justice, he in one or two cases tried to prevent, but they refused to obey him. He dismissed the prefect at Marseilles; but he held on, and set the new appointee at defiance. Another prefect levied a forced loan on the Government officers; another dismissed all the mayors of his department and drafted them summarily into the army; and all, as we have said, seized on the taxes and administered them as they pleased.

In the meantime, the Tours Government sent Laurier, the young lawyer, to London to negotiate loans. Without any regular government at his back, he had to accept any terms he could get. Besides foreign loans, the plan of raising money which was most seriously discussed at Tours by the Government, was a forced loan levied on the twelve richest inhabitants of each commune, the list to be prepared by the prefect or other persons in authority. No explanation or account of the terms or manner in which the loan was negotiated in London was ever offered. An official note informed the public that it had been approved by the "Conseil des finances;" but this was the first time the world ever heard of this body, and it was the last, and who composed it was never known.

After the fall of Metz, Gambetta, without waiting for explanation, or knowing anything about the causes of the catastrophe, issued a frantic manifesto declaring it was due to "treason." This led to ten Red risings in different cities, with attacks by mobs on generals and other officers, ending, in two or three cases, in atrocious murders. At Marseilles, the new prefect tried once more to take possession of his office, and was shot for his pains, General Cluseret having been appointed "Commander-in-Chief of the Army of the League" in that city. In the midst of all this horrible disorder Gambetta found time to establish a little official paper called the *Bulletin de la République*, published three times a week, and issued a circular commanding all mayors to circulate it diligently in their communes, and, what was more efficacious, *ordering* the school-teacher in each commune to read it aloud to the inhabitants every Sunday. This precious little sheet, which was intended to "enlighten the people," was filled principally with scandalous stories of the Imperial Court. Several numbers in

succession contained long accounts of the "Liaisons of Napoleon III. with Marguerite Bellanger" and with "Miss Howard." The writing was generally in the style of the *New York Blatherskite*.

M. Gent, the new prefect at Marseilles, having recovered from his wound, went to work on the old plan. The first ban of the Garde Mobile elected their own officers under a decree of the Tours Government; M. Gent set this aside by a decree of his own, and appointed such officers as he pleased in his department. Some citizens claimed exemption under the law; so he fined them himself from $200 to $600 a day for every day they delayed joining their regiment, and made the penalty retroactive—that is, made it cover all the time preceding their claim as well as the time following it. The municipal council about the same time tried to make a loan of $2,000,000; it was not all taken, so a commission was appointed to visit rich citizens at their houses to make them subscribe.

When the Government removed to Bordeaux, it became, under the influence of the local populace, more frantic than ever, Gambetta's impressionable nature ill fitting him to resist the contagion of outdoor excitement. Violent denunciatory resolutions were passed by the city municipal council. The National Guard gave in their adhesion, and, under their influence, Gambetta issued his famous decree disqualifying whole categories of persons for seats in the National Assembly, and dissolving the councils-general of the departments, the only representative bodies surviving in France. The crusade against the press still continued in a style worthy of the best days of the Empire. Foreign journals were denied admission to France by decree, pamphlets were seized, papers suppressed or suspended, editors locked up for criticising M. Gambetta's measures—in fact, there was no act of arbitrary violence and illegality which has ever been committed in France in the worst days of the monarchy which these apostles of the republic did not commit. They outdid the ministers of Louis XV. in the disorder which they introduced into the finances; they outdid the ministers of Louis Napoleon in the contempt with which they treated representative government and the processes of law, and in their hostility to the liberty of the press; the Empire, too, was often, and justly, reproached with its want of respect for the office of the public school-teacher; but no Imperial minister ever dared to subject the teachers to the degradation which Gambetta imposed on them of reading aloud, in public, on Sunday, a dirty little chronicle of court amours. More than this, they handed over the administration of that portion of France which was not ravaged by the enemy to a swarm of *badauds* from the newspaper offices and cafés of Paris, who helped to destroy military discipline, disorganize the administration of justice, put life and property in peril, and shake every man's confidence in the existence of a government and in the stability of society itself. Can we wonder, after this, and after a humiliating peace to which all these follies and disorders undoubtedly led, that the constituencies should have elected an assembly which, whatever else it may do or leave undone, is determined to take such measures as it can to prevent any return of the sad and sorrowful reign of the Blatherskites?

ENGLAND.

LONDON, April 14, 1871.

THERE is one matter in which, by the general consent of such Americans as I have had the pleasure of knowing, we of the old country may claim some superiority over you. We have a greater capacity for taking a holiday, or, if you prefer the phrase, for doing nothing. It is not surprising that we should have developed such a talent, considering how many persons there are in England whose whole life is one long apprenticeship to the art. With a large class which merely regards business as an occasional sauce to pleasure, we have naturally made ample provision for interspersing our labors with a due amount of relaxation. An English university, for example, enjoys six months of absolute recreation, and any effort to diminish this apparently extravagant allowance is generally met by the assertion that the human brain would not bear a longer and more continuous strain. At the present period, we are enjoying the brief interval which gives to weary Londoners a foretaste of the pleasures of the long vacation. Members of Parliament are dispersing—some to take lessons in practical politics at the new siege of Paris, others to repose in the bosom of their families, and others (for that cruel fate overtakes some zealous persons) to favor their constituencies with brief expositions of their political views. Humbler mortals, each in their own department, are doing what they can to make the best of their brief absence from harness by snatching a few mouthfuls of country air. The university boat-race gives the first signal for play. All London turns out at a premature hour in the morning to watch for hours on the banks of the Thames for a brief glimpse of the racing crews. Then comes Good Friday, which, in more superstitious times, was supposed to have certain solemn associations, and to be properly celebrated by fasting and humiliation. The ordinary Briton now reads his *Daily Telegraph* in the morning, and feels himself considerably edified by its burst of sentimental eloquence, and then proceeds to enjoy himself after his fashion, which, I fear, too often includes the consumption of a considerable quantity of spirituous liquors.

Easter Monday, however, is the most generally recognized festivity, and it is now annually celebrated by a grand review of volunteers. Some 25,000 men had this year the pleasure of spending a day on the Brighton downs. Considered in the light of a grand picnic, these performances may be considered as a decided success. For some reason or other, men like to dress themselves in fancy uniforms, and march about for many hours in a bitter east wind, and other people like to look on. The day is something of the longest, and to persons of defective patriotism not a little tiresome; but, on the whole, it seems to come under the general description of "good fun," as understood by the general public. Regarded as a military spectacle, we used also to be proud of the display; but in such matters we are naturally growing to be rather more exacting. In fact, the business is hardly taken seriously enough to be a real trial of strategic skill. A volunteer writes to complain that his regiment was first ordered to fire away its ammunition at a distance from the enemy equal to about twice the maximum range of the rifles; that it was then moved up to a position where it partook of luncheon under the raking fire of a strong battery of artillery, at the distance of 100 yards; and that some of its supports afterwards extended in skirmishing order in its rear and commenced a lively fire into its ranks. I know not whether this picturesque anecdote be strictly true, though, from my own experience on similar occasions, I can believe it to be not altogether fanciful. The main object of these performances seems to be the exhibition of a number of picturesque tableaux to the inhabitants of Brighton and their visitors, and the reference to any practical application of the lessons supposed to be taught is exceedingly faint. We are promised better things in future; and people are beginning generally to admit that our volunteer army should either be disbanded or made really efficient. The last course will, I presume, be attempted; but there is great difficulty in persuading gentlemen, who think that they have made sufficient sacrifice when they have gone through a certain number of drills and fired a few rounds at a target in the course of a year, to submit to any sufficiently stringent tests. However, there is so much good raw material that it seems a pity not to turn it to account. At present, our volunteer army is not only deficient in training, in discipline, and in really capable officers, but it has absolutely no organization which would enable it to take the field at any moderately brief notice. To supply these wants, and to impose adequate tests upon volunteers, without damping their ardor, are amongst the problems which the War Office is endeavoring to solve. It is a long and exceedingly complicated task; but we dismiss the matter from our minds at present, to be discussed again, doubtless, in the endless debates which still await the Government measure of army reform. The very thought of that dismal flow of words is painful at the present moment, when our holiday is just beginning. In another fortnight we shall be buckling to our task once more, and therefore we would fain forget it now.

I know not why it is, but when other subjects retire for a space into the background, theological questions always seem to come uppermost in the English mind. For example, the *Times*, which represents the current, easy-going orthodoxy, with a holy horror for all extremes, all enthusiasm, fills most of the space left us by French difficulties with discussions of various religious topics. It has been reviewing Mr. Darwin's new book quite in the good old spirit, which, as I had begun to hope, was rather growing out of fashion. Besides raising the ordinary scientific and metaphysical objections, which are fair enough, whatever their force, it cries out that if Mr. Darwin's views were well-founded, we should lose all sound basis for religion and morality; there would be no particular reason for believing in God or the soul, or for anything except the most grovelling views of expediency in place of morality. According to the epigram, the *Times* is

in that stage when the regular argument is that a new theory is contradicted by the Bible, and perhaps is approaching the stage at which the argument will be that everybody knew it before. Meanwhile, the popularity of Mr. Darwin's speculations is certainly remarkable. His book is, beyond all comparison, the most successful book of the season; and though, perhaps, few people read to the end of it, almost everybody feels bound to talk about it. The most remarkable thing, however, in spite of the ebullition of the *Times*, is that most people are so very little startled by an argument which, not many years ago, would have been supposed to be subversive of all our religious ideas. Perhaps they have reflected that, even if monkeys were our ancestors, the great point is that we are men, and that no explanation of our origin makes much difference to the conditions under which we are actually placed.

Meanwhile, a more bitter discussion, to which I have already more than once alluded, is raging in theological circles. The Purchas case has produced an amount of excitement to which nothing has afforded a parallel since the development of the Tractarian movement thirty years ago. The discussion overflows the bounds of the so-called religious papers, and it is impossible to take up any newspaper without coming upon furious invectives from one side or the other. The last contribution to the controversy comes from the Archbishop of Canterbury, and it is sufficiently characteristic of the spirit in which the rulers of the church are meeting the storm that rages around them to deserve short notice. The primate lays down, in the first place, the principle that the law must be respected, and that, if the judgment of the highest courts is to be impugned as dishonest and ignorant because it tells against any particular party, there is no result except absolute anarchy; but when he tries to draw some practical conclusions, he becomes terribly puzzled. He says, on the one hand, that the law should not be enforced in a rigid and inquisitorial spirit; and on the other, that the supremacy of the law must be recognized. He begs the clergy not to trouble themselves about such trifles, but to unite against the progress of infidelity. This is all very well, but it does not throw much light upon the subject. The courts have decided that the clergy are not to array themselves in particular garments. The question is whether the bishops are to endeavor—moderately, of course, and with due regard to particular circumstances—to suppress the use of the garments in question, or whether they are to fold their hands and allow the decisions of the court to be neglected and its members openly insulted. The good archbishop—for he is really a most exemplary and amiable prelate—obviously shirks this question. He talks about his "dear brethren" and the paternal interest of his colleagues in their subordinates, and is generally most anxious that everything should be made as pleasant as possible. Unfortunately, people have become far too angry to listen to such well-meant advice. If, as is highly probable, the bishops act in the spirit thus recommended, and endeavor to evade any responsibilities whatever, the result is easily foreseen. Indignant Protestant Associations will bring actions against the recalcitrant Ritualists, and an amount of bitter feeling will arise which will speedily threaten very seriously the vitality of the Establishment. There seems, indeed, to be another possible mode of escape. There is, namely, a prospect that the case may be reheard, and, of course, the judgment may be reversed. And yet a reversal of the judgment, under such circumstances, would be such an apparent confession of weakness as must damage most seriously the theory of a state church. It would be said, and with every appearance of justice, that the court had been bullied into giving up their interpretation of the law simply because it was unpleasant to a good many influential people. The immediate danger would no doubt be averted, but it would be at the expense of the character of the supreme court of appeal, and therefore at the expense of the only tribunal upon which the laity can count to restrain the vagaries of the clergy. The prospect is not encouraging to the advocates of an establishment, in whatever direction we look; and the want of backbone, if I may use such a word, exhibited by the highest authorities, is of rather bad augury for the successful management of the institution in the stormy times which await it.

Notes.

FORTY years after the first publication of Carlyle's "Sartor Resartus," a cheap edition of it and of all his works is begun by Messrs. Scribner, Welford & Co., in connection with the English house of Chapman & Hall. The series will comprise upwards of thirty volumes, issued monthly, in shape a square 12mo, quite convenient to hold; and in respect of binding, paper, and print so unexceptionably good that the price at which they are furnished seems very low indeed. Any single volume may be had for ninety cents, or the whole set may be subscribed for at seventy-five cents. The "Sartor Resartus" has an admirable steel portrait of the author. The demand for it has been such as to promise a very gratifying success for the edition, which, by the way, will have all the merits of the carefully revised library edition of the same works.——Mivart's "Genesis of Species" has been reprinted by Messrs. D. Appleton & Co.——Messrs. Dodd & Mead announce "The American Cardinal," a novel by an Episcopalian clergyman whose name is not divulged; and "Papers for Home Reading," by Rev. John Hall, D.D.——On the important subject of trade-marks there are said to be but two law-books in the language, one English and one American, and both incomplete. Messrs. Robert Clarke & Co. are to publish a work which will repair this deficiency: "A Collection of all the American Cases, adjudicated prior to the year 1871, affecting the law of Trade-Marks; with references, and an appendix containing abstracts of the leading English cases, the U. S. statute, etc.," by Rowland Cox, of Washington, D.C. There will be a copious and minute index.——Messrs. Macmillan & Co.'s agency in this city has been removed from No. 63 Bleecker Street to No. 38.

—We share fully in the regret of Mr. Robert Clarke that the Ohio Valley Historical Series, of which he has been the disinterested editor and publisher, is to be discontinued for want of support. It has been, he states, less favorably received by the citizens of the Ohio Valley than at the East, and they are therefore immediately responsible for its termination. We trust, however, that the enterprise may be revived at no distant day. In any event it has doubtless answered one of the aims of its projector, viz., "to do something towards the preservation of the fast disappearing records and reminiscences of the early days of the now great and prosperous Central West." The last volume, in which this announcement is made, is one of the most interesting of the series, though the greater part of it has already appeared in print. It contains: "Memorandum of a Tour made by Josiah Espy in the States of Ohio and Kentucky and Indiana Territory in 1805;" "Two Western Campaigns in the War of 1812–13" by Samuel Williams; and "The Leatherwood God: An Account of the Appearance and Pretensions of Joseph C. Dylks, in Eastern Ohio, in 1828," by R. H. Taneyhill—one of the most extraordinary narratives of religious fanaticism we have ever met with.

—Mr. Espy's narrative is that of a man with a "curiosity for observation," as he himself says, and with an acute judgment which led him frequently to conclusions greatly in advance of his time. For example, at the Yellow Spring, in Ohio, he remarks:

"From the small quantity [of sediment] which this spring deposits in one year, compared with the immense size of the mound, the man of science will find it difficult to reconcile the Scriptural account of the *time* of creation (according to common computation) with the number of ages it must have taken to produce this little mountain of mineral earth. To me it is another evidence of the great age of the world, and that Biblical chronology has not rightly been computed heretofore."

Other passages confirm this aptness for the study of nature, while the following attests the writer's political insight:

"The emigrants [to Ohio] from Kentucky, Tennessee, and the Southern States are chiefly composed of those who are either opposed to slavery, or are unable to purchase slaves. Consequently, this class of people are daily increasing in Ohio. The expectations of the few who wish the introduction of slavery there can never be realized." In Indiana, on the other hand, "this circumstance [the legalizing of slavery, 1805–1810] will check the emigration of farmers who do their own labor, while the slave-owners of the Southern States and Kentucky will be encouraged to remove thither; consequently the state of society there will be altogether different from that of Ohio. Its manners and laws will assimilate more and more to those of Virginia and Kentucky, while Ohio will, in these respects, more closely imitate Pennsylvania and the Middle States."

—We have been furnished with the official abstracts of the census returns of the Territory of Utah for 1870. They should enable us to see whether the anomalous state of society there existing has produced any marked effects on population. As some standard of comparison is required for this purpose, we have taken the population of Massachusetts, where, during the past two hundred and fifty years, men have been content with one wife apiece. The Massachusetts returns are taken from the published report of the State census of 1865, being the latest available. The total population of Utah is 86,786, and of Salt Lake City alone 17,346. There are 1,456 more males than females in the Territory; but, excluding the young children and the Chinese, the numbers of the sexes are nearly equal. Above the age of twenty, the foreign-born exceed the native-

born, and, among the foreign-born, the women exceed the men. 4,790 men and 5,379 women, between the ages of 20 and 35, were born in foreign countries. In Salt Lake City, which, we suppose, may be regarded as the headquarters of Mormonism, the proportion of foreigners is greater. Nearly three-fourths of the whole number between the ages of 25 and 50 were born abroad, and of this class we find 1,577 to be men, and 1,791 women. The following table shows the comparative ages of the population in Utah and in Massachusetts, expressed in each case in percentages of the whole number:

	Utah. 1870.	Massachusetts. 1865.
Under 5	19·24	10·57
5 to 10	15·64	11·32
10 to 15	13·39	10·00
15 to 20	9·42	9·25
20 to 30	14·02	17·80
30 to 40	11·15	14·64
40 to 50	8·00	11·27
50 to 60	5·21	7·61
60 to 70	2·80	4·67
70 to 80	0·95	2·10
80 to 90	0·17	0·60
90 to 100	0·01	0·06
Unknown	—	0·11
	100·00	100·00

—It will be seen from the above that children under fifteen years of age make up (in round numbers) half the population of Utah, and one-third of the population of Massachusetts, while 15 per cent. of the population of Massachusetts, and 9 per cent. of that of Utah, are above 50 years of age. This proportion of children in a new country, where additional hands are of value and additional mouths of little account, where there are also but few persons of advanced age, and a nearly equal number of the sexes at maturity, would not strike us as remarkable even if polygamy did not exist. In Massachusetts it is to be observed that, besides the very considerable number of aged persons, there were, in 1865, 49,185 more women than men between the ages of 20 and 40. There was that number of women at marriageable ages for whom no partners existed. Under a system of polygamy, it is reasonable to suppose that most of them would have had husbands and children. In Utah the population shows a proportion of 156·4 children under five years to each 100 women between the ages of 20 and 40; in Massachusetts, a proportion of 58·2 children under five years to each 100 women between 20 and 40. The proportion of the sexes among children under one year of age in Utah corresponds very nearly with what has been observed wherever accurate records are made. The laws of nature in this respect are not disturbed by the accident of one man having six wives and five men having none. 105 or 106 males to 100 females is the birth-rule the world over, and Utah conforms to it.

—Temporary expedients like the Shellabarger Bill are least to be feared by the Ku-klux. Their greatest enemy, to speak comprehensively, is "the long run." Give time enough, and there are plenty of slow-working forces that will surely undermine this or any similar organization opposed to public quiet and prosperity. One of these, and which is perhaps nearest to the enemy's works, is the Peabody Education Fund; and we recommend, as a capital anti-Ku-klux tract, the fifth report of its general agent, Dr. Sears (Cambridge, press of John Wilson & Son). His account of the progress of education in Virginia, West Virginia, Georgia, Florida, and especially Arkansas, is very encouraging. In North Carolina, on the other hand, the public school system "has met with some opposition and more coldness; the taxes have been imperfectly collected and paid into the treasury; and the counties and townships have been negligent in making the returns required by law." The funds available for the education of 342,168 children of school age are, in this State, but $200,000. In South Carolina "the new school law has not been in operation long enough, nor have the school funds been ample enough, to produce very marked results." Texas, also, which has meant well, and legislated not badly, has not yet put its system into operation. In Alabama, the system established more than two years ago has met with opposition, and comparatively little has been done. The work of the Fund has been, as usual, to encourage the founding of schools where none exist, to aid independent efforts already begun, to sustain schools of special value or in peculiar straits, but to do nothing except as auxiliary. This course, as wise in itself as necessary from the smallness of the Fund's resources, has been remarkably successful in developing a public interest in education and a determination to have free schools at any cost. During the past year it disbursed, in assisting 213 towns, districts, and institutions, the sum of $108,900. The people thus benefited have expended of their own means $550,000. The Board of Trustees, at the annual meeting in Philadelphia in February, expressed its "deep sense that the time has come for calling the attention of the State of Mississippi to the bonds issued by the State to the Planters' Bank," which were included in Mr. Peabody's gift, and which, as is well known, the State repudiated when less scrupulous, it is to be hoped, than now. The Trustees voted to present a memorial to the Mississippi Legislature on this subject.

—The following extract from Dr. Ellis's "Life of Count Rumford" (p. 102) is not the least instructive portion of that valuable work. With the necessary changes, it might answer as a picture of the French conduct of the late war:

"When, soon after the peace, the members of the successive administrations and parliaments of Great Britain looked back over the long series of mortifying blunders, mishaps, and discomfitures connected with the management of the war, there was one conviction which, as an explanation or palliation, offered them chief relief, though in itself hardly a consolation, namely, that they had all along been working in the dark. They were made aware of the entire ignorance, and of the wholly misleading knowledge so-called, of this country, its geography, its people, their feelings, purposes, and resources, under which the war had been conducted. This ignorance was felt in itself to have been culpable, though the reason of it had been mainly indifference, if not arrogant contempt. Means of information had been within the reach of the Government. Franklin and other provincial agents had offered to enlighten the ministry. Whole drawers of despatches and other important papers relating to the American colonies had lain unopened in Government offices. Indeed, the first knowledge which some of the custodians of those papers and many more recent historical and political essayists obtained about important documents hid away in those offices, came to them through the requests sent in for the privilege of examining them by investigators like Mr. Sparks, who crossed the ocean for that purpose."

The France of that day, indeed, committed no such blunders. What pains Choiseul and De Broglie were at to learn the true condition of the colonies, is well described in Kapp's "Life of De Kalb."

—In Plato's version of the story of Gyges, he relates how, after that shepherd had found the magic ring, "he chanced to turn towards the inner side of his hand" the *stone* of the ring, as we should naturally say in telling it; but the Greek word used by Plato is *σφενδόνη*, literally "a sling;" *i.e.*, "that which contains the stone," the part of the ring holding the stone. For ordinary purposes of translation *stone* answers; if the translator wishes to be more exact, and to show that the original term means *what holds the stone*, we really do not see any valid objection to *setting*. If, however, this be rejected as ambiguous, we must find the exact English for *σφενδόνη* in this sense, if such word exists. There *is* such a word, though antiquated; it is *bezel* or *bezil* in its later, *beazil* or *beasel* in its more archaic forms. We presumed this to be the received Cambridge rendering, till, on referring to Messrs. Davies and Vaughan's translation of the "Republic," we found to our surprise *hoop*—a translation positively erroneous, as we shall show. Professor Jowett gives *collet*, which we suppose must be the recognized Oxford term. We do not prefer it; first, because there is a doubt, to say the least, whether *collet* (probably from Latin *collum* and cognate to *collar*) does not mean the *whole circle* of the ring. Crabb's "Technical Dictionary" says "bezel or bezil is the upper part of the collet of a ring which encompasses and fastens the stone." This sentence, to be sure, is equivocal; the relative "which" *may* refer to "collet," but the sense certainly points to "bezel" as the antecedent, so that here we have an objection like that to the Davies-Vaughan rendering, only less strong. For *hoop* certainly means the *whole circle* of the ring; or, if there is any limitation, it is precisely the *σφενδόνη* that is excepted; the hoop is either the whole ring, or the whole ring *minus* the bezil. Secondly, *collet* has other technical meanings in various arts; *e.g.*, in gunnery it signifies the part of a cannon next the muzzle, whereas bezil in its various forms always means the same thing.

—Dr. Döllinger has a companion in persecution in Dr. Tangermann, of Unkel, whose opposition to the infallibility dogma has caused the Archbishop of Cologne to suspend him from his cure. He has accordingly published a pamphlet with the title: "The Romish-Jesuitical Innovation" (*Die römisch-jesuitische Neuerung*), in which he asks the Government whether it ought not, in the case of a priest who has remained true to the ancient faith, and whose congregation adheres to him, to sustain him against the discipline of the bishops. Such an appeal reminds us that church and state are still united in Prussia, while the Latin race south of the Alps is on the eve of formally pronouncing them divorced. An Italian critic, indeed, has taken Döllinger to task for saying that the system which declares the tribunal of God and of the Pope to be one and the same, "bears its Latin origin stamped on its forehead, and can never penetrate into German countries." In the Roman Empire, replies the

Perseveranza, after the rise of Christianity, the civil power and legislation constantly maintained their full rights with regard to the ecclesiastical authority; and it was not till the barbarians had descended into Italy ("for there was a time when the Germans were barbarians") that the church usurped those rights, and the Papacy began to form itself into a sovereign and universal power. The Latins were the most obstinate in opposing its supremacy over the civil authority, and the Holy Roman Empire was the product neither of the Latin mind nor of Latin history, but of the Papacy on the one hand and the German spirit on the other. "We Latins resisted it and fought it down, but did not create it." Latterly, since the birth of ultramontanism, whatever the share of the Italian clergy in spreading and defending it, the Italian laity has either paid no heed to it or has combated it; "and to-day we Latins have a better right than foreigners to call these doctrines *ultramontane*." The notion of an empire armed, as Dante says, with two swords, spiritual and temporal, is so peculiarly German that German society is not yet freed from it. As it was a German and not a Latin movement that maintained from 800 till 1500 A.D. the Holy Roman Empire, so was that later movement, begun by Luther, "which in Protestant states subjected the church to the prince, and was formulated in one of the most horrible sentences with which history has ever been stained—*cujus regio, illius religio*."

—Neither must what religious freedom owes to France of the eighteenth century be forgotten by the detractors of the Latin race; nor ought they to flatter French vanity at the expense of truth in order to impute a Latin origin to Charlemagne's union of church and state. "No claim can be more groundless," says Mr. Bryce in his "Holy Roman Empire," "than that which the modern French, the sons of the Latinized Kelt, set up to the Teutonic Charles. . . . He was a Roman, much less a Gaul, in nothing but his culture and his width of view; otherwise a Teuton." The French, in fact, have not been over-cautious in appropriating great men and great events to themselves. They have even gone so far as to call the art of printing a French invention, because Guttenberg lived in Strassburg, which, says a German scholar, writing in 1866, "it is well known has belonged to France since the creation of the world." As it is a poor rule that will not work both ways, the Germans in recovering Elsass have doubtless regained also their title to the great discovery of modern times.

—Apropos of Döllinger, the *Westliche Post* recalls his "excommunication" more than thirty years ago by Heinrich Heine, he being then one of the firmest pillars of the Roman hierarchy. Heine asks, in his "Wintermärchen," while speaking of Munich:

> "Lebt denn noch der erzinfame
> Pfaffe Döllingerius—
> Dieses ist doch wohl sein Name—
> Lebt er noch am Isarfluss?"

The "world-infamous" has in the meantime become the "world-famous;" and Heine's lines might now be adopted into the Catholic hymnology.

JOWETT'S TRANSLATION OF PLATO.*

(SECOND NOTICE.)

PERHAPS by this time the reader may ask, Is Plato worth all the praise and trouble that have been bestowed on him? And, if so, why? If we give him up as a systematic philosopher and a practical statesman, what do we leave him? Much, as we shall endeavor to show.

A very great merit of Plato's is his merit as a dramatic writer. Let us take a single dialogue, the "Gorgias" (which we select not because intrinsically better fitted for our purpose than many others, but because, having been for many years a text-book at Yale, it is known to more American readers). What a wealth of dramatic power it displays! Callicles, the finished gentleman and unscrupulous man of the world, ambitious withal, something much superior to a M. de Camors, having in him the stuff of a Bonaparte or a Bismarck, intended, some think, for the real Critias. Gorgias, the professed rhetorician, fertile in commonplace, weak in first principles, yet not without a certain dignity. Polus, related to Gorgias as the colt to the horse, the tyro to the master, the college senior to the experienced politician. And Socrates himself—sceptical, ironical, satirical, but with a deep background of seriousness, overhung by the shadow of his approaching doom. Nor must we overlook that wonderfully flexible style, which imitates without servility, and parodies without vulgar ridicule, as in that charming speech of Agathon's in the "Symposium"—charming to us who can but make haphazard guesses, for the most part, at the pronunciation and rhythm of the original, a discourse filled with antitheses like a Thucydidean* speech, artificial to the last degree, yet so beautiful in its art and artifice that we could not wish it to be more natural.

So much, briefly, for Plato as a literary man. Now for him as a philosopher. We admit that he was not a consistent political speculator. He began life as a liberal; he ended it as a bigot. And, though his works contain many able strictures on the practical working of Athenian democracy and the general tendency of democratic institutions, it cannot be maintained that he ever suggested a practical remedy. Nor was he a consistent metaphysical speculator. Not only has his great theory of ideas been utterly dropped by modern thinkers, but he himself seems to have dropped it in his later, post-Socratic period. Such, at least, is the inference which most readers draw from the "Parmenides," and which Professor Jowett certainly does not discourage.

But we are far from having covered the whole ground. In the negative conclusions, the resultless results of many of the earlier dialogues, we see not indeed philosophic truth itself, but one most important preliminary step to the discovery of truth. Whatever may have been the merits of Parmenides as the pioneer of logic and metaphysics, it is not too much to say that the sceptical spirit took its first definite form and crystallized, so to speak, with the Platonic Socrates.

How much of this truly remarkable character was a real man and how much mythical, how much of him was Socrates and how much Plato? is a question, the discussion of which has filled shelves of English and libraries of Continental literature, and into the depths of which the reader will hardly expect us to plunge. We shall only notice two points connected with it which, to the best of our knowledge and recollection, have not attracted much (if, indeed, any) comment.

Persons who take an unfavorable view of Plato on account of what they consider his mysticism and sensualism, hold that he foisted upon Socrates a great deal that was not Socrates at all, and that for a true and correct representation of the sage we must turn to his other great disciple, Xenophon. *Per contra*, those who worship Plato with the admiration of a German for Goethe, and regard Xenophon as a good, honest country gentleman, very liberal-minded and sometimes verging on twaddle, maintain that Socrates imparted to him more of his esoteric mysteries, but only revealed to the pupil what the pupil had capacity to appreciate. Both parties, so opposed in other respects, seem to agree in this, that Xenophon's representation of Socrates makes no *addition* to the real character.

Now, is this an adequate view of Xenophon's position? Was he, in regard to his master, only a better sort of Boswell? We think not. Any man who can write a historical novel like the "Cyropædia," must have some idealizing power and propensity; and there is, therefore, no absurdity or improbability in the supposition that Xenophon idealized *his* Socrates after his fashion.

Again, we suspect that the negative and sceptical character which pervades most of the earlier Platonic dialectics was one of the main causes that stimulated the wish to build up a complete and consistent system of morals, politics, and general philosophy out of the long series of Plato's works. Men supposed (not so unnaturally) that all this levelling of the ground must be intended as a preparation for some great and harmonious edifice, and the certain amount of connection between certain dialogues would favor the idea that all these bilogies and trilogies (so to speak) might be ultimately reduced to a single orderly group.

Of the two great qualities which we have remarked in Plato, Mr. Grote lays most stress on the latter. Professor Jowett, while recognizing both, and giving fair prominence to the former, rests his claim to a great reputation mainly on a third, namely, that he was "the father of idealism." And this leads us to look back on what we have said about Plato's scheme of government. One of our paragraphs in that place may require a fuller development. We noted that the abolition of marriage and private property was confined to the guardian class in the "Republic." That this important limitation should be neglected by persons who speak of Plato at second, or third, or tenth hand is not remarkable, but we had never met with a *scholar* who even in the most cursory manner ignored it,† and we

* "The Dialogues of Plato. Translated into English. With Analysis and Introductions. By B Jowett, M.A., Master of Balliol College, Regius Professor of Greek in the University of Oxford." In four volumes. London, Oxford, and New York: Macmillan & Co. 1871.

* Yet no more Thucydidean than Elizabethan. "Let not us that are squires of the night's body be called thieves of the day's beauty." Is not this the very counterpart of "Οι δ'εὐπρεπῶς ἄδικοι ἑλόντες εὐλόγως ἀπρακτοι ἀπίασιν?

† Except George Cornewall Lewis, in whom we attributed the omission to inadvertence.

were certainly surprised to find Professor Jowett speaking of it as "an omission of no real significance, probably arising from the plan of the work, which prevents the author from entering into details."

In order to weigh the probabilities in this matter, it is necessary to correct the wrong impressions which we may have acquired of ancient democracy from our experience of modern, and especially to rectify the wrong inferences which we are apt to draw from isolated facts in Greek political history. Thus, when we read of seisactthies and liturgies (to speak after the Anglo-Greek manner of Mr. Grote), that is to say, of almost periodical repudiations of debts and impositions on rich men of expensive public duties, we are tempted to regard the fierce democracy as something far more radical than any coherent government of later times; and, if the existence of slavery threatens to interfere with this conception, the mental answer is that, at any rate, slavery promoted a sort of equality among all free men. Now, however a practical statesman or popular demagogue may have favored the notion of general equality, nay, whatever approaches may have been made to the thing itself in actual life, it certainly was not recognized as the true theory by either the Athenian philosopher or the Athenian gentleman. Neither Alcibiades nor Xenophon, neither the Platonic nor the Xenophontic Socrates, neither the dramatic Callicles nor the real Critias, acknowledged it. Plato himself, while anticipating in his way all the "strong-mindedness" of woman and her equality with man, never said or thought one man was as good as another. The "common people," the *βάναυσοι*, were as much below the "gentlemen and scholars," the *καλοκἀγαθοί*, as in aristocratic England or Austria. Different legislation for different classes was exactly in accordance with the speculative views of the educated, though the hard logic of facts generally hindered them from carrying out these views in practice. And the principle that certain privileges carry with them certain restraints and self-denials (which is good Christian doctrine to boot) occurs frequently in the writings of Plato and of other philosophers.

The abolition of private property and marriage (especially the latter) for the guardians were measures chiefly aimed at the improvement of the breed, a result less important for the lower classes. Laborers and traders could "get on" well enough on the old plan. In the same way, a theoretical legislature might prescribe for a certain class of youth (say, gentlemen's sons or prospective officers or travellers) athletic sports and exercises requiring much expenditure of time and money, or both, which would not be desirable or feasible for the rest of the community.

But now comes up another important question. Granted that the *quasi*-communism of the "Republic" was confined to the guardian class, is this in Plato's favor as compared with later communists? Our first impulse is to answer in the negative, and to admit that, after all, the Regius professor may be right, and the distinction between the classes in this respectis of no practical consequence. For what was forbidden to the highest class, or the highest but one, would naturally have an unfavorable stamp throughout the whole state. Suppose—and a would-be Plato in Congress actually did make such a proposition not long ago—that all Government functionaries were prohibited from using fermented liquors or tobacco, then (supposing, also, that such legislation was practically effective and not merely nominal) a general disrepute would after a time be attached to these indulgences everywhere.

But when we pass from the region of theory to that of fact, the example of priestly celibacy in the Romish Church at once arises to confront us; and bearing in mind the prevalent Greek idea that the individual is always to be sacrificed to the state, we can understand how the *quasi*-communism of the guardians, though in some sense an honor, might have been the reverse of a privilege. There is much plausibility in this aspect of the case, yet we must not accept it too hastily without regard to some qualifying circumstances. The Roman Church has found it necessary to strengthen marriage against the consequences of clerical celibacy by various precautions, such as calling it a sacrament,* making it indissoluble, etc., etc.; yet, in spite of them, it may be doubted if as much honor is practically paid to the institution in Romish as in Protestant countries—even after all allowance has been made for some of our own recent eccentricities in the way of divorce—and certainly the notion of marriage is less compatible with that of exalted piety or holiness in the former than in the latter.

Still, on the whole, we may admit the limitation as a point in Plato's favor, but another plea often urged in his behalf and strongly pressed by Professor Jowett appears to us only an aggravation of the offence. We are told that Plato was an idealist, that he did not suppose his ideal state to be possible unless and until man could reach the philosopher's millennium, and much more to the same effect. So much the worse for his ideal, if it is bad. A bad ideal is worse than a bad reality. The former has material obstacles to excuse or palliate it. We say of an ideal, "It is very fine, but too good to be realized; the most we can hope is to be constantly approaching it, but the co-ordinate will never reach the abscissa." But if the ideal be not good, what then? Let us reverse Plato's method, and proceed from the individual to the state. We draw a hero of romance; we invest him with all the desirable attributes of humanity that can possibly be collected in a single person consistently. If such a man existed, we should like him for a friend or a connection; we should like to be like him ourselves. But take a hero of a certain French school; we may say that we admire him, but that means that we admire the skill with which he is drawn, as we might say that we admired a tiger, meaning that we admired his adaptation to destroy. We admire the character of Callicles in the "Gorgias," not the man Callicles, but the power with which he is depicted; in fact, not Callicles but Plato. We have no wish to be like Callicles; we do not propose him to our sons as a model.

On the whole, we are forced to conclude that the change in Plato from the Socratic to the positive, from the "Phædo" to the "Laws," was a moral decadence, and that only from a psychological point of view can it be called an intellectual progress, however deplorable.

* The accidental origin of this tenet (a misunderstanding of the later Latin *sacramentum mysterium*) does not interfere with its practical effect at an after period. Compare Macaulay's remarks on the exclusion of clergymen from the House of Commons, of the king from his own cabinet, etc.

FURNESS'S SHAKESPEARE.*

THAT a new Variorum Shakespeare is wanted, no one will be inclined to dispute. The last work of the kind—by Boswell, son of Johnson's biographer—appeared in 1821. In the half-century since then, Shakespearian studies have been carried on with constantly increasing activity. Much has been done for the criticism of the text, much for its interpretation. The number of critical editions has more than doubled. Illustrative works of every kind and of all degrees of merit have swarmed from the press. Along with the countrymen of the poet, English or Anglo-American, scholars of other lands have entered the field. The Germans, laboring with an unbounded enthusiasm, with a kind of Shakespeare-olatry, have done much for the higher criticism of the dramas as works of poetic art: what they have contributed to the construction and explication of the text, though marked by learning and ability, cannot be said to have very high value. We have thus a Shakespeare literature wonderful for extent and variety. It is clearly time that some one should go through it, and present its substance in a condensed and accessible form, furnishing a compend in which the Shakespeare student may find the main results on all points of interest, and may see where to go for fuller information.

This is the task—*opus vere operosum*—which Mr. Furness has undertaken. For his trial-piece he has selected "Romeo and Juliet," one of the earliest and one of the most attractive of the dramas. Text and commentary form the body of the volume. Below the text on each page stand the various readings; and below these, at the foot of the page, yet often nearly filling it, the explanatory notes. Here the aim has been to insert all remarks, wherever found, that throw a needed light on the meaning of the author. In deciding what to admit, the editor has exercised a liberal judgment. He has preferred, with reason, to err on the side of fulness rather than of defect. Perhaps he feared that by a stricter method he should exclude much that to some readers would seem interesting and useful. One aim of his work was to present a history of Shakespearian interpretation; and for this it was necessary that imperfect or erroneous views should appear in it as well as the correct. Often, indeed, the correct view is seen in a clearer light, and with greater force of evidence, when placed in contrast with the imperfect or erroneous.

The editor has taken pains to make his work complete to the very date of its publication. He has taken valuable observations from the third edition of Abbott's "Shakespearian Grammar," which has been out only a few months. The references to this excellent book might well have been more numerous than they are. Thus Abbott, § 461, would throw light on "thou'se hear" (I. iii. 9) for "thou shalt hear;" A. § 391, on "saints do not move, though [they] grant for prayers' sake" (I. v. 103); A. § 419a, on "the appertaining rage to such a greeting" (III. i. 58); A. § 292, on

* "A New Variorum Edition of Shakespeare. Edited by Horace Howard Furness." Vol. I. Romeo and Juliet. Philadelphia: J. B. Lippincott & Co. 1871. 8vo, pp. xxiii., 480.

"thank me no thankings, nor proud me no prouds" (III. v. 151). Where Romeo says to Friar Laurence, "both our remedies within thy help and holy physic lies" (II. iii. 51), a reference to A. § 333, on the third person plural in *s*, would have been worth more than the half-page of commentary, in which Mason declares that Shakespeare "has sacrificed grammar to rhyme," Singer rejoins that "Shakespeare must not be tried by rules [of syntax] which were invented after his time" (as though Shakespeare could have said *he are* or *we am*), Delius explains that "*both our remedies* (meaning the *remedy of both of us*) is in reality a singular," while Charles Knight exults loudly in what he is pleased to term "this exquisite bit of false concord."

In the collection of various readings which stands on each page between the text and the commentary, the student is shown the readings of all the five quartos, all the four folios, and all professedly critical editions down to the present time. Only for the first quarto (that of 1597), which differs widely from all the other authorities, and is more than a fourth shorter, a different course had to be taken: it is printed by itself, in full, and with fac-simile spelling, at the end of the volume. The critical editions are named on page xvii. in the order of their dates, and are thirty-five in number, including the second editions of Pope, Theobald, Singer, Knight, Collier, and Dyce. Many conjectural readings which were originally proposed in essays or articles of various kinds, have afterwards been adopted in one or more of the editions. In all such cases Mr. Furness is careful to name the first proposer. Indeed, he mentions, and credits to those who first suggested them, a large number of conjectures which have not been taken up in a single edition. In a collection of this kind, the main point, of course, is that it should be complete and exact. We cannot profess to have tested the author's work by comparisons of our own; we have not even the necessary apparatus for doing so. But from a variety of indications, we are satisfied that his self-imposed task has been executed with conscientious and unwearied fidelity.

A remarkable case of various readings, a case in which criticism and interpretation are equally involved, is reserved for the Appendix, where it occupies nearly thirty closely-printed pages. It relates to a single word in the monologue of Juliet, Act III., Scene II.:

> "Gallop apace, you fiery-footed steeds,
> Towards Phœbus' lodging: such a waggoner
> As Phaethon would whip you to the west,
> And bring in cloudy night immediately.
> Spread thy close curtain, love performing night,
> That *runaway's* eyes may wink, and Romeo
> Leap to these arms, untalk'd of and unseen."

The trouble here comes from the word *runaway's* (line 6), which appears, with only some difference of spelling, in all the early authorities. Of the critics, a large part retain it; but with a surprising diversity of opinion as to what it means. According to Warburton (whom Theobald and Johnson follow, the last with some hesitation), it is the *sun*, named *runaway* here from the swiftness of his course. According to Steevens (followed by Rann and Cornwall), it is the *night*, whose flight Juliet would wish to retard, and whose *eyes* are the stars. According to Lunt, it is *Phaethon*, as *run away* with by the steeds of the sun. According to Seymour, it is *Romeo*, as about to *run away* with Juliet. According to Douce (and Massey), it is *Juliet*, thought of as a *runaway* from her filial duty. According to Halpin (followed by Ulrici, Mitford, and Halliwell), it is *Cupid*, the *δραπέτης*, *fugitivus*, "runaway" *par éminence*. (Is not Mr. Furness partial to this view? He allows its advocates to present it at a disproportionate and unnecessary length.) Hunter writes *runaways'*, as genitive plural, making it refer to rovers who wander about in the night; and in this he is followed by Muirson, Delius, and Staunton. The last seems, indeed, to be only sure of the word *run-away*, uncertain "whether it applied to Romeo, or to Juliet, or to Day, or to Night, or to the Sun, . . or to the Moon, who has some claim to the distinction, . . or to the Stars, for whom much might be said; or whether," etc. But to many critics the difficulty of making out what is meant by *runaway* has seemed an objection to the word; and various attempts have been made to get rid of it by conjectural emendation. The first proposal, and perhaps the best, was that of Heath (in 1765), for *runaway's* to read *Rumour's*. Between *Rumour's eyes* in line 6, and *untalk'd of and unseen* in the next line, there would be a natural and perfect correspondence. Mason (in 1785) suggested *Renomy's* (from French *renommée*), which gives the same meaning as Heath's conjecture. Little different is *rumourers'* proposed by Singer. Hudson adopts *Rumour's*, partly under the influence of Grant White, who (in 1854) had argued ingeniously and forcibly in support of this reading; but in his edition of the drama (1861), Mr. White has preferred *runaway's*, to which he would give Warburton's explanation. Zachary Jackson, a practical printer, conjectured *unawares*, and was followed by Knight, Collier, and Verplanck. But Knight in his second edition has gone back to *runaways*; and Collier in his second edition adopts the reading *enemies'* from his famous manuscript corrector. To this last reading the German critic Mommsen gives his adhesion. Other suggestions are the *rude day's* or *soon day's*, or *roving* of Dyce, the *sun away* of Knight, with nearly a dozen more, which need not be mentioned here. All these opinions are presented in the language of their supporters. The discussion, as a whole, is spirited and entertaining; and, what is more, it furnishes a highly instructive specimen of the principles and processes of textual criticism. As to the result of all, it seems to be a negative one, that it is hardly possible to find an explanation for the word *runaway's* which will give general satisfaction, and hardly possible to find a conjectural emendation which will commend itself as probable to the majority of critics.

The Appendix contains also an extensive collection of discussions and remarks on the source of the plot, the date of the play, the text (with reference chiefly to the relation between the form it had in the first quarto and that which it afterwards received), the costume of the persons represented, and, finally, on the æsthetic character and value of the drama. Under the last head, the writers of France and Germany are represented with especial fulness. French criticism speaks here through Châteaubriand, Saint-Marc Girardin, Philarète Chasles, Guizot, Albert Lacroix, Alfred Mézières, Lamartine, and Taine: German criticism, through Lessing, Goethe, Franz Horn, Tieck, Ulrici, Rötscher, Gervinus, Vehse, Kreyszig, Sträter, Rümelin, Bodenstedt, and Cohn. This series of foreign critiques is exceedingly interesting, though it shows, of necessity, a great deal of repetition. What is most striking in it is the universal recognition of Shakespeare's poetic supremacy; the more striking, as in the French critics it is generally a somewhat unwilling recognition. They cannot thoroughly *enjoy* Shakespeare; his disregard of logical correctness and propriety, his frequent grotesqueness of fancy and coarseness of expression, the quibbles and conceits in which he often indulges—these things, and many more, are offences to their sensitive and exacting taste. Yet they cannot escape from his transcendent power. They are compelled to recognize his marvellous insight into human feeling and character, and the prodigious force and truth with which he portrays them, and to render him their unequivocal, though half-reluctant, homage.

The volume is dedicated to the Shakespeare Society of Philadelphia, from which association the editor seems to have derived inspiration and encouragement for his task. That this society has done thorough work in the study of the poet is shown by a note of Professor Allen's, inserted in the Appendix. It relates to certain phonetic contractions in the text of Shakespeare, such as *or'* for *or are*, *near'* for *nearer*, *in'* for *in an*, *but'* for *but the*, etc., and shows much ingenuity as well as careful observation.

As to paper and printing, the book is got up in admirable style. The only complaint one could think of making would be that it is, perhaps, *too* handsome; the completed work must bear a price which many students of Shakespeare will find it hard to pay. But the completed work will be a library in itself; the owner will be relieved from the purchase of many costly books which he might otherwise find it necessary to procure. We believe, however, that the demand for the work will be such as to make it worth while for the publishers to reproduce it in a cheaper form.

OUR GIRLS.*

"Voulez-vous rendre chacun à ses premiers devoirs? Commencez par les mères; vous serez étonné des changements que vous produirez. . . . Mais que les mères daignent nourrir leurs enfants, les mœurs vont se reformer d'elles-mêmes, les sentiments de la nature se reveiller dans tous les cœurs; l'État va se repeupler: ce premier point, ce point seul va tout réunir. Qu'une fois les femmes redeviennent mères, bientôt les hommes redeviendront pères et maris. Discours superflus! l'ennui même des plaisirs du monde ne ramène jamais à ceux-là. Les femmes ont cessé d'être mères; elles ne le seront plus; elles ne veulent plus l'être." A hundred years ago, Jean Jacques, in his sentimental wisdom, struck the note whereon ever since the changes have been rung, and it is curious to notice how steadily we have been repeating ourselves since the day when the philosopher desperately cried that all his novel theories, his eloquent attacks and warnings, were but "superfluous discourse." It is a little discouraging to find that the natural duties of mother and wife are nearly as distasteful in the America of 1870 as they were in the France of the previous century; that feminine tastes run as persistently in the direction

* "Our Girls. By Dio Lewis, M.D." Boston: J. R. Osgood & Co. 1871.

of high-heeled shoes and small waists now as then; in short, that while individual women have held their own, and made quiet advance, the bulk of the sex are pretty much what they were in the Garden of Eden. It looks as if we had a problem on our hands whose solution nobody but Mr. Darwin can offer, and he, alas! does not condescend to tell us how long we have to wait before the female brain shall become capable of evolving correct thought on the subject of self-culture. We fancy we could settle comfortably to our work, if somebody would demonstrate to us that, as it took a certain appreciable term of time for the pointed ears of the Lemuridæ to fold themselves into the pretty waxen shells wherein young ladies hang painful ornaments, so there is some definite period within which the brain-cells of the same young ladies will lose their extreme susceptibility to the flash of diamonds and the excitement of artificial distractions. But to wait for changes which can only come as a result of structural growth, demands a passive faith which would procrastinate all attempts at reform, and it is only fair to acknowledge that such books as this of Dr. Lewis do, in some dim way, suggest the cure for the evils which they attack.

In reading "Our Girls" and similar publications, one is throughout impressed with the fact that, while the education of girls is deplorably bad, and the education of boys not much better, there is a specific difference between the systems adopted for the two sexes—a difference based on an imperfectly appreciated truth. The sins of male youth are principally those of nature, arising, in nine cases out of ten, from a superfluity of unregulated life, while it is worth noticing that the feminine vices, against which Dr. Lewis and his forerunners and followers wage war, are every one of them of artificial origin. Not to go into the vexed question of the relative morality of the sexes, it is evident, if one takes the word of tutors and governors, that while Tom and John have most to fear from their own passions and weakness, their sisters find their worst enemy in a false social system. A boy is irrepressible; he grows in spite of you; the mere fact of his superior physical strength saves him from half the dangers that beset a girl's path. He may use bad language and bad liquor, but he will never fall a victim to tight lacing and décolleté dress, and his follies are, on the whole, more of his own seeking, and not so much the result of the misapplied force of other people's opinions. There is a strong and general impression that the mistakes in the education of women are capable of speedy cure, if only the right course of treatment can be hit upon, and it is this which ensures eager reception to the theories and systems that have crowded upon each other's heels for the last half-century. We all know in our hearts that human nature must undergo a radical change before the temperance reform will amount to more than a superficial agitation; we know that no act of Parliament or Congress can do away with the animalism of humanity; we confess with weary impatience that certain sins we shall rid ourselves of only by the slow process of growth; but with follies which belong only to a class and a time is another matter. Women may have to answer for all that Rousseau puts upon them—upon their action may hang the good of society at large—but they can justly recriminate, and declare with privileged directness of retort, that society has done quite as much harm to them as they have done to society. And here it is that the signs are hopeful, for the class of literature of which Dr. Lewis's book is a representative exhibits the intention of society to take up the matter in earnest, and to train its young girls with that intelligent attention to established law which has proved to be essential to the production of satisfactory race-horses and thoroughbred pigs.

Now, if we have concluded that this thing can be done, that young women are, physically and mentally, susceptible of immediate improvement, is it not worth while to give our clearest thought, our best strength, to consideration of the matter, and action therein? Dr. Lewis has undoubtedly done good service, and his heart is in his work; but the book which he offers to the public as the result of his experience is commonplace in style, faulty in arrangement, and contains more than a suspicion of quackery. While there is plenty of sound truth in it, there are also misstatements and exaggerations not to be excused even by the proverbial disagreement of doctors; and the physiological facts introduced would attain added power from a setting of correct and eloquent English, which they unfortunately lack. As a moral stimulant, it is not likely to be of much value; as a hand-book of general physiological information, or a manual of education, we have already better ones; the principal thing to be said in its favor is that it may strengthen hands for which Huxley and Herbert Spencer are as yet too heavy. The evils struck at are so familiar to most of us that they must be presented in a new light before we shall appreciate their magnitude and limitation; and while the thinking that is to be done must be hard and logical, it must be popularized and simplified to the level of the minds on which it is to act before it can become visibly remedial. On the highest plane of thought, we have in this generation produced much that bears directly and practically upon the education question, but the books in which this is embodied do not come within the range of the people who need them most. The sallow *élégante* on Fifth Avenue and the dyspeptic New England girl are not likely to be greatly benefited by the reports of German gymnasia or the closely written argument of an Oxford professor, and "Our Girls" and analogous works seem only to show the width of the gap which is waiting to be spanned. "The method of nature is the archetype of all methods," says M. Marcel, and on that point at least we have reached the unanimity of the wise; who now will make clear to us the workings of that nature upon which all our progress depends?

If the best of our American scientific men, who know the needs and the power of our American girls, could be brought to feel that this is too important a subject to be left to second-rate theorists or even to honest, unpractised enthusiasts, we might then hope for the production of a literature which should give vital assistance and wake up the whole nation to a sense of the value of a woman's life. There are few women in any station of life who are not conscious of their own warped natures and failure of development, and who are not willing to try a new path; but the leading and the teaching must come from the heights. "Our Girls" must look beyond behavior books and moral tales and empirical treatises for the help they need; learned professors must study the aching spines of their living daughters instead of the backbones of extinct fishes, and clergymen, wise in spiritual things, must condescend to teach lessons of practical duty to the little women of their flocks, before we shall get the change that we look for. Our educational machinery is confessedly at fault; we get a fair article of raw material, and return it to the market in the shape of Flora McFlimseys—a process of manufacture which we are gradually finding to be unremunerative.

"How to live?—that is the essential question for us. Not how to live in the mere material sense only; but in the widest sense. The general problem which comprehends every special problem is—the right ruling of conduct in all directions, under all circumstances. In what way to treat the body; in what way to treat the mind; in what way to manage our affairs; in what way to bring up a family; in what way to behave as a citizen; in what way to utilize all these sources of happiness which nature supplies—how to use all our faculties to the greatest advantage of ourselves and others; how to live completely? And this being the great thing needful for us to learn, is, by consequence, the great thing which education has to teach. To prepare us for complete living is the function which education has to discharge; and the only rational mode of judging of any educational course, is to judge in what degree it discharges such function."

The application of this test to our existing systems tells the whole story: our young women are *not* prepared for complete living; and if our only way out of our difficulty lies in following nature, it must be the men who know her best who must set the fashion for us. Until they are willing to write and speak for the enlightenment of the masses, bringing the leaven of scientific truth into our daily lives, the improvements in practical training will be uncertain and spasmodic, and we can only hope that the discussion will be immediately taken up in this country by men and women who can speak with authority and command general attention.

Diary of the Besieged Resident in Paris. Reprinted from the London *Daily News*, with several New Letters and Preface. (New York: Harper Brothers. 1871.)—A likeness, with a name under it on the cover, divulges the secret that the besieged English correspondent—by the bye, one of the *Tribune's* apocryphal "own"—was no less a personage than H. Labouchère, M.P.; and the perusal of a few letters makes it clear, which is far more important, that the writer is a man of excellent good sense and exquisite humor, a sympathetic yet unbiassed observer, and a racy delineator of things observed. His facilities as an observer were ample, and he bravely availed himself of them, little disturbed by the smell of battle snuffed from afar, the whiz of shells in the air, or the more threatening swagger of spy-hunting restaurant patriots. His day in Paris—at the height of the siege, yet before the bombardment—he thus describes, under date of December 18:

"In the morning the boots comes to call me. He announces the number of deaths which have taken place in the hotel [an ambulance hotel] during the night. If there are many, he is pleased, as he considers it creditable to the establishment. He then relieves his feelings by shaking his fist in the direction of Versailles, and exit growling, 'Canaille de Bismarck.' I get up. I have breakfast—horse, *café au lait*—the *lait* chalk

and water; the portion of horse about two square inches of the noble quadruped. Then I buy a dozen newspapers, and, after having read them, discover that they contain nothing new. This brings me to about eleven o'clock. Friends drop in, or I drop in on friends. We discuss how long it is to last. If friends are French, we agree that we are sublime. At one o'clock get into the circular railroad, and go to one or other of the city-gates. After a discussion with the National Guards on duty, pass through. Potter about for a couple of hours at the outposts; try with glass to make out Prussians; look at bombs bursting; creep along the trenches; and wade knee-deep in mud through the field. The Prussians, who have grown of late malevolent even towards civilians, occasionally send a ball far over one's head. They always fire too high. French soldiers are generally cooking food. They are anxious for news, and know nothing of what is going on. As a rule, they relate the episode of some *combat d'avantposte* which took place the day before. The episodes never vary. Five P.M., get back home; talk to doctors about interesting surgical operations; then drop in upon some official to interview him about what is doing. Official usually first mysterious, then communicative, not to say loquacious, and abuses most people except himself. Seven P.M., dinner at a restaurant; conversation general; almost every one in uniform. Still the old subjects—How long will it last? Why does not Gambetta write more clearly? How sublime we are; what a fool every one else is. Food scanty but peculiar. At Voisin's to-day the bill of fare was ass, horse, and English wolf, from the Zoölogical Garden. A Scotchman informed me that this latter was a fox of his native land, and patriotically gorged himself with it. I tried it, and, not being a Scotchman, found it horrible, and fell back upon the patient ass. After dinner, potter on the Boulevards, under the dispiriting gloom of petroleum; go home and read a book. Twelve P.M., bed. They nail up the coffins in the room just over mine every night, and the tap, tap, tap as they drive in the nails is the pleasing music which lulls me to sleep. Now, I ask, after having endured this sort of thing day after day for three months, can I be expected to admire Geist, Germany, or Mr. Matthew Arnold? I sigh for a revolution, for a bombardment, for an assault, for anything which would give us a day's excitement."

At that date the "besieged resident" had grown rather impatient of the long confinement, and of all the mock heroism played around him, and his letters became more and more tinged with that impatience which, he tells us, infected everybody, though but few felt annoyed by the hum bug.

"I have ceased to wind up my watch for many a week," he says in a vein rather too frequently indulged in, and which at once puts us on our guard concerning the acceptation of many an expression, whether of sentiment or of fact. "I got tired of looking at it; and whether it is ten in the morning or two in the afternoon is much the same to me. Almost every one has ceased to shave; they say that a razor so near their throats would be too great a temptation. Some have married to avoid active service; others to pass the time. 'When I knew that there was an army between myself and my wife,' observed a cynic to me yesterday, 'I rejoiced; but even the society of my wife would be better than this.'"

At such moments it was quite refreshing to him, after grumbling at or caricaturing the common variations of the ridiculous in the attitude of the besieged—which they called the sublime, however—to meet with a humbug of a quite unusual kind, such as he depicts in the following about the ex-confessor of the Empress, who "began life as a German Jew," and "is now a Frenchman and a Christian bishop:"

"'What is this?' cried the crowd, as Monseigneur Bauer, the bishop *in partibus infidelium* of some place or other, now came riding along with his staff. He held up his two fingers, and turned his hand right and left. His pastoral blessing was, however, but a half-success. The women crossed themselves, and the men muttered 'farceurs.' The war which is now raging has produced many oddities, but none to my mind equal to this bishop. His great object is to see and be seen, and most thoroughly does he succeed in his object. He is a short, stout man, dressed in a cassock, a pair of jack-boots with large spurs, and a hat such as you would only see at the opera. On his breast he wears a huge star. Round his neck is a chain, with a great golden cross attached to it; and on his fingers, over his gloves, he wears gorgeous rings. The trappings of his horse are thickly sprinkled with Geneva crosses. By his side rides a standard-bearer, bearing aloft a flag with a red cross. Eight aids-de-camp, arrayed in a sort of purple and gold fancy uniform, follow him, and the *cortège* is closed by two grooms in unimpeachable tops. In this guise, and followed by this *état-major*, he is a conspicuous figure upon the field of battle, and produces much the same effect as the head of a circus riding into a town on a piebald horse, surrounded by clowns and pets of the ballet. He was the confessor of the Empress, and is now the *aumônier* of the press; but why he wears jack-boots, why he capers about on a fiery horse, why he has a staff of aids-de-camp, and why he has two grooms, are things which no one seems to know. He patronizes generals and admirals, doctors and commissariat officers, and they submit to be patronized by him. Half-priest, half-buffoon, something of a Friar Tuck and something of a Louis XV. abbé, he is a sort of privileged person who, by mere force of impudence, has made his way in the world."

The acting of great personages of a different kind, such as the "venerable" Blanqui, the heroic Flourens, and other leaders of the clubs, is not forgotten either; and it is one of the merits of this diary that its disconnected but continued remarks on the feelings and attitude of the revolutionary classes—both high and low—afford us a tolerably clear insight into the gradual development, from its incipiency, of the agitation for the Commune, which, during the siege, culminated in the insurrection of October 31, and, after it, plunged France into the most senseless of civil wars. The "besieged resident's" remarks on Trochu, Ducrot, and other defenders of Paris, as well as on the conduct of the defence in general, also deserve attention; they are, however, fragmentary in their character, reflecting the fleeting impressions of the moment, and we should wrong the author—and mostly also the men he speaks of, for the remarks are rarely flattering—were we to reproduce them here, detached and in a broken form, as expressions of a more or less definite historical opinion. For these, as well as a multitude of other interesting or amusing observations, we must refer the reader to the book itself. We cannot refrain, however, from stating here the principal conclusions the writer was led to by the constant contemplation of Parisian political folly and conceit during that momentous period. It is this:

"If the thirty-eight million Frenchmen outside Paris are such fools as to allow themselves to be ruled by the two million amiable, ignorant, bragging humbugs who are within it, France will most deservedly cease to be a power of Europe. If this country is to recover from the ruin in which it is overwhelmed, it is absolutely essential that Paris should cease to be its political capital, and that the Parisians should not have a greater share in moulding its future policy than they are numerically entitled to."

Rome and the Campagna. An Historical and Topographical Description of Ancient Rome. With 85 illustrations and 25 maps and plans. By Robert Burn, M.A., Fellow and Tutor of Trinity College, Cambridge. (London: Bell & Daldy. 1871.)—This is a quarto of about 500 pages, and a valuable book. It is a careful and conscientious account of the remains of ancient Rome, giving the latest results of historical and topographical criticism and research. The maps and plans, twenty-five in number, are particularly valuable, giving the old buildings and the modern streets on the same plate, one over the other, in different colors; and of the Forum and parts adjacent. Separate plans are given for the time of the Republic and of the Empire. The woodcut illustrations from photographs are extremely accurate and well executed. The list of books quoted, Index of Quotations, Chronological Table of the Principal Buildings in Rome and the Campagna, and the Complete General Index, add greatly to its value. A complete collection of the one hundred and thirty-eight "Books on Roman Topography and Archæology," quoted by Mr. Burn, would be an invaluable contribution to the proposed library of our Metropolitan Museum of Art.

Memoirs of the Rt. Rev. Alonzo Potter, D.D., LL.D., Bishop of the Protestant Episcopal Church in the Diocese of Pennsylvania. By M. A. De Wolfe Howe, D.D. (Philadelphia: Lippincott & Co. 1871.)—Bishop Potter was a student of good classical and scholastic attainments, a preacher of sound and edifying manners, a philanthropic and public-spirited citizen, a churchman whose zeal was tempered with discretion, a bishop of practical wisdom, sincere piety, and a catholic spirit, and a high-toned Christian gentleman. These qualities appear in the memoirs and correspondence embodied in this volume, and were worthy of such preservation, though his life was marked by no special achievements in literature, theology, or reform, and by no extraordinary incidents or events. For the general public, and as a contribution to the history of the church, the volume would bear compression; but to the clergy of his diocese, and the wide circle of his personal friends, it will be the more acceptable because of the minuteness of its details and the unvarying eulogy of its tone.

MACMILLAN & CO.'S LIST.

Now ready, the Second Edition of Volume II. of

The War Correspondence of the "Daily News." From the Recapture of Orleans by the Germans to the Peace. Edited with Notes and Comments. Crown 8vo, with Map (Vol. I., Third Edition) $2 25.

Tales of Old Japan. By A. B. Mitford, Second Secretary to the British Legation in Japan. With upwards of 30 full-page Illustrations, drawn and cut on Wood by Japanese Artists. 2 vols. crown 8vo, $5. (Just published.)

Standard.—These are two very curious and very valuable books; curious because they help us to see a good deal of the inner life, moral customs, and religion of a remarkable people, concerning whom little is known, and valuable because they really contribute towards the history of a country just on the boundary line between barbarism and civilization. . . . . Mr. Mitford has collected both stories and sermons from authentic sources, and done his work as a translator with great freshness, vigor, and clearness of style. . . . . Taken as a whole, they are the most graphic and valuable sketches of a singular and interesting people that have yet been published."

Saturday Review.—"There are probably very few to whom its contents will not appear perfectly new, and to all they will be highly interesting."

Professor Huxley's Lay Sermons, Addresses, and Reviews. New and cheaper edition. Crown 8vo, $2.

I.

CALVINISM.

An Address Delivered at St. Andrews, March 17, 1871.

BY JAMES ANTHONY FROUDE, M.A.,

Author of "History of England," etc.

1 vol. 8vo, in cloth, 75 cents.

This address, which was delivered upon the occasion of Mr. Froude's withdrawal from the rectorship of St. Andrews University, Scotland, is an eloquent vindication of Calvinism, not from a theological, but from the historical standpoint. It abounds in striking and brilliant thoughts and in passages of ringing eloquence. The earnest discussion which it has provoked in certain quarters in England is sure to be resumed here, and the result cannot fail to be increased admiration for the genius and power of Mr. Froude as a writer and thinker.

II.

A NEW VOLUME OF THE

Illustrated Library of Wonders.

THE WONDERS OF THE HEAVENS.

By Camille Flammarion. From the French by Mrs. Norman Lockyer, with 48 illustrations. Printed on tinted paper. One vol. 12mo, $1 50.

CRITICAL NOTICE.

JAMES R. OSGOOD & CO.'S NEW BOOKS.

I.

THE HEATHEN CHINEE.

By Bret Harte. With 8 full-page illustrations by S. Eytinge, Jr. Paper, 25 cents.

Truthful James, Bill Nye, Ah Sin, and their eventful "little game" are here portrayed with great artistic skill and striking effect.

II.

THE LANDS OF SCOTT.

BY JAMES F. HUNNEWELL.

1 vol. 12mo. Uniform with the Library Edition of the Waverley Novels. $2 50.

This book contains sketches of the life and works of Scott, and of the objects and places with which they are associated, arranged in the order in which they could be most readily visited. These include picturesque scenes in nearly all the shires of Scotland, in England, Wales, the Isle of Man, France, Belgium, the valley of the Upper Rhine, and the far East. This is a book which would be heartily welcomed at any time by the numerous host of Scott's admirers, but it comes now with special fitness on the hundredth anniversary of the great romancer's birth.

III.

GINX'S BABY: HIS BIRTH AND OTHER MISFORTUNES.

From the Seventh London Edition.

1 vol. 16mo, paper, 25 cents; cloth, 50 cents.

"Satire is a formidable weapon when edged with truth, and we hope this book will be of service, as it certainly deserves to be.... It is a clever and telling piece of work honestly done."—Nonconformist, London.

IV.

THE FOE IN THE HOUSEHOLD.

BY CAROLINE CHESEBRO.

1 vol. 8vo, paper, 75 cents; cloth, $1 25.

This is an engaging and instructive story of domestic life, showing with great vigor and delicacy some of the evil influences which mar the beauty and destroy the peace of many a household.

V.

5 Beekman Street, New York.

The Nation.

NEW YORK, THURSDAY, MAY 11, 1871.

The Week.

THE treaty that is to be known as the Treaty of Washington has been signed by the Joint Commissioners, but we have not, as we go to press, anything which can be called absolutely certain knowledge of what it contains. This, however, is the account of it which is semi-authoritatively given: A board of arbitrators is to be appointed who shall settle upon the amount to be paid us by the English because of the depredations of the rebel cruisers of English build or equipment. This board is to be composed of five members, one of them being American, one English, and of the other three one being named by each of three designated sovereign powers. Apparently, then, the hope we the other day expressed that the Commissioners might do something to hasten the day when arbitration shall take the place of war between civilized nations of the first rank, is about to be happily realized. Certainly a very weighty tribunal is provided for, and, to make it still more probable that the arbitrators shall reach a solution of the *Alabama* question, the English Commissioners have consented, it is said, to lay down certain principles as to the duty and rights of neutrals, which are to govern the arbitration as so many supplementary principles of public law; and these supplementary principles are said to be in effect those which this Government, during the rebellion, thought should be acknowledged as binding rules of conduct, while the English Government replied that, as a matter of fact, they were not binding at that time. However, as it is agreed that they shall retroact on the negotiations that are to come, this difference of view is without practical importance. On the whole, we should say that the prospect of an adjustment is good; and that we may very likely see, as the upshot of one of the most obstinate disputes ever existing between the two nations, the establishment of some two or three new principles of international law honorable to both as a joint contribution to the civilization of the world. It will not be the first time in the history of this country that a like honorable distinction could be claimed for it.

Of less moment are the other matters touched upon, and perhaps the one most likely to make a hitch in the negotiations is the fisheries question. Briefly, the case of the United States was this: By the Treaty of 1783 we were to "continue unmolested" in fishing everywhere in seas, bays, inlets, and rivers throughout British North America. In 1814, nothing was said in the Treaty of Ghent about abridging our rights or privileges in this particular, but we were told that the British held that the war had abolished them. Our Commissioners held not, and that we had an inalienable right in the fisheries, one only to be destroyed by conquest—a right like a right to our own territory. But in 1818 we compromised, and took certain limited rights. In 1854 we made our Reciprocity Treaty, and got increased privileges; and in 1865 we declared the Treaty of 1854 at an end, and the fisheries question has been in a muddle for the last six years. The new Treaty gives us, not the rights we had under the Convention of 1818, which are what a strictly British construction would give us, nor does it give us quite all we had prior to 1812, which is what we should get under a construction strictly American, and, perhaps, only doubtfully a better construction than the British, though we think it more correct. Our apprehension, which is not very strong, that it is on the fisheries part of the Treaty that a hitch may be looked for, is based on the fact that this part of it is to be ratified not only by Congress and Parliament, but by the Dominion Parliament, and, we suppose, by some others of the Colonial Legislatures. Still, Sir John Macdonald probably knows what his fellow-countrymen are ready to do.

Senator Schurz was serenaded on Tuesday week in St. Louis by a very large and enthusiastic body of citizens, of all shades of political opinion. The speech elicited by this spontaneous expression of the popular favor was distinguished, like all the senator's efforts, by good sense and tact. There are few American orators who might not envy the latter quality, as displayed in the following passage:

> "This demonstration is in point of character and composition so peculiar, so unusual, as to be apt to become embarrassing to a public man under ordinary circumstances—embarrassing for the simple reason that, in the presence of two parties, the approval of one side might make him appear undeserving of the confidence and approval of the other. It is by no means embarrassing to me, and never will be embarrassing to me, to see the whole people of Missouri before me. Indeed, I see in it one of the most hopeful signs of the times."

These felicitous words paved the way for some excellent remarks on the national duty of wiping out for ever the animosities of the war, and engaging all parties in the study of the "great political, social, and economical problems which this generation has to solve." Recommending general amnesty as the best means of bringing this about, Mr. Schurz pointed to the admirable fruits of this policy as tried in Missouri. Passing on, in a strain of manly independence, to a statement of his political programme, he declared his fixed adhesion to the equal rights amendments of the Constitution—"not only because they are there in point of fact, but because, if they were not, they ought to be;" vindicated his attitude and vote on the San Domingo question and the Ku-klux Bill by his solicitude for "strict fidelity to the essential principles of constitutional government;" and closed his enumeration of principles and measures with the civil service reform, together with revenue reform and a reduction of taxes.

The bill for amending our State Code of Procedure has not yet been signed by the Governor, and the probabilities would seem to be against his signing it, though, since it has been printed in full, one ground of expecting it to remain unsigned has partly disappeared. At first, the section of it that attracted most attention was that restoring the common-law rules as to contempts, and while it seemed probable enough that the Ring would be not unwilling to let such a bill be signed, there seemed no particular reason why they should care enough about it to insist, and therefore some reason to expect that the Governor might, on this occasion as on others, throw a sop to Cerberus and be virtuous. It certainly is not for the interest of any man who thinks he has a political future outside of the State of New York to insult the press as it would be insulted by restoring the rules for contempt which were made for a world when newspapers had no existence, and when, one might almost say, revised statutes had not been invented.

But other sections of the bill proposed have "money in them" to an enormous extent. One "prohibits that any stockholder who may have been wronged or defrauded by any corporation, should bring suit anywhere except where such corporation has its principal place of business;" so that no one of our great corporations, which has or may hereafter have its principal office in this city, can be sued anywhere except in one of our courts. Then come various provisions, of which the general effect is this: the Court of Appeals, where all the judges are held to be honest, is greatly weakened; the power of the Superior Court, where are some honest judges, is greatly diminished; and, of all men in the city or the State or the country, the power thus taken from the tribunals which the bar and the public respect, is given to Barnard and Cardozo, the majority of the Supreme Court. Among their new powers, for instance, is that of the appointment of referees, the present practice being the equitable one of letting the parties agree upon referees in whom both have confidence. Now, the amount of business done before referees is about as much as that done in the courts—hundreds of millions of dollars; and favorite referees are young Mr. Tweed and other relatives, friends, and dependents of the Ring. So, although the Bar Association sends up committees to Albany; and although the lawyers everywhere protest; and although Mr. Hoffman himself is a lawyer, and would sign the bill with his eyes open to its full meaning, he may nevertheless sign.

How ever a bill of this kind could be got through a legislature containing many members who are lawyers is at first sight an astonishing thing, but the explanation is not difficult. From Congress down there is hardly a legislative body in the country where most of the real work is not done in committee-rooms; and, secondly, there is none in which there is not interminable talk at the beginning of the session and on towards the very end, while at the very end there is headlong haste and confusion. The result of these two things is that members necessarily must place a good deal of confidence in the different committees, or at any rate pay them deference, and that talk fills the time which bills should get, and most bills are hurried through in the last few days. At first, a bill introduced is referred, gets consideration from the committee, is printed, and may be read, sentence by-sentence, by each member, discussed point by point, and intelligently accepted or rejected. But when the thing to do is to pass a bill like this one amendatory of the code, everything is kept quiet till the session draws towards its last day, when scores of bills are to be worked off, and when, according to a bad custom, committees have leave to report by title. Then, if the committee is "fixed" and the Speaker "sound," even should there be some member sharp enough to know that the proposed measure probably contains something dangerous, he is apt not to catch the Speaker's eye when he rises to object amid the din, and the bill goes through by "a strict party vote;" the Republicans being just as good at the game as any other set of people. So though at first we were moved to make some harsh and upbraiding remarks to our famous "Trojan band" of Republicans who were to perish before surrendering, and were going to say to them something more about the "traitor Winans" and his clear inferiority in point of righteousness to the other members of the party, we, on second thought, decided to leave them unattacked. The evil is common, and a general cure must be sought—perhaps in general legislation in place of special, and the adoption of stricter rules as to the passage of bills not before the legislature in print for a certain length of time.

The *Tribune*, admitting itself to be for the moment "Tammany Republican," proceeds in a way that is really pathetic, whether we look on it as used in earnest or as being uncandid and dishonest, to ask of our Comptroller, Richard B. Connolly, some dozen or two of questions relative to the management of the city finances. Connolly is one of the four men, two Irishmen and two Americans, who govern the city, and have, we all know how, for years. A law of the State peremptorily orders the Comptroller to make annually, and before the legislature votes the taxes of the year, an exhibit of the financial condition of the city. The Tammany Comptroller does it or not as he chooses, and he chooses not, for reasons which need not be mentioned. No exhibit is forthcoming this year, none was last year, none the year before. Now, knowing what the *Tribune* knows, would anybody believe it credible that out of "softness," or for any other reason, any adult person should say to this sort of man, "Will he let us know how many and what persons are drawing salaries from the city, who only work for her by proxy or do no real work for her at all?" "Will he tell us the cost of our new City Hall?" "Will he enable us to ascertain from his exhibit what sums are paid out to the sheriff, county clerk, mayor, corporation counsel, and other officials—not what salaries each receives under any particular head, but what amount per annum each receives altogether?" Of course he will; particularly when he hears, further, that "if he will deal frankly with us, we proffer him in advance a hearty acknowledgment, and we feel sure that many will unite with us." We confess that we for our part do not understand this. One thing, however, we may feel sure of; and that is, that it is to Tammany Democrats and not Tammany Republicans of the *Tribune's* degree of innocence that this sort of information is vouchsafed. Tammany Republicans of the commoner kind know it all; or know as much as they wish.

General John Cochrane, for instance, that model Republican who "would vote for the devil, if the devil was the regular party candidate," and who, we need not say, was at one time a tremendous Democrat, and who now serves with Mr. Greeley on the regular Tammany-Republican, pro-Fenton, anti-Administration, anti-Custom-house Committee, could tell the *Tribune* a good deal that it wants to know; though no one suspects him of being in the pay of Tammany, because he is as "sound" as this that follows. The Tammany Republican Committee, being anti-Conkling, is of course out of Custom-house places, and its heart burns within it when it reflects on the baseness with which the Administration, which is pro-Conkling, has used Senator Sumner. General Cochrane expresses its indignation in these words:

"*Resolved*, That the recent deposition of the United States Senate of Charles Sumner, of Massachusetts, from senatorial dignities, defines to the American eye with startling distinctness the outlines of this tragic tableau. It is the 13th day of May, 1856. The curtain rises upon a Senate Chamber, a seated senator, and a stricken blow. The 10th day of March, 1871, has come. Again the Senate Chamber. The seated senator and a blow. Fifteen years have passed. The Senate house and the man the same. Say you who saw the deed, all else unchanged, how falls the blow of slavery then, beneath the blow sped by vicarious vengeance now?"

It would be curious to know how long, by devices of this kind and by factional animosities on the part of their leaders and wire-pullers, the Republican party of the State of New York is going to let itself be fooled and sold. We wonder how many men think that the party cannot dispense with Cochrane and his like better than they with it?

Affairs in South Carolina continue to have more interest than those of any other section of the South. This is partly owing, it must be admitted, to fresh outrages on the part of the Ku-klux, in spite of the President's warnings and the legislation of Congress. What is curious, however, and at the same time very encouraging, is the fact that the leading men of the State, with the possible exception of Gov. Scott, have no faith in the remedies prepared at Washington, and, better still, are earnestly endeavoring to restore peace in other and more rational ways. Judge Orr looks upon the Ku-klux bill as a grave political blunder, in a national point of view, and says it will catch no Ku-klux, and correct none of the evils it was aimed at. Senator Robertson, a native of South Carolina, though a Republican, voted against the bill in his seat in Congress, believing in the policy of conciliation. Ex-Representative Whittemore calls the bill "a sham and a farce," but on the ground that it is milk-and-water, and "we want strong measures." When the Ku-klux "learn how weak and silly it is, they will pay no attention to it, and go on as ever." Mr. Whittemore, however, is no exception to our remark that the leaders are working for the return of order and good government as if they laid no dependence upon Congress. He is one of a committee appointed by the late General Assembly to investigate the finances of the State, and in a private letter, which has been published, he declares that "no attempt at 'whitewashing' will be suffered, but a complete exposé made, let 'the shoe pinch' where it will." He also says—what is not surprising, considering that our old friend Treasurer Parker's accounts are to be overhauled among the rest—that the committee is "not cheered on in the investigation by some of the high functionaries" as it might be. "They have become exceedingly cautious, reticent, and fearful of 'the judgment to come.' We are aware of the cause of their trepidation, and we propose to follow it up." What his game may be is not clear, but that this is not mere talk is perhaps proved by his proposing that the Charleston Board of Trade and Chamber of Commerce appoint a suitable clerk and a competent expert to sit with the committee, and keep watch of its doings and discoveries. "True Republicanism," he says, "is to invite all energies, influences, and interests in the cause of an honest administration of public trusts."

One of the most atrocious murders took place in Chesterfield, where an old man by the name of Melton was called out in the early morning and shot by a band of men, who also fatally wounded his wife and daughter. Nevertheless, the intelligent and fair-minded correspondent of the Cincinnati *Commercial* in South Carolina found it almost impossible to ascertain whether this outrage ought properly to be imputed to the Ku-klux. As in numerous other instances, there was the most conflicting testimony, even among Republicans, as to the character of the deceased and the probable motive for killing him. The Hon. B. F. Whittemore asserted that Melton's only offence was that he was tax-collector for Chesterfield County and a Republican; but another informant, himself a Republican, and who knew Melton, told the corre-

spondent that he "was a man of bad character, and his so-called Republicanism had nothing to do with the murder. He was ignorant and dishonest, and no more fit for tax-collector than a horse." Melton came, he added, from North Carolina, where he broke jail while confined for sheep-stealing, and, when he became collector, "abused his official powers awfully," especially exciting the enmity of the negroes. If they did not combine to kill him, it must have been another dishonest officer named Donaldson, against whom Melton and his wife were witnesses, who procured his death. Doubtless, if we knew the truth, a great deal of the Southern violence now too hastily styled Ku-klux, would resolve itself into the work of vigilance committees or of hired assassins.

The coal troubles are resolving themselves back into their original elements. The combination of the railroads is broken, by the opening of an independent road between New York and the Lower Luzerne and Lehigh region, where virtually no disagreement existed between operators and miners, and where resumption was solely prevented by the railroads. In Schuylkill, where the operators are entirely under the control of the Reading Railroad, partial resumption is announced, but the position is less clear and definite. At Scranton, the laborers willing to resume have been mobbed by the miners, and further violence is apprehended. If the railroad to Wilkesbarre is really as independent as it is represented to be, all fear of a coal-famine is removed; but it is premature, at least, to announce the end of the troubles.

Advancing spring has brought no improvement to country trade. Complaints are general from all sections concerning the difficulty of making collections, and the evil is not attributed to its usual cause: accumulation of stocks in the hands of retailers. On the contrary, the feature of the whole merchandise trade, for months past, has been the judicious buying of retailers in every class of business. The evil is due to the inability of the retailers to collect from their customers. The undeniable want of prosperity throughout the country is most strikingly shown in this one particular, which puts to rout and confusion all the claims upon which railroad securities, choice city property, and a variety of similar expensive luxuries, have recently been speculatively advanced. The cold and wet weather has been construed as injurious to the cotton prospect, and has helped, with the falling off in the receipts (for the first time below the figures of the same week last year) to strengthen the price. The exports of cotton continue liberal, but in all other articles have fallen off greatly, so that, in spite of daily announcements of fresh negotiations in Europe of large amounts of American securities of every description, the condition of the foreign exchanges continues unfavorable, and the specie export in payment of foreign balances proceeds steadily, the shipments to date exceeding those for the same period of every previous year. A species of infatuation seems to have taken possession of the community, which blinds it to the gravity of the situation. The gold premium remains almost unchanged, though with a rather firmer tone. Real estate has been more active, and building operations are reported in progress to an unexpected extent. Breadstuffs have kept firm, but meats are lower than ever.

Money, in the general absence of business movement, continues abundant and easy. The 'greenbacks not required' for circulation in the pockets of the people, flow into the banks, where they tempt to increased liberality in loans. The speculation at the Stock Exchange has come to a halt, though signs are not wanting of preparations for further movements. The funding process appears to have totally exhausted itself, and several Government officials have left for Europe to try to stimulate further conversions there. Under the influence of the steady Treasury purchases, and the growing belief that United States bonds are, after all, the best obtainable security for investors, the prices of bonds remain firm, and comparatively few are offered for sale. The city of New York is reported as negotiating a seven per cent. loan at Frankfort, where Bismarck and Von Arnim, with Favre and Pouyer-Quertier, are also said to be negotiating a French loan, to enable the Versailles Government to pay the first instalment of the German war indemnity.

Fort Issy has finally fallen, after a prolonged struggle. The fighting in its vicinity was very severe on Tuesday, May 2, when the park of the village of the same name and Les Moulineaux were alternately taken and retaken, the Versailles troops eventually remaining masters of the ground. On Wednesday, their batteries, erected at Châtillon, Clamart, and Bas-Meudon, resumed the work of breaching the walls of the fort, and, under cover of the fire, the approaches to it were, on the following days, steadily pushed forward, amidst frequent fighting in the trenches. Fort Issy responded slowly. Between it and Billancourt the assailants occupied the island of St. Germain, in the Seine, and established a battery there, directed against the insurgent gunboats in the river. On the opposite side, all communications between Fort Issy and Forts Vanves and Montrouge were destroyed. These, too, were subjected to heavy showers of projectiles from the Châtillon batteries, to which they feebly responded. Beyond them, to the east, the Versailles forces carried by assault the insurgent position at Moulin-Saquet, south of Forts Bicêtre and Ivry, with heavy loss to the Parisians in killed, prisoners, and artillery. The position, however, could not be kept, exposed as it was to a destructive fire from the forts in front of it, and it was subsequently reoccupied by the insurgents, who made strenuous efforts to hold the field outside of the *enceinte*, in the vicinity of Villejuif and Vitry, and thus to prevent the completion of the investing line on the south. A small redan, taken by storm in front of Fort Vanves, on Saturday the 6th, had also to be evacuated. This engagement was followed, on the 7th, by severe cannonading, which was continued till Tuesday, when Fort Issy fell, and Vanves was on fire.

West of Paris, the Government troops, early in the week, unmasked a formidable battery at Montretout, near St. Cloud, which menaces the southwestern districts of Paris, Point-du-Jour, Auteuil, and Passy. To this the Parisians are reported to have opposed fresh batteries within the *enceinte*. At and around Neuilly much cannonading, chiefly from Government guns, and occasional fighting, continued to take place, apparently without any material change in the positions of the contending parties. The batteries at the gates of Maillot and Des Ternes were for a time silent, the insurgents being engaged in making repairs. Portions of Neuilly and Levallois, between that place and Clichy, were set on fire by shells from Mont Valérien. General Ladmirault's troops were, about the same time, pushing from the bridge of Neuilly in a northeasterly direction, towards the *enceinte*, with the object, it was believed, of pressing the insurgents towards Clichy. On Monday, the 7th, the Montretout battery opened a moderate fire on "the city," which was subsequently kept up with greater energy, although M. Thiers, in a proclamation to the people of Paris, assured them that the Government would "not bombard the city, but make an assault upon the ramparts." In this decisive assault he hoped to be aided by the loyal or repentant citizens within the ramparts, whom he implored to "reunite and open the gates," in return for which he promised the granting of an amnesty, and the continuance of the subsidy for the poor, until reviving order should have restored industry and abundance.

This proclamation, if we may be allowed to judge by the brief extracts transmitted by the Cable, was far from being couched in very reassuring or hopeful words. Nor could the old statesman then be in a very cheerful mood, while Jules Favre was humbly and vainly negotiating with Bismarck at Frankfort-on-the-Main for a change in the stipulations of the preliminaries of peace; while the Orleans princes—as reported—had to be expelled, Napoleon's agents watched, the Paris deputies in the Assembly checkmated, and plotters for a treasonable Congress at Bordeaux—with Gambetta at their head—arrested, in the rear of the scanty troops at his command; while all the forts, ramparts, and barricades of the immense seat of the insurrection were still unconquered before him—defended by madmen determined to rule or ruin; and while the Germans "declared they would mercilessly resume the war unless the insurrection was at once suppressed." This latter threat, however, may have been directed by the Chancellor of the German Empire not so much against the Versailles Government as against the cosmopolitan revolutionists of the Paris Commune.

"FOREIGN LOANS."

THE *Evening Post* of the 4th inst., commenting on our recent article on "The National Wealth," takes some exceptions to it, on points on which we may have something to say hereafter; and, in doing so, makes one statement which, of all places in the world, we were surprised to find in its columns, and which is not only a fallacy, but a fallacy which has done a great deal of mischief during the last ten years. The statement is this: "If the public debt were ten times as great as it is, but all held by our own citizens, the nation, as a whole, would not be directly made a cent poorer for it—its wealth would simply be differently distributed; all the property in the country would still belong to the people of the country." The *Post* then makes the assumption that it is only when the bonds are held by foreigners that the public debt is a loss.

Now, the origin of this delusion, for delusion it is, is to be found in the fact that many people have fallen into the habit of looking on Government bonds, as many people look on greenbacks and on gold and silver coin, not as evidences of a claim to a certain amount of wealth, but as wealth itself; in other words, in the fallacy which lies at the bottom of the mercantile system of which the *Post* is one of the oldest and ablest opponents in the United States.

The real truth of this matter, which seems plain enough when stated, but which nevertheless proves in practice hard to comprehend, is, that whether the nation is or is not poorer by the amount of the national debt, depends wholly on what has been done with the money for which the debt was contracted. If that money was used in making railroads or canals, or draining swamps, or erecting public buildings for the transaction of business, or for any other productive purpose, the bonds issued to those who lend the money undoubtedly are not evidences that the nation is any the poorer by having contracted the debt. But this is not a true account of the origin of our national debt, or of any of the great national debts of the world. They have all, or nearly all, been contracted for military purposes, and the money has been spent in the destruction of life and property, or, in other words, in an economical sense, has been utterly wasted. From the standpoint of the economist, the $3,000,000,000 which we owed when the late war closed, showed that the nation had been impoverished to the same extent and in the same manner as if goods of that value had been collected and burnt up. The individuals from whom they were taken have not been made any poorer by it, because the nation at large has promised to reimburse them, and they are able to negotiate its promises in the market; but the nation itself, as a whole, has been made poorer by just that amount at least. In other words, it is the converse of the *Post's* proposition which is true, and not the proposition itself. A Government bond, it cannot be too distinctly remembered, is not wealth. It is simply an evidence of debt. It is an acknowledgment by the nation at large that it has taken from A one thousand dollars' worth of his property, and (in our case) fired it away in broadsides, or used it in feeding and clothing fighting men, and that it will one day repay him. He is no worse off in having parted with his property, but the persons who took it, and who agreed to give it back, undoubtedly are. Government bonds are, consequently, not real capital. You cannot employ bonds in making a railroad, for instance; they do not represent wealth actually in existence; they represent wealth destroyed. If the holder wishes to use a bond in the work of production, what he does is to go to another man and say, "The Government owes me $1,000, and cannot pay me now, but will do so out of the future earnings of the people twenty years hence. I cannot wait so long; will you let me have the money, and take my place as its creditor?" In other words, the operation is simply a transfer of a claim from one hand to another.

It is easy to see from all this, that if the whole debt were held by foreigners, that is, if it was foreign capital we had taken and destroyed, and had agreed to pay back when we got to be richer, our condition would really be far better than it is; and the fact that most of the creditors of the Government are American citizens, so far from being a source of comfort or a sign of wealth, is simply a misfortune, a thing to be lamented and not rejoiced over. It would be well for us, the terms of the loan being the same, if every cent of the national debt were held abroad, except for the danger of the bonds being hurried home in a panic or in the event of a foreign war, and convulsing the money market. But even in this case the mischief would be slight and temporary, the advantage great and permanent. For, if foreigners threw their bonds on the market in a fright, they would have to sell them very cheap, and as nobody but our own citizens would buy them, they would become possessors of claims on the Government at a very low rate, and though the expense of the war would not thus be diminished to the nation as a political corporation, it would be diminished to it as a collection of individuals.

It is the interest of every nation to carry on its wars with foreign money, if it can get it at any lower rates than it has to pay for money at home. It is also its interest to borrow all the foreign capital it can get for productive undertakings, if it can get it more cheaply than at home. Nothing can come of such borrowing but good; nothing but good ever *has* come of it. The worst that can possibly happen is that it will have to pay back as much money as it got; but if it has had the use of it at five per cent. and has made ten per cent. profit, all wailing over having to pay it back is ridiculous. A nation cannot be sold out; its creditors have no remedy if it fails to pay its debts but to sell their claims low. It may therefore become knavish under its obligations, but it cannot be ruined by them. The howl over the amount of a foreign indebtedness which the *Tribune* has been keeping up for thirty years is one of the amusing economical eccentricities of that paper; it would be, however, a very ludicrous spectacle for the *Post* to join in it.

The *Post* may now see why it should not take exception to our deducting the whole amount of the national debt from the estimated total of national wealth, nor maintain that only the debt held abroad should be so deducted. That the latter should be deducted is, of course, not denied by any intelligent writer; the question is concerning the bonds owned by our own citizens. Now, the bonds held by our own citizens are, indeed, counted as part of their personal property in the census returns; but, as we have just shown, they are not true property in the sense of national wealth. If they were paid off to-morrow, that payment would neither increase nor diminish the true wealth of the country by one single dollar, whereas it would undoubtedly diminish the census returns of personal property by the full amount paid off. The whole of the bonds have been created since 1860; whatever amount is held by our citizens is, therefore, an apparent but not real increase of our national wealth, made since that time; and in order to ascertain the true increase, the bonds held at home, as well as those held abroad, should, therefore, be deducted from the total returns of national wealth. The bonds are not, as might be supposed, already deducted on the returns, since the latter are not derived from the statements of the taxpayers, like the income-tax returns, but are the result of actual assessments; in these, no account is taken of the nature of the individual's property, whether invested in national securities or otherwise, but the total value of the real estate is taken from the records, and the personal property is estimated by the assessors.

RECEIVERS.

THE elaborate histories of several important lawsuits which have lately appeared in the newspapers, magazines, and reviews have made the public familiar with the names, at least, of many technical legal terms generally known only to experts. In attacking or defending the professional character of eminent counsel, and the private designs of litigant parties, questions of practice have been freely discussed, as though the ordinary citizen was as well acquainted with the details of procedure as is the advocate or the judge. Among these technical terms none has been repeated oftener than the word "receiver," and repeated with such an amount of sharp criticism and of damaging application to individual cases, that one might think the homely legal maxim ought to be slightly modified by a change in its articles, so as to read, "*a* receiver is as bad as *a* thief." We purpose to describe, without the use of any legal phraseology, the nature and objects of the

receiver's office, his general powers and duties, and the well-settled rules which govern or which have hitherto governed his action.

In all ordinary common-law actions, on account of the essential character of the proceeding, and of the judgment or relief granted, there is no occasion for any such officer as a receiver. Outside of certain statutory enactments, the receiver is therefore only known in courts of equity. A suit in equity almost always relates to some particular identified property, either lands and their rents and profits, or chattels, securities, or moneys, in which all the parties, plaintiff and defendant, have or claim to have some ownership or interest; and its primary object is to establish and declare these various ownerships and interests according to their respective natures and extent, and to enforce the rights which flow from them, when thus ascertained, by transferring possession, permitting present use, or otherwise securing the enjoyment, as the circumstances of the case may demand. It is evident that during a protracted litigation, while the interests of all the parties remain undetermined, the property itself may perhaps be consumed or destroyed, or suffered to go to waste, by the persons originally in possession, whom the final decree may decide to have had no valid claim whatever upon the subject-matter. To avert this danger, and to preserve the property secure, so that it may be delivered intact and undiminished to those who are found to be entitled to it, is the sole object of a receiver according to the settled practice of courts of equity. For this purpose alone such tribunals may, in certain cases, appoint that officer and clothe him with the proper functions of his office. The principles which govern this class of cases are well established and easy to be understood, and we will briefly state them. It sometimes happens that the plaintiff and defendant are confessedly owners of a common fund, and equally entitled to its control and management, so that neither has, as against the other, any right to exclusive possession or use; for certain reasons, these persons are unable to settle up their affairs amicably, and therefore appeal to a court of equity to decide all differences between them, and to divide the fund as their respective rights demand. The familiar instance is the action brought to wind up a partnership. Under these circumstances, a receiver to take possession of the property, to collect the debts, and otherwise to administer it until the final decree of the court, is indispensable. Again, when the specific property is in the hands of the defendant, and apparently in his ownership, but the plaintiff claims to impress upon it some trust in his own favor—that is, claims that he has in it some beneficial ownership, either absolute or partial, which would entitle him to complete possession and use, or to possession and use for a limited period of time, it is plain that, during the pendency of the suit, it might be possible for the defendant to transfer, or consume, or destroy the fund, and thus to turn the plaintiff's final success into a practical defeat. Under these circumstances, the court might appoint a receiver to take possession of the fund, and to hold it secure until the termination of the pending controversy. Again, the decree of the court might declare that the plaintiff had a lien on a certain fund owned by the defendant, and that his claim should be satisfied out of the rents and profits of the land, or out of the avails of the securities or debts, in which case a receiver would be necessary to take these rents and profits, or to collect the debts, or to convert the securities into money, so that the proceeds might be appropriated in payment of the plaintiff's demand. Finally, certain statutes provide that the affairs of an insolvent corporation should be placed in the hands of a receiver for settlement.

The nature of the receiver's official functions has been determined by an unbroken series of decisions and course of judicial practice. He is, in fact, an officer of the court, and the property entrusted to him is in the custody of the court. He has, and can have, no possible interest in the final event of the litigation; he is to look upon the contest as an indifferent spectator. His chief duty is to preserve the fund entire until the decision of the cause, so that it may then pass to its appropriate possessors and owners. To accomplish this ultimate purpose, it may be necessary for him to do many intermediate acts, such as the collection of debts, the payment of encumbrances, the maintenance of suits, and the like. These he is to do as an agent of the court, under its express directions and constant supervision. All the authoritative decisions and rules of procedure most carefully guard his integrity, and especially his entire impartiality between the contending parties. The notion that he is an agent or instrument of one of the litigants to aid such party in obtaining any advantage, or in reaping the fruits of a successful litigation from the outset, is utterly opposed to the fundamental theory in respect to his functions, and to a practice uniform in all places and times except in New York city within a few years past. The books speak one language upon the point: "He is an indifferent person between the parties." "He is appointed on behalf of all the parties, and not of the complainant or of the defendant only." "He is appointed for the benefit of all the parties who may establish rights in the cause, and the money in his hands is in the custody of the law for whoever can make out a title to it." "He should be a person wholly disinterested in the subject-matter of the suit, and ought not to interfere in any litigation between the parties." "He represents the interests of all the parties, which interests are often various and conflicting, and sometimes involved in doubt. It is his duty to protect the property entrusted to him to the best of his ability, for all those interests, without being controlled by any one of them." These maxims are elementary, and undoubtedly apply with special force to the acts of a receiver pending the litigation. After a final decree, he becomes more the agent of the successful party, and his duty is to carry into effect the judgment against the loser.

It is plain from the foregoing statements and citations that the theory and settled practice of equity courts require that a receiver should be a person not only of the highest integrity, but of peculiar independence of character. Above all, he should be bound by no personal relations to any of the litigants or to their attorneys or counsel. He must be a man able to hold himself utterly impartial, able to repel at once all approaches towards favoritism. He is entrusted with property not his own, and he cannot decide upon the merits of the controversy nor upon the respective rights and claims of those who participate in it. In addition to these indispensable elements of integrity and independence of character and position, he must often be a person of large and peculiar business knowledge and experience. It is true that he acts under the direction of the court; but this direction must from the necessity of the case be general, and much or all of the details of the administration must be left to his discretion. Very peculiar matters are sometimes committed to his charge. Thus, in a case before Chancellor Walworth, the property in the hands of the receiver was a political newspaper, with its subscription-list and goodwill. The chancellor said that the court could not carry on a political newspaper indefinitely, and therefore the receiver must dispose of it as soon as possible, but that until such disposal he must edit it and manage the concern as best he could. It would be a violation of judicial duty for a court to appoint as receiver of an insolvent insurance company a person ignorant of the business of insurance, or as receiver of a bank one ignorant of banking, or as receiver of a railway one ignorant of the special business of railroad management. To sum up, the settled procedure of courts of equity requires in the receiver integrity, independence, and special knowledge of and fitness for the particular trust to which he is appointed, so that all of the parties claiming the subject-matter of that trust may be satisfied that their interests will not be injured or defeated by his dishonesty, by his favoritism, or by his ignorance or mismanagement.

In the light of these principles, courts of equity have uniformly proceeded with great caution in the appointment of a preliminary receiver. The general, almost universal, rule requires that the application should be made upon notice. Appointments of receivers *ex-parte*, with no opportunity for the defendant to be heard, were exceedingly rare until very recently. No such step would ever be taken against a defendant who had appeared in the suit or whose time of answering had not expired, unless in a case of great emergency, where the property, would be likely to perish. In other words, there must be some very special and extraordinary circumstances making the plaintiff's right clear, and showing that a delay of a few days even would probably be fatal to that right. But the caution of the court goes still further. Not only is notice thus requisite, but the judge does not assume to name the receiver. He simply orders a referee to examine into the fitness of the

persons suggested, and to select such an one as seems to him proper, and to report back his proceedings for confirmation. An *ex-parte* appointment by the judge himself is a recent innovation upon the established practice, confined as yet, we believe, to a narrow but unfortunately most important district of the State and the country.

It is plain that a receivership pending a litigation is at best an invasion of rights of immediate possession and perhaps of property, and that the measure is only resorted to as a matter of necessity, in order to preserve ultimate rights and to render the decree which is to be made effectual. For this reason, the practice of the courts in England and in America has surrounded the proceedings with all the safeguards which an extreme judicial caution could suggest. How far this theory and practice have been departed from, and how completely these safeguards have been overthrown in New York City, can be easily learned from the history of a few notorious cases with which the public have been made familiar. In the first place, the fundamental notion that a receiver is an officer of the court, standing entirely indifferent between the parties, has been thrown to the winds. A receivership is rather looked upon as an ordinary step to be taken at the commencement of a suit in order to enable the plaintiff from the outset to enjoy all the advantages of a final decree in his own favor, while the receiver regards himself not as an officer of the court, but as an active agent for the parties who procured his appointment, ready and willing to obey their directions, and in every possible way to subserve their interests. The facts which illustrate this statement are too well known to require more than a simple reference to them. The voting of the receiver of Mr. Groesbeck's stock in the Susquehanna Railroad controversy, at the suggestion of the counsel who procured his appointment, was without any color of authority, and in plain violation of his official duty. The *ex-parte* appointment of Mr. Fisk in the same matter as receiver of the entire road was a scandal which disgraced alike the counsel who obtained the order, the judge who granted it, and the administration of justice in the State of New York. A more recent occurrence shows the same tendency to pervert the forms and instruments of the law. By the easy compliance of an *ex-parte* receiver—who seems to practise the double profession of referee and receiver in the New York courts with great diligence and success—the Erie Company or its officers were enabled to raise money upon thousands of shares which should have remained locked up in his safe, while the certificate left in his custody was probably rendered valueless.

Another departure from the theory and practice of equity seems to have been established. The requisite of business knowledge and fitness for the special duties of particular trusts is no longer important. Receivership as well as refereeship has become a profession, and a few favored practitioners monopolize the business. The New York lawyer has long been able to predict who will be made referee in a given case by certain judges, and he may now prophesy with equal certainty as to prospective receivers. We are not competent to pronounce upon the personal and professional merits of these fortunate gentlemen, but it is certainly safe to say that, in addition to their great legal acquirements, they can hardly be versed in *all* the various kinds of business carried on in the commercial metropolis. One of them bears a name which will long be notorious if not celebrated in New York politics, and nothing seems too small or too great for his attention and care. He does not disdain a receivership in supplementary proceedings to enforce an insignificant judgment of a few hundred dollars, in which, if we can believe the vigorous protests of the indignant attorney, only ninety-nine per cent. of the proceeds may be absorbed in fees and emoluments; and again we find him presiding over the affairs of defunct life insurance companies, or forcing his way, armed with a judge's order and sledge-hammers, into the safes of a great railway corporation. We are satisfied that the double profession of referee and receiver in the New York courts offers many inducements and advantages to intelligent, sharp, and enterprising young men.

PRUSSIAN AND FRENCH SOCIETY.

We cannot resist the temptation of making one more extract from Colonel Stoffel's reports to the French Government, dated August 2, 1869, one year before the outbreak of the war. We have italicized the absurd passage where the colonel's judgment is clearly clouded by the spirit of "caste." His description of the kind of men who ought to occupy responsible positions shows that, shrewd as he is, his "heart" is not in the right place:

"Again, looking at the moral condition of the contending countries, one cannot but admit that Prussia is not only the more cautious and the more vigilant of the two, but that her people are also the most highly educated and disciplined in the world. Who that has lived here will deny that the Prussians are energetic, patriotic, and teeming with youthful vigor; that they are not corrupted by sensual pleasures, but are manly, have earnest convictions, do not think it beneath them to reverence sincerely what is noble and lofty? What a melancholy contrast does France offer in all this! Having sneered at everything, she has lost the faculty of respecting anything. Virtue, family life, patriotism, honor, religion, are represented to a frivolous generation as fitting subjects of ridicule. The theatres have become schools of shamelessness and obscenity. Drop by drop poison is instilled into the very core of an ignorant and enervated society, which has neither the insight nor the energy left to amend its institutions, nor—which would be the most necessary step to take—become better informed or more moral. One after the other the fine qualities of the nation are dying out. Where is the generosity, the loyalty, the charm of our *esprit*, and our former elevation of soul? If this goes on, the time will come when this noble race of France will be known only by its faults. And France has no idea that, while she is sinking, more earnest nations are stealing a march upon her, are distancing her on the road to progress, and are preparing for her a secondary position in the world.

"I am afraid that these opinions will not be relished in France. However correct, they differ too much from what is usually said and asserted at home. I should wish some enlightened and unprejudiced Frenchmen to come to Prussia and make this country their study. They would soon discover that they were living in the midst of a strong, earnest, and intelligent nation, entirely destitute, it is true, of all fine and delicate feelings, of all fascinating charms, but endowed with every solid virtue, and alike distinguished for untiring industry, order, and economy, as well as for patriotism, a strong sense of duty, and that consciousness of personal dignity which in their case is so happily blended with respect for authority and obedience to the law. They would see a country with firm, sound, and moral institutions, whose upper classes are worthy of their rank, and, by possessing the highest degree of culture, devoting themselves to the service of the state, and setting an example of patriotism, know how to preserve the influence legitimately their own. They would find a state with an excellent administration, where everything is in its right place, and where the most admirable order prevails in every branch of the social and political system. Prussia may be well compared to a massive structure of lofty proportions and astounding solidity, which, though it has nothing to delight the eye or speak to the heart, cannot but impress us with its grand symmetry, equally observable in its broad foundations as in the strong and sheltering roof.

"And what is France? What is French society in these latter days? A hurly-burly of disorderly elements all mixed and jumbled together; *a country in which everybody claims the right to occupy the highest posts, yet few remember that a man to be employed in a responsible position ought to have a well-balanced mind, ought to be strictly moral, know something of the world, and possess certain intellectual powers;* a country *in which the highest offices are frequently held by ignorant and uneducated persons*, who either boast some special talent, or whose only claim is social position and some versatility and address. What a baneful and degrading state of things! And how natural that while it lasts France should be full of people without a position, without a calling, who do not know what to do with themselves, but are none the less eager to envy and malign every one who does. Reverting to my architectural simile, France may be compared to one of those noble temples of ancient Greece, masterpieces of art in former times, but shaken, crumbled, and destroyed by revolutionary earthquakes and the corroding action of time. When gazing at it, the wanderer cannot help admiring the magnificent ruins strewn around far and wide; but in marking the beauty of its broken fragments his heart is filled with sorrow at the demolition of the whole."

THE CLERICAL DEFEAT.—MR. BANCROFT'S RESIGNATION.

BERLIN, April 14, 1871.

After an excitement of more than seven months, filled with war, battles, and sieges, country and people have comparatively quickly fallen back into their old habits. Only the absence of our soldiers indicates an unusual state of things. Since April 1, part of the Landwehr and reserves has been sent home; officers and men who have been discharged, cheerfully return to their old vocations of life; but the greater part of our army—fully seventeen army corps—is still in France, and it depends on the development of things there when our troops will finally be withdrawn. It is a sad spectacle in itself which France offers to the civilized world in general, and a heavy injury to our interests in particular; but if we should lose the whole war indemnity, the loss would not be out of proportion to the substantial advantages which we derive from the French disturbances.

Germany was much in need of this lesson. She has always been too

prone to look to France for the realization of her ideals. While from the days of Louis XIV. the French language, art, habits, and customs have been the models eagerly imitated by our ruling and aristocratic classes, the French Revolution made the people the successor of the nobility in its longings for the intellectual leadership of the French. With all due respect and thanks for past real or imaginary benefits, we cannot afford to be guided by the Revolution any longer, by making it, as do the French, a regular factor of progress, by striving for it as the great boon of salvation, by proclaiming it an integral part of political life. No other country in Europe but ours, I believe, just on account of its dearth of actual political strife, was so rich in theoretical revolutionists. Revolutionary sentiments and ideas were the test by which the honesty and integrity of a politician were measured. Among the German liberals it had quite become a superstition that the French example was the only panacea for political evils and shortcomings. Thus in our representative assemblies we have not followed the sound principles of English or American constitutionalism, but are still ruled by its French counterfeit, manufactured by the men of the Restoration. We had a French school in our literature, even up to the very outbreak of the revolution of 1848. Heine and Boerne, the most powerful writers who influenced the minds of the young generation, were blind idolaters of French superiority in political and social life. I took up, the other day, Boerne's "Letters from Paris," which for about twenty years were the gospel of all liberal Germans; but after having read a few pages, I threw them down in disgust. Looked at in the light of our day, a German must feel ashamed of the unpatriotic and slanderous character of the book, the more so when we consider what the ideal looked up to really amounts to. You will find in Heine's poems and prose writings the same glorification of the French character. A French Béranger, in spite of all his political mistakes, is a refreshing and grand literary phenomenon; but a gifted German poet, outdoing Béranger in worshipping Napoleon, is a sad spectacle, reflecting dishonor and shame upon his own nation. The radical wing of our philosophers, like Arnold Ruge, were under the same ban; our economical writers and the whole socialistic school were taught by French experience and views; and last, not least, George Sand had a firm hold on the minds of almost every German mother and daughter, who were imbued with a false idea of life by imbibing the sweet poison of the seductive writings of her first period. The events of 1848, and especially the insurrection of June, increased the strength of French sympathies. In some respects Victor Hugo was right in calling Paris the holy city, as it was so regarded by all the revolutionists of Europe, who, since 1789, have expected parole and countersign from there.

At present the French are most effectively destroying what they have been building up for the last two centuries. They are proving beyond contradiction that they are incapable of supporting a regular government, of establishing free institutions; and that, lapsing from one revolution into another, they only know how to sap the very foundation of the social and political structure. They are ruled by their beaux-ideals instead of a constitution, by whims and notions instead of political duties. Each man, each clique, each party wants to realize its principle; what constitutes this principle is left to the decision, to the *bon plaisir* of the individual. To what end will this lead? Ultimately the strongest will realize his principle and subdue the others, *i.e.*, a dictator, who with blood and iron holds down the popular passions and aspirations. Notwithstanding the several thousand members of the "Internationale," or the reddest of red republicans, like that innocent German music teacher of Hoboken, who, as he boasted, is opposed on principle to everything existing, our people will now sober down, and will themselves draw the logical results from the French cataclysm. What the great Lessing began, in emancipating us intellectually from the French influences, will be consummated politically by the events subsequent to the frivolous war of 1870. At present we cannot do anything but stand afar off, and let things go on in France as they will. It is not in our interest to follow the good advice of our British friends who, for the sake of European civilization and liberty, request us to act as the gendarmes of order, and to end the internecine struggle by means of our troops. The insinuated appeals of the Thiers Government for assistance have likewise not been heeded. As a return of thanks for Bismarck's abstinence and discretion, Favre deliberately states that he has refused the national enemy's offer for help. If we can help it, not a drop of German blood shall be spilt for the purpose of bringing the Paris mob to terms; but circumstances may arise which will make the German interference a matter of dire necessity. For the present, the German Emperor has consented to release 80,000 French prisoners, among them the Imperial guards, and to let them return home, where they will be enrolled against the Paris Commune. This situation in France is very injurious to our interests. Our just claims become more insecure from day to day, the final conclusion of peace is postponed, our expenses are trebled and quadrupled, and the return of at least half-a-million of German soldiers is rendered uncertain. Thus we should have not only a plausible pretext, but really good reasons to justify our interference; but all these considerations are insignificant in the face of the gratifying fact that the civilized world will learn from the neutral attitude of Germany how much she is in earnest in her protestations of peace.

The German Reichstag has given another unmistakable proof of the desire of our people to maintain amicable relations with our neighbors by its refusal to interfere with Italy. The clerical party, numbering some sixty-four or sixty-five representatives out of 382 in all, availed itself of the throne address debate to offer as an amendment the motion of an eventual intervention for the re-establishment of the Pope. It was rather too good that, after Pius IX. had been dethroned by a Catholic king, and after all the Catholic powers had declared either their unwillingness or their inability to reinstate the Pope, an effort should now be made to engage the good services of that nation which, with more energy than any other, has for about 500 years fought against Rome politically and intellectually. This appeal, based upon the supposed German stupidity, was of course defeated. It would hardly be worth while to mention the Ultramontane motion in your paper, were it not for its accompanying circumstances. Contrary to former experience, the clerical party acted with a want of skill and cleverness which cannot be excused even by the hopelessness of their case. Instead of stating plainly what they wanted, they shrouded their unsuspicious-looking words with glittering generalities; they had not the courage to be straightforward. The speech-making part of the performance was equally indifferent. The principal speaker, the fighting Bishop Ketteler, of Mayence, cut a rather poor figure. By the way, this same Ketteler was a dashing young Hussar officer some thirty-five years ago in one of the Westphalian regiments; an excellent rider, who, at the request of the Sultan, and on account of the superior acquirements in his line, had just been commanded by the King of Prussia to drill the Turkish cavalry according to the Prussian system, when he had a sabre duel by which he lost half his nose. While on his sick-bed he reformed and imitated the example of Ignatius Loyola, with whom he also shares the energy and bitterness of a narrow intellect. Instead of going to Constantinople and drilling recruits for the Turkish army, he went to Rome to be taught to drill souls for the Catholic Church. Ketteler looks like one of those mediæval bishops whose effigies are cut in stone in many old cathedrals; he gives the impression of having just risen from his grave, and of deploring the lack of persecution and zealotry of our age. The parliamentary platform is not the proper arena for this class of men; they cannot monopolize talk there, and, instead of being listened to with respect, they are interrupted or refuted very irreverently. The awkwardness with which the clericals have made their début in the Reichstag could hardly be understood were it not for the reason that they did not act of their own motion, but by order from Rome. The Catholic Church has become aggressive again. In decreeing infallibility, it has chosen the war path to reconquer what it has irretrievably lost, and it will cause much disorder, strife, and misery; it will fight a desperate struggle all over the world before it will acknowledge that it cannot regain its former position. I apprehend that it will be more successful on your side of the water than on ours. We know the old enemy by centuries of experience, but his tactics and craft are as yet not fully understood by the people of the United States, where the Irish element is the rank and file, which are pushed back and forward, like the pawns on a chess-board, at the will of the players in Rome.

The Reichstag will probably adjourn its first session in a few weeks. Thanks to the liberal elections in Southern Germany, where the patriotic enthusiasm of the liberals has defeated the clericals and the state-rights men, the liberal party is stronger than all its opponents put together. The fears which were entertained after the elections in Prussia, that the new parliament would inaugurate a reactionary period, have fortunately not been realized. It is not a very brilliant, but an honest body of men, which means to work and to secure the political fruits of the last year's development. Slowly but surely it will advance the interests and enlarge the liberties of the people. The principal business of the session will be to authorize a loan of 120,000,000 of thalers, which has become necessary in consequence of the Paris disturbances. Another important measure will be the admission of Alsace and Lorraine. These disturbances have

quite a salutary effect upon the people of those provinces. They now prefer remaining where they live instead of emigrating to France, where they will have to pay at least double taxes; and, besides, the comparison between the two states in their present condition more readily reconciles them with the German Empire. A deputation of Alsatian manufacturers has been received here with marked attention. A temporary tariff will win over the Mülhausen manufacturers to our side. The German civil and military officers treat the Alsatians with marked distinction, and if the latter continue to understand their own interest they will soon be the spoiled children of Germany, and will be much better off than in their former connection with France.

The resignation of Mr. Bancroft, and his probable succession by a politician who has greater claims on the party, is the cause of much regret among those of his countrymen and those Germans who look at the importance and duties of a diplomatic representative with different eyes from the members of the victorious party at home. If Mr. Bancroft did not consider it his principal duty to introduce at court successful ready-made clothing or paper-collar manufacturers, or, as a kind of "commissionaire," to act for and attend to the business of any fool who thought himself especially entitled to the assistance of "his" minister, there are better men who appreciate the always hearty and able services he has rendered in drawing the two countries as near to each other as possible. Mr. Bancroft has always been a staunch friend of Germany, and her leading men will never forget that, as much as was reconcilable with his duties as the minister of a neutral power, he stood by her in her hour of trial. They know very well that he was not concerned in the sale of arms with which his Government so painfully surprised us last fall, and that the offence would never have been offered to the German people if Mr. Bancroft had been asked for his advice. His intimate relations with the most prominent men of letters and public character, his mastery of the German and other languages, and his extraordinary knowledge of German history and politics, have enabled him to do more for the mutual understanding of the two nations and for their mutual appreciation than any of his predecessors in office. Since 1797, when John Quincy Adams was appointed as the first minister to Berlin, up to date, only three American diplomatists have been here who have endeared themselves to this country. They were Adams, Wheaton, and Bancroft—three men who will always stand in the foreground of the political and literary history of their own country. What we want here, and what I would advise you to send here, if I were asked for my opinion, is not so much an unsophisticated Western squire, who chews tobacco, holds handkerchiefs in utter contempt, and considers it a prejudice, unworthy of a true republican, to express himself in any other language than his native English, as an educated gentleman and scholar who knows a little more of European history and politics than he can learn from Abbot's so-called histories or from Mühlbach's novels—in short, a man who nobly represents American science and republicanism, and by his personal character and intercourse with others makes the most efficient propaganda for his country—a gentleman, for instance, like Geo. W. Curtis. The time, however, appears to me to be near at hand when Tammany Hall will appoint the Hon. John Morrissey or Ben. Wood, if not the great James Fisk, jun., himself. I apprehend, however, the Berlin climate will not agree with these worthies.

Notes.

In the press of Messrs. J. B. Lippincott & Co. are the following works not heretofore announced by us: "Muskingum Legends," with other sketches and papers descriptive of the young men of Germany and the old boys of America, by Stephen Powers; "Travels of a Doctor;" "Life of George Junkin, D.D., LL.D.," by D. X. Junkin; "Religious Philosophy," four courses of lectures before the Lowell Institute, 1845–1853, by the late Alonzo Potter, Bishop of Pennsylvania.——Four prizes of $50 each are offered by the American Social Science Association for brief essays on the following subjects relating to hygiene: I. The Care of our Eyes. II. The Brain, and how to hurt it. III. Nursing the sick. IV. Food, Cookery, and Digestion. But essays on the Air we Breathe; Inherited Disease; Work and Play, or the Influence of Association upon Health, may, if the subjects are preferred, be rendered in place of the first named. They must be written in a popular style, and contain not more matter than twenty crown 8vo pages. They should be sent with a sealed note containing the author's name and address, before July 1, to the Treasurer of the Association, 13 Pemberton Square, Boston. A person may write on one or more of the subjects.——On Tuesday next, May 16, a meeting of persons interested in mining and metallurgy, either as owners of works, engineers, or foremen, will be held at Wilkesbarre, Penn., for the purpose of organizing an American Institute of Mining Engineers. The morning will be devoted to visiting the mines, furnaces, and other works of interest in the vicinity, the afternoons and evenings to the reading of papers. The occasion promises to be one of no little interest, and the organization itself is likely to prove an element of concord between labor and capital, though its primary aim is scientific and economic.——Messrs. Appleton & Co. will publish, first in their *Journal* and afterwards in book-form, "Good-bye, Sweetheart," by the author of "Red as a Rose is She." Also: "Fifty Years' Reminiscences," by Mark Boyd; "Treatise on the Physical Cause of the Death of Christ," by Dr. Wm. Stroud; and a new edition of the late Winthrop Sargent's "Life of André." Their *Annual Cyclopædia* for 1870 will appear this month.——Messrs. Holt & Williams will shortly publish a translation of Gustave Droz's "Autour d'une Source;" to be followed by other of the same author's works.——"Seed Truths; or, Bible Views of Mind, Morals, and Religion," by Rev. Pharcellus Church, D.D., will be published simultaneously in Edinburgh by T. & T. Clarke and in this city by Sheldon & Co.

—The draught of an Act to regulate Primary Elections has been printed by a committee appointed for that purpose by the late Republican Convention to revise the rules of the party in Philadelphia. It is modelled after an act passed within a few months by the Ohio Legislature, and already applied in the spring elections, which in turn was copied from a California statute of March 24, 1866—a good instance of the room there is in this country for a Review of the comparative legislation of the several States. The proposed act seems to us good as far as it goes, and it has the very great merit of uniting all parties in its support; though it is instructive to notice that the Ohio measure was introduced and carried in the House by a Democratic member, and was first defeated and afterwards bitterly opposed in the Senate by Republicans. On the general question, we are of opinion that it is more important to encourage the practice of candidates offering themselves for election, thus giving the electors the widest possible choice, than to seek to purify the caucus. All representative bodies, at least, might be chosen in this way, in accordance with the Hare system. This would not dispense with party nominations, but would simply change their character. They are now, in our political contests, little more than a countersign, distinguishing the hostile camps; they would become what they ought to be, the military outfit. The best arms would then win the day.

—We are happy to be able to point out that our respected contemporary, or whatever is the right name for her—sister of the press, perhaps—Ouida by name, has been getting herself into a disagreeable little scrape. If she has not herself been stealing an American poem for the purpose of adorning her magazine, she has been imposed upon by some gentleman who has been guilty of that bad act. In the last *Broadway* that we have seen, we find a poem called "No Love Lost," which, except for some mutilations, intended to conceal its nativity or to adapt it better to the shrinking modesty of the British nation, is identical with a poem published in *Putnam's Magazine* in December, 1868. Some of our readers will remember the latter as telling in pleasant hexameter verses the story of a love affair which occupied the minds of two or three young ladies and gentlemen who were at the time making the tour of Italy, and who wrote letters in which are very prettily mingled poetry, humor, and story—the humor, perhaps, being the best of it, but the story nice enough, too. The author, as we had almost forgot to say, was Mr. W. D. Howells. The alterations which his English despoiler has made are not numerous, and Ouida will have no difficulty in bringing the crime home to him, nor, we should think—if she condescends to any but the more violent kinds of wild poetic justice—in getting satisfaction out of him before a police justice or a British jury. Here is a sample of one of the greater alterations. The party are at Venice "taking their ices al fresco" and observing the scene before them in the Piazza San Marco:

> Dark-eyed Venetian leoni regarding the foresticri
> With those compassionate looks of gentle and curious wonder
> Home-keeping Italy's nations bend on the voyaging races!
> Taciturn, indolent, sad as their beautiful city itself is;
> Groups of remotest English—*not just the traditional English*
> *(Lavish milor is no more and the travelling Briton is frugal)*
> *English, though, after all*, with the Channel always between them
> (Islanded in themselves) and the Continent's sociable races:
> *Country people of ours—the New World's confident children,*
> *Proud of America always, and even vain of the Troubles,*
> *As of disaster laid out on a scale unequalled in Europe;*
> Polyglot Russians, etc., etc., etc.

The lines in italics our piratical friend leaves out, as, to do him justice, he could hardly help doing, if he was to get any good from his thievery.

—Of Mr. Howells, by the way, it is proper to say that he has now succeeded to the editorship of the *Atlantic Monthly*, of which he has for a long time been the working editor, though he has not been the manager in any sense which would make it proper to hold him responsible for what, not of his own writing, has appeared in that magazine. Neither will it be fair, we presume, to hold him responsible for all of the next number or two, the accepted articles in a magazine editor's drawer being always numerous, and in very many cases not being such as any two editors, how like soever in point of taste, judgment, and knowledge, would equally approve. The mention of this magazine brings to our recollection that we have not done what we some time since meant to do—namely, call attention to the recent very marked improvement in the character of the editorial page of Messrs. Osgood & Co.'s weekly paper, *Every Saturday*. Originally an eclectic publication, *Every Saturday*, whether in its early days as an illustrated paper, or in its earlier days without illustrations, gave little or no proof of any other editorial ability than the ability to select interesting light reading for decidedly light readers, and of that sort of ability it gave not much proof. Recently, however, it has published articles on State and national politics, social essays, as they are called, and dramatic criticisms, which, as a rule, have been both able and independent. Particularly noticeable, especially amid the rather timid consideration of the Boston press, have been some few biographical and critical essays, accompanying the paper's portraits of public men, and written by somebody who, whether or not very wise or always just, at least does not put on a foolish face of praise whenever certain names are mentioned. This is a department of the paper that might be made very serviceable. Reflect, for instance, on the admirable services rendered the country by Mr. Curtis, in taking advantage of such a vehicle as *Harper's* illustrated periodical publications, and talking so sensibly and takingly as he usually does on the right side of each important current question, political, moral, or social. Some such work we shall hope to see *Every Saturday* constantly doing.

—We have occasionally referred to the scientific corps of the Army, whose operations, at least during peace, have an intrinsic value and a special character that bring them more in accord with the country at large than those of their brethren of the Line. Among them the Medical Department, by modestly-styled circulars and reports, holds a worthy place. The latest publication of the Surgeon-General's office is under the title of Circular No. 4, 1870, and is a "Report on Barracks and Hospitals," with a description of the chief military posts, making an illustrated quarto of five hundred pages. The report is by Assistant-Surgeon John S. Billings, of the army, who, in thirty-three well-written pages, succinctly sets forth the general principles upon which houses for well or sick soldiers should be constructed, and points out how fearfully deficient our military service is in this respect. The remainder of the book, compiled from the ordinary reports of the Medical Corps, is valuable for reference both as to the natural features of the country and the special description of the military posts. Our army, whose organization and administration are copied so closely from the British, contains both in theory and practice many features that are, or rather should be, wretchedly obsolete. Dr. Billings regards its preventible mortality from disease (exclusive of epidemics) at 50 per cent. of the whole during the last three years. This estimate is probably not exaggerated. The cause is the want of an intelligent system. Notwithstanding all that was learned in the late great war—notwithstanding the superb arms and the most admirable commissariat that now are supplied the enlisted man—his clothing, his mode of carrying his equipments, his sleeping accommodations, and his ordinary barracks are no better than they were fifty years ago, and for this reason a picked medical corps is comparatively powerless. The latest regulations (1863) allow as a possibility 225 superficial feet to six soldiers north of 38°; which, with a ceiling of ten feet, would give 375 cubic feet per man. But there is absolutely no provision whatever for ventilation, and even this superficial allowance the commanding officer may cut down at his discretion. In point of fact, at less than twenty out of the one hundred and fifty-one posts described, are the air-space and ventilation both satisfactory. At more than half of the military posts double bunks—often of two tiers—occasionally of three tiers (for six men) are used. A two-tiered bunk was looked upon as a curious relic thirty years ago in the British army. Without noting other reasons—and they abound—those two are amply sufficient to weaken the efficiency of the army fully as much as is reported. Were it not that so large a part is healthfully employed on the frontier, the sick rate would be much larger. It is but fair to say that the Medical Department does not seem to be responsible for this unfortunate condition. Except as to reports and remonstrances, it is powerless—these weapons, judging from the accompanying sub-reports, it appears to use freely. This admirable discussion, emanating directly from the office of the Surgeon-General, ought to arouse the co-ordinate branches of the military administration to a sense of the sanitary evils which they only can directly remove. If they still neglect the warning, the Military Committees in Congress can appropriately legislate thereupon. To place it upon the lowest of all grounds, the country cannot afford to recruit one hundred men when fifty are all that are necessary. The army has no special prerogative in the principles and practice of hygiene, and this excellent paper deserves to be studied by every Board of Health in the country.

—It has caused some disappointment among students of Plato that Professor Jowett, in his translation of the Dialogues, does not give the grounds of his accepting some as genuine and rejecting others as ungenuine. His critics say that we should either accept as Plato's everything, from cover to cover, of that collection which has come down to us labelled Plato's Works, or else should state our reasons for pronouncing this or that really Platonic, and this other or that other counterfeit. To do the one or the other of these things would be to adopt at least an intelligible and justifiable method of editing the Dialogues; but Mr. Jowett, it was urged, had done neither. Such critics will be pleased to hear that among forthcoming English books will be a fifth volume from Mr. Jowett, in which he will discuss the question of authenticity and such other matters as he could not compress within the limits of the previous four volumes. Another important new English book is also supplementary of previous volumes by its author. Mr. Henry Sumner Maine, in six lectures delivered at Oxford, where he is a professor, has followed out his studies of Eastern law and of social life. "Village Communities in the East and West" is the title of the volume. Professor Masson has now finished the second volume of his "Life of Milton," and it will soon be published by Macmillan, who also announces a two-volume life of one of the most remarkable of Milton's contemporaries, Anthony Ashley Cooper, first Earl of Shaftesbury—Dryden's "Achitopel," royalist, Parliamentarian, leader of opposition to Cromwell's government, a main instrument in the restoration of Charles II.; the worst chancellor England ever had, and her earliest Parliamentary debater; the politician who engineered Titus Oates's plot; author alike of the Test Act which excluded Catholics from place and power for a century and a half, and of the Habeas Corpus Act; "Alderman Shaftesbury" of London, who, being prosecuted for high treason, was going to come over to this side of the water, and caused John Locke to draw up his famous constitution for a colony in the Carolinas. His career is one of the most interesting in the annals of English politics, and the author of his life, Mr. W. D. Christie, has secured one of the best of subjects. Of other new English books perhaps as much worth attention as any is one that will be the joint work of half-a-dozen dignitaries of the Established Church. The Archbishop of York, Thomson, best known in this country as the author of a good little elementary treatise on logic, will unite with the Bishop of Carlyle, the Dean of Canterbury, the Rev. Stanley Leathes, and others, to "take up the challenges thrown down by modern scientific infidelity, and answer them one by one." So here, then, we are to have "an old abusing of the king's English;" for the scientific men so civilly referred to will look with the utmost scorn on the amateur science of the clergymen, and they have Mr. Huxley to teach them how to express their feelings on such occasions, while, as is well known, the clerical gentlemen have not the softest of tongues. The archbishop is to treat of "The Theory of the Development of the Universe by purely Physical Laws."

—Two French works which deserve a place in any collection pertaining to the siege of Paris are "Principaux Discours prononcés au Club de la Porte-Saint-Martin pendant le Siège de Paris;" and "Le Siège de Paris: Impressions et Souvenirs," by Francisque Sarcey. The first consists of the best addresses delivered before the only rational club in Paris while it was beleaguered, which was organized by M. Eugène Yung, editor of the *Débats*, and met in the theatre of the Porte-Saint-Martin. It was further distinguished by charging an admission fee, and by tolerating the word "Messieurs" from the platform. The attendance was large, and the proceeds were devoted to patriotic purposes, just as those arising from the sale of this volume will be applied for the benefit of wounded soldiers. The best-known names which appear here are those of Coquerel, Pressensé, and Cernuschi. Mr. Sarcey's "Impressions and Recollections" have reached a seventh edition in Paris, notwithstanding his exceeding frankness in regard to the shortcomings of his fellow-citizens. One of his most

amusing stories is this, of a quiz who sought to test the credulity of a man of Belleville:

"'The Germans have agreed to retire without our sacrificing an inch of our soil,' he informed this patriot.

"'Nor a stone of our fortresses?'

"'Nor a stone of our fortresses.'

"'Nor a crown of our treasure?'

"'Nor a crown of our treasure.'

"'And what indemnity do we mean to exact of them?'"

—Gustave Flourens, who has figured so prominently and, as far as can now be seen, with so little credit to himself in the history of Paris during the past year, and whose death last month at the hands of the Marquis of Gallifet's cavalrymen did not cause regret on this side of the water, was not merely a feather-brained revolutionist and nothing besides. He was a writer of some merit, a successful lecturer on ethnography at the College of France, and the author of several other published works, one on "The Science of Man"—non-political—and one, "Paris Delivered," which came out last month, political enough, no doubt, to make up fully for its predecessor. Flourens's activity in the cause of what he believed to be liberty was not confined to his own country; from 1865 to 1868 he was in the mountains of Crete fighting, with what effectiveness is not stated, against the Turks.

—Readers of poetry will be somewhat interested in some remarks which are prefexed to a metrical translation into German of Marlowe's "Life and Death of Doctor Faustus." A Doctor A. v. d. Velde, of Breslau, is the translator, and what he asserts is, that the English poet founded his play not on an English ballad, nor upon an English translation of the "Historien von Dr. Johann Fausten, dem weitbeschreyten Zauberer und schwarz-Künstler," but directly upon this "Historien" itself. That Marlowe knew no German is altogether probable, but Dr. v. d. Velde would seem to make it appear that from 1585 to 1587 two English actors, Pope and Bryan, performed in Dresden and Berlin; and this being so, the supposition becomes probable enough that Marlowe got the story from them. It is not certain, however. As Dr. v. d. Velde shows, the lines in the first act where Faustus speaks of "chasing the Prince of Parma from our land" point to the year 1588 or 1589 as the date of the production of the English play, for it was shortly after the defeat of the Spanish Armada in 1588 that Alexander Farnese left the Netherlands. But in or near 1589 there was extant in English not only the buffoonly ballad which relates "The Life and Death of Doctor Faustus, the great Conjurer," but also "The Damnable Life and Deserved Death of Doctor John Faustus," a prose version of the "Historien" above mentioned, a work which spread and became popular with very great rapidity. However, the matter is of no great consequence. To the popular tradition rather than to any particular poetic or dramatic use which it has been made to serve were both Marlowe and Dr. v. d. Velde's great countryman indebted.

—Professor Krause, of Halle, author of a valuable work upon "The Byzantines," has recently published a monograph entitled "Die Eroberungen von Constantinopel"—treating of the Latin Conquest in the Fourth Crusade, the reconquest by Michael Palæologus, and the final capture by the Turks in 1453. His view of this last event is that it was not a necessary one, the result of an irresistible movement; still less, that it was the substitution of a vigorous race for an effete one; but that it was, in every point of view, a calamity which might and should have been prevented. It is true, the power of the Empire had fallen very low, weakened by the inroads and encroachments of Slavonic and Asiatic neighbors; still the author maintains that it possessed a remarkable degree of stability, as was shown by its previous history, while it was noways lacking in elements of culture and progress. He recognizes in its institutions, for instance, "an astonishing degree of pains to suffer no one to perish in misery and poverty." The story is told with great minuteness, and with a good degree of animation and interest, although nothing to compare, in this respect, with Gibbon's account. There is lacking, however, a clear statement of the territorial relations of the Empire and of the Turks. An interesting feature of the work is a Turkish account of the siege, in a style of which this is a fair specimen: "The season of snow, ice, and frost was over, the charming spring was arrived, and had adorned the meadows. The rose, the image of graceful beauty, displayed her charms. The dear nightingale began to let her complaints be heard. The earth, covered with a green carpet, seemed to await the armies of the righteous Mahomet. Soon the Mussulman tents arose in the midst of blooming meadows," etc. This Turkish account agrees in many points with those of the Byzantine writers, who are the authorities chiefly followed. Particularly, as Prof. Krause points out, it bears testimony to the determined will of the Sultan, which alone accomplished the great task; the stimulus which he gave his soldiers by the promises of the Koran; the great courage of the besieged and the immense losses of the besiegers; the horrible scenes of the sack of the city; and the important fact that it was only by transporting his fleet across land to the great harbor that the Sultan at last succeeded. In regard to this last exploit, the chronicler relates that the monks of the city had prophesied that the city could not be taken until a commander should convey his ships over the land with sails spread. Then, when they had seen with their own eyes the accomplishment of this miracle, they were astounded and overcome with despair.

—We recently mentioned, among the new publications, the "Diary of an Embassy from King George of Bohemia to King Louis XI. of France." The negotiations between these distinguished men had a twofold object; first, to form a union of Christian princes in order to expel the Turks from Europe; and, secondly, to call a general council of the Church in order to settle the Bohemian question. George Podiebrad was, as is well known, a Hussite; and the Roman curia had determined to revoke the concessions made to the Hussites by the Council of Basel. George's whole reign was a struggle against Popes Pius II. and Paul II., by whom he was at last declared deposed and put to the ban. The Emperor Frederic III. was allied with the Pope in this crusade, and Charles the Bold of Burgundy was to carry it into execution. Naturally, then, George turned to Louis XI., the great rival of Charles the Bold, and attempted to get up a counter-combination, in which he hoped for the aid of Casimir IV. of Poland, Albert Achilles of Brandenburg, and other princes. The great embassy to France, consisting of forty persons, was in 1464; but resulted only in talk and scheming, and here the matter is usually supposed to have rested. Herr Pazout, however, of Prague, has recently discovered at Weimar some documents showing a later embassy in 1467, when Louis declared himself ready to enter into the alliance, and even sent an embassy the same year to Prague. George was to move an army upon Luxemburg, which had formerly been politically connected with Bohemia, and from there act with Louis against Brabant and Flanders. Before, however, any definite arrangements could be formed, the storm burst upon King George against which he struggled the last years of his life; and Louis XI. was not the man to help a friend in need.

MORAL INSANITY.*

Probably no work on the obscure and difficult subjects of which it treats has received more attention or exerted more influence on public opinion—in the United States at least—than Dr. Ray's. The publication of the fifth edition affords an occasion to consider how far some of the author's peculiar theories, in regard to the legal effect of insanity in criminal cases, are warranted by sound reason and the rules of an enlightened jurisprudence. Such an examination seems the more necessary at the present time, when the plea of insanity on the part of the accused has become almost of course in criminal prosecutions, and is accepted, by juries at least, with a readiness and recklessness which may well alarm those who would stand in the ancient ways of jurisprudence until convinced that they are wrong.

Dr. Ray joins issue boldly with the received legal notions in regard to insanity and insane delusion. He says that "every year's experience has only strengthened [his] conviction that much of the common law relative to insanity, whatever other support it may have, has no foundation in the facts of science." In these words we find the erroneous assumption on which much of Dr. Ray's reasoning is based, namely, that insanity means the same thing in law and medicine. Law takes cognizance only of acts, and, in some cases, of their motives, and it can notice insanity only as it is manifested in acts. With the pathological condition of the patient's brain, with all the numberless indications which demonstrate to the physician the presence of insanity, the law has nothing to do, except so far as these may tend to show that the act itself, whose quality it is the office of the law to decide, was dictated by an insane impulse so strong as to overpower the reason and will. By the physician, on the other hand, insanity is very properly regarded as a disease whose presence is manifested by certain symptoms. Dr. Ray himself regards it "solely in the light of a disease—of a derangement of the physical structure." To him it makes no practical difference whether the disease has proceeded so far as to overpower the reason or will of its subject—it is still insanity; and

* "A Treatise on the Medical Jurisprudence of Insanity. By I. Ray, M.D." Fifth edition, with additions. Boston: Little, Brown & Co. 1871.

Dr. Ray appears to believe that the presence of insanity, in ever so slight a degree, ought to excuse the criminal acts of its subject. In other words, he contends (and it is upon this proposition that the issue between him and the common-law authorities is joined) that moral insanity is an excuse for crime.

Moral insanity may be defined, in the fewest words, as the inability to distinguish between natural right and wrong. It cannot be doubted that many, either by natural disposition or bad education, are really unable to see any reason in the nature of things why they should not lie, steal, or murder. It was reserved for the sentimentalists of these latter days to invent a theory that such men were to be the law unto themselves, and that society should suffer their depredations simply because the criminals were unconscious that they were committing a moral wrong. Indeed, it may well be doubted whether this theory, pushed to its logical conclusion, would not excuse every crime against society; for it is probable that a vast proportion, if not all, of the criminals who are brought to justice have formed in their own minds some theory which to themselves justifies their crime. Thus, the burglar and forger believe that society owes them a living, and that they have a right to take it by force or fraud, and the murderer only pushes the same theory to a little broader extension. If we once break down the legal rules which declare that the criminal shall not escape the consequences of acts which are *mala prohibita*, merely because he himself is unable to perceive that they are *mala in se*, it would seem that we might at once abandon our system of criminal jurisprudence, and revert to that state of primeval barbarism in which the stronger vindicated his rights, and the weaker went to the wall.

The mischief which Dr. Ray's book is in danger of doing among non-professional readers lies not so much in the naked enunciation and elaborate defence of the theory we have thus briefly criticised—a theory which no amount of reasoning could render plausible, and which the author himself would probably hesitate to follow to its logical result, as in his strange failure to discriminate cases, to perceive the difference between that moral insanity which can never excuse its subject from legal responsibility, and that intellectual mania which destroys will and reason, and with them, of course, legal responsibility. Dr. Ray does, indeed, state his views as to what constitutes moral insanity with sufficient clearness. Speaking of its victims, he says: "Their abstract conceptions of crime present its hideous outlines as strongly defined as they ever were in the healthiest condition. The particular criminal act, however, becomes divorced in their minds from its relations to crime in the *abstract*, and, being regarded only in connection with some favorite object which it may help to obtain, and which they see no reason to abstain from pursuing, is viewed, in fact, as of a highly laudable and meritorious nature." Observing, again, that the above passage would describe the precise mental condition of nine-tenths of all the robbers and forgers in the community, we shall find that the actual cases which Dr. Ray cites as instances of this "moral mania" nearly all include some derangement of the *reasoning* faculties of their subjects.

This error is particularly noticeable throughout the seventh and eighth chapters, which treat of "General Moral Mania." Of the cases there cited, nearly every one is, in fact, an example of clearly-defined intellectual insanity. Thus, it appears from Dr. Ray's own statement of the case of Peter Neilsen (§ 263), "that the idea of killing his children first came into his head on the morning of the day that he put the idea into execution, and *that the impulse was quite irresistible*." Surely, an irresistible impulse must overcome the *will* of its subject, yet Dr. Ray cites this as an instance of "moral mania" simply. Again, in Cornier's case (§ 264), the accused, who, without cause, had brutally murdered a child, and thrown its head from a window into a crowded street, was manifestly so intellectually insane as not to appreciate the consequences of her own act, and declared that "she was destined" to commit the murder. Certainly, she had lost much more than the mere perception of moral right and wrong. Trestel (§ 270) "was so imbecile as to be incapable of executing the slightest commissions," and finally destroyed himself while awaiting execution. There can be little doubt that he ought to have been acquitted, and none that, had he been morally insane simply, he should have been convicted. It is in thus laying down the theory that moral insanity ought to excuse crime, and then citing cases in its support that are not cases of moral insanity at all, that Dr. Ray's great error lies.

The author seems to be unable to perceive the different principles which determine civil and criminal responsibility. There is no doubt that mere moral insanity may, and often must, render invalid civil contracts made under its influence; but the inference that, therefore, the criminal acts of its subject are to be excused is a most dangerous specimen of *à priori* reasoning. Yet Dr. Ray (§ 304) lays down the following proposition, which seems little less than monstrous: "There is certainly no reason why a person should be held responsible for a criminal act that springs from a delusion which would be sufficient to invalidate any civil act to which it might give rise. A monomaniac's sense of the *fitness of things* is not different when he signs a ruinous contract, or makes a will, from what it is when he commits a criminal deed." Perhaps the absurdity of this doctrine may best be shown by an example in point. A familiar case is cited in the books, where a father, under a perfectly groundless and insane delusion that his wife had been unfaithful to him, made a will disinheriting his children. The will was properly set aside. Now, according to Dr. Ray's theory, the testator's "warped sense of the fitness of things," which rendered his will invalid, would equally have excused him had he chosen to murder his children because he believed they were bastards. Yet the rule is all but universally recognized that criminal acts committed under the influence of a delusion shall not be excused, unless if the delusion had been a reality they would have been justified. This was the view taken in McNaghten's case by all the judges of England, and in this country by Chief-Justice Shaw of Massachusetts in the famous case of Commonwealth *vs.* Rogers.

We have no desire to question Dr. Ray's honest belief in the opinions we have criticised; and no one can fail to recognize the ability which he brings to their advocacy, or the vast and patient labor of which this book is the result. As a digest of curious cases, the work is of the greatest value. But its very ability and learning render its erroneous theories all the more dangerous in these days, when the rules of criminal responsibility have become so unsettled.

THE LIFE OF GREENE.*

The new volume of the life of General Greene covers from the autumn of 1777 to that of 1780; that is, a little more than the period during which he held the office of Quartermaster-General. It ends with his departure for the South, to take command of Gates's army. These years were the darkest in the war, and the most devoid of events of stirring interest. The first enthusiasm of the contest had passed away; the resources of the community were almost exhausted; and the history of these years is in great part a record of indifference, discouragement, and dissensions. It was Greene's brilliant Southern campaign that turned the tide at last; of that we shall hear in the next volume. But it may in a certain sense be said that his is the central figure during the period of this volume, as well as the one that followed; for the office he held was not only that which suffered most severely from the exhaustion of the resources, but was—next to that of the Commander-in-Chief—the one which had most responsibility and influence upon the fortunes of the war; for upon the quartermaster's department rests at all times the efficiency of the army; but at this time it was peculiarly the case, because the thing to be done was not to fight, but to wait and prepare.

Perhaps there is no time when Washington's real greatness appears more strongly than in these years. The qualities which enable a commander to protract a war year after year, under such circumstances as these, are rarer than those which win battles; and Washington came out from them higher than ever in the estimation and confidence of his countrymen. The volume before us places this feature of his character in a strong light, and, indeed, affords illustrations of his personality from many points of view. One cannot help being struck, for instance, in reading the correspondence in this volume, with the strong and solid good sense and vigorous thought of Washington. Greene is likewise distinguished for these qualities; but, as compared with Washington's style, his appears weak, inexact, and diffuse. In more personal points, too, we have an occasional glimpse of Washington which we are glad to get; for instance, on page 161, where Greene writes that "His Excellency and Mrs. Greene danced upwards of three hours without once sitting down."

But if it is true that the war could not have been kept up during these years without the personal qualities of the Commander-in-Chief, it is, perhaps, equally true that even he could not have accomplished the task without the special support which he received from Greene, and which he judged that nobody could give him so well as he; for it was in the main a question of supplies and transportation; of food, clothing, and ammunition. The volume is very properly, therefore, made up in large

* "The Life of Nathanael Greene, Major-General in the Army of the Revolution. By George Washington Greene, author of 'Historical View of the American Revolution,' 'Historical Studies,' etc." In three volumes. Vol. II. New York: Published by Hurd & Houghton. Cambridge: Riverside Press. 1871. 8vo, pp. 514.

degree of a description of the ways and means in the quartermaster's department, its difficulties and discouragements, and the manner in which these were met; and this results in a very graphic picture of the condition of things. Of course, from the nature of the subjects treated, it contains more dry detail than the other volumes. There is very little, however, that the reader would wish to spare, except letters now and then which are hardly more than a repetition of others given just before (as on pp. 225 and 350). There is indeed a good deal too much of this.

We do not think it is made quite clear enough why there was such bitter hostility to Greene on the part of Congress; from all that appears, it may be inferred to have been wholly an outgrowth of the spirit of Conway's cabal, and perhaps the author intended so to represent it—as unquestionably it must have been in great part. Seeing that Washington himself could not be injured, his enemies did their best to overthrow the officer who was most nearly identified with him. But any such opposition must pitch upon special charges of mismanagement, corruption, or extravagance, and it is not brought out with sufficient distinctness what these charges were. Again, page 343, we ought to be told specifically what was the interpretation put by Greene upon his reservation of his rights as Major-General when he entered upon staff duties. We are told that Washington did not agree with this interpretation, but this fact does not seem to have interfered with his obtaining the command of West Point at his own request, and being immediately transferred from there to a most important command in the South.

The character of General Greene himself is, of course, amply illustrated, as well by actions as by copiously quoted words. One is especially glad to have the frequent pictures of his domestic relations, which appear to have been exceedingly happy. "No pleasure is equal to domestic happiness," he writes to his cousin, Griffin Greene, page 297. . . . "I wish the war was over, that I might return to my dear fireside." His letters abound—as is so common at this period—in lamentations at the degeneracy of the times. "The world is full of folly, superstition, and ignorance," he goes on, "and overrun with malice, prejudices, and detraction. . . . The black passion of jealousy and the cankering spirit of envy had well-nigh worked my overthrow before I had the least idea that I had an enemy in the world."

Two or three illustrations of his clear and moderate tone of thought will be of interest. General Sullivan, just after the failure at Rhode Island, had expressed his dissatisfaction with the French Admiral very strongly in a letter to the Governor. Greene happened to be present in the Legislature when this letter was brought up. "'Do not let these letters be read aloud,' said he in a whisper to the Speaker; and the whisper passing round the house, the order of the day was called, and a serious danger averted; for the house was crowded, and such accusations, publicly read, could hardly have failed to spread over the country, gathering strength as they passed from mouth to mouth, and reviving at a critical moment old and dangerous prejudices," page 149. Again, page 155, in a letter to Governor Greene he gives wise counsel in regard to the treatment of Tories: "I would recommend great moderation. Let none fall a sacrifice but such as may be dangerous hereafter, or are necessary to deter others from similar conduct. . . . Proscription and confiscation are rather to be considered as misfortunes than benefits to government, although we may seem to gain by the measure." It is also interesting to learn of his habit of reading a little before going to bed, in order to calm his mind for sleep.

Lord Mahon, in giving an account of the trial of Major André, speaks of the judges at the trial (at which General Greene presided) as "having never probably so much as heard the names of Vattel or Puffendorf." To this Mr. Greene answers, page 234, that General Greene was as familiar with the common law "as an attentive study of Jacobs and Blackstone could make him familiar; and the law of nations he had studied in Vattel, the leading authority of the day."

An interesting illustration of the temper and suspicions of the times is afforded by the incident, page 144, of General Hancock presenting the French admiral with a picture of Washington. "He was going to receive it on board the fleet by firing a royal salute, but General Hancock thought it might furnish a handle for some of the speculative politicians to remark the danger of characters becoming too important. He therefore dissuaded the Admiral from carrying the matter into execution."

There are some judicious remarks, page 342, upon the result to Greene himself of his having held the quartermaster's office, which, as we know, was against his will. "The probation of the quartermaster-general's department proved an instrument of success, a completing of that severe and vigorous discipline of mind and character by which he had been prepared for the exercise of independent command; and when at Charlotte he set himself to the study of the condition and resources of his army, he found that the period of his public life which he regretted most had been fruitful of an experience, and, through experience, of a knowledge without which he would never have won the proud name of Conqueror of the South."

This volume is marked by the same high qualities on the part of the author as the preceding; its style appears more even and sustained, while—as would be expected—there are fewer passages of striking interest. As before, the hero is rather depicted than described, and one side of his character—that of thoughtfulness, faithfulness, and accuracy—receives ample illustration. His executive and active qualities will be more fully brought out in the closing volume. An appendix of 120 pages contains a number of additional letters, and the entire controversy between Mr. Greene and Mr. Bancroft in regard to the charges of the latter against General Greene.

THE MAGAZINES FOR MAY.

CRUIKSHANK'S absurdly truthful pictures of the great drama of "Punch and Judy," as played in England, may be found in this month's *Harper's*, and together with the accompanying letterpress which gives the text of the play, as rendered by Piccini, an old puppet showman, who, for forty or fifty years, has gone about exhibiting his show in the English cities and towns, they make about as instructive and agreeable an article as any of the May magazines has to offer. It is a little curious, by the way, that "Punch" has so little luck in this country, where several attempts to establish him have been made, of which none has had good success. One would have thought that merely as a nation of Dickens readers we should have given the old gentleman a heartier welcome. Doubtless, however, his unlovely moral character has much to do with the coolness of his reception; we observe that when it was undertaken a while ago to introduce him to the Bostonians, it was considered necessary to change the catastrophe of his fortunes. In the last scene of the last act of the original drama there begins a terrific combat between the Devil and Punch, and the latter in the beginning gets very much the worst of it; the fact is that he has been made faint by the sight of this new enemy after even the hangman has been disposed of, and by the simultaneous thought of his many murders and robberies. He succeeds, however, more by luck than skill or valor, in planting a few good blows, and, going on prosperously, he at last stuns his adversary, kills him, and gives three cheers because the devil is dead. This was too much for the moralities of the Boston people, and though, for humanitarian reasons probably, the Massachusetts Punch is allowed to hang Jack Ketch, yet there his successful criminal career is made to end, and when the devil comes, Punch is made to know the difference between Boston and London.

How much longer a reputable house sending family literature for all sorts of readers into every State in the Union will feel justified in keeping on its list of authors such a writer as the author of "Anteros," it would be curious to know. Mr. Lawrence's "Guy Livingstone" was bad enough, though it would be of little avail to try to prevent its being read with avidity by certain readers. The craving for slate-pencils to eat is not more natural than the craving for "Guy Livingstone" and other such productions; and disgust at a story in which the school-girl notion of what constitutes strength and dignity of character is revealed side by side with the most abject social snobbery, may always be diluted with amused contempt for the silliness and dulness of a man who could hold such opinions, and advertise himself to the world as holding them. It was one of the most agreeable and suggestive passages in personal literary history which has happened during the last few years, that our Brummagem Guy should have pulled on those big boots of his, brushed out his reckless moustachio, come over here to draw his tremendous sword in the cause of the gentry of the South as against the proletariat, and been lodged in the Old Capitol prison for the valor of speech which he displayed in Baltimore and thereabouts, while the squadrons expecting his advent were some hundred or two of miles to the southward. But a story such as "Anteros" is in no way amusing as throwing light on the conception of life entertained by a certain kind of person, or set of persons, and is merely immoral. Not that there is much need of saying anything of all this in the interest of readers, for the story is long-winded and dull; we were thinking rather of the responsibility of publishers in having anything to do with putting such a book before the reading public.

In the Easy Chair of *Harper's* we have something about ministers' salaries, which is juster and more sensible than what most ministers allow

themselves to say on that subject, and something also about literature as a profession. "Dead-Headed" is a lively sketch, very good in comparison with the love-story which may usually be looked for at about its place in *Harper's*.

The *Atlantic* opens with another instalment of Mr. John Fiske's curious collection of mythical folk-lore, and gives first a personal experience of Mr. Fiske's with the witch-hazel divining-rod still in use in some parts of Massachusetts, and still successful, if we are to believe Miss Gail Hamilton. In Mr. Fiske's unbelieving hands it declined to work as decidedly as a Spiritualist medium when a "sceptic" of a discordant "sphere" or "plane" comes into a company. Another interesting article is about Delsarte, the French teacher of the philosophy and art of gesticulation. The story of his life as told here is touching. He was born at Solesmes, in Northern France, in 1811, and in 1815 began his troubles by insulting a detachment of the allied troops. He cried *Vive l'Empereur!* as they passed, and the officer in command caused the house of the Delsartes to be burned to the ground, and thus reduced the family to ruin. His boyhood was passed in all sorts of misery; but, though his education was not regular, it was not wholly neglected, and his brain was continually active. For instance, he invented for himself a system of musical notation and a system of shorthand. Briefly, in 1829 he had a success on the lyric stage, and in 1834, his voice failing him, he abandoned the active exercise of his profession, and took to teaching gesticulation—an art the philosophical reasons of which he thinks he has discovered, and believes, as do some of his pupils, that he has formulated. At all events, whatever his pupils may think of his philosphy, which looks to us, in some of its particulars at least, "very French," he certainly succeeds in teaching them a good deal. Perhaps it will never be easy for people of American blood to refrain from something like contempt for the acting even, let alone the oratory, sacred or secular, which rests on arts such as Delsarte teaches; and perhaps it is inevitable that there should be in the details of any such scheme a good deal that is highly arbitrary and dependent on no fixed or no discernible principle; but the exposition and illustration of the system would be interesting, and there is now in the country a pupil of Delsarte. As some of our readers are likely to see his illustrations of his master's theory, we recommend to their notice this sketch of Mr. Durivage's, which appears opportunely.

"Castilian Days" is pleasant reading this month, though rather affected in tone. Kate Beaumont goes on, and is readable. "The Capture of Fort Fisher" appears to be written in the interest of General Butler, and the *Atlantic* is rather a queer place in which to find it. The pity really is, that General Butler was not absent on the first occasion of attacking the fort as he was on the second. In the account before us, Admiral Porter appears in no very good light; but, as we say, it seems a partisan account, and certainly is an incomplete one.

Mr. Donn Piatt's portrait is the illustration in this number of the *Galaxy*, and in "The Galaxy Club-Room" we have his first work as editor of the humorous department, which is like all other similar departments—unless, indeed, we except the collection of old and new stories at the end of *Harper's*—in being, on the whole, depressing. "The Duke of Cambridge," by Mr. Justin McCarthy, is, perhaps, best worth reading in the May *Galaxy*, Mr. McCarthy being not above a little gossip now and again, and his expressions of opinion having as a rule this value, that one may know from them something of what is thought and taught by the so-called intellectual radicals in England.

Old and New has a rather elaborate and somewhat stiff and not very exhaustive eulogy of the late George Ticknor, of whom Mr. G. S. Hillard, we think, has spoken best, certainly very well, with sound and discriminating praise—indeed, a model of what such things should be. This in *Old and New*, however, is also worth looking at. A very disagreeably written essay entitled "Jesus and the Christ" is the other most noticeable thing in *Old and New*, unless perhaps the little account of a remarkable co-operative agricultural association, which existed thirty years ago at Ralahine, County Clare, Ireland, and which had a curious ending.

The *Overland* usually reaches us a little after the other magazines, and so is less often noticed here than we could wish. We should like, for example, to call attention now to a remarkable article in the April number, in which are set forth the advantages which California offers the cotton planter. It is the custom to laugh a little when Californians make talk about the boundless natural resources of their State, but the writer to whom we refer appeared to be reasonably cautious and yet make out a strong case. The May number has all the *Overland's* characteristic merits, which are freshness of topic, the local color of the Pacific coast as visible in the men, the incidents, and the scenery, some fun and wit, and some sentimentality of a healthy enough kind. The loss of Mr. Harte was no inconsiderable loss, but on the whole the *Overland* will be found not to be essentially different to-day from what it has been since its establishment; full of good light reading for magazine readers, who will seldom find in it anything stupid, or stupidly like the regulation magazine articles from which no Eastern magazine is free. Here is a story from Mr. Prentice Mulford, who tells about the old-time California camp:

"These are a keen set of men. Involuntarily their minds turn to the study of human nature. When a stranger comes in their midst, they set to work and analyze him and sift him down, until he is thoroughly known. Has he any special weakness, it is discovered. These little, lazy 'Camps' become select schools for the study of character. New material wanting, they study each other. They know, and comment upon, and relish each other's peculiarities. There is Green, a tall, gaunt man from North Carolina—a man profoundly wise in ignorance. Green cannot read. But he watches narrowly the newspaper as others read it; he notes the location of stirring paragraphs which have been read aloud; he fastens upon them with his thumb and finger, and then, awaiting his opportunity until some unemployed bystander saunters into the 'Magnolia,' he knowingly and triumphantly hands him the sheet, perhaps upside down, and remarks, 'Here, sir, read that!' Green's *ruse* lasts for years."

Mr. Mulford appears again in *Lippincott's*, and relates more of his mining experience, but is not there in any very great force. Other articles in the current number are something pleasant about Berne in winter, more of Mr. Donbavand's "Wild Ireland," and an intelligent essay on Ivan Turgenef, the novelist. There is also this contradiction of some assertions contained in the last number of *Lippincott's*, where they formed part of an article on Mr. Charles Francis Adams, which we noticed at the time. The expulsion of Mr. Hoar is the particular matter in hand:

"That unhappy event was sufficiently discreditable to our State without any exaggeration, and has probably been more misrepresented than any fact of like importance which has occurred in the present century.

"I have no intention of correcting any of these misrepresentations, save those contained in the following sentences: 'Mr. Hoar's life was threatened in the streets. A sheriff's officer assaulted him. A mob, headed by one Rose, who had profited so little by the education which he owed to the bounty of the Massachusetts University, conducted him to a steamboat about to depart, and South Carolina once more drew tranquil breath.'

"As I was an eye-witness of Mr. Hoar's departure from the Charleston Hotel, I feel competent to correct some of the errors in this extract. With regard to Mr. Hoar's life having been threatened in the streets, I can only give negative testimony. I heard nothing of it at the time, but I did hear that a policeman, who met Mr. Hoar in the street, advised him to leave the city as speedily as possible. The 'mob headed by one Rose' was composed of said Rose, Joseph Leland, and David Leland (two natives of Massachusetts), and the distinguished James L. Pettigru. These gentlemen called to advise Mr. Hoar's departure, especially as he was accompanied by his daughter. They told him of the angry feeling which his mission had created, and represented that, as he could do no good by remaining, his proper course was to depart before this feeling culminated in violence. From Mr. Rose's lips I heard what was Judge Hoar's reply: 'Gentlemen, I have been appointed by the Governor of Massachusetts to attend to a public duty, and I mean to perform it, regardless of consequences.'

"This *mob-leader*, Mr. Rose, who had previously urged the removal of the daughter to his private residence, then told Mr. Hoar that, if he was determined to remain, he and his other friends would remain with him, and protect him as far as lay in their power. As soon as the matter was presented to Mr. Hoar in this light, he immediately changed his mind, and said, 'Gentlemen, I will go. I have a right to peril my own life, but I have no right to expose you to any danger in my defence.' His luggage was brought down, and Mr. and Miss Hoar got into Mr. Rose's carriage, which was waiting at the Charleston Hotel, and drove to the steamer, without any escort save Mr. Rose himself.

"The insinuation that Mr. Rose was educated by the '*bounty* of the Massachusetts University' is probably about as true as that he 'headed a mob.' Mr. Rose inherited an ample fortune, and doubtless paid for all the education he received at Harvard University.

"As soon as the carriage drove from the Charleston Hotel, Mr. Pettigru walked over to my store, his bearing and manner indicating great excitement. To my remark that our Legislature had made a dreadful blunder in voting to expel Mr. Hoar, he replied, in the most emphatic language, that it was a most unhappy business; and he also stated, with a solemn oath, that before a hair of Mr. Hoar's head was touched, they should have walked over his dead body."

Reginald Archer. A Novel. By Anne M. Crane Seemuller, Author of "Emily Chester" and "Opportunity." (Boston: James R. Osgood & Co. 1871.)—It is not a pleasant task to find fault with a writer who is evidently ambitious, and who apparently takes increasing pains with her work. In some respects, too, the "Author of 'Emily Chester'" does really improve as she grows older, and gains more literary experience. The

action of her stories is better, she has fewer superfluous characters, and her personages, when in conversation, dabble less in the metaphysics of their bloodless passions. She is as analytical as ever, still, and, owing to what seems to us the unnecessarily revolting nature of the subjects she chooses for that process, we find it in the present instance even more repulsive than it was at first. Most of her readers have, we suppose, had time enough to forget her first novel, unless the family likeness which the present one bears to it may have recalled it to their minds. What moral it was intended to suggest we have forgotten; the impression it actually left was that the writer had a not very clearly defined idea, to the effect that, when a woman who is personally attractive has an exceptionally good mind and more than ordinary cultivation, it is more than likely that she will never find her emotional and intellectual needs quite satisfied by any *one* man, and that she is either condemned, as Margaret Fuller suggested in apology for George Sand, to seek full development of her whole self at the expense of her virtue, or to lead a miserable, dissatisfied, unhappy existence. It is a dangerous doctrine to broach in days when the "greatest happiness" theory of morals is flourishing, and when the next logically-minded reformer may argue that dissatisfaction and unhappiness are plainly immoral, and may follow the idea to its legitimate consequences. Now, this idea is not precisely and formally restated in "Reginald Archer," although the heroine does first gratify her thirst for beauty by marrying the villain of the book, and afterwards the needs of her higher nature by marrying his brother, whose personal attractions are but limited, but whose strict attention to business and to the requirements of the moral law are thereby fully requited. It is more than likely that our author did not consciously intend to suggest any such theory of the needs of women, but it is in her books nevertheless, and is a most serious fault in them. What we dislike most in the novel before us, however, is that increasing and familiar knowledge of the worst side of human nature which it is always unpleasant to have thrust unnecessarily before one, and which it is perhaps more disagreeable to find in a woman's work than elsewhere. Nobody, as we suppose, lies under a necessity of writing novels; and certainly no woman is called upon to deepen, by work which she undertakes at least as much for her own amusement as for her neighbor's edification, a suspicion which often enough forces itself upon the mind of any one who reads many modern novels, to the effect that delicacy and reticence are more certainly masculine than feminine virtues. The character of Mrs. Seemuller's hero, the incidents recorded of him, the sort of intimate knowledge of his vileness which she displays, do not, we confess, make her book one which we should be glad to see generally read; and a certain intensity and force there is in it only deepens our objections to it.

PORTER & COATES, Publishers,

822 Chestnut Street, Philadelphia.

A BOOK FOR THE PEOPLE.

JUST PUBLISHED:

LIFE AND LETTERS OF HUGH MILLER.

BY PETER BAYNE,

Author of "The Christian Life," etc.

2 vols. 12mo, cloth, price $4.

Peter Bayne's long-looked-for life of the great Scottish geologist and elegant writer, Hugh Miller, is now completed. The biography of a man like Hugh Miller, by Peter Bayne, the prince of biographers, as shown in his "Christian Life," of which the Hon. R. C. Winthrop says, "It is the most charming specimen of condensed biography I have ever met," and the *British Banner* says: "These sketches we consider the finest things of the kind that have appeared the present century," cannot fail of being deeply interesting, and must be universally welcomed by American readers.

GOULD & LINCOLN,

59 Washington Street, Boston.

"THE AMERICAN CARDINAL," shortly to be published by Dodd & Mead, is written by an eminent evangelical Episcopalian, who will remain anonymous. It is a story of intense interest and dramatic power, and, dealing with the Catholic question from a new standpoint, cannot fail to attract much attention.

DODD & MEAD, Publishers,
762 *Broadway, N. Y.*

HOLT & WILLIAMS,

25 BOND STREET, NEW YORK,

HENRY K. VAN SICLEN,
BIBLIOPOLE,
133 NASSAU STREET.

Special attention given to orders by letter.

NEW BOOKS AND NEW EDITIONS,

PUBLISHED BY

HURD & HOUGHTON, New York,

THE RIVERSIDE PRESS, CAMBRIDGE.

The Life of Nathanael Greene, Major-General in the Army of the Revolution. By George Washington Greene, author of "Historical View of the American Revolution." 8vo. Volume II. Cloth, $4.

"A literary monument more enduring than marble, destined to a permanent place in the literature of the nation."—Hon. H. B. Anthony, in United States Senate.

"The volume is one of the really good books of the day, not merely interesting, but of permanent value."—The Nation.

"The author's charming simplicity of style is in keeping with the character of the hero."—N. Y. Evening Post.

Culture and Religion in some of their Relations. By J. C. Shairp, Principal of St. Andrews, Scotland. In 1 vol. 16mo, cloth, $1 25.

"The lectures are filled with strong thoughts, and they open a new and very suggestive field. The heart which inspired this work is devout and spiritual, and the whole tone of the work is elevating."—Providence Press.

"The author's thorough appreciation of, and hearty sympathy with, all that is good and true in the life and thought of the day, will secure him a ready hearing from all, especially from young men."—Christian Witness.

The Story of My Life. By Hans Christian Andersen. Now first translated into English, and containing chapters additional to those published in the Danish edition, bringing the narrative down to the Odense Festival of 1867. With a Portrait. 1 vol. crown 8vo, $2.

"Aside from the never-failing fund of interest which Andersen's own remarkable career supplies at every turn and period, his relations to prominent personages, and his visits to, and personal recollections of, his contemporaries in the world of literature, art, and the drama, make the 'story of his life' a rich repository of facts and impressions in the current history of belles-lettres."—Sunday-School Times.

Three Successful Girls. By Julia Crouch. In 1 vol. crown 8vo, cloth, $1 50. (Third edition just ready.)

"In some respects it is the best novel on the subject we have seen. It is certainly the most natural, most pure in tone and practical in plot."—Philadelphia Post.

"The tone of the book is wonderfully wholesome; it is interesting, and, in the main, pleasantly written."—Philadelphia Inquirer.

Sermons Preached upon Several Occasions. By Robert South, D.D. In 5 vols. 8vo, price, in cloth, $20.

"Of all the English preachers, South seems to us to furnish, in point of style, the truest specimen of the most effective species of pulpit eloquence."—Edinburgh Review.

"His sermons are certainly, on many accounts, to be regarded as among the best treasures in our language."—Dr. Convers Francis.

A Handbook of Legendary and Mythological Art. By Clara Erskine Clement. With One Hundred and Eighty Illustrations. In 1 vol. crown 8vo. cloth, $3 25. (Third edition, with a complete index, just ready.)

"All that we need to explain the stories illustrated or the persons represented in the pictures and statutes of the churches and galleries of Europe may be found in Mrs. Clement's book, which ought to be known to a large public."—Eugene Benson, in the College Courant.

"There are books which we admire so much, whose excellence is so unquestioned, which so completely and worthily fill the niche for which they were intended, that out of the superfluity of words we vainly seek for some one absolute, unagainsayable, all-embracing epithet that shall express in its full intensity the measure of our delight. If such a word were at our pen-nib, it would be brought into quick requisition to mark our hearty admiration for Mrs. Clement's hand-book."—The Christian Union.

The Children's Crusade. An Episode of the Thirteenth Century. By George Zabriskie Gray. In square 16mo, $1 75. (Second edition just ready.)

"One of the most curious, singular, and pathetic movements that ever transpired in human annals."—Commonwealth.

Suburban Sketches. By W. D. Howells, author of "Venetian Life" and "Italian Journeys." In 1 vol. crown 8vo, price $1 75. Second edition.

"The quiet humor, combined with tender, unobtrusive pathos, reminds us more of 'The Vicar of Wakefield' than anything we have read for many a day."—Toledo Commercial

NEXT WEEK.

A Poet's Bazar. By Hans Christian Andersen. In 1 vol. crown 8vo, price $1 75.

Wake Robin. By John Burroughs. In 1 vol. 16mo.

NEW BOOKS.

I.

THE HOUSEHOLD TENNYSON.

The Complete Poetical Works of Alfred Tennyson. 1 vol. 12mo, bevelled edges, and handsomely stamped. With fine portrait and 60 illustrations. $1 75.

☞ AUTHOR'S HOUSEHOLD EDITION.

This popular edition contains all the poems included in previous American editions published with Mr. Tennyson's sanction; also, some poems which he has omitted from late editions, but has consented to have reproduced in this issue; and others which have appeared recently in English periodicals. It is, therefore, absolutely complete, and is the only complete edition of Tennyson's Poems published in America with the author's consent.

It is embellished with a fine portrait and 60 illustrations, and is far the most desirable of the popular editions of Tennyson.

II.

PIKE CO. BALLADS, AND OTHER PIECES.

BY JOHN HAY.

1 vol. 16mo.....$1 50.

This volume includes the noted poems in dialect, "Jim Bludso," "Little Breeches," and "Banty Tim." It has, besides, many poems never before printed, and others reproduced from leading periodicals, which evince the fine quality and wide range of the author's poetic genius.

III.

OUR EYES, AND HOW TO TAKE CARE OF THEM.

BY HENRY W. WILLIAMS, M.D.,
Author of "Diseases of the Eye," etc.
1 vol. 16mo. $1.

The purpose of this work, by one of the most distinguished of living oculists, is to explain to parents, teachers, and all who have occasion to use their eyes, some of the advances recently made in our knowledge of the eye, its powers, and proper uses; and to show what should be done and what avoided, that sight may be enjoyed and preserved.

For sale by all Booksellers. Sent post-paid on receipt of price by the publishers,

JAMES R. OSGOOD & CO.,

PRATT'S Astral OIL. Not the cheapest, but the best illuminating oil ever made. Does not take fire or explode if the lamp is upset and broken. Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have occurred from it.
Oil House of Charles Pratt, Established 1770, New York.

The Nation.

NEW YORK, THURSDAY, MAY 18, 1871.

The Week.

Opposition to the ratification of the new treaty makes some small show, but the general opinion, as expressed by the newspapers, seems to be that it ought to be ratified, and that it will be. Of partisan hostility there seems to be very little, although it is undeniable that Grant will be very decidedly strengthened as a candidate for re-election if his Administration can bring this business to a prosperous conclusion. Mr. Reverdy Johnson, indeed, whose influence with the Democratic senators is deservedly great, is represented as strongly urging ratification—a course of action which seems very creditable in a man who has had to bear such an amount of ignorant abuse as was lavished on him as the conductor of previous negotiations. Of the Republican opposition nothing very definite appears to be known, but human nature would not be human nature if we might not look for hostility from certain quarters. And every true patriot must share in the apprehensions which some of our senators have expressed in the hearing of the Washington correspondent of our contemporary, the *Tribune*. It is regarded as unfortunate, he says, that the arbitrator in the San Juan question should be the Emperor William of Germany, because that monarch is an aged man, and, as the Cable reported the other day, is suffering even now from an indisposition. In case of his demise, he would be succeeded by his son, Frederick William, who would not only fill the ancestral throne, but would also take his father's place as arbitrator. "The arrangement of the Joint High Commission is considered unfortunate in view of the fact that the Prince, having married Victoria Adelaide, the daughter of the Queen of England, might therefore be influenced in the determination of the question by family considerations." Nothing more probable; and we would give a large sum of money towards procuring "a testimonial" for the publicist who has pointed out this peril to his fellow-countrymen. The strongest opposition comes from the East, and, as was anticipated, the fisheries question is the point where most difficulty will arise. Something is indeed said about the necessity of excluding expressly the claims of the English holders of Confederate cotton bonds, but we should say that anxiety as to those claims might profitably be left to the bond-holders themselves in session at the London Tavern, and that all alarm as regards them is a little preposterous in the American breast. A queer "claim on the United States Government" a certificate of the Confederacy's indebtedness would be.

As regards the fisheries question, the attacks and replications are confusing, and it would require a board of experienced Eastern fishermen and dealers in fish to come to an intelligent conclusion as to the matters in debate. According to a writer in the Boston *Advertiser*, the effect of the treaty, as it now stands, would be to cripple our own fishermen, and give our home market to the Province people. This for these reasons: We being at a distance from the Gulf of St. Lawrence, are obliged to build a class of swift, costly vessels, good sailers, but bad carriers, and, under our present tariff, these vessels pay high duties on everything that enters into their construction. Secondly, bounties have been withdrawn by the American Government, while the Canadians pay a bounty of four dollars a ton. The only reason why, under these circumstances, our Gloucester and Cape fishermen hold their own is, that Provincial fish have been subject to a duty of two dollars a barrel on mackerel and half a dollar a quintal on dry fish, which duties have sufficed to secure for our men the home market. The treaty gives to the Provincial fishermen the right to import their fish duty free, and also to come into our waters and catch the mackerel bait—which does not frequent their shores—which we now sell them at a price ranging from $200 to $300 for each vessel. Thus, says the writer in question, we grant a privilege worth more than six times as much as the privilege conceded to us by fishing within the three-mile limits. This latter concession is, after all, he says, of no very great importance, except that making it removes some possibilities of collision between the two countries. Not a third of our mackerel are caught out of our own waters, he says, and not a tenth of those which are caught in Provincial waters are caught within the three-mile line, and our cod-fishery is carried on in the deep sea by vessels which do not enter the Gulf and never cross the three-mile line. Yet, for the abolition of this limit, we are not only to pay such a compensation in money as may be hereafter determined, but we are to make what amounts to three other payments – namely, we are to let Canadians fish in our waters north of 39°, where most of the mackerel are taken; we are to let them take bait here; and we virtually give away our home market for salted and dried fish.

On the other hand, to read in some of the Dominion papers, one would suppose that in case of the ratification of this product of Yankee greed and English timidity and indifference to colonial interests, there will be immediate revolution. To be sure, there is nothing much less to be depended on for exactness of statement than a Provincial paper when it is talking about a "Government measure" if it is itself "in opposition," or an "opposition scheme" if it supports the Government. The smallness of their politics is, as usually happens in such contracted fields, made up for by their spitefulness and bitterness. Still, the Nova Scotia malcontents have this excuse, that if it is true that the privileges which the treaty accords us are so much more valuable than those we accord that we shall have to pay money for them, it is pretty certain that the money will go to the Dominion, and that Nova Scotia will be no better, or very little better, for it. Then, again, let it be said, they say, that the Nova Scotia and New Brunswick fishing interest will be benefited by the operation of the treaty; other interests, which languish without reciprocity, will be sacrificed to the fishing interest; and the country will have given away irrevocably the price with which reciprocity was some time in the future to be bought. And the sacrifice will be made, because, says the Halifax *Chronicle*, which hates the Dominion, "the English blockade-runners and shipbuilders are to be permitted to father the cost of their blunders on Nova Scotia. The Home Government may as well attempt to sell the province over our heads—to sell ourselves outright—as to sell our fisheries;" and it prophesies a struggle. But the Government papers, although they are by no means enthusiastic, are disposed to regard the proposed arrangements as on the whole satisfactory, and to lay much stress on the right to a free market in this country as being a complete equivalent for the right conceded to us of fishing anywhere in Canadian waters, and curing our fish on British soil. There will, however, be plenty of discussion of this part of the treaty, and the Canadians are not likely to be too tractable.

Everything promising so well as it does, and the dawn of an era of international good feeling being so close at hand, it is a pity that anything should occur to mar the general happiness; but in the newspaper world there is much sadness and depression. One American newspaper has been found capable of wringing everybody's breast by "disgracing American journalism," and the air is full of the highest-toned sermons directed at the offender. It is notorious that if there is anything which the managing editors of our journals will not do, it is to connive at the practice, by reporters and correspondents, of any devices for obtaining news which are in the least ungentlemanly and wanting in delicacy of feeling. So it may be fancied what heartfelt rebukes were administered to the editor of the *Tribune* when there suddenly appeared in that paper, and before it was elsewhere published, the full text of the Treaty of Washington. Did he not know that it was desired to keep the treaty from public comment until the Senate had examined it? How, then, could he so far forget what was due to himself and the public respect for decency as to print that instrument? Did he not know that American journalism could never be elevated to its proper place so long as leading newspapers

violate the usages observed among gentlemen? Indeed, some of his censors, in their zeal for the honor of the profession, used language that was almost too severe even for his fault. The *World*, in particular, could not fully express its disapprobation of his ungentlemanly conduct, and several days after the commission of the offence talked to him in this way: "The illegitimate, incomplete, and inaccurate publication by the *Tribune* of the Treaty of Washington having led to its legitimate, complete, and accurate publication in the *World*, and Mr. Greeley having gone to Texas, the *Tribune* illustrates its honesty by its courtesy, calls the *World* a liar, and, admitting itself to have been a thief, seeks to implicate the *World* as a receiver." This is in fun, of course; but there was much preaching done that was professedly serious, while doubtless the Washington correspondents of the preachers were at the same moment in receipt of telegrams cursing them for letting So-and-so "get ahead of them." The fact being that bribery and all kinds of sharp practice, to say nothing of all kinds of disgraceful violations of almost every code of morals or manners, would be forgiven, and rewarded, in almost any of the offices of our daily papers, provided its correspondents showed more "enterprise" than its competitors', it is even a little disgusting to uncynical friends of the press to read these periodical homilies on gentlemanliness.

It is amusing rather than otherwise to see the Senate, too, making an occasional stand for its dignity, and to hear it talking of expelling the senator who gave to the "*Tribune* man" a copy of the treaty, and to watch its investigation, by a committee, into the conduct of the reporters. These latter gentlemen seem to be very much at ease in their minds as regards the possible result of the enquiry, the secret perhaps being that they know perfectly well that about half, more or less, of the whole number of senators are always ready to tell the correspondent of this or that weighty paper anything and everything, no matter what, irrespective of the Senate's having put upon it "the seal of secrecy." It is a long time since there was a secret session of either Senate or caucus the doings of which were not instantly made known by half-a-dozen senators to as many reporters capable of injuring or helping the honorable gentlemen's "chances." It looks a little absurd, then, for Mr. Conkling and his brethren to get into a flurry in the presence of our diplomatic British visitors. The genuine article of dignity they know when they see it, and while they recollect the published report of Mr. Conkling's secret session speech on his colleague Fenton, and Mr. Chandler's occasional displays, they are as little likely, as the reporters to be much impressed by the committee.

The convention of taxpayers at Columbia, S. C., adjourned on Friday, after a harmonious session of four days. It proved to be composed of able and moderate men, and the action which it took reflected the era of good feeling in which the State now rejoices. One of the results proposed was to ascertain the exact amount of the debt, and everybody was pleased to learn that it does not exceed $8,900,000, whereas rumor had put it as high as sixteen or twenty millions. The convention was also assured by Governor Scott, in a private interview by committee, that "nothing had been done involving the credit of the State not strictly authorized by law;" that he would endeavor to bring about retrenchment in all departments, would cut off supernumerary officials, and make better appointments, and would heartily favor the introduction of minority representation. To the latter scheme, in the form of cumulative voting, the convention turned as a main reliance for removing the evils of bad legislation, and it seems not at all unlikely that the experiment will be made, great as the concession will be on the part of the non-taxpaying majority. Another and much respected State officer, Attorney-General Chamberlain, has argued very forcibly in favor of this reform measure, both in a letter published in the newspapers, and subsequently in a speech in the convention itself. While not omitting to speak in proper terms of the Ku-klux, his denunciation of the corruption of which his Republican associates have been guilty was most unequivocal.

The example of South Carolina in this matter of minority representation might now be taken to heart by the people of Connecticut. The Legislature of the latter State, having to determine a doubtful election for Governor last week, gave it to the Republican candidate, Marshall Jewell, after it clearly appeared that in one of the Democratic wards of New Haven there had been a fraudulent polling of at least a hundred votes in favor of Governor English—enough to turn the scale. Possibly other frauds might have been discovered if further search had been made, but it was not necessary. Whether they be allowed or not, the State is notoriously one of the most evenly divided in the Union, and this condition of parties inevitably leads to the practice of frauds, in order to secure the small handful of voters on whom success depends, and who virtually rule the State. This is attended by the serious evil of contested elections, which are a fruitful source of demoralization, both where they occur and where they come up for settlement. Party virtue is not equal to the strain of deciding impartially; and, besides, the facts are generally obscure, and the proofs of fraud rarely so undeniable as those obtained at New Haven. Moreover, the anomaly may any time arise of a Democratic executive and a Republican legislature, or *vice versa*; and, on the whole, nothing better could be devised to foster partisanship and the low arts of the politician, than the majority rule in such circumstances.

Ruloff, the Binghamton murderer, has been examined by two Albany doctors, who pronounce him sane, and publish a long farrago of question and answer as containing the basis and justification of their judgment. It is, however, a deal more convincing as testimony to their unfitness for the business they had in hand than as testimony of any value concerning the sanity of the convict, who, as on other occasions, showed himself to be a philologer whose "great work" has a very distinct family resemblance to the great work in philology of Mr. Stephen Pearl Andrews. The doctors, however, listened gravely to all that he had to say. "Did you see his book?" said a reporter to one of them, after the interview was over. "Yes," said the doctor. "It is very profound; I am surprised that philological scholars have not taken more interest in the work than has so far been manifested." Again: "His ideas of Greek mythology are remarkable. I learned from him that he has conned over a single word for ten years before he has arrived at its exact meaning. The readiness with which he answered the metaphysical questions put to him was wonderful." A sample of the metaphysical questions put to him is this one, which was asked after Ruloff had said that once he used to read quantities of German philosophy, "Kant and Comte especially." "Do you accept their doctrines as conclusive?" enquired one of the physicians—or, in other words, did you, after bringing your mind to bear on it, conclude that the Copernican system of astronomy and the Ptolemaic system were beautifully correct? "I did," says Ruloff; whereupon the doctors fall to wonderment at the profound intellect of this person, and have pity for "those who think that he is only a superficial scholar." Other matter of similar wisdom is set down, along with some matter which goes to show that the criminal had gone through some of the common reading on various systems of morality. Considered as a philologist, Ruloff as usual appeared to be a man of some considerable acquirements, with an addled brain, just as he appeared when he was offering to sell his great secret for half-a-million. That a possible reason why the philological students of the country took no interest in this secret was that Ruloff's scheme is nonsensical, seems not to have occurred to the minds of his examiners. Apparently ignorant of linguistics, and not profound in metaphysics, those gentlemen stared at Ruloff as a wonder of erudition and ability, and declared him fit for the gallows on evidence which, so far as it makes anything plain, makes it plain that they are incompetent to speak as experts in such a case, and which leaves it as doubtful as ever whether Ruloff is not half a madman. This, of course, is not saying that he is not sane enough to hang; nor is it at all like saying that such a person can ever be of the least service to learning. But to hang him on the merits of the case, as they were shown in court, would be, whether he is crazy or sane, far preferable to hanging him on the strength of such a document as this physician's report.

The coal troubles continue. As we indicated last week, the resumption in Schuylkill is nominal, and the Reading Railroad has not reduced its excessive tolls. In Scranton, matters are going from bad to worse. The attempt to break up the Miners' Union by fomenting discord between the miners and the laborers, who both belong to it, has apparently failed, but has created a great deal of bad blood. The riots and scenes of violence reported thence have been proved to be mainly fictitious; but there is no doubt that the feeling is very unsatisfactory. The companies, after rejecting the offer of the men to resume on the companies' terms and leave the question of wages to arbitration, have now offered the men a nominal advance in wages, but have clogged the arbitration proposal with so many conditions that the men have in their turn rejected it.

The receipts of cotton continue to decline, and the unseasonably cold and damp weather is unfavorable for the prospects of the coming crop. Prices have consequently advanced sharply; but the exports continue liberal. Breadstuffs and meats continue unchanged, but with a general tendency to lower prices. Trade is dull and quiet, but, on the whole, more satisfactory in some departments. Nevertheless, and in spite of the extreme abundance of money at the leading financial centres, the complaints of poor collections continue to increase. The iron-masters, not satisfied with the result of combination among the coal-masters, have been endeavoring to agree once more about prices, so as to prevent competition among themselves, but without result—at least, so far as known. The coal troubles are sadly interfering with the iron industry, though there are not wanting persons who assert that many furnaces would have gone out of blast this spring even had there been no coal-strike. In general, all the highly-protected interests are not prosperous. Those which have been left to their own resources appear to be in a more satisfactory condition. Real estate is stagnant and depressed for all except choice building sites up-town, which continue to be in active demand at advancing prices, the belief being general that such property will ultimately prove remunerative, even as an investment. It is, however, asserted, as a remarkable illustration of this class of investment, that the Wilkins estate, which was sold a few weeks since for about one and three-quarter millions of dollars, and was originally purchased for a merely nominal sum, would have been more profitable if the purchase-money, with taxes and assessments, had been invested steadily at seven per cent. compound interest. In spite of the decided decline in rents, many stores and even dwelling-houses remain vacant, and builders report that walls torn down a few years ago to throw two stores into one, are quite frequently being put up again. Building materials are dull, although an unusually large number of new buildings are in progress or in contemplation.

The progress of the Versailles troops in the work of reducing Paris has been steady, though far from rapid, since the capture of Fort Issy. On Wednesday, May 10, they carried the insurgent barricades in the village of Bourg-la-Reine, killing or capturing a number of the defenders. In the following night, and on Thursday, severe fighting took place before Fort Vanves, which convinced the Parisians of the untenability of that stronghold. Simultaneous attacks were made, on the west, on the insurgent defences at Neuilly and Asnières, while forces were massing opposite Auteuil and Point du Jour, where the main assault was expected. The cannonading all around was reported as terrific. On the 12th, a position in the rear of Fort Issy, which was stoutly defended by the Parisians, was carried at the point of the bayonet. On the same day, a sharp fusilade was kept up against the defenders of Fort Bicêtre. The approaches to the ramparts were actively pushed forward, especially from the southwest, under cover of a heavy fire, and breaching batteries were placed in position against the *enceinte*. On Sunday, May 14, Fort Vanves was captured, with fifty guns, eight mortars, and a few prisoners, the bulk of the defenders effecting their escape to the adjoining Fort Montrouge. The Seminary of Issy, and a fortified position at Oiseaux, were simultaneously captured, with considerable loss to the insurgents in men and artillery; the Lyceum at the village of Vanves was occupied next; the communication between Forts Vanves and Montrouge was cut; trenches were opened in the Bois de Boulogne; the work of breaching the *enceinte* was vigorously begun, and, at last accounts, the Auteuil Gate was almost entirely demolished, the heavy guns at Montretout doing most of the battering. An address to the soldiers, issued by Marshal McMahon, was regarded as preliminary to a speedy grand attack on the city.

In several of these attacks the Government troops seem to have met with stubborn resistance, and to have suffered considerable losses. On the whole, however, there can hardly be a doubt that the defence of Paris is carried on with vacillating hands, without harmony and strength. Rossel, the successor of Cluseret—"the able Franco-American," as the London *Spectator* ludicrously calls him—resigned on the fall of Fort Issy, because he found that "everybody deliberated, nobody obeyed orders, and nothing was organized." He asked for a cell in the Mazas prison, and was arrested; but subsequently somehow succeeded in escaping trial, though the Committee of Public Safety, in a proclamation to the people, thundered against him, designating his surrender of Fort Issy as the first step in a plot hatched by treason which was to end with the opening of the gates of Paris. Delescluze succeeded Rossel, but ill-health prevented this new Minister of War—who has for long years practised the art of war in the newspapers—from displaying his talents in this new field; and he had to surrender the task of reorganizing victory to a man bearing the unusually martial name of Brittiorary, or Brittiorari, if he be an Italian, like La Cecilia, who now commands in Petit Vanves, sharing the brunt of the struggle with Dombrowski. The latter general is now said to meet with very little obedience, and various battalions of the National Guard, in spite of not unfrequent shootings for treason, have refused to march to the front. A widespread conspiracy for the overthrow of the Commune is suspected to exist, and that body is taking measures to guard against the peril. Executions by wholesale are demanded by the most exalted regenerators of France and cosmopolitan philanthropists; but the tone in general is rather subdued, and even that modern Brutus, Félix Pyat, has begun to despair of the Commune. Incarcerations, however, searches, suppressions of papers and religious institutions, confiscations, and demolitions continue to be the order of the day. New batteries and barricades are also raised, and a *levée en masse* is spoken of.

Thiers is sanguine of speedy success in the approaching decisive operations, and he is well sustained by the Assembly at Versailles—while the Parisians are busy demolishing his mansion in Paris. In a late division, which involved an expression of confidence, he is reported to have obtained 495 votes against 10, which, if correct, would prove that the ill-success of the Paris Commune, the general condemnation it meets with in the provinces, and fear of provoking the majority, are gradually silencing the voice of the opposition. The proposed municipal congresses, to assemble at Bordeaux, Lyons, Nantes, and Lille, have proved abortive attempts. The news from Algeria is also reassuring. Of its dealings with the Germans, however, which resulted in substituting a definitive treaty for the peace preliminaries of Versailles, the Government was in no condition to give a satisfactory report to the Assembly, and Jules Favre's communication caused quite an emotion, destroying, as it did, some previously received and much more favorable accounts. The main new features of the Treaty of Frankfort are these: France pays half-a-milliard francs thirty days after the occupation of Paris by the Versailles army, and a milliard more before the end of the year; on the receipt of the latter sum, and then only, the Germans will evacuate the Paris forts. This prolongation of their stay before Paris was extorted by Prince Bismarck from Favre as a compensation for the delay granted the French Government in paying the first half-milliard, and the permission given it to concentrate a large army north of the Loire, contrary to the stipulations of Versailles. Of the minor points we have as yet no account both definite and trustworthy. The exchange of ratifications is to take place on the 20th of this month.

THE TREATY OF WASHINGTON.

An analysis of the treaty which the American and British plenipotentiaries have framed with so much care and labor, shows that it consists, in the main, of certain principles applicable to assumed states of fact, and of provision for a system of arbitrations by which the facts themselves may be established, and the principles thereupon applied so as to produce practical results. But in addition to these features, which are expressed in positive terms, the arrangement in all its parts implies concessions by each of the high contracting parties which underlie the whole compact. The portion which naturally excites the most interest and receives the closest attention among Americans is that relating to the *Alabama* claims. We have, at the outset, a gracefully expressed regret on the part of the British Government for the escape of the *Alabama* and other vessels, and for the depredations committed by them. This clause is certainly unusual in treaties made without force and compulsion between powers actually equal and independent, and it ought to satisfy those who have the most loudly demanded a formal apology as an essential preliminary to any settlement. The descriptive language should be carefully noticed. No terms could be more general and comprehensive. Reciting the difficulties "growing out of the acts committed by the several vessels which have given rise to the claims generally known as the *Alabama* claims," the parties agree "that all the said claims growing out of acts committed by the aforesaid vessels" shall be referred to arbitration. This plainly includes every complaint and claim upon the part of the United States and its citizens for wrongs done by each of the Confederate cruisers which sailed from a British port. Stripped of all its detail, the scheme of arbitration is as follows:

The tribunal, consisting of five members, is to meet at Geneva; the two Governments, and not individual claimants, are to be represented. Each is to lay before the arbitrators a case containing the charges and counter-charges, the proofs and counter-proofs; arguments are then to be submitted in support of each case. The arbitrators are then to determine with respect to the *Alabama*, and with respect to each of the other Confederate cruisers, whether Great Britain, by any act or omission, failed to fulfil any of the international duties resting upon her in regard to the construction, equipping, arming, or escape of the vessel, and in regard to its subsequent use of British ports as a base of operations and for the procuring of military supplies. If the arbitrators decide the question in the affirmative, they may either award a sum of money in gross to be paid by Great Britain to the United States, or they may thereupon terminate their own labors. In the latter alternative, a new mixed commission, sitting at Washington or at New York, is to examine the claims that may be presented to it by the United States Government, pass upon the merits of each separately, and award such sum thereon as may be proper. It will thus be seen that the great and probably only function of this tribunal of arbitrators will be to decide a question of fact as to the original remissness of British officials in suffering the *Alabama* and other vessels to escape, and as to their subsequent fault in receiving the same vessels from time to time into British ports, and in permitting them to obtain warlike supplies. We do not understand that the arbitrators are to settle any rule or principle of international law. On the contrary, they are to be a jury, and are to decide the simple issue of negligence under the light of the three following rules of law, furnished by the treaty itself: "A neutral government is bound, *first*, to use due diligence to prevent the fitting-out, arming, or equipping, within its jurisdiction, of any vessel which it has reasonable ground to believe is intended to cruise or to carry on war against a power with which it is at peace, and also to use like diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or carry on war as above, such vessel having been specially adapted, in whole or in part, within such jurisdiction, to warlike use. *Secondly*, Not to permit or suffer either belligerent to make use of its ports or waters as the base of naval operations against the other, or for the purpose of the renewal or augmentation of military supplies or arms, or the recruitment of men. *Thirdly*, To exercise due diligence in its own ports and waters, and as to all persons within its jurisdiction, to prevent any violation of the foregoing obligations and duties." While the British Government saves its consistency by protesting that these rules were not acknowledged portions of international law at the time when the difficulties arose, it agrees that for the purposes of this decision they shall retroact, and that in future they shall control the conduct of the two nations towards each other.

Such is the scheme. The important question is, What will be its probable result? It has been suggested that Great Britain concedes nothing, and that we are no nearer a determination in our own favor than before. This is the language of persons utterly ignorant of diplomacy. It is very true that the British plenipotentiaries have not conceded in express terms that the highest officers of the Crown were guilty of negligence, of a gross dereliction of duty. No honorable representatives of an independent nation would ever make such a damaging admission in a definitive treaty except at the close of a disastrous war, which had left no other alternative possible. But the provision itself, that the matters may be referred to arbitration, and that an award of damages shall be final, is a concession, and is always understood in diplomatic intercourse as a concession, of the existence of a claim *prima facie* valid at least. In signing this treaty, Great Britain has virtually said, "We were wrong." But, furthermore, the adoption of the doctrines and rules of international law which this convention contains—doctrines for which the United States had contended from the first—makes a decision by the arbitrators in our favor absolutely certain. The first of these rules relates exclusively to the construction and equipping of hostile vessels within a neutral jurisdiction; the second and third relate to the entirely different matter of the use of neutral ports by belligerent cruisers as the base of operations, or for the purpose of obtaining military supplies. Now, assuming for the moment that the officers of the Crown were not at all remiss in respect to the original construction of the *Alabama* and the other similar ships, it is notorious that all these vessels afterwards resorted to British ports, and refitted at will. The British Government never contradicted this fact, but simply denied its liability therefrom as a question of law. By acknowledging the law to be otherwise, and to be as claimed by the United States, Great Britain has destroyed all possible defence to this charge. The tribunal of arbitrators will, therefore, have no difficulty in deciding that Great Britain is liable under the second and third rules, and this will open the whole field of compensatory damages. Having reached this important conclusion of fact, the arbitrators will probably leave the matter of awards to the board of assessors provided for by Article X.

There are features of this treaty having an important bearing upon general international law which deserve a special notice. The first is the formal rules which have already been quoted. It is true that these doctrines are not new. The United States has maintained them by the decisions of her courts and by the acts of her administrative officers. Foreign jurists of the highest reputation have pronounced them to be accepted parts of the international code, or plain and necessary deductions from principles universally acknowledged. If Great Britain had finally rejected them, a doubt would have been raised as to the rights and duties of neutrals which can never hereafter exist. The second feature to which we refer is the absence of any allusion to the recognition of Southern belligerency by the British Government. The blow which some Americans, more zealous than wise, would have struck at independent neutrality, as a condition which the United States has generally occupied and must hereafter occupy, has happily been averted. We cannot here discuss the subject of recognition. It is enough to say that the position which the *Nation* has held from the beginning, through all the time of Mr. Seward's dispatches and of Mr. Sumner's declamation, has finally been reached by the Government. We may rest here secure and certain that our independent action as a neutral between two belligerent powers will not hereafter be cramped and thwarted by any such stipulations as a blind zeal or a wicked desire to keep alive national hatreds has so vehemently demanded. To sum up, we believe that the articles of this treaty relating to the *Alabama* claims are all that independent, self-respecting, and just America should ask, and all that independent, self-respecting, and just Britain should concede.

Articles XII. to XVII. provide that all claims of American

citizens upon Great Britain not included in the foregoing class, and arising between April 13, 1861, and April 9, 1865, and all claims of British subjects upon the United States arising during the same period, shall be referred to a mixed commission of three persons, who shall hear and examine the proofs, and make the final awards. The anxiety which the Administration has shown to avert an expected opposition to this portion of the treaty and to pacify the public, by asserting that the sum awarded to British subjects would be small, is certainly not very flattering to the honesty and sense of justice of the American people. It assumes that the people, while demanding apology and compensation for all wrongs done to the nation, will absolutely refuse to hear of a claim based upon alleged wrongs done by the nation. We have not so low an opinion of the mass of American citizens. We believe that, while they ask justice, they are ready and willing to do justice. What claims, therefore, can be brought against the United States by British subjects in conformity with well-settled doctrines of international law? First, the owners of vessels and cargoes captured and condemned for attempting to break the blockade can have no redress. The right of a nation to decide, in its own prize courts, all questions in regard to the liability of neutrals for a breach of blockade or for the carrying of contraband, and the absolute finality of such decisions upon matters of property, are as well settled as any other rules of international law. But it has been suggested that in some instances where the Supreme Court has decided against the captors, and has ordered a restitution to the owners, such restitution has not yet been made. If this be true, it states a plain case of a most just claim against the United States; indeed, it is a scandal that such liabilities should need the stipulations of a treaty for their enforcement. Secondly, there can be no claim on account of the emancipation of slaves, as slave property is universally admitted not to rest upon any natural right, but upon the positive municipal law, and as the owners of slaves hold them subject to any change in this law. Thirdly, the recent utterances of the officers of the Crown which have been so freely quoted by the newspapers, were statements of legal doctrines so familiar as to be commonplace. If a foreigner resides within the territory of one belligerent, his property is impressed with the enemy character so far as to make it liable to all the customary hazards and losses of modern warfare. Whatever property of British subjects domiciled at the South was therefore destroyed by the ordinary operations of war, whatever was seized or consumed on the line of an army's march, whatever was lost in battle or in the siege of towns, must be treated as so much enemy's property similarly situated, and the owner has no claim upon our Government for compensation. But there are cases which do not fall within either of these rules. After a city or a district of country at the South was completely occupied by the national troops during the war, and all resistance there had ceased, the cotton found therein was seized, sent to the North, sold, and the proceeds were paid into the Treasury. This was not done as an ordinary proceeding in military movements and operations; it was the result of laws of Congress, and was deliberately enforced as a part of the civil administration. Some of the cotton belonged to non-resident British subjects, and they clearly have a valid claim against the United States for this appropriation of their property. Another large portion belonged to British subjects domiciled at the South, and, as their case does not fall within the third rule stated above, their claim will doubtless be urged with earnestness.

Articles XVIII. to XXV. relate to the fisheries. Closely following the language of the Reciprocity Treaty, they stipulate that for a period of ten years and further, until two years after notice given by either party, American citizens, in addition to the liberty secured by the convention of 1818, may fish on all the coasts and shores, and in all the bays, creeks, and harbors of the Canadian Provinces and of Prince Edward's Island, and may land to cure fish and to dry nets. The United States grants to British subjects a similar liberty on its eastern coasts north of the 39th degree of north latitude. Reciprocity of trade between the United States and Canada and Prince Edward's Island is established for the same period in fish and fish-oil, the produce of the respective countries, excepting fish of the inland lakes. The British Government maintains that the concessions which it has thus made are of greater value than those made by the United States. A mixed commission is therefore to determine the amount of any compensation which ought to be paid by the Government of the United States to the Government of Great Britain.

In this arrangement, the American Commissioners seem to have waived their national rights more than in any other portion of the treaty, and to have abandoned the traditional policy and doctrines of international law advocated by the Government since the year 1815 to the time when Mr. Fish became Secretary of State. Unfortunately, they have used such language as will, we are afraid, for ever estop the United States at any future time from urging its rights growing out of the treaty of 1783. If the Commission created by these articles should determine that, in accordance with the doctrines of international law, the rights conferred in 1783 were permanent and still existing, they would necessarily hold that the stipulations of the present treaty grant nothing additional which must be paid for. But as we said before, unfortunately the language of Article XVIII., by making no reference to the treaty of 1783, and by expressly reciting "the liberty secured to the United States fishermen by the convention of 1818," makes it impossible for American agents to take this position before the Commission. It is very possible that the whole arrangement will fall through, and that the fisheries difficulty will be left more irritating to both parties from this very attempt to remove it. Before the articles become operative, they must be assented to by the British and Canadian Parliaments, by the Legislature of Prince Edward's Island, and by the United States Congress. It now seems very probable that the Canadian legislatures will reject the convention. In this case, we shall be thrown back into our present condition, with an additional element of exasperation.

We have thus noticed the three most important branches of this many-sided treaty. The other articles do not require separate comment.

"THE COMMUNE" AND THE LABOR QUESTION.

It has been in some respects a misfortune for the "labor reform" movement that its leaders should have had an opportunity offered them, by the surrender of Paris, of giving the world a specimen of their powers as political administrators. They escaped the discredit of the disorders in the provinces during the siege, though it was largely due to them, owing to the fact that lawyers and literary men were most prominent in beginning the confusion. It was only when the Commune was set up in Paris that Assy and his *confrères* of the International Congress were enabled to give us some idea of the kind of régime they have in store for us if they are ever allowed to have their way, and they could hardly have had a better theatre for the exhibition than Paris; for in no other city are the disciples present in such large force, and in none is their faith so lively. The number of men above twenty who believe society can be regenerated by decree is comparatively small in all countries except France; but in France—partly owing to the constitution of the French mind, which has always been fonder of ideas than of facts, and partly owing to the course of recent French history, which has for eighty years been composed mainly of a series of social and political experiments—their number really seems to be very large and their sincerity unquestionable. The Commune, it is true, has done but little towards regulating property and labor, but solely owing to the fact that it has been kept so busy fighting. If the Versaillists would let it alone, we should see, in a very few weeks, how poverty and great accumulations of wealth are to be prevented, and, at the same time, how man is to be made to labor as much as is good for him, for the benefit of the community at large, and not for the gratification of his own selfish desires. Thiers said, in 1848, in his cutting way, that men could readily be got to die for the country, but that it was ridiculous to suppose they could be got to make pig-iron for their country. If he had now the grace to let the Commune constitute itself peacefully, he would soon be convinced of his error.

But the doings of the Commune, however incomplete they have been, and however much they may have helped to injure the Socialist cause in the estimation of the world, will undoubtedly help to stimulate "the labor reform" movement for the present in other countries. The civil war now raging in Paris seems, to the portion of the civilized

world which calls itself "sensible," one of the greatest pieces of folly and wickedness on the part of the "Nationals" ever witnessed, if for no other reasons, for these two—that it is a revolt against the fair decision of the majority; and that it is a shedding of blood without a hope of success. Paris cannot fight all France, and therefore, granting that the objects of its defenders are legitimate, and that there is no immediate hope of attaining them through discussion, the contest is marked by that foulest and greatest of all kinds of guilt, the guilt of useless slaughter. It would probably be difficult, if not impossible, to find in history a case of indifference, even on the part of the most reckless absolute monarch, to the value of human life and of the results of human labor, as has been displayed by these Parisian humanitarians and peace men during the last two months. Kings, if they fought for nothing else, fought at least for the sake of military glory, which to military kings is a palpable good, but to the communists "glory" of this kind is simply a hideous chimera. But, then, the struggle has had for the school of political thought which they represent the capital advantage of translating into reality what a year ago seemed probably to the most ardent of them a wild dream. The Commune does really present a reality, however briefly and imperfectly—that turning of society upside down which the more enthusiastic members of the labor movement have long looked to as the goal of their striving.

This time the revolution is not directed by lawyers and literary men, or any other class to whose hands usage has hitherto committed the work of government. Veritable workingmen sit in council in the gilded saloons of the Hôtel de Ville, and—which is perhaps the most striking incident of the crisis—are waited upon by lacqueys in livery. Men who have passed their lives obeying other people's rules now make rules for everybody except themselves. Shiftless adventurers, who have had infinite difficulty in getting two meals a day all their lives, and have been treated with contumely and scorn not only by "financiers," but by small grocers, find the moneyed institutions and great fortunes of a wealthy city at their absolute disposal. Criminals who have not for years ventured into the streets by daylight, now promenade armed in the gardens of the Tuileries, and enjoy the luxury of seeing old policemen run away at their approach. Editors of the *petits journaux*, whose weightiest treatises, in days gone by, were reproductions of the gossip of cafés, and whose knowledge of geography was mostly confined to the Department of the Seine, find themselves charged with the foreign affairs of a "Universal Republic." In addition to this, the courts are all suspended; the ordinary modes of settling rights and deciding controversies are abolished; the churches are "secularized;" and, in short, everything is done that can be done to put out of sight or abolish all the machinery, whether moral or material, which the rich and educated classes have invented and declared to be necessary for the proper conduct of human affairs. To crown all, too, a government thus constituted has shown itself capable of maintaining an army, and carrying on war for two months.

The effect of this on the philosophers of the topsy-turvey system has undoubtedly been very great. It has given an air of practicalness to what all the rest of the world sneered at as unpractical. It has shown that it is not impossible for a great crowd of persons, whom "society" denounces as lunatics and loafers, to seize on the government of a great capital, and administer it for a time, at all events. Moreover, inasmuch as the Commune will perish, not under the weight of its own follies, but under the blows of "the reaction," its adherents will always be able to dream golden dreams, and tell golden tales of what it would have accomplished, if "the assassins of Versailles" had let it alone. Though, therefore, there is no doubt that "society" will everywhere hereafter regard the Socialistic theories with greater repugnance and alarm than ever, we think they are mistaken who suppose that the downfall of the Commune and the spectacle of its excesses will do much to weaken the faith of those who now hold these theories, and to lessen their attractiveness to the workingmen of the great manufacturing towns, not in France only, but everywhere—for it cannot be too distinctly remembered that a strong class feeling is, in the minds of the population of these towns, nearly everywhere taking the place of patriotism. It is the rich, and the capitalists of whatever country, who are now becoming their natural enemies or rivals, and not foreigners as such. The trades-unions are rapidly wiping out national distinctions, or at least as rapidly as difference of language will permit.

Another important contribution which the Commune is making to the "labor reform" cause is to be found in the extent to which it has succeeded by its exploits in Paris in bringing philosophers to its assistance. The influence of thought and learning on the popular imagination, especially with regard to social and political subjects, in spite of all appearances to the contrary, has greatly increased within the last twenty-five years, mainly, we think it may be safely said, through the rise of Positivism, the prophets of which, owing to their "radicalism," have very strong attractions for the working-class mind. No "cause" has much chance of success in our time which has not a regular "philosopher" at its back. Mere apostles, or martyrs, or fanatics will not do any longer. There has to be somebody in the rear, of good intellectual standing, armed with a complete social theory, and ready to stand by the main body of the faithful when hard pressed. It is Mr. Mill, for instance, who supplies the bold intellectual port of which so many rather weak and noisy bodies make so comical a display on the woman's rights platform, and the same thing, *mutatis mutandis*, might be said of the labor movement. If anybody doubts whether society can be regenerated by having people use sponge-baths, or walk two-and-two, he is now informed, with a pitying smile, that So-and-so, the great logician, or the great mathematician, or the great poet, differs with him; and what makes the arrangement all the more complete is, that the disciples usually take as much of the master's doctrine as suits them, and leave the rest. The woman-suffragists, for instance, take Mr. Mill's views on female equality, but never mention his hostility to ignorant voting.

What has brought the Positivist philosophers to the assistance of the Commune is its revolt against universal suffrage, to which all true Comtists entertain the strongest repugnance. The settlement of questions by a mere count of noses is to them only one degree, and that a short one, removed from anarchy. So that, though they do not share the Commune's ideas on the subject of property, they are enchanted with its refusal to be bound by the peasant vote or to live in subjection to it; and they predict triumphantly that we are now witnessing the beginning of the overthrow of the notion that the majority ought to rule. They applaud, too, singularly enough, the determination of the workingmen of the cities not to be governed by "the educated classes," maintaining that the workingmen have greater breadth and depth in their political ideas, and indeed, though for a different reason, having much the same distrust of what is called "culture" as the average American politician. They are of course compelled to admit that the doings of the Commune have been wanting in wisdom, and that a federation of cities, governed as Paris is at present, would be a somewhat singular organization; but then, like the communists themselves, they throw most of the blame of all these follies on the wretched Thiers and his reactionary followers at Versailles.

To crown all, the land question has received in England a touch at the hands of Mr. Mill and his followers which can hardly fail to have a powerful influence on the question, in what manner *all* property should be distributed, which really lies behind the conflict between labor and capital. Mr. Mill holds that the rise in the value of land which results from the general growth of the community in wealth and population properly belongs to the state, the quantity of land being limited, and its possession, therefore, a monoply. This proposition looks rational enough, and harmless enough, but it is impossible to believe that it can be stated by such an authority without greatly strengthening the "labor reformer's" doctrine, that nobody should pocket any profit, rent, or interest which is not the product of his personal labor; which, laughable as it sounds when laid down as it was the other day in this city, is devoutly held by a great and increasing number of English and Continental workmen, and which, firmly as we believe it to be the seed of a barbarism compared to which that of the Dark Ages was respectable and hopeful, is yet destined, we do not hesitate to say, before it disappears, to give the civilization of the Western world a severe shaking.

RIGHTS OF CITIZENS.

An esteemed correspondent, whose letter we print in full in another place, asks us to answer the following questions: "Has a citizen of the United States, as such, any rights within the several States, and if any, what rights? What would be 'appropriate legislation' to enforce or secure such rights?" We will reply as briefly as possible, but shall not go over ground with which we have already made our readers familiar. The Constitution, as originally adopted, assumed that the status of citizenship existed independently of that instrument, but it nowhere defined this condition, nor described the rights and immunities which flow from it; it rather took them for granted as being involved in the very notion of citizens and citizenship. Undoubtedly citizenship implies a duty of protection on the one side correlative to the duty of allegiance on the other. It seemed best to confer upon the several States the function of actively administering this high duty in respect to personal liberty, security, and the enjoyment of property. To the State governments was therefore allotted the primary, and, with the exception immediately to be stated, the exclusive control of all matters pertaining to the domestic and civil affairs of the citizen, all matters relating to the protection of life, person, liberty, and property. But while the grants to the States were thus so large, and were unrestrained by any express limitations, except by the provision that "the citizens of each State shall be entitled to all privileges and immunities of citizens in the several States," and by the provisions respecting bills of attainder, *ex-post-facto* laws, and laws impairing the obligation of contracts, they were nevertheless held and were to be exercised under a most important implied limitation, growing out of the fundamental facts of an essential nationality and of citizenship independent of the Constitution, and out of the residuum of duty left in the General Government to afford final protection to citizens. This implied limitation was as follows: All citizens being free and equal, they must remain so before the laws of a State; they must be left by those laws in the enjoyment of life, liberty, and property; they must not be subjected to any discriminating or class legislation. In other words, while the field of active legislation in reference to all private and civil matters was left open to the States, and was primarily to be occupied by them alone, they were implicitly forbidden to make or enforce any law which should abridge the privileges or immunities of citizens of the United States, or to deprive any person of life, liberty, or property without due process of law, or to deny to any citizen the equal protection of the laws. In our opinion, a State statute which violated these implied prohibitions was null and void to exactly the same extent and for exactly the same reason that a bill of attainder or law impairing the obligation of contracts was null and void. The first section of the Fourteenth Amendment was therefore declaratory of the meaning of the Constitution, and introduced no new principle nor rule. We concede that this position would not have been acquiesced in prior to the war, which kindled the slumbering sentiment of nationality into a clear and steady flame, but it is now accepted as correct by all who, like ourselves, regard the United States as essentially a nation, and its organic law as framed by the one people thereof. In it we find the authority to enact the Civil Rights Bill, which was so grand a movement in the development of the national idea. Whatever doubts may have existed prior to the war in respect to the rights of citizens and the limitations upon the legislative power of the States, they have all been removed by the first section of the Fourteenth Amendment, which has simply put into a positive and express form what was before inferential and subject to the varying interpretation of Congresses and courts.

The result is that, citizens being free and equal, each one has, as against the State in which he may be—that is, as against the State acting in its organic capacity—the right to remain free and equal to his fellows. The State is organically represented by its legislature, which alone wields the portion of sovereignty entrusted to it: the State acts organically by its legislature, and through its laws, and in no other manner; the implied restrictions of the Constitution which we have mentioned, and the express restrictions of the Fourteenth Amendment, are in terms addressed to a State exercising its function of law-making. The citizen has, therefore, under the Fourteenth Amendment the right, as against a State, that no laws shall be passed by its legislature, or enforced by its officers, which abridge his privileges and immunities as a citizen, which deprive him of life, liberty, or property without due process of law, or which deny to him the equal protection of the laws. He has thus a right, as against the State, that his life, liberty, or property shall not be taken from him *by virtue of State authority*, in any other manner than by a regular course of judicial proceeding, and that all laws which affect him in his private and civil capacity shall affect him and all other citizens alike, without discrimination or class distinction. Under other provisions of the Constitution, he has a right, as against a State, that its legislature shall pass no bill of attainder, *ex-post-facto* law, or law impairing the obligation of contracts, which may operate upon his life, person, liberty, property, or agreements. The effect of the second section of Article IV. is simply to make these several rights effective as against all the States of the Union, instead of confining their operation to the single commonwealth in which the person may reside.

While the citizen is clothed with these rights directed against a State and referring to its legislative action, to its high function of law-making; while he has a right that the State laws shall protect him in the enjoyment of all the immunities which are based upon the fundamental facts of his freedom and equality, he has no jural right—that is, no right which can be made the subject of legislation, or which can be taken cognizance of by the courts—against a State *in reference to the due administration of its proper and valid laws by its executive and judicial officers.* We wish to dwell upon this proposition with emphasis. A confusion in the minds of legislators and of the public in reference to this very subject lies at the foundation of the Force Bill. The position we have thus stated must be maintained by all those who wish to preserve the nationality of the Union and the supremacy of its government, and, at the same time, the principle and practice of local self-government in respect to all things local and private. We repeat, therefore, that when a State has passed laws in agreement with the fundamental facts of freedom and equality, its organic legal duty to the Constitution and to the citizen is discharged; the Constitution can no longer be invoked to compel its action, and the citizen has no jural right as against it that these proper laws shall be duly administered by the executive and judicial officers. That this must be true is seen at once, when we consider that if such a right exists at all it can have no limit; if the citizen has such a right in respect to the due administration of proper laws, it cannot stop short of requiring absolute perfection in the course of administration, which would be simply impossible. When, therefore, the laws of a State are proper, the citizen has no jural right, as against the State, that prosecuting and police officers shall be vigilant in acts of prevention, of inquisition, and of apprehension, that grand juries shall be ready to find indictments and petit juries to convict, that judges shall be quick and stern to punish. All this is beyond the reach of the United States constitutional sanctions and, we may add, of State constitutional sanctions. We desire, upon this point, to be exactly understood. By jural right is meant a right which can be the subject-matter of statutory enactment and of judicial cognizance. The citizen, beyond all question, has rights—or we should prefer to say privileges—in respect to the due administration of the laws, but they are political, merely, and not jural; they are held by him in connection with all other persons, and are to be maintained and enforced by him through the ballot-box, and by means of a public opinion which he helps to create. This is a necessary incident of all governments, and especially of those which are republican and representative. If the good and valid laws which legislatures have enacted are not duly administered, there is no legal remedy to be obtained either from Congress or from the State governments; redress must be found alone in a change of officers through the ordinary processes of election and appointment. So much of the responsibility of government does the organic law leave with the people themselves as the final depositaries of power. It is hardly necessary to state that we do not here refer to the exceptional cases of positive corruption or maladministration in office, where the offenders become liable to the ordinary punishments for crime or to impeachment. The first question is thus, as we believe, plainly and accurately, though briefly, answered. We

have not referred to rights which may flow from the Fifteenth Amendment, because none of our readers need be told that the electoral capacity does not belong to any person merely by virtue of his being a citizen of the United States.

What has already been said suggests the ready answer to the second question. The language used by our correspondent shows that he has the Fourteenth Amendment in mind. The phrase "appropriate legislation" is used in the last three amendments, and nowhere else in the Constitution. In the present connection, such "appropriate legislation" must relate to the rights which, though originally implied in the organic law, were first expressed in the first section of the Fourteenth Amendment. The nature of these rights, as already described, tells what legislation is appropriate. In the first place, no legislation at all is necessary. All the various constitutional prohibitions directed against particular acts or classes of legislation, either by Congress or by the States, execute themselves. Being negative and mandatory in their form and effect, any statute passed in contravention of their requirements is simply null and void. The remedy for their violation is judicial rather than legislative. It has never been thought necessary for Congress to pass statutes in aid of the three important prohibitions which are found in the tenth section of Article I., and which protect life, liberty, and property by forbidding the States to pass any bill of attainder, *ex-post-facto* law, or law impairing the obligation of contracts. The new prohibitions of the Fourteenth Amendment stand upon the same basis as the old ones, are similar in form and nature, and, like them, are to receive their force and sanction from the courts. Congress may clothe the national tribunals with ample jurisdiction over all cases arising under such invalid local laws, and the citizen will thus be fully protected from their unjust and injurious effect. Secondly, If the legislature of a State should place upon its statute-book any law which violated the provisions of the Fourteenth Amendment, and which thus infringed the rights of citizens as above described, Congress might, beyond a doubt, declare all acts of State executive and judicial officers, and others, in enforcing such laws, to be offences against the United States, and make them cognizable in the national courts. We express no opinion upon the question whether the State legislators themselves, who enacted the invalid laws, can, in like manner, be made amenable to judicial sanctions. In accordance with this doctrine, the Civil Rights Bill, in its main features, was a proper exercise of the authority conferred upon Congress. Thirdly, In no case can the United States interfere with violations of State laws by individual offenders. In no case can Congress confer upon the national courts jurisdiction over criminal acts of violence done by one or more persons acting singly or in concert against the private civil rights of life, liberty, person, and property, which belong to all citizens alike. *A fortiori*, in no case can Congress make the defaults, deficiencies, and laxities of State executive and judicial officers, in duly administering those State laws which are valid and proper, offences cognizable by the courts of the United States. In the foregoing we do not, of course, include the very exceptional instance of domestic violence within a State, which is specially provided for by the fourth section of Article IV. We have thus answered the questions fully, though briefly, and, as we trust, with precision and accuracy. The subject is a broad one, and a complete treatment of it requires that the naked propositions which we have stated sometimes without the connecting links of thought should be carefully illustrated and amplified.

ENGLAND.—THE TAX BLUNDER.

LONDON, April 28, 1871.

I HAVE several times called your attention to the decreasing influence of Mr. Gladstone's Government. It is, in fact, easy to see that they have made various blunders in the course of the session, that they have not called forth any genuine enthusiasm, and that they have quarrelled with the extreme wing of the Liberal party, from which they should naturally expect support. But I confess that I never anticipated that a misfortune would befall them of the particular kind which I have now to mention. If there was one subject upon which Government might be expected to show an unmistakable superiority to its opponents, it should naturally be finance. Mr. Gladstone owed a great part of his reputation to his distinguished success as Chancellor of the Exchequer. It is past eighteen years since he turned out the then Conservative Government by a victory over the budget proposed by Mr. Disraeli. Mr. Lowe, again, the present Chancellor of the Exchequer, is certainly one of the very ablest men in the Government. He is rather too deficient in sentiment and imagination to win much popularity as a statesman in other departments. But he is admirably clear-headed and logical, a sound political economist, and, in short, endowed with all the qualities which should go to making a great financier. And yet Mr. Disraeli, though he will hardly succeed in upsetting the Government, is likely to take a good instalment of revenge for his old defeat. Mr. Gladstone and Mr. Lowe between them have succeeded, contrary to all expectation, in incurring great unpopularity from their financial policy; and what is even worse, in incurring no small amount of ridicule. At the present moment, the Government, with its hands full of important legislative proposals, has almost gratuitously got into difficulties which will very naturally weaken its remaining prestige.

The reason of this singular catastrophe appears to be, in two words, that Mr. Lowe has been too clever. He has invented such an ingenious scheme that in his own delight at its merits he fairly forgot the impression which it was likely to make upon the public, and has thus conjured up a storm which shows at present no signs of being appeased. I will recapitulate shortly the history of the last week's campaign. The result of the measures for army reform was that Mr. Lowe found himself in face of a deficit of £2,713,000 for the coming year. Parliament had voted, though with some grudging on the part of the Radicals, that the expenditure should be increased by the compensation for the abolition of purchase and other military measures, and the question arose how this expenditure was to be met. Mr. Lowe's budget involved three changes in our system of taxation. The first was a slight increase in the income tax; the second was a change in the legacy and succession duties; and the third a tax upon matches. Now, in each of these proposals there was something at once vexatious and ingenious. The rise in the income tax was expected, but Mr. Lowe tacked to it a proposal for changing the mode in which the tax was to be calculated. Instead of asking for another penny in the pound, according to the ordinary method, we were to pay 44 shillings in a hundred pounds, making, if stated in our accustomed way, 5 pence $1\frac{3}{5}$ farthings in the pound. This detestable $\frac{3}{5}$ of a farthing was a vexatious fraction, and gave a headache by anticipation to people whose knowledge of arithmetic is limited. They saw themselves in imagination performing the most troublesome operations in the rule of three, and floundering in hopeless perplexity before the demands of a tax-gatherer. The change in the succession duties was unnecessarily irritating in a different manner. Hitherto there has been a scale, according to which persons succeeding to the inheritance of their parents or near relations paid less than if the testator had been more distantly connected with them. Mr. Lowe pronounced this to be contrary to sound philosophy, and applied a partial remedy, whilst raising a rather larger sum, by increasing the percentage to be paid by near relations. To the unphilosophical mind this appeared to be a case of harsh political economy riding roughshod over the natural affections of mankind. But the final proposal was by far the most unfortunate, though Mr. Lowe described it as a small tribute of respect to the United States.

Now there are some things which English Liberals would be glad enough to borrow from your arrangements, but, if you will permit me to say so, your system of taxation is not generally reckoned amongst them. Mr. Lowe proposed to raise half-a-million pounds sterling by a small stamp upon match-boxes, and produced rather startling statistics in confirmation of his estimate. I forget how many millions or billions of matches are annually manufactured, nor, as things have turned out, does it much matter. Mr. Lowe was unaffectedly delighted with the ingenuity of this proposal, and showed his pleasure by a number of carefully prepared jokes which adorned his eloquence. Eighteen distinct witticisms were counted up by his opponents. He had, indeed, gone so far as actually to order the new stamp for the boxes, on which were to be engraved the words *ex luce lucellum*. (You will pardon me for pointing out what few members of the House of Commons seemed to remember, that *lucellum* is the diminutive from *lucrum*.) Everybody has sometimes witnessed the melancholy effect of a joke elaborately concocted by a very clever man, which somehow completely misses fire. The hearers look uncomfortably upon each other, and the clever man blushes inwardly, and repents his rash confidence. Never did joke fall flatter than this bit of financial pun. But there was something worse than a mere failure of facetiousness. Grave economists urged that to impose a new tax upon industry was a

piece of retrograde policy, and in this instance it was peculiarly out of place. The poor inhabitants of the East End of London are the chief makers and sellers of matches, and the proposed taxation of a Liberal ministry would thus fall with totally unexpected severity upon a class who are just struggling with doubtful success against pauperism, and barely keeping their heads above water at the best of times. Meetings of the unemployed are being held to beg for aid in emigration; and there was a kind of curious infelicity in suddenly saddling them with a new burden, which would be of little service to the public treasury, and would be keenly felt by one small and impoverished class. The consequence was general indignation, mixed with not a little ridicule. A procession of matchmakers was organized from the East End of London, under pretense of presenting a petition to Parliament. They came accordingly in considerable numbers, and, it is said, though the facts are disputed, that they were treated with unnecessary roughness by a large body of police who were called out on the occasion. In short, this tax was one of the most luckless proposals ever laid before Parliament. Almost every newspaper, even those which are thick-and-thin supporters of Government, denounced it, and I have no doubt that if a new election takes place within any short time, it will be a new cause of alienation of the working-classes from the Liberal ministry. They conceive that they have already much cause of complaint in the direction taken by the economical reforms of the Government, such as the reduction of the number of laborers in the dock yards, and it will certainly not diminish their bitterness when they remember that it was proposed to raise additional revenues from the pockets of the very poorest classes. Economy, they will say, means turning off laborers, and extravagance means having them. Which is the worst move for the gentleman whom the *Daily Telegraph* used to call "the people's William"? He had unintentionally proposed to raise half-a-million in such a manner as to give the greatest possible stimulus to the revolutionary sentiments current amongst the lower orders.

The indignation aroused in all quarters by these proposals has been fatal to the Government measures. The Radicals and the Conservatives coalesced—the Radicals because they objected to any increase of expenditure, the Conservatives because they objected to the particular mode of raising the necessary means. Government succeeded in repelling a condemnatory motion, drawn up with a view of combining the hostile elements, by a majority so small as to be fatally significant, and last night Mr. Gladstone substantially announced that he was prepared to abandon the whole scheme. The match tax and the change in the succession duties were surrendered unequivocally, and instead of Mr. Lowe's proposed modification of the income tax, we are to have the beautiful simplicity of paying an additional twopence in the pound. Whether this proposal can be carried must still be doubtful. It is vehemently opposed by the *Times*, which advocates as an alternative measure the suspension for a year of the scheme carried some time back by Mr. Gladstone for the gradual reduction of the national debt. It was opposed also by Mr. Fawcett, on the ground that, although an "extreme democrat," he objected to throwing the burden of increased taxation entirely upon the class which pays income tax. That, he urged, was substantially encouraging the lower classes, who are now coming into power, to incur heavy expenses, and make the higher classes pay the bill. The argument sounds rather questionable in the mouth of a Radical, but it probably indicates that the party with which he generally acts is prepared to continue its opposition to Government. The breach between Mr. Gladstone and the extreme fraction of his party has, in fact, become wider than ever, and the main security of his Government at the present time is that a coalition between that fraction and the Conservatives cannot well outlast more than one or two particular votes. I should imagine, therefore, that Mr. Gladstone will probably tide over the present difficulty, though with much injury to his prestige; and the immediate harm caused by the fiasco which I have described will be confined to the delay caused in much important public business, and the weakening of the hands of Government in carrying it through Parliament. The prospect of useful legislation during the session is certainly diminished, though we may still hope that a fair amount of work will be accomplished.

The supporters of woman's suffrage are having their annual field-day this afternoon, and I take the opportunity of returning thanks to a correspondent of yours, who drew a flattering picture—in some respects, I fear, rather too flattering a picture—of our so-called "strong-minded" ladies. In one part of her remarks, however, I should be disposed to agree without qualification. The ladies have certainly strengthened their position within the last year by the share which they have taken in the working of the school-boards. Several ladies have been elected in different parts of the country, and, though it is rather premature to speak of the working of the act, they have so far at least improved their reputation for practical ability. Their success in that department gives additional weight to their claim for sharing in the franchise. Though that change will hardly be made in the present Parliament, the prospects of carrying it within a moderate time are probably increasing.

Correspondence.

AN ENQUIRY.

To the Editor of the Nation:

Sir: I agree in the main with the forcible protest you make against legislation by Congress in violation of State rights; but I do not agree with you in thinking that the Ku-klux law (so called) is fairly obnoxious to all your objections to it. Your arguments, especially against the second section of the law, seem to me to overlook, or not fairly to consider, the rights of citizens of the United States, and you will oblige me, certainly, and possibly other readers of your very valuable paper, if you will answer these questions:

Has a citizen of the United States, as such, any rights within the several States; and, if any, what rights?

What would be "appropriate legislation" to enforce or secure such rights? Vermont.

DR. CUYLER'S CONFESSION.

To the Editor of the Nation:

Sir: The Rev. Dr. Cuyler, in a speech made at a temperance meeting yesterday, said (see report in to-day's *Tribune*):

"And when the alcoholic takers can show a man who has lived as long and worked as well on wine as he on water; or an editor that works as long and as well on wine as Horace Greeley works on water; or a preacher who will preach as long and as well on wine as Henry Ward Beecher on water; a man who will speak as long and well on wine as John B. Gough on water; or a man who will make his light shine as far on wine as William E. Dodge on water, I will go down to the *Nation* office and acknowledge that I am an 'unscrupulous orator.'"

I beg leave to "show" the poet Goethe, whose performances on wine will compare favorably with those of the above-named gentlemen on water, especially on the subject of making his light shine. I expect Dr. Cuyler now to come down to your office and make his promised declaration. Some persons might call it not only unscrupulousness, but downright impudence, to pretend to challenge the world with a few names of some local note—the world so full of really great names unconnected with the whim of total abstinence. A Reader.

New York, May 12, 1871.

JULIET'S RUNAWAY.

To the Editor of the Nation:

Sir: In your notice of Furness's "Variorum Shakespeare" (p. 308, No. 305), you refer to the exhaustive criticism bestowed upon that stumbling-block of the commentators, "Juliet's runaway." An emendation which, so far as I know, is original with myself, and which I do not think has been published, has been approved by several competent scholars to whom it has been communicated. This is simply to substitute "Veronese" for "runaways," so that the passage would read:

> "Spread thy close curtain, love-performing night,
> That *Veronese* eyes may wink, and Romeo
> Leap to these arms, *untalk'd of and unseen*."

The word *Veronese* has the authority of Shakespeare, being used in "Othello," Act II., Scene I.:

> "The ship is here put in,
> A *veronese*;"

but I am disposed to believe that it was used in a somewhat different form in the particular passage under discussion. In "*Tales and quicke Answeres, very merry, and pleasant to rede*," a book written temp. Henry VIII., we have *Janway* put for *Genoese, e.g.*: "There was one amonge the *Janewayes* that the Frenche kynge hyred to make warre agaynst the Englysshe men, etc. . . . Then sayde the *Janway*, etc."*

Shakespeare himself sometimes uses a similar construction, as when he puts *Senoys* for *Siennese*:

"The Florentines and *Senoys* are by the ears." (*All's Well that Ends Well*. I. 2.)

Now, if we may be permitted to suppose that the poet, in this confessedly

early work of his, wrote *veronoys* or *veronayes* as he wrote *senoys*, and as his contemporary wrote *Janways*, so that the passage would read—

"Spread thy close curtain, love-performing night,
That *veronayes* eyes may wink, etc.,"

we are able to see at once how easy it was for the transcribers and printers of the first editions to mistake the word for *runnwayes*, and so originate the error that has occasioned such debate. I am not familiar enough with the written text of that time to be able to say whether its character is favorable to my supposition or opposed to it.

EDWARD SPENCER.

RANDALLSTOWN, MD.

Notes.

TRÜBNER'S *Literary Record* announces the publication, early next year, of a new volume by Robert Dale Owen, author of "Footfalls on the Boundary of Another World," which also, we believe, appeared first in England. The title will be "The Debatable Land between this World and the Next," and one of the divisions of the book will consist of an address to the Protestant clergy, who, if they will read Mr. Owen's thirteen sections, may be convinced that "spiritualism [is] necessary to confirm the truths and assure the progress of Christianity."——Macmillan & Co. publish shortly "Inside Paris during the Siege," being the diary of an Oxford graduate; "Our Baths and Wells," an account of the mineral waters of the British Islands, with a list of sea-bathing places, by John Macpherson, M.D.; the Hulsean Lectures for 1870, viz., "The Witness of History to Christ," by Rev. F. W. Farrar; and "The Atonement of Christ," by Alfred Barry, D.D.——"The Life that Now Is" is the title of a new book of sermons by Rev. Robert Collyer, to be published by Horace B. Fuller, Boston.——Messrs. Pott & Amery announce a cheap reprint of the English portion of the Rev. J. T. Bailey's "Defence of Holy Orders in the Church of England," to which will be prefixed two of the large folio pages (of the photo-zincograph) containing the record of the Consecration, at Lambeth, of Archbishop Parker.

—We are glad to observe that the Hebrew Library which we announced in January as about to be sold by Mr. Frederick Muller, in Amsterdam, and whose rare value made it a highly desirable acquisition for this country, has in fact been purchased by a committee of members of the Temple Emanuel, in this city. This must be considered one of the most important of the recent transfers of fine collections from Europe to America. It is stated that Cornell University has offered to take charge of this library, and in return to establish a Hebrew professorship and ten scholarships at Ithaca; but without success, as the new owners naturally prefer that the library should remain in this city. Columbia College would stand a better chance of getting it; or why should it not go to swell the Lenox free library?

—The "Handbook for Immigrants to the United States," prepared by the American Social Science Association, and just published by Hurd & Houghton, meets a want which has been keenly felt in England, where general ignorance of this country is combined, in the classes tempted to emigrate, with special unfitness for adventure. The remedy proposed for pauperism, of shipping the more deserving poor to this country, has had no practical effect, partly because the small tradesmen whom failure or indebtedness has permanently reduced to the rank of paupers, have no knowledge—they or their families—of any mechanical art or of agriculture, and, overcome by their sense of helplessness, lack the will as well as the means to remove to an unknown land. The pitifulness of their case first suggested, we believe, the compiling of this Handbook, which can, of course, furnish them little besides the information necessary to inspire a certain degree of confidence. Among the Irish, especially the more intelligent of them, this book promises to be of immediate value. For emigrants from the Continent, there should be an edition in the vernacular of each people; and we understand from the prefaee that, if private or public benevolence will furnish the money, the Association will publish translations in several languages, and supply them at the chief ports of emigration. As an experiment, considering the difficulties of gathering and condensing statistics, the Handbook is sufficiently successful to warrant the Association in asking support towards spreading and improving it in future editions. It is a fairly national undertaking.

—Doctor Felipe Larrazábal is known to those who have studied the history of the South American States as the author of a valuable "Life of Bolivar," an English version of which was published in this city some five years since, and which may possibly be remembered as much for its curiosities of translation as for its intrinsic merits. "There, the hands still clasped," we read on page 408, "Bolivar, whose vivacity was superior to all ponderation, spoke to Montilla of going to free Cartagena. . . . 'Munificent was the Liberator, on this occasion,' says the biographer of Montilla, 'manifesting from that moment, of what feeling is capable in the heart of a hero.'" And on the page following it is stated: "Afterwards the election of the President of Colombia was proceeded with, and General Simon Bolivar was unanimously elected. None could doubt this election, and, *notwithstanding*, it was received with enthusiasm"—an unconscious satire on South American constitutionalism. Doctor Larrazábal has, however, a good literary reputation, and the publication of a work which he has prepared on "Ilustres Americanos," is looked for with some interest. The preface he has already printed in a Caracas journal, ventilating what may be called Know-nothing doctrine quite amusing to encounter in the world of letters. He holds that

"None but Americans must write on America, on the manners and customs of the Americans, on their history in both periods of their oppression and their victory, of their captivity under the colonial system, and of the splendor of their struggle for independence. The books which reach us from Europe are incurably infested with errors on everything that relates to us. The ignorance which is shown by the learned and the unlearned on the other side of the ocean on matters referring to the New World, must stimulate us to take the greatest pains to exhibit the condition of our country, which, in French, English, and German books, is obscured by the grossest absurdities and errors."

The examples which he cites of European misstatements, so far as they are given in *Trübner's Record*, do not seem to bear out this editor's allegation that Doctor Larrazábal would exclude foreigners from "*scientific* researches in and publications on America;" but simply from historical and political and, incidentally, geographical undertakings. This limitation relieves the doctrine of much of its absurdity.

—The first volume of Leopold von Ranke's "German States and the League of Sovereigns" (Die deutschen Mächte und der Fürstenbund) shows unabated vigor of style and research in the venerable author. It treats of the period of 1780–88, the time immediately preceding the death of Frederic the Great and next succeeding the accession of Frederic William II., including the state of religious affairs in Prussia under Wöllner. Particularly interesting is the stand taken by Frederic the Great against Austria in consequence of the Bavarian war of succession, when Bavaria already cherished the design of breaking Austrian influence and bringing about a union of the northern German princes against the imperial house of Hapsburg, the failure of which was mainly due to the death of Frederic. Still greater expectant interest awaits the sequel, both because it will cover less trodden fields and because the popular movements thence taking rise must be heeded by a man for whom history is made in the cabinets of ministers and monarchs, and who regards popular agitation as a matter of record, but not of material moment. In the initial volume of his "History of theEmperor Frederic I." (Geschichte Kaiser Friedrich's I.), Hans Prutz discusses anew German relations with Italy (in 1154–1165), and the ill-starred war waged by the pattern of German emperors against the Lombard cities. Dr. Geiger offers an interesting book on the "Life and Works of Johann Reuchlin." Eminent and powerful by reason of his public position and distinguished erudition, holding high imperial office, and famous for his learning in the law, the classics, oriental languages and literature, and standing in intimate relations with the eminent scholars of his day, Reuchlin was the central figure of the pre-Lutheran Church agitation, for his siding with the Jews in their controversy with the Dominicans concerning the Talmud gave impulse to the agitation which ended in Luther's reformation. Of effective importance in this were the "Epistolæ virorum obscurorum," whose origin and influence the author attempts to set forth in this capitally written book, which also contains signal contributions to the history of the culture of the time, particularly as respects the condition of legal and natural sciences. Professor Ritschl, whose recently published letters to Napoleon III. have caused so much umbrage, has re-edited the "Trinummus" of Plautus, omitting many of the opinions formerly maintained by him. He promises a speedy justification of his present views. Interesting to the student of philology is Gatschet's "Sprachen und Dialekte der Schweiz," in which are discussed the various languages and dialects spoken by the two millions and a half of Swiss. Of the three languages, German, Italian, and French, the German has at least thirteen dialects, the Italian six, and the French two.

* Quoted in "Lower on English Surnames," i. 53.

. —Those who may wish to preserve an interesting record of the late war, and indeed of the present one, can have an excellent opportunity by subscribing at any foreign bookseller's to the *Illustration*, which was published weekly in Paris before, during, and since the siege. The back numbers are now being reprinted, and copies have been received up to as late as the 26th of November. Often the numbers are small, not larger than eight pages, but the illustrations are always interesting, and the letterpress, with its record of the doings of every day of each week, gives an excellent account of the various emotions, the hopes, despairs, exultations, griefs, and indignations of the Parisians during that time. At times we see pictures of the half-dozen Frenchmen holding countless hordes of barbarous Prussians at bay, but generally the artists are remarkably fair. The later numbers, those for April, give a full account of the later scenes in Paris, of the doings of the Commune, and all the proclamations of the Reds. One year's subscription will give one an interesting and, in time, very valuable volume.

—Two of the English magazines for May, *Macmillan's* and the *Cornhill*, have noticeable articles on the late war. In the first, M. Gabriel Monod contributes "Souvenirs of the Campaign of the Loire," he having been attached to the 11th Ambulance (*bis*) of the Paris Société Internationale de secours aux blessés. The *Cornhill* paper is entitled "Recollections of the Siege of Paris," but we do not clearly make out whether it is a true history, under a proper disguise as to names and places, or an historical romance. In the latter case it is to be praised for its verisimilitude, and for its entertaining style. We quote a passage or two from the dramatic report of a meeting of the Sons of Brutus:

"Custom demanded that the meeting should every evening elect its board, the chair being occupied during that formality by the president chosen the night before. A board consists of an honorary president (often defunct but illustrious), an effective president, two assessors, and a secretary. The preceding night the Citizen Joshua, 'slayer of five-and-thirty kings,' had been elected to the honorary chairmanship amidst uproarious cheering. This evening an emaciated citizen, with long finger-nails, rose from one of the back benches and, in a shrill treble, moved—'That the Greek citizen Aristogiton be voted into the chair.'

"*A Citizen with a red beard*, springing up furiously—'Citizens, I protest. How does that man dare to move that a Greek aristocrat named Giton shall be voted into the chair at a meeting of republicans? Down with all *aristos*; say I.' (Vehement applause. Looks of indignation at the emaciated citizen. Cries of 'Turn him out.')

"*The Citizen Maclou* (in the chair).—'Citizen, I call upon you to explain what you mean by insulting this republican assembly.'"

The Emaciated Citizen explains that Aristogiton was a Greek *sans-culotte*, who slew the last of a race of despots and vampires like the Bonapartes, and restored the Republic. But there are murmurs of incredulity, suggestions that the man is a *mouchard*, a telling retort that "an aristo never restored anything to anybody—never," and finally a bundling out, arms and legs, of the Emaciated Citizen. The club afterwards proceeds to enlarge its list of public traitors. There is no burlesque in this episode:

"*A Citizen slightly drunk* thinks poorly of the Citizen Ernest Picard, Minister of Finance. He too—the citizen slightly drunk—had a communication of importance to make to the Government. He had invented a new shell, which was one of the most murderous ever fabricated, and would very soon get rid of the Prussians. Here it was, he had a model of it in his pocket. If he dropped this shell on the floor everybody in the room would be blown away to atoms. (Sensation.) Ay, and it would be precious difficult to find the bits, he could tell them that. (Renewed sensation.) Well, he had applied to the Citizen Picard for a subsidy to help him push his invention, and Picard had declined to lend him a centime. What business had the Citizen Picard to give himself these airs. Did he think the purse of the nation was his? Who filled those money-bags which he guarded like the dog in the manger? It was not the Citizen Picard himself, I fancy (hear, hear). No, it was the people, with the sweat of their brow; and this conduct of the Minister of Finance was but part and parcel of the old system followed by all governments, of keeping the workingman out of what justly belonged to him. He moved that the Citizen Picard be summoned to tender his resignation without delay. (Hear, hear. Applause. The citizen retires with his shell to a front bench, which is expeditiously vacated by its occupants, who install themselves at a prudent distance.)"

—M. Monod speaks of his countrymen and his country's invaders with admirable frankness and impartiality. His talk, indeed, is chiefly of the latter, and he reserves for another article his judgment on the French; but he says incidentally that "the Empire had bequeathed its system of lying to the Republic, and Gambetta lied to the nation as the Empire had done before him." In the Loire army he recognized many faces which he had seen before the battle of Sedan—"not a few, I grieve to say, officers who had sworn not to take up arms again, but were now prepared to break their parole, encouraged by a government that had lost not only its regard for truth but all sense of honor."

"Never had I been so painfully conscious of the incorrigible levity of our national character; or of the strength of those illusions by which so many minds are prevented from grasping the reality in all its deformity; or of that wilful blindness which not only makes the French unable to see the truth and unwilling to speak it, but makes them even detest to hear it."

He says, in another place, speaking of the Germans: "They were just in their appreciation of the French, and always ready to recognize any real superiority either in their tactics or method of fighting, and in their courage. All which convinces me that in many respects it is not too much to say that, comparing the two sides, the Germans were like men fighting with children." The worst charges of outrage brought against the Germans—such as the wanton burning of houses and villages—he does not find sustained by his experience; but he testifies to the wholesale plundering done by certain portions of the German armies—the Pomeranians, Poles, Siberians, East Prussians, and Bavarians—and to their characteristically rude behavior. The following tribute, however, is of the highest kind, and seems to have been universally merited:

"The most remarkable feature of the campaign was the respect paid by the Germans to women; and this is a national virtue, and one to which in a great measure the Germanic race owes its power. Individual outrages may have been perpetrated, but not one came under my notice in the long course of my seven months' experience, neither did I hear one testified to as a positive fact. Everywhere, on the contrary, I saw women treated with true respect in a manner that astonished the French soldiers, who, on several occasions, remarked to me, 'We should have behaved rather differently if we had been in their place.'"

—The Cable brings us the news of the death of one of the last of those complete astronomers whose labors did as much as anything, perhaps, to distinguish in science the first half of this century. When Sir John Herschel held a place beside Bessel, Struve, and Argelander, it was impossible to attain eminence in this lofty science without a largeness and strength and discipline of intellect in comparison with which, it is no disparagement to say, the ability of the brilliant amateurs who have of late so much adorned astronomy is slender indeed. Sir John Herschel understood how to make chemical experimentation aid astronomy as well as our modern lights, and in his early days he discovered some important phenomena of polarization, added much to our understanding of photography, and may be said to have originated the spectrum analysis. But in those days it was necessary for an astronomer to be a mathematician and not merely a manipulator, and though he never reached any fame in that direction, yet his attainments were very considerable, and sufficed for original researches into several important questions. In the calculation of the orbits of double stars, for example (by no means so easy a problem as might be supposed), his method has quite driven out that of Encke. His popular books (written, it is true, before the art of popularizing was carried to its present extraordinary pitch), "The Introduction to the Study of Natural Philosophy," "The Outlines of Astronomy," and the treatises on Optics and Acoustics, exhibit him as a man of an elegant intellect, and one who is able to look at science with a philosophic eye, and to direct his scientific labors by the light of wide and large views. He was by no means without literary talent, and in his last years published a translation of the "Iliad" in hexameter verses of a peculiar kind. Upon the title-page of his books his name appears in this style: "Sir John F. W. Herschel, Bart., K. H.; M. A.; D. C. L.; F. R. S. L. and E.; Hon. M. R. I. A.; P. R. A. S. T. G. S.; M. C. U. P. S.; Member of the Institute of France; Correspondent and Honorary Member of the Imperial, Royal, and National Academies of Sciences of Berlin, Amsterdam, Breslau, Brussels, Copenhagen, Göttingen, Haarlem, Massachusetts (U. S.), Modena, Naples, Pesth, Petersburg, Stockholm, Turin, Vienna, and Washington (U. S.); the Italian and Helvetic Societies; the Academies, Institutes, etc., of Albany (U. S.), Bologna, Catania (Gioenian), Cherbourg, Dijon, Lausanne, Nantes, Padua, Rome (dei Lincei), Venice (Athenæum), Utrecht, and Wilna; the Philomathic Society of Paris; the Asiatic Society of Bengal; South African Literary and Philosophical Society (C. G. H.); Literary and Historical Society of Quebec; Historical Society of New York; the Batavian Society of Experimental Philosophy of Rotterdam; Royal Medico-Chirurgical Society; the Institution of Civil Engineers, and Society of Arts, Manufactures, and Commerce, London; the Leeds and Manchester Literary and Philosophical Societies; Geographical Society of Berlin; Astronomical and Meteorological Society of British Guiana," etc., etc., etc. If such a display of honors seems like vanity, it must be remembered that hardly any one was so instrumental as he in bringing the scientific men of Europe into communication with each other, and the large number of societies of which he was a member testified to the suc-

cess of his endeavors, and was therefore a thing in which he might take a rational pride. Besides, societies are sometimes offended if they are not mentioned in this way. The chief work of his life was the completion of his father's survey, with a great reflecting telescope, of the entire northern heavens, and the making of a similar survey of the southern heavens. All this he did at his own expense. He discovered about 5,000 double stars. The number of nebulæ known to us exceeds five thousand; but those for a knowledge of which we are not indebted to either Herschel cannot amount to four hundred. For a round century, Sir William and Sir John Herschel have been enriching astronomy with important theories, and the results of their untiring work of observation, which no other astronomers had the assiduity to do, and few at first had the penetration to appreciate. Their epitaphs are inscribed on the heavens, and it is not, perhaps, too much to predict that ages hence the name of Herschel will be as familiar as that of Hipparchus.

IVAN TURGENEFF.*

We take advantage of the appearance in English of one of the best of Turgeneff's novels to call more of the attention of the public to this remarkable writer. Already a translation of his "Fathers and Sons" has appeared in this city, but it was far from meeting with the success which it deserved. Whether it was that the reader was frightened by the uncouth names of the characters, or was too ignorant of the name of the author, at that time much less widely known than now, or for whatever reason, the book fell comparatively dead. Perhaps a more accurate explanation would be that the especial circumstances which produced the novel were felt much less vividly here than in Europe, and particularly than in Russia, so that the novel-reader preferred the beaten ground of the London ball-room. No such objection, however, can be made against this story. It does not require for its appreciation any knowledge of the materialistic philosophy, or of the social changes wrought by the freeing of the serfs, as did "Fathers and Sons." All it demands is a willingness to be delighted. It can be enjoyed as well in South America as on the banks of the Neva, for it is a love-story, pure and simple. If that were its only merit, it might very well be left to take its chances with the three or four hundred other novels of the year, most of which may be classed in the same category. But the interest of the story, the vivid drawing of the characters, and the poetical charm of the work, call for more serious notice.

The scene of the story is in Russia. The action is simple. We are introduced at the beginning to two young men, Shoubine, an artist, and Bercenef, a student, who are both in love with the heroine, Helena. Bercenef she prefers, his amiability and sincerity being more agreeable to her than the levity of Shoubine, which she never comprehends. Bercenef has a friend, Inçaroff, a Bulgarian, whom he introduces to Helena. They fall in love with one another. He being ardently devoted to his oppressed country, and feeling that his first duty is to that, determines to leave her while there is yet time. The way in which Helena sees and prevents this can only be told by Turgeneff. They are married, leave Russia together, and after a year he dies. Of her we only know that she gave herself wholly to the good of her husband's country. Her fate is left obscure.

An analysis of the story, of which this is the merest outline, would be unfair both to the writer and to the reader, whom we hope to send to the book itself. Turgeneff's way of telling it cannot be improved. It is a way so delicate, so poetical, and so rare, that the fascination of the reader is immediate and complete. Every character is drawn with a thousand nice touches, so that it represents to us not a type merely, but an individual, and one whom we know. In the book that we have before us, with what infinite vividness is Shoubine represented from the first chapter to the very last page! The author does not content himself with saying, like our duller workmen in fiction, that Shoubine was a merry-making, intelligent, cynical young fellow with artistic tastes, but he really does what many more people are praised for doing than have ever done it—he lets Shoubine appear to us as men do in life; we really find out for ourselves what sort of a man he is. On the other hand, he is very far from using the method, which, in their anxiety to avoid writing "horse" under their picture, too many of our clever writers have adopted: he does not dissect his horse, nor go into a chemical analysis of the component parts of what should be a living organism. His is an accurate and most sympathetic comprehension, and a most skilful representation of things as they really appear. But comprehension and representation are vague terms. In regard to Turgeneff, they mean in the first place a patient observation, with all the keenness of a humorist, but with a reserve, a coolness, that save him from the common faults of the humorist—sentimentality and exaggeration—and a power of description that is almost inscrutably life-like, so wonderful is its air of reality. Indeed, we know no author whose realism is so extraordinary, who, by so few touches, can so vividly represent whatever he wishes to say. If, for instance, we compare him with Balzac, we notice with what an apparent barrenness of means he more than accomplishes the same results. Balzac uses a ponderous machinery, describing a house, for example, from the lowest stone of the foundation to the topmost brick of the chimney; in the human face, not a line escapes his eye; but this is a microscopic accuracy, a scientific accuracy compared with that of Turgeneff, whose artistic eye judges as well as sees, who catches what to another might appear to be a useless trifle, and sets it where it has more importance than would the most thorough inventory. As in our lives the memory of a tragic event will be connected with some trifle, a flower, a stain on a carpet, a hole in an umbrella, so it is with these touches of Turgeneff, delicate and true as life. He has the same mysterious power of choice that memory has. His tales are full of incidents which, at first sight, appear to be only wilful examples of his powers of observation; later, we find that they have a bearing upon the story. For instance, there is the waiting-maid in the beer-garden in the story of Annonchka. Before the hero is in love, he happens to see the poor girl bemoaning the departure of her lover for the army; afterwards, when he is desperately enamored, and is leaving the town in search of Annonchka, he sees the maid flirting contentedly with another man. A simple enough incident, yet one that would hardly be noticed at the first reading. He is an artist in his realism.

We spoke of Shoubine above. What is true of him is true of all the other characters. We only mention him more particularly because, from the fact that he is so admirably drawn while he is not the hero of the book, we can see so well the care and power of our author. The heroine, Helena, is one of the most charming figures of fiction; in fact, Turgeneff draws his women with the same skill that he does his men. Those who are already familiar with his works need only be reminded of Helena herself, of Natalie in "Dmitri Roudine," of Annonchka in the little story of that name, and of Marie in "The Correspondence." Each leaves upon us a complete and individual impression; they are only alike in so far as they are women, and women in love.

From this same realism it naturally follows that none of Turgeneff's heroes are faultless creatures, pinks of every perfection, ideals of every virtue. They are simply human beings, with faults and foibles as well as whatever virtues there may be. Many realists see the stains upon their characters as vividly, and paint them as large as they do the virtues. With Turgeneff, however, none of the qualities are unduly magnified. He is always a narrator, never an advocate. The charming girl will fall in love with the stupid man; the intelligent or able man is too timid or too dull of perception to fall in love with the right woman. Turgeneff does not stray from the truth to bring about a happy termination. Justice is shown, too, in the construction of the story. Often this gives an unhappy ending, but this unhappy ending is an accurate one, as far removed from a wilful rending of the feelings as from the ordinary tinkle of the marriage-bells at the end of the volume, intended to suggest "happiness ever after."

Whether there is the same impartiality in his view of life that we see in the method of his stories, is another question. While with each story we might be contented to accept the sadness of its conclusion, it might still be asked whether a writer who saw life uniformly in such sombre hues were not limited in his field. There is tragedy in life, but is life all tragedy? Are the good never rewarded? Does the dullard get all the prizes? After all, optimism is much more a matter of feeling than the result of reflection; but are not the greatest poets those who have left cheery, strengthening works alongside of the deepest tragedies? And why are they the greatest, unless it be that they are the truest? Not that Turgeneff is all gloom and despair. In "On the Eve" we see the love of Helena outlasting everything, and, in spite of its unhappy termination, the reader is left at last in presence of the sublimity of a woman's love, rather than weighed down by an unnecessarily painful reminder of the truth that man is mortal. But there are others, again, which simply treat of hopeless misery. Such are "Le Juif" and "Die Unglückliche" (in the German translation).

The reasons for this pessimism are various. An intelligent observation of human life may be said to be one, however; and besides this, the political condition of Russia, and the general state of feeling that characterizes

* "On the Eve: A Tale by Ivan S. Tourguénieff. Translated from the Russian by C. E. Turner." London. 1871.

the present time, with its various remote causes. But we do not wish to-day to speak of Turgeneff's relation to the political and social matters of Russia, but simply to indicate roughly some of his more marked literary qualities.

For the benefit of any who may be desirous of reading his works, we would say that most of them may be found in French translations made by himself, or by Mérimée and others under his supervision. An excellent German translation is now being published at Mitau. The accuracy of this is guaranteed by Turgeneff. Four volumes have already appeared. A few of the shorter stories have been published in different American and English magazines, and many are to be found in the *Revue des Deux Mondes*. The translations are not all equally good. The story we have spoken of more particularly had better be read in the French version, which bears the title of "Éléna," and from which, as the spelling of the proper names clearly shows, that of Mr. Turner's was made, though his is far inferior. And the German translations, excepting those referred to above, abound with faults. All of the French ones, on the contrary, are accurate, except the volumes entitled "Mémoires d'un Seigneur Russe." The reader should try to get, instead of it, the "Récits d'un Chasseur," a better translation of the same book, but quite rare.

WYSE'S IMPRESSIONS OF GREECE.*

The condition of Greece is that of a clever spoiled child—full of offences against the general sense of fitness, now and then compensating for them by a vein of charming quality, by turns a nuisance and a delight. In no country in the world will one travel with such contradictory feelings, and of none will such contradictory testimony be borne by different witnesses. The revolutionary history of the Greeks was full of splendid heroism, which won from a reluctant Europe assistance and freedom; but, the phase of military action over, nothing to maintain political sympathy has followed it, and the "unnamed demigods" whose courage and persistence electrified civilization, remain in the barbarism where Navarino found them, save at the few points where commerce and its advantages have developed a trade prosperity, the most fickle and partial of all forms of national good. Indeed, so far as political organization is concerned, Greece has absolutely retrograded; for the system of local self-government which had survived the Turkish conquest (or been developed by it?) has given place to a constitution of the worst possible type, a bad adaptation of the French, centralizing, giving an almost despotic power to the King, and tending to develop place-hunting and demagogic ambitions—the worst vices of the republican state—with all the artificial stimuli and corruptions of the despotic.

So few people have lived long enough in Greece to understand the true condition of the country and the causes of its poverty and disorder, that the testimony of Sir Thomas Wyse, long a resident of Athens, familiar with the language, the country, the people, the politicians, the King, and the operation of the constitution and laws, is peculiarly valuable; the more, as few English officials care to speak well of Greece or anything in it. "Impressions of Greece" consists mainly of diaries of travel by Sir Thomas, notes of a book rather than a completed work, but full of vivacity and *vraisemblance*, which are better than polish without them, as one may see by the letters of Dean Stanley, appended in supplement to the incomplete work of Sir Thomas—carefully written, elegant models of style, but with a vague smoothness, an effacing polish, which make no favorable contrast with the vigorous diaries. An introduction by Miss Wyse gives her uncle's opinions on many matters of interest, and her own experience of residence with him in Athens. In this introduction are the most valuable items of information concerning the influence of the King and court. "It is melancholy," quoting from Sir Thomas, "to think what Greece is, and what under a tolerable government she might have been. The King came with absolute power; he had no aristocracy, no old habits, no prejudices to embarrass him. He had a most docile and a most intelligent population, and he had a treasury filled by the allies to overflowing. But he treated his population just as they had been treated by the Turks—as a mere sponge, out of which money had to be squeezed. He did nothing for them; he did not advise them or even encourage them to do anything for themselves. He treated them as an appanage to Bavaria—as a country given over to him as a younger son's portion."

In other places, Miss Wyse states, in unmistakable language, her own and that of witnesses as intelligent, the general effect of the form of government imposed on Greece by the protecting powers. "These trustees of the nation ruled at a period when Greece was yet young, . . . when everything had to be formed, and when the national character . . might have been moulded into a very different type. Instead of placing before their subjects a high standard of principle, honoring virtue and integrity and rewarding honesty, they permitted, when they did not sanction, trickery and corruption throughout the length and breadth of the land; bestowed their royal favors on fawning hypocrites, no matter how blackened their reputations, and persecuted men of probity and self-reliance if they dared to show disapproval of their arbitrary rule. Under this system everything collapsed, and, when blaming the Greek nation, the first and largest portion of that blame should assuredly fall on those who had it in their power to elevate and correct, but, on the contrary, contributed to lower and debase, this young nation entrusted to their care."

To sum up the testimony of "Impressions of Greece," abundant as it is in detail of the most satisfactory character: there is ample cause for all the disorders and poverty of Greece, the corruption of her politics, the squandering of some resources and the neglect of others, the brigandage, and all the rest, in the constant and shameless example of the King and Queen, who, new to the country, without sympathy with it or care for its prosperity except as their estate, corrupted, bought, depraved, oppressed, and perverted in a manner which makes an eminent English political economist, quoted in the book, say: "The King and Queen have had their own way; they have been able to squander or to accumulate for their own use more than a tenth of the revenue of the country; they have been able to discredit, by turns, every public man, and to reduce ministry after ministry, and chamber after chamber, into mere puppets; they have been able to ruin every one who opposed them."

Whoever would obtain a charming glimpse of the most beautiful country amongst the old lands of men, and a faithful portraiture of a people which, with great and undeniable vices, has some of the most admirable qualities which can enter into a national character, should read Sir Thomas Wyse's books of Greek travel. Democratic by instinct and tradition, with the most decided tendency to and adaptation for municipal institutions, which, indeed, in all Greek history has been a character of the nation, whether in civil or ecclesiastical matters, the Greeks have been compelled to submit to despotism after despotism (for the present King is only a weaker and more aimless despot than Otho); they have received from Europe all the ill which it was possible to impart; and, loaded down with unjustly imposed obligations, loans which were stolen before they were received, forbidden to develop even their national strength, or to apply their own resources according to their needs, they deserve, what Sir Thomas Wyse gave them, more sympathy and pity than blame for the misfortunes under which they labor still. "Impressions of Greece" will console many friends of the Greeks and correct many unreasonable antipathies.

THE EXPERIMENT AT RALAHINE.*

The raw material of the interesting experiment described in this book was the Irish field-laborer of forty years ago—the Ku-klux of that period of intense agrarian disorder. The particular force employed on the estate which was to try co-operative farming deserved no milder epithets than "ignorant, drunken, dissolute, and criminal." They were probably accessory to the murder of their steward, whose plantation manners had made him obnoxious to the whole neighborhood. They shared the savage life of the peasantry of the south of Ireland—"without any employment at all for months in winter; whose average earnings throughout the year will not amount to sixpence per day, and this for the support not of the individual only, but of a large family—his wife and children no other employment than attending to a little plot of potato-ground and begging—their only food a scanty supply of potatoes, and those frequently of bad quality—the whole family covered with filth and clothed with rags—all herding and sleeping in the same apartment (upon a bit of dirty straw) with pigs, ducks, poultry, dogs, goats, cows, and asses, on an earth floor, covered with mire and manure of every description—the apartment a miserable mud cabin, roofed with thatch or sods, often without window or chimney, and nine times out of ten with a dung-heap before the door—no bed, no furniture, scarcely any utensil save a cast-iron pot, in which the potatoes are boiled for the family dinner, and in which afterwards the surplus and refuse are served up to the grunters."

This picture is indispensable to an appreciation of the change wrought

* "Impressions of Greece. By the Right Hon. Sir Thomas Wyse, K.C.B., late Envoy Extraordinary and Minister Plenipotentiary at Athens, etc." London: Hurst & Blackett.

* "Co-operative Agriculture: A Solution of the Land Question, as exemplified in the History of the Ralahine Co-operative Agriculture Association, County Clare, Ireland. By William Pare, F.S.S." London: Longmans. New York: Robert Turner. 1870.

at Ralahine in the course of two years, under the initiative of the proprietor, Mr. John Scott Vandeleur, a friend and disciple of Robert Owen. The constitution of the "New System," as it came to be called, was put in operation November, 1831, with the assent of fifty-two laborers of all ages and conditions of strength and health, who thus found themselves an "agricultural and manufacturing co-operative association," renting a place of 618 acres, in sole charge of the cultivation of it, and paying rent and interest in produce of a fixed amount and at fixed values. The members hoped to gain from this arrangement a common capital; mutual assurance against poverty, sickness, and indigent old age; a greater proportion of the comforts of life than was then possible to persons in their condition; mental and moral improvement; and the education of their children. Mr. Vandeleur, on his part, sought to obtain higher rent for his land; better interest on his capital; the punctual payment of both; security for the advances he made upon the labor of the people; and the safety of the property entrusted to them. Both parties to the contract—so wise and explicit were its provisions, and so faithfully were they executed—had their wishes gratified.

In place of the steward, a committee chosen semi-annually by the members directed affairs, deciding what crops should be raised, and apportioning the work from day to day. Every farm-hand was obliged to learn some mechanic handicraft, and every artisan to learn farming, so that the whole force could, in case of need, be turned upon one thing. The married laborers had stone cottages built for them, two stories high; the single hands lived in dormitories provided for each sex. The cooking and washing for the association were done away from the dwellings, and the meals were served either at a common table or in the family cottages, where independent cooking was discouraged. All the advantages of a community were thus enjoyed at the least expense, the women particularly being the gainers, inasmuch as the infants and young children were kept all day, and finally all the time, by a teacher whose business was to amuse and instruct them, thus relieving the workers of all anxiety while engaged at their tasks. The older children were also educated, besides being taught a trade. There were evening lectures and classes for the adults, and frequent social gatherings for dancing and other enjoyment. The pay for work was in paper notes, receivable at the store of the association, but of no use off the place; and as no tobacco or liquor was sold there, the habit of using them was almost entirely abandoned. Though there was no ownership of the land or the buildings or tools (until they should purchase the latter, as they would certainly in time have done), the greatest care was manifested that nothing should be wantonly injured nor necessary repairs be neglected. No new members were taken in except by ballot, while the idle or vicious, or those who by marrying would have brought in undesirable persons, were given leave to withdraw. This last-mentioned mode of self-defence, as it tended to restrain members from making imprudent matches, did something to check the increase of population, and to overcome the natural recklessness of the poor in this respect. While the experiment lasted, sickness was unknown—proper accommodations and a mixed and well-cooked diet being allied with moral causes in producing an improved hygiene. There was all the elevation of spirits that came of self-government, each man and woman having a vote and being eligible to office, and all being free to write down in a "suggestion-book," which was read aloud at the weekly meeting, whatever hint or comment seemed to be for the general good. The priests were delighted with their transformed parishioners, the politicians made nowhere so little impression as at Ralahine. Even the country round about stopped its murdering and arson, in the faith that other landlords would adopt the "New System."

Preparations were making for turning to account the water-power at Ralahine by introducing machinery on a large scale—contrary to the not very old prejudices of the members themselves—when the philanthropist who had derived as much pleasure as profit from the workings of his little colony, suddenly fled the country, and left behind him a gambler's reputation and fortune. In the settlement of his affairs no regard was paid to the moral claims of the association—unfortunately it had no legal status; the lands passed into the hands of the sheriff, and, to make a long story short, a year ago the old outrages were rife on the property held by the Vandeleur family. To this disastrous termination the word failure is not strictly applicable. The experiment had been proved sound at every point, and no one can read Mr. Pare's narrative without the keenest pity for those poor people who were thrust back into filth, poverty, and crime, when they and their descendants and their like should now be making Ireland the home of the happiest peasantry in the world.

The history of Ralahine, and of the numerous other schemes of associated farming described in the appendix—some of which are still in successful operation—is not so much a lesson on the value of co-operation as applied to agriculture, as on the simple methods that lie ready to hand of arriving at a good understanding with our fellow-men, of establishing pleasant and equitable relations between the workingman and the capitalist, and of enlarging for the former his sphere of happiness and of usefulness, by freeing him from anxiety, building up his self-respect, and stimulating his honorable ambition. This little volume, therefore, deserves to be recommended to all employers, in whatever branch of industry, and to all social reformers, of whatever stripe. Political economists must needs look into it.

Geological Survey of California: J. D. Whitney, State Geologist. Ornithology. Volume I. *Land Birds.* Edited by S. F. Baird, from the manuscript and notes of J. G. Cooper. (1870. Roy. 8vo, pp. xi., 592. Uncolored edition, $10; colored, $20.)—The publications of the State Geological Surveys do not, in general, fall within the province of the *Nation.* We leave to other hands the task of turning them over, and commending or condemning. Accordingly, while conscious of only friendly feelings toward the California Survey, we never even noticed the appearance of its two stout volumes of Palæontology. These were, to be sure, profusely illustrated, and in the highest style of art; but our particular public we know to be somewhat unimpressible by the beauties of an extinct and embalmed nature of a few million years ago, however skilfully limned, and however full of interesting suggestiveness to the trained scientific eye. The volume of Geology also passed unheeded by us, although its pages were adorned with many a view for lovers of the picturesque to admire; although much of the Yosemite Valley and some of the grand peaks of the high Sierra Nevada were depicted there. But when the best of these views were collected and published separately in a guide-book to the valley, accompanied with a text which not only described the valley itself and its vicinity, and the ways of getting to and from it, but also gave an accurate and attractive sketch of the physical geography of the region, in which this is only the grandest and most beautiful of many grand and beautiful features, while to it were added two of the best topographical maps that have ever been produced in America—then, as in duty bound, we gave the work a few words of welcome and praise.

And now comes forth another volume, which we may not leave unmentioned. The Survey has in preparation what is likely to prove the handsomest and most trustworthy account of American birds; and the first part of it, one volume out of three, has just left the press. This treats of the land-birds of the Pacific Slope of the continent found to occur in United States territory (excluding our last purchase, Alaska); the few species which have not yet been met with inside the California boundary being, for the sake of completeness, taken with the others. The second volume, already under way, is to contain the water-birds. So much of the work belongs to the Survey; but then, that the great cost and labor expended may not fail of its due result in wide use and usefulness, there is to be added by private enterprise a third volume, in the same style, treating of all the United States species which have not already found a place in the other two; and the three together will make up a complete illustrated manual of our ornithology. The work is edited, and in great part composed, by Professor Baird of the Smithsonian Institution, the best living authority on its subject; being, in its first part, founded especially upon material furnished by the well-known zoölogist, Dr. Cooper, a member of the Survey; for the third volume, the assistance of Dr. Brewer, of Boston, is also secured.

As was to be expected in an ornithological work brought out under such auspices, the scientific part—the classification, the nomenclature and synonymy, the description of generic and specific characters—is worked out with great care. The illustrations, too, are primarily rather scientific than pictorial. Under every genus is given a whole-length figure, smaller than life, of some typical species belonging to it. There is added a full-sized outline depiction of the parts specially characteristic by their form, as the ends of the wings and tail, the tarsus and foot, the bill in its various aspects—cunningly grouped together, so as to occupy the smallest possible space. These characteristic parts, or some of them, are also often given for individual species, wherever they seem called for. Then, for every species, a very careful picture of the head and neck is presented, of life size, and frequently for each sex; and these heads, in the more costly edition, are colored by hand in exact imitation of nature. Some of them, of course, are very brilliant, and all are exceedingly lifelike and characteristic, and, as helps to identification and study, altogether to be preferred

to the entire figures, carelessly drawn on stone and coarsely tinted, which are often found in illustrated manuals of ornithology. All the illustrations are engraved on wood and electrotyped, and they are introduced into the descriptive text itself, and printed along with it. This is the newest and most striking feature of the work, this putting of brightly colored figures upon the same page with the letterpress.

A Latin Primer. By Professor W. F. Allen. (Boston: Ginn Brothers & Co. 1870.) *Latin Composition.* By W. F. Allen. (Boston: Ginn Brothers & Co. 1870.)—This primer reminds us of the Dutch preacher who opened his discourse with "Let us say a few words before we begin." It is intended for children too young to attack the solid columns of the Latin inflections, but who can make predatory incursions into the enemy's country with profit. And we are inclined to believe that the old-fashioned method of beginning is altogether the best for those who are in a position to adopt it. It is astonishing how much of a scholar's attainments depend upon those bits of information which are picked up before he really commences the serious study of a subject. For boys who do not begin the study of Latin until they are fourteen this book would, of course, be a waste of time; but if a boy can have got the cream of the Latin grammar and a little vocabulary of Latin words before he begins to study the language at all in our ordinary sense, it is easy to see that he has a very fine start. To accomplish that object this book seems excellently well fitted. It gives by easy stages the inflections of the nouns and verbs and most of the common rules of syntax—enough, in fact, to enable one to read any Latin with profit. These bits of grammar are interspersed among the successive chapters of the "Historica Sacra," a Latin composition, hardly known to the children of this generation, but which used to be in the regular curriculum of all beginners. It is not very good Latin certainly, but it seems to be the only thing that is simple enough for the purpose. Then follow some dialogues of Corderius and Erasmus, the latter witty and captivating as usual, and some translations into Latin by modern scholars, one, "The Golden Egg," by the author himself, quite well done. Two or three extracts from Livy, Valerius Maximus, and Pliny the Younger, complete the work. It will be seen that the author is more concerned that the pupil should come to *realize* the Latin as a "living, flexible tongue" than that he should know that "the following have *ĕ* in the ablative." Though no scholarship is possible without the latter, yet of the two we think the pupil's mind in general is more benefited by the former. Though the matter is not specially suggested by Mr. Allen, it seems to us that this method tends to give a solution to some of the difficulties of female education. Though the regular course pursued by boys seems at present to be impossible for girls, there is no reason why every girl in the country who has any education at all should not learn to read Latin with ease by such methods as this, and so either prepare herself for real scholarship afterwards, or, at least, enlarge the scope of her mind by having within her range ten centuries more of literature and a distinct civilization which is largely the foundation of our own.

Somewhat more advanced, though adapted to a preparatory course, is Allen's "Latin Composition." The parts of the Allen series which this book completes are of various degrees of merit, but this is the best of them, and may be praised as absolutely good. Even if it were not so good as it is, it would be a relief after the dreariness of Arnold's "Latin Prose," with its "Balbus" and "stat per me quominus." It is short, too—another thing we ought to be thankful for—and yet it seems to give sufficient practice on all the ordinary constructions of Latin prose. The sentences, as well as the continuous exercises, are from classic authors, and are neatly translated with a sufficiently English flavor to lead to facility in the translation of modern prose. Take such exercises as "His soul, indeed, I persuade myself, has returned into heaven, from which it was; not because he led great armies, for these the mad Cambyses also had, but on account of his excellent moderation and piety, more admirable in him when he left his country than when he defended it," and so on for half a page; or, "Well, Tranio! what's going on? The country people are coming from the country. P. will be here at once. By Pollux, he comes in good time for me. I am of opinion that this neighbor of ours is a bold and bad man," etc. A boy who has had practice in such passages as these will find no difficulty in rendering any ordinary style into Latin as soon as he can increase his vocabulary sufficiently beyond the twelve hundred words given in this book. In particular, the treatment of the English potential mood and its accompanying auxiliaries is worthy of all commendation, and it is to be noticed that this is the only book in the world, to our knowledge, from which a correct idea of the Latin Protasis and Apodosis can be obtained. The temporal particles still lie buried in a German pamphlet, and it will probably be some years before they emerge into an English text-book. Meanwhile, however, the treatment of them in this book is neatly done, and is as good as can be expected. We cannot leave the work without calling attention to the especial excellence of the mechanical part of this as well as of all the Allen series. The printing is perfection. They are as refreshing to the eye as a grassy knoll in the middle distance, and we should not be sorry if they had a success even beyond their merits in other respects if it would serve as an encouragement to other publishers to imitate their external appearance.

History from Marble. Compiled in the reign of Charles II. by Thomas Dingley, gent. Printed in photo-lithography, by Vincent Brooks, from the original in the possession of Sir Thomas E. Winnington, Bart. With an Introduction and Descriptive Table of Contents, by John Gough Nichols, F.S.A. (Printed for the Camden Society. 2 vols., pp. 196, and ccccexvii.)—The name of the Camden Society is familiar to many of our readers as that of one of the great book clubs of England, whose publications have been as interesting to antiquaries here as to any of her Majesty's subjects. Founded in 1838, and named in honor of Camden, the author of "Britannia," it has had but one rival, the Surtees Society, until within the past few years. Out of the long list of its volumes (the 103d having been issued last autumn), it is hard to select any one for especial notice. The student of English history knows the value of all, and that much-abused personage, the general reader, must cull for himself. The two volumes above cited are deserving of attention, for an especial reason. The history itself consists of a series of pen-and-ink sketches, made by Thomas Dingley, in the latter half of the seventeenth century, and now reproduced by photo-lithography in these 517 pages. It is a noteworthy use of this new process of printing, since at a moderate cost we are presented with fac-similes of the results of the prolonged labors of a skilful draughtsman, while the cost of any other mode of reproduction would have prohibited its use. These note-books are the production of a zealous antiquary, who jotted down epitaphs and pedigrees, copied monuments and made sketches of buildings and their contents, and in many cases thus preserved facts of considerable importance not now otherwise recoverable. It is impossible to explain without illustrations the character of this book; but it impresses the reader with the strongest idea of the compiler's industry, skill, and zeal. Page after page is filled with elaborate drawings of tombs in churches, of carved windows and shrines, of sculptured coats-of-arms, or copies of long and interesting inscriptions.

Little has yet been discovered by Mr. Nichols, the learned and careful editor of the volumes, as to the history of the author. It seems clear that he belonged to a family resident at Southampton, that he was admitted at Gray's Inn in 1670, that he lived at Dilwyn, in Herefordshire, and that he died unmarried in 1695. He was a great traveller, and in fact died at Louvain, while on a tour in Flanders. Besides this "History from Marble," five other manuscript volumes, recording his travels and the sights he noted, are known. They relate to the Low Countries, France, Ireland, and Wales, and are all enriched with drawings. Such a resuscitation of a forgotten worthy is interesting, and it may stand for a proof that solid well-applied labor is never lost—is even, perhaps, as certain of eventual recognition as noisy mediocrity seems to be in the present.

The Primary Synopsis of Universology and Alwato. By Stephen Pearl Andrews. (New York: Dion Thomas. 1871.)—This book is a brief compendium of "The Basic Outline of Universology." Universology is "the Science of the Universe itself, as the One, Grand, All-Inclusive Domain." Mr. Stephen Pearl Andrews is the inventor of the science of Universology. "Alwato" is another of his inventions; it is the new scientific universal language. When we read—and the reader will please notice that what follows is not Mr. Andrews's Alwato but his English—that "This new Stage of Science is technically the Descending Wing of the Duismal Stage of the Scientific Mental Evolution lapping over the Trinismal or Integral Method and governing it, as Induction arose, at the other extreme, out of the Unismal Stage;" or that "the Non-Metals, Aerial, *Upward and-front-wise tending*, or as it were, visibly presentative, are *generically* Electro-Negative, or allied with the Lightning, the Grand Type, and, as it were, Fountain, of Electricity in the Cosmos, and with *its* Aerial Position overhead or above; and Electro-Negative *because they are so allied*, since things are not attracted to the Pole of Being which is identical with their own nature; they, therefore, being of the nature of the Lightning and of the Light (or

Front-Presence) are attracted to the Metals, which are of the nature of the Earth *beneath*, and of Obscurity, or of that region of the Edifice (or of the Human Body, to which the Edifice is an Adjustment) which is pointed *downward* and *behind*"—on reading such sentences, we say, we should be laying claim to steadier brains than we possess if we did not cheerfully resign this book to the admiration of Mr. Andrews and his disciples. All the more should we be content to give it over on being told that it "declines the jurisdiction of the technically so-called learned or scientific world as a special body of judges, and comes for understanding and appreciation to the general mind of humanity, learned and unlearned alike, according to inherent capacity;" but we cannot overlook in the preface a card in which, among others, Mr. Parke Godwin, President Barnard of Columbia College, Professor Youmans, Ex-Mayor Opdyke, and Judge Daly state that, "having listened to Mr. Stephen Pearl Andrews's preliminary statement of his 'Universology,' and been impressed with the importance and originality of the new scientific claim, as well as with the profound research implied in it, [they] do cordially concur in urging the publication of the work at the earliest possible date." Names of such weight demand that we should divest ourselves of all flippant prejudices and give the book a careful examination.

We readily agree with President Barnard and Professor Youmans that the book is original; but is it important? is the research profound? This book concerns itself with the "Scientology of Language." Mr. Andrews affirms that "Every Alphabetic Sound of the Human Voice is inherently laden by nature herself with its specific significance or meaning; that the Aggregate of these meanings is, at the same time, the Aggregate of the Fundamental Entities and Principles of the Universe of Matter and Mind; and that, hence, a Language rightly built up from the combinations of these sounds must exactly echo to and represent, from the broadest Generalizations to the minutest details, the Total Universe of Matter and Mind, itself built up in parallel development from the Echoing or Corresponding Entities or Principles." Let us examine some of the inherent meanings of the alphabetic sounds.

A (ah) represents Thickth; Up-and-down-ness, etc. U, back, *shade*, retiracy, obscurity (as of the posterior and inferior portions of the body); occultness, turbidity, dubiosity, etc., etc., etc. COLLOID. W, cardinated sequentiality (waddling, wagging, waggling, walking). "—n (The nasalization, or nasal twang), incomprehensibility, mystery, the ineffable; *je ne sais quoi*. R expresses, break, roughness, turn, beat, and grab; L, not-broken-ness, not-rough-ness, not-roundness, not-grabbed—for example, *l*iquid, *l*iquor (what is *let* to flow), *l*iber, a book, the *l*eaves of which fall asunder or are free." Can Mr. Andrews put his hand on his heart and say that the *l* in *l*obster or *l*ion owes its presence to the fact that we do not grab them? And do Messrs. Godwin, Youmans, and Barnard seriously mean to say that they find here a scientific claim of vast importance? Is there profound research in the derivation of *substance* from *sub-stans*? or of *forma* (which the author accordingly writes *ferrima*) from *ferre*? Do those gentlemen really believe that there was a great necessity for the publication at the earliest possible date of such compounds as "Paus" (p. 130), which means "single or simple abstractoid linear-PARTINGS-*and*-point-like-UNITINGS; single HINGINGS viewed from the Flanges to the Rivet-and-joint; or single Triangulations viewed from the Legs to the Apexes (or Apices) of the Angles; converging or diminishing *conicities;* comings or bringings to a *Point*, whence POSITINGS, pointings"? Or "Aups" means "single or simple *abstractoid* linear-*counter*-PARTINGS-and-point-like-UNITINGS," etc., etc., etc., for eight lines, at the end of which we are bidden to compare the English *open* and the Greek ὄps, the eye.

We can leave it to the *Saturday Review's* accurate and penetrating reviewer of American books to be "so satirical" over this representative work of American philology. The extracts we have given above are very good specimens of the "importance, originality, and profound research" which characterize it. It has for a long time been easy enough to get meaningless praise of a book after its publication, but it is a novel as well as a sad sight when such men as those who signed the card from which we have quoted endorse and approve this unmitigated nonsense before it has seen the light, and thus help delude the ignorant into the belief that here is the solution of the universe, the great science of the future. It is high time we had a single word by which to express that culpable amiability by which alone we can account for their action. We bespeak for it the early attention of the inventor of "Alwato."

*** *Publishers will confer a favor by always marking the price of their books on the wrapper.*

GUSTAVE DROZ.

The "Nation" (February 23, 1871), speaking of this author's writings, says: "His longer novels are masterpieces of fiction. . . . We shall not give an analysis of the novel 'Around a Spring,' which it is so easy to get, but shall content ourselves with praising its great merits. Regarded merely as a bit of workmanship, it has all the elegance which, perhaps, will immortalize the best of the present race of French writers."

"The Galaxy" says of this novel: "Portraiture of character, description of persons, dissection of motive, pictures of life in city and among the mountains, conversation, dialogue, development of plot, are all excellent."

The works which Droz has already published are—

AROUND A SPRING.
MR., MRS., AND BABY.
A PACKET OF LETTERS.
BETWEEN OURSELVES.
MLLE. CIBOT'S BLUE COPY-BOOK.

Messrs. Holt & Williams will soon publish "Around a Spring," and hope to rapidly continue the series.

The style will be the usual paper 8vo.

BOOKS DIRECT FROM LONDON.

All who buy books will find it to their interest to put themselves in communication with J. SABIN & SONS, Booksellers and Importers, 84 Nassau Street, New York, and 22 Buckingham Street, Strand, London. They keep constantly on hand some 50,000 volumes, in all departments of literature, and, having their own partners as purchasers in London, are enabled to supply fine, standard antiquarian and miscellaneous books at very low prices. They publish monthly the "American Bibliopolist," a literary register, repository of notes and queries, and literary gossip, together with a catalogue of a portion of their stock. Sent to subscribers, postage prepaid, for $1 per annum. An edition printed on cheap paper, 36 cents per annum.

Catalogue of a few of the Books for sale.

Allibone, S. A Dictionary of Authors. 3 vols. large 8vo, cloth, new, $20.

Bancroft, George. History of the United States, from the Discovery of the American Continent. 9 vols. 8vo, cloth. Boston, 1867. $20.

Cruikshank. The Comic Almanac. An Ephemeris in Jest and Earnest, containing Merry Tales, Humorous Poetry, Quips and Oddities, etc. With many hundred Illustrations on Steel and Wood by George Cruikshank. First series, 1835-1843, $2 75

Cruikshank. Oliver Twist, by Charles Dickens. With all the original Illustrations by George Cruikshank. 3 vols. crown 8vo, half red morocco. London, 1841. $9.

Fine copy, with early impressions of the plates.

Curiosities of Street Literature. Comprising "Cocks," or "Catchpennies," a large and curious assortment of Street Drolleries, Squibs, Histories, Comic Tales in Prose and Verse, Broadsides on the Royal Family, Political Litanies, Dialogues, Catechisms, Acts of Parliament, Street Political Papers, a variety of "Ballads on a Subject," Dying Speeches and Confessions, to which is attached the all-important and necessary copy of verses, as

"Come, all you feeling-hearted Christians, wherever you may be,
Attention give to these few lines, and listen unto me;
It's of this cruel murder to you I will unfold,
The bare recital of the same will make your blood run cold."

4to, half-morocco, gilt top. London, 1871. $8.

Dibdin, Dr. Bibliographical Decameron; or, Ten Days' Pleasant Discourse on Illuminated MSS., Early Typography, Engraving, etc. Numerous beautiful Engravings, some on India paper. 3 vols. royal 8vo, half-morocco, extra gilt edges. London, 1817. $125.

Dickens's Works. Riverside Edition. 26 vols. 12mo, cloth, new copy, $39.

Froude, James A. History of England from the Fall of Wolsey to the Death of Elizabeth. 12 vols. crown 8vo, cloth, new. New York, 1871. $13.

Hallam's Constitutional History of England. Crown 8vo, cloth. London, 1868. $1 50.

The unprejudiced reader will find that in this work the balance of Queen Elizabeth's good and bad qualities is held with a more steady and impartial hand by Mr. Hallam than by any preceding writer.

Hamilton, A. Memoires du Comte de Gramont. Nouvelle Edition. 64 Portraits. 2 vols. in 1, 8vo, red morocco, gilt edges. London, 1811. $12.

The Same. 2 vols. 8vo, blue morocco. London, 1811. $15.

Hone. Ancient Mysteries Described, especially the English Miracle Plays, founded on Apocryphal New Testament Story, extant among the unpublished MSS. in the British Museum; including notices of Ecclesiastical Shows, the Festivals of Fools and Asses, the English Boy Bishop, the Descent into Hell, the Lord Mayor's Show, the Guildhall Giants, Christmas Carols, etc. Illustrated with curious facsimile Engravings on copper and wood. 8vo, cloth, new. London, 1823. $1.

Hone. Apocryphal New Testament, being the Gospels, Epistles, and other pieces now extant, attributed in the first Four Centuries to Jesus Christ, His Apostles, and their Companions, and not included in the New Testament by its Compilers. Translated from the Original Tongues, and now first collected into one volume, with Tables and various Notes and References. 8vo, cloth, new. London, 1820. $1.

Jones's (Sir W.) Works. Complete, with Life by Lord Teignmouth. Portrait. 13 vols. 8vo, half-calf. London, 1807. $14.

"Need I dwell a moment," says Dr. Dibdin, "on the recommendation of the works of Sir William Jones, a scholar, a critic, a philosopher, a lawyer, and poet."

Leech. Early Pencillings from 'Punch.' by John Leech. Nearly 300 Plates. 4to, cloth, gilt edges. London. $5.

Monogram and Alphabet Album. After Designs of Eminent French Artists. 76 pages of fine Artistic Designs for Monograms. Printed on Plate Paper, and mounted on Linen Guards. Bound in cloth, $7 50; half-morocco, 8vo, $8; in portfolio, leaves loose, $6 50. New York, 1871.

Nuttall, T. Ornithology of the United States and Canadas. 2 vols. 12mo, half-calf. Boston, 1832-34. $25. Very scarce.

Palgrave, F. T. Essays on Art. 12mo, cloth. London, 1866. $1.

Pacific Railroad Reports. Complete set. 13 vols. 4to, $25.

Thackeray, W. M. Complete Works. Best edition, with Illustrations on Steel, and numerous Engravings on Wood by the Author. 22 vols. 8vo, cloth extra, new copy. London, 1868. $50.

Walker, Alexander. Analysis of Beauty in Woman. With general Hypotheses respecting Beauty, by Da Vinci, Mengs, Winckelmann, Hume, Hogarth, Burke, Knight, Alison, etc. With 22 beautiful Plates by Gauci and Lane, after drawings from life by H. Howard. India paper, royal 8vo, cloth. London, 1852. $8.

Walton & Cotton's Complete Angler: or, the Contemplative Man's Recreation. With Memoirs and Notes by Sir Harris Nicolas. Illustrated with about 60 fine Plates by Stothard and Inskipp. 2 vols. imp. 8vo (on much larger paper than the edition of 1860), half-morocco extra, uncut, gilt top. London, 1836. $45.

An original copy of the late W. Pickering's magnificent edition.

Webster's Dictionary, Unabridged. 3,000 Illustrations. Sheep, new copy, $10.

Wood, Rev. J. G. Illustrated Natural History. 5 vols. large 8vo, new (published at $35), $27.

Send for latest Catalogue and Specimen Number of the "American Bibliopolist."

596 Broadway, New York.

NEW AND VALUABLE PUBLICATIONS.

THE HISTORY OF FLORIDA, from its Discovery by Ponce de Leon, in 1512, to the close of the Florida War, in 1842. By G. R. Fairbanks. Crown 8vo, extra cloth, $2 50.

Although so much has been written in reference to Florida, hitherto no connected history of the State has been published; and it has been the object of the writer of this work to bring within a moderate compass a complete and authentic narrative.

DALLAS'S LIFE AND WRITINGS. The Life and Writings of Alexander James Dallas. By his Son, George Mifflin Dallas. 8vo, extra cloth, uncut edges, $5.

THE CONSERVATIVE REFORMATION and its Theology, as represented in the Augsburg Confession and in the History and Literature of the Evangelical Protestant Church (commonly called the Lutheran Church). By Charles P. Krauth, D.D., Norton Professor of Theology in the Evangelical Lutheran Theological Seminary, and Professor of Intellectual and Moral Philosophy in the University of Pennsylvania. 8vo, extra cloth, $5.

THE VIRGINIA TOURIST. Sketches of the Springs and Mountains of Virginia; containing an Exposition of Fields for the Tourist in Virginia; Natural Beauties and Wonders of the State; also, Accounts of its Mineral Springs; and a Medical Guide to the Use of the Waters, etc., etc. By Edward A. Pollard, author of "The Lost Cause," etc. Illustrated by Engravings from Actual Sketches. New and cheap edition. 12mo, paper cover, $1; extra cloth, $1 75.

"We confidently recommend Mr. Pollard's entertaining and exhaustive guide."—New York Times.

ANIMAL PLAGUES. Their History, Nature, and Prevention. By George Fleming, F.R.G.S., Member of Council of the Royal College of Veterinary Surgeons, author of "Horseshoes and Horseshoeing," etc. 8vo, fine cloth, uncut edges, $4.

For sale by all Booksellers, or will be sent by mail, postage paid, upon receipt of the price by

ATHENS.

VIEWS OF THE ACROPOLIS.

The undersigned publish for the author an Album of photographic views, entitled "The Acropolis of Athens, Picturesquely and Architecturally Illustrated, by W. J. Stillman," printed in carbon by the Autotype Company, London.

These indestructible photographs are from 8x10 inch negatives, taken by Mr. Stillman during the winter and spring of 1869, and include all the views which are necessary to give the most complete idea of the existing ruins on the Acropolis, and their relation one to the other. They were taken with architectural lenses correcting the perspective distortions, and so that the proportions of the buildings may be measured as to scale, on any given plane; and most of them by Dallmeyer's wide-angle rectilinear lens, by the aid of which views never before successfully photographed have been rendered.

Of the twenty-five subjects, sixteen have not been taken by any other photographer, and the negatives used are selected from not less than 300 taken. The picturesque views show the Acropolis from five exterior points of view, and the architectural show those characteristics of Greek architecture which contribute to its unexplained as unapproached perfection—the curves of the horizontal lines, pitch of the columns, etc.

They are mounted on board about 13x22, with a page containing description opposed to each print; the whole bound in substantial and elegant style. Nothing finer of the kind, it may be safely asserted, has ever been offered for sale in this country. Edition limited to 100 copies.

Price, delivered at the *Nation* office, 3 Park Place, New York, $25.

Orders received by

E. L. GODKIN & CO.,
March 16, 1871. Office of the *Nation*, New York.

SINGLE VIEWS.

Enquiry having been made for single copies of the photographs contained in the Album, Mr. Stillman, while unable to furnish these in autotype, offers for sale a few duplicates printed by the ordinary silver process, along with other views enumerated below. The duplicates are marked with an asterisk:

VIEWS OF ATHENS (8x10):—Plain of Athens, from the East.—Valley of the Ilissus.—Mars Hill.—The Parthenon, from the South-east.—Columns of the Propylæa.—Tribune of the Caryatides.—Interior of the Propylæa.—Western façade of the Propylæa (*).—Eastern façade of the Erectheum (*).—Acropolis, from the Turkish town (*).—Acropolis from the Ilissus (*).—*Fragments of Sculpture:* Victory untying her sandals.—Victories with bull.—Victory elevating an offering.—Metope from the Parthenon.—Fragment of frieze from the Parthenon (Æginetan school); do. do. (Attic school).

CRETAN VIEWS (8x10):—Bridge of Kalepa (Venetian).—Village of Kalepa.—View from Kalepa.—Convent of St. John (exterior); do. (interior).—Convent of the Holy Trinity: Olive-tree avenue; Cypress avenue; From the olive-trees; From the cypresses; The interior and church; The Cloisters.—Canea: The city and plain; Ruins of the citadel (Venetian); Fortifications; Doorway of ruined palace (Venetian); Court-yard of a mosque; Marina and dogana; Gate of the asteliî.—Town of Platanîa (ancient Pergamos).—Statue of Minerva found at Kisamos.—Ravine of Therisso.

VIEWS IN AND NEAR ATHENS (7¼x4¾):—Port of Peiræus.—Secret Port of ancient Peiræus.—Ruins of the Long Wall and Plain of Athens.—Ruins of the Temple of Jupiter Olympius.—Acropolis, with columns of the temple of Jupiter.—Choragic monument of Lysicrates.—Theatre of Bacchus; Altar from ditto (4¼x3⅜); Choragic monument above ditto (4¼x3⅜).—Arch of Hadrian.—Temple of Theseus (three views).—Pnyx.—Way of the Enneacrunæ (footprints of the sacrificial animals).—University of Athens (modern).—Byzantine church (4¼x3⅜).—Temple of the Winds (4¼x3⅜).—Portico of Hadrian 4¼x3⅜).—Bed of the Ilissus.—Two views on the Cephisus.—Town of Aegina and Temple of Venus.—Two views of the Temple of Minerva (Aegina).—Plain of Marathon and mound of the Greek dead.—Athens from Plato's Academy.—Acropolis from Mars Hill.—Grotto of Pan.

AMERICAN VIEWS (7¼x4¾):—Glen Ellis fall (White Mountains).—Glen Ellis, with fall in the distance.—Crystal cascade.—Glen below the Crystal cascade.—Two views of Mt. Kineo (Moosehead Lake).—Forest study.—Moosehead trout.

Price of the large views (8x10)—mounted, $1; unmounted, 85 cts. Of all the rest—mounted, 60 cts; unmounted, 50 cts. Payable in advance, together with postage on orders for less than six, viz.: for one to five large photographs—mounted, 30, 35, 40, 45, 50 cents; unmounted, 30 cents. For one to five small ones—mounted, 15, 20, 25, 30, 35 cents; unmounted, 15 cents. Orders to be filled in the course of thirty days after receipt.

Address E. L. GODKIN & CO., as above.

BY JOHN HAY.

1 vol. 16mo.....$1 50.

The dramatic power, picturesqueness, and pathos of "Little Breeches," "Jim Bludso," and "Banty Tim" have made Mr. Hay's name known throughout the English-speaking world. The other poems in this volume are worthy of the author's fame, and will be welcome to his numerous admirers.

For sale by all Booksellers. Sent post-paid on receipt of price by the publishers,

JAMES R. OSGOOD & CO.,

BOSTON.

HISTORIC AMERICANS

(Franklin, Washington, Adams, Jefferson).

BY THEODORE PARKER.

Edited by Rev. O. B. Frothingham. 12mo, price $1 50.

Second Edition now ready.

"Parker had a terrible gift for character dissection. If there was a flaw, he found it. Hidden no matter how deep, his knife reached the tainted tissues, and he never hesitated to bring it forth to the full light of his audience. This adds rare value to his portrait of Washington. The sketch, as it stands, is in important regards the truest, clearest, and most complete of our great First President. And this is all the more to be noted because Parker believed that, in intellectual breadth and height, Franklin was our greatest representative American. Him he most admired, but of him he was compelled to acknowledge painful faults, and his love for the man never gets the better of his love for truth. Another marked feature of the book is its style—excellent verbally—but supreme in methods of treatment. First we have a rapid historical résumé, then clear-cut estimate of what each achieved; finally, the analysis of character—made searchingly complete. In this way the memory grasps all, and holds the whole image of the man with a vividness and tenacity that very few biographers give. Mr. Parker had the reputation of introducing his religious views into his lectures, but in the present volume the allusions are those which naturally arise from the subject, and in no wise have the air of intrusion."—*Christian Union.*

105 NASSAU ST., CORNER OF ANN ST.

HARVARD UNIVERSITY, CAMBRIDGE, MASS.

LAW SCHOOL.

Instructors and Subjects for 1871-72.

PROFESSORS.

Emory Washburn, LL.D., Real Property and Constitutional Law.

Nathaniel Holmes, A.M., Evidence, Equity, and Bailments.

C. C. Langdell, A.M., Contracts, Sales of Personal Property, Civil Procedure.

LECTURERS.

George T. Bigelow, LL.D. (late Chief Justice of Massachusetts), Marine Insurance.

Charles S. Bradley, LL.D. (late Chief Justice of Rhode Island), Corporations.

Nicholas St. John Green, LL.B., Criminal Law and Torts.

John Lathrop, LL.B., Shipping and Admiralty.

John C. Gray, Jr., A.M., Conflict of Laws.

The academic year begins Sept. 28, 1871. Important changes have been made in the terms of admission, the course of Study, the requisites for the degree, and the fees. For a circular containing full information, address

JAMES W. HARRIS, Sec'y, Cambridge, Mass.

The Satin Finish Silver Plated Ware of the Lippiatt Silver Plate Company is unsurpassed for beauty or for household service. It cannot be distinguished from sterling silver, yet is furnished at *one-tenth* the cost.

For sale by Ball, Black & Co., Starr & Marcus, and at their

SALESROOM.....10 MAIDEN LANE.

DARTMOUTH HOME SCHOOL

FOR YOUNG LADIES.

Instruction given in all departments. Apply for Circulars to

BANKS AND OFFICES FITTED UP.

PRATT'S Astral OIL. Not the cheapest, but the best illuminating oil ever made. Does not take fire or explode if the lamp is upset and broken. Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have occurred from it.

Oil House of Charles Pratt, Established 1770, New York.

The Nation.

NEW YORK, THURSDAY, MAY 25, 1871.

The Week.

THE treaty will probably have been ratified by the time this reaches the majority of our readers. The expressions of opinion on the part of the country at large have been almost unanimous in its favor, and although it falls far short, as we predicted it would, of meeting the extreme views which prevailed at and during the war, it meets fully the demands of the sober judgment of the best portion of the American people. Let us add that Caleb Cushing, who has written a letter on the subject, has not overrated its importance when he pronounces it not only unprecedented in character, but its conclusion the opening of a new era in international relations. It is the greatest gain for civilization which our age has witnessed, the most solid victory which the great cause of Peace has ever won. Of all the splendid contributions made by the Anglo-Saxon race towards the art of government; of all the things it has done to "make reason and the kingdom of God prevail," we do not know one—extravagant as it may sound—which will, as it seems to us, hereafter take a higher rank. Since this great contention has been settled round a table by a party of jurists, it is hard to see in what way a true *casus belli* can ever again arise between the only two nations which have thus far succeeded in saving liberty without imperilling order.

The correspondents of the New York *Tribune* and of the Cincinnati *Commercial* are still undergoing a sort of farcical confinement in a committee-room of the Capitol, surrounded in the daytime with their wives and children, and served with all the delicacies of the season, for refusing to tell where they got the copy of the treaty. To produce this ridiculous result, the Senate expended a week of an extra session called to consider perhaps one of the most important treaties ever laid before a deliberative body, and is now placed in the supremely humiliating position of having exhausted its powers without accomplishing its object. The correspondents will, of course, soon have to be released, and will then join the rest of the country in the laugh at their judges which is now going on. The *Capital*, whose editors have had considerable experience, however, in this business of Washington correspondence, says one very wise, and sound, and respectable thing about the whole matter, and that is, that real "professional honor" ought to prevent correspondents accepting information from any source which they are ashamed to reveal; that the disgrace lies in this case not in telling where they got the treaty, but in taking it from a man who dares not own that he gave it. As long as newspaper men place themselves in such positions, they must expect to have the term "gentlemen of the press" used with a smile, as a kind of nickname.

The folly and inefficiency of this proceeding is not unlikely to hasten the return of sounder views on this whole matter of legislative inquisitions. During the excitement of the war, and under the influence of the passions which grew out of the war, and under the instigation of sages like Thaddeus Stevens and B. F. Butler, Congress fell into the habit of "investigating" on the most frivolous pretexts, and examining people on all sorts of subjects with which the legislature had nothing to do, and which in no way concerned public business. The climax of this absurdity was reached when the House appointed a committee to find out what Judge Field of the Supreme Court said at Jerry Black's dinner-party, a mystery which, however, never was solved; and the whole business of investigating was made odious and contemptible when Butler was authorized by the House to collect a barrelful of private telegrams, and overhaul them, for the purpose of discovering whether Republican senators of the highest standing had not taken bribes in a judicial proceeding. Let us hope that we are now going to witness a return to saner and more constitutional ways. Public opinion will be strengthened in insisting that these extravagances shall come to an end by a decision which has just been rendered by the Supreme Court of Massachusetts, discharging from custody a person imprisoned by order of the State Senate for refusing to answer questions which would criminate him. Judge Wells, who pronounced the judgment, held—and we presume this is as good law in Washington as in Boston—that the legislatures cannot deprive men of their rights under the Constitution; and that attacks on personal liberty which these bodies cannot make by enactment, they can still less make by mere order, for the purposes of "investigations," whether frivolous or serious.

Mr. Vallandigham has made his appearance in public once more at a Democratic convention in Montgomery Co., Ohio; and produced and got adopted a platform, which most people will read with considerable surprise, and which, if it should secure acceptance at the hands of the party at large, will be entitled to the rank of a political event of the first importance. If, too, the Democrats should put on it, at the next Presidential election, a candidate of high standing and character, of good Union antecedents during the war, the consequences would most likely be such as Messrs. Cameron, Forney, and the like would at first contemplate with horror, and then adapt themselves to with commendable alacrity. The great difficulty in the Democratic path is, however, well expressed in the popular proverb, "Fine words butter no parsnips." People somehow do not believe in Democratic promises, no matter how glowing they are. The difficulty, in short, is one of character. The new platform, which is to be called "the Dayton platform," declares bygones to be bygones; accepts the three last amendments to the Constitution; proclaims the equality of all the States, and denies the right of any State or States to deprive others of representation in Congress; protests against centralization; declares that all legislation outside the Constitution is essentially temporary in its nature and liable to revision; calls for a universal amnesty; for the early payment of the public debt; for a reduction in the number of tax-gatherers; for equality, uniformity, and justice in taxation; for a reform of the civil service; for a revenue tariff simply; for the basing of taxation on wealth, and not on population; and for a speedy return to specie currency, as the only sound one; expresses sympathy with capitalists, and also with laborers; opposes further grants of public lands to railroads; denounces the San Domingo scheme, the "Bayonet Bill," and "the Ku-klux Bill," and, finally, "the Radical party of 1871," which it says is "neither the Republican party of the period previous to the war nor the so-called Union party during the war." It is right to add, however, that the platform does not as yet find favor even with the Democratic press of Ohio.

An attempt, which, under the circumstances, cannot be called creditable, to say the least, has been made during the past week by telegraphing to newspapers, and other means of a similar character, to spread abroad the belief that Judge Smith's decision at Rochester in the Erie and Susquehanna litigation, on which General Barlow based a considerable portion of his charges as to the manner in which that litigation had been conducted by the counsel for the Erie road, had been reversed by the General Term on appeal, and the performances of the Fisk party thus relieved from the imputations which the Judge fastened on them. This is wholly untrue. The judgment has been affirmed on every point which has the smallest bearing on the manner in which the now famous election at Albany was conducted, and in which the accompanying litigation was carried on. The suit before Judge Smith was in the nature of a *quo warranto*, and was brought by the Attorney-General merely to try the question whether the Fisk directors or the Ramsey directors were lawfully elected, and which were entitled to the possession of the road. The General Term has affirmed so much of the judgment as declares "void the election of the Fisk board, and valid that of the Ramsey board," and orders that the Ramsey board "be let into possession of the property and

franchises of the Company," thus endorsing by implication Judge Smith's opinion of the manner in which the Fisk party carried on the election. There is not one word of dissent in the judgment of the General Term from his conclusions on these points.

The points on which the judgment of the court below are reversed are simply points of law, and have nothing to do with the conduct of the Fisk party. The Attorney-General asked that the defendants be restrained from the prosecution of further suits brought in relation to the matter in controversy, and Judge Smith did so restrain them. The General Term holds that the Attorney-General has no title to interfere in such a matter, and that no such injunction can be granted *on his application* in such a suit, on the ground that it would be "a dangerous precedent to allow the Attorney-General or any other officer of the Government to intermeddle in litigations between individuals." The other point on which the judgment of the court below is reversed is where it grants the costs of the action to those of the defendants who have been declared duly elected, against those of them whose election has been declared void; but this is merely a point of practice. Finally, let us add, the General Term does not, as some papers have disingenuously tried to persuade the public, relieve the Fisk counsel from the imputations cast on them by Judge Smith with reference to these proceedings. It is true that Judge Mullen tries to make things pleasant at the close of his opinion, but what he says is that he has seen nothing "unbecoming" in the conduct of the counsel in "these proceedings and the action," meaning, of course, the suit in which he was giving judgment. But nobody ever said that there had in *this* suit been anything improper. It was in the previous litigation which led to the action brought by the Attorney-General that counsel were, to use the boys' phrase, charged with "cutting up," and that charge has not been met or refuted before any tribunal or anything resembling a tribunal.

The Woman's Rights camp has again been the scene of frightful commotions, brought about partly, we believe, by the adherence of the two (or three?) rival organizations to the fond and foolish custom of holding their "anniversaries" in the same month and in the same city, and partly by a police case, in which Mrs. Victoria C. Woodhull's domestic relations were brought into light, and which, as Satan would have it, came on just about the time of the annual meetings. The evidence revealed the fact that Mrs. Woodhull has been divorced from her first husband and is living with the second, from whom she has also been once divorced, but to whom she has been remarried, and all three reside in the same house. The first husband, it appears, is an incapable sort of person, living on the bounty of Mrs. Woodhull and of the second; and the latter is at sword's-point with his mother-in-law, who swears he threatened her life, while *he* swears he only threatened to "spank" her. He now goes by the name of Blood, and was an advertising doctor, and practised, it seems, under divers aliases, but at present fills the position of "Co." in the firm of Woodhull, Claflin & Co., engaged in the publication of a weekly paper, and, its enemies declare, the more profitable business of blackmailing. If anybody says, on reading the above, that this is very disgusting stuff to introduce into the *Nation*, we can assure him we entirely agree with him. It *is* disgusting; but we are not to blame. We have been pointing out for two years what this Woman's Rights movement, as it has been conducted, was tending to; and now that we almost have our hand on the proofs of the soundness of our previsions, we are not going to be driven off by foul sights or foul smells.

Harper's Weekly calmly informed us, two weeks ago, when, discussing "sex in politics," we ventured to assert that if women entered the political arena the probabilities were that the female politicians would, in their moral qualities, after a while closely resemble the male politicians—that is, that politics would speedily become a refuge or career for female adventurers of bad reputation, and thus make public life a foul sink of impurity, and paralyze reform, it might be, for a century—that the probabilities were all the other way, and bade us look at the influence of women in literature and in the drawing-room; as if literature and drawing-rooms were places in which the sexual passion could be brought into play to help in the winning of an exciting game, in which the stakes were high; as if Morrissey and Tweed gave any trouble in literature or drawing-rooms, or in any manner troubled the waters of social life. We now ask *Harper's Weekly* to consider attentively the Woodhull case. Mrs. Woodhull has in one short year risen to the head of the strongest and most popular section of the woman's suffrage party. She owns and edits by far the most widely-circulated organ of the movement. She lives the life of a "free lover," and announces openly that she holds the free-love theory in its entirety, and has a reputation damaged in every direction. Nevertheless, she is accepted as a leader with enthusiasm, not by the denizens of the slums and groggeries, but by a considerable number of excellent women; they refuse to pay any attention to her character, and declare they care not what she is, or what she was, so long as "she can speak the word for the hour"—to use the latest bit of platform jargon—and sit at her feet, and listen to her expositions of constitutional law with profound faith and reverence, and maintain that one has only "to look into her blue eye" to know she must be good, no matter what is said about her. It must be remembered, too, that as yet the women are only playing at politics; that there is as yet nothing but notoriety to be gained by their agitation; and that the constituency to which Mrs. Woodhull appeals is a picked body of persons of strong moral or religious feelings. We think any fair-minded persons may readily picture what would happen, when the struggle began in dead earnest, with subsidies, charters, and "treats" of all kinds for prizes, and with the common run of voters for constituents What is most strikingly revealed in the Woodhull case, too, is the readiness, and even eagerness, with which the female agitators have adopted the male politicians' indifference to character, as long as the champion is "sound," and can "speak the word for the hour."

The Republican State Convention of Kentucky met at Frankfort last week, with the not inconsiderable advantage of having been preceded by the Democratic Convention on the 3d instant. That body had proved a disappointment to the more sagacious if not more liberal Democrats represented by the Louisville *Courier-Journal;* for it not only endorsed the still-born Congressional Democratic address, but nominated men who are mainly identified with the bigoted policy which distinguishes Kentucky above any other of the former slave States. However, it is conceded that the nominations are not all bad; and that the Republicans may as well give up the idea of defeating Mr. J. G. Carlisle for Lieutenant-Governor, or Mr. D. H. Smith for Auditor. If they elect their own nominees for Attorney-General and Register of the Land Office, as they hope to do, they will be more successful than could be expected from the strength of the party, as shown in the elections of the past three years. The two platforms agree in demanding complete amnesty; but, whereas the Democratic resolutions glibly denounce lawlessness, whether in the form of "unconstitutional enactments or of organized bands," the Republicans reproach their opponents for not passing laws to suppress the Ku-klux, for not making adequate provision for popular education, and for rejecting negro testimony in the courts. This last injustice seems in a fair way of being removed, since Judge Cofer, of the Seventh Judicial District, has instructed the Grand Jury to admit colored witnesses. The Judge was an officer in the Confederate army, but he argues soundly for the supremacy of the United States Constitution and laws.

The extremely quiet condition of trade throughout the country furnishes but little employment for money, so that greenbacks and national bank-notes accumulate in increasing quantities, and the rate of interest has fallen to a lower point than ever before known in the history of the country. Loans on call are reported to have been made as low as *two* per cent. per annum, and prime commercial bills have been discounted at four and four and one-half per cent. National bank-notes have sold at a quarter to three-eighths per cent. discount, and the question of a system of practical redemption of these notes is again under discussion among bankers and others, to whom this discount is an annoying and unwarrantable loss. Under the influ-

ence of the great ease in money, prime railroad bonds continue to advance, Government bonds remain firm, and the speculation in the stock market generally in favor of higher prices, but there is very little business of any kind. The funding drags, and Europe apparently declines to participate in it. But large amounts of railroad bonds and stocks and other securities continue to be sent there, although probably only a small portion of these have been actually sold, the remainder being used as security for money loans. In spite of these loans and sales, the condition of the foreign exchanges does not improve, and the specie shipments continue on a liberal scale. Of the crops, especially cotton, the later accounts have been rather less favorable, and prices have again advanced a trifle. Breadstuffs are also firmer, but the merchandise markets are otherwise but slightly changed. Real estate has been more active. Coal, since resumption has commenced, is steadily declining.

The Döllinger revolt seems to bid fair to be really the most serious ecclesiastical event of the century, the support which the learned doctor is receiving being far greater and bolder than anybody a year ago would have ventured to predict. His brother professors at the university at Munich, which perhaps has no rival or equal as a seat of Catholic theological learning, have given in their adhesion to him to the number of forty-three, and their example is being very extensively followed by the country clergy. The King of Bavaria, too, stands firmly by him, and, finally, the professors of the Roman University at Rome have declared for him. Indeed, there is now hardly a Catholic theologian of real eminence outside the "Latin countries" who does not support him. The University of Marburg has conferred on him the honorary degree of Doctor of Laws. Finally, the German bishops have become sufficiently alarmed to resolve on holding a meeting at Eichstadt, to consider the best means of preventing a schism.

The levelling of the Vendôme Column, on Tuesday, May 16, was the last great achievement of the Paris Commune, which has since been gradually tottering towards its own fall. Minor acts of vandalism and revolutionary terrorism, it is true, were still frequent after that date; churches were demolished or plundered of their treasures; Sisters of Mercy were turned out of their convent; "conspirators" were arrested, and "spies" were shot; a Court of Impeachment was opened to select hostages upon whom to execute bloody retaliation; clubs of women were organized to stop runaway patriots; the leading committees were purged of vacillating members; civil commissioners were placed at the side of the military chiefs, in order to frustrate all attempts at dictatorial usurpation; the last of the moderate journals were suppressed, and refractory editors menaced with death; and many other measures of a similar character threatened or proposed—but all real nerve for action seems to have vanished with the capture by the Versailles forces of Forts Issy and Vanves. Commune, Central Committee, and Committee of Public Safety wrangling with each other; battalions of National Guards refusing to march; Cluseret, Rossel, Delescluze, Brunel, removed from their brilliant spheres of activity; Pyat absorbed in elaborating laws against bachelors and the confessional; Rochefort meditating schemes of escape; suspicion everywhere within the walls; constant lying resorted to as a last means of encouragement—such was the aspect of affairs in the domain of Paschal Grousset's Republic when "the Prussians of Versailles" determined to make the final attack.

The last attempts of the Commune at resuming the offensive outside of the walls were made on the 16th and 17th, by Dombrowski's command, at Neuilly, and ended in failures. Batteries at Montmartre vainly bombarded at the same time the position of the Versailles troops at Château Becon. On the evening of the 17th, a powder-magazine exploded with terrible effect inside of the western *enceinte*, spreading havoc and consternation all around. Further south, fierce cannonading was kept up by the besiegers against the gates of Auteuil and St. Cloud, and from their new positions at Issy against Point du Jour and Grenelle. On Thursday, the 18th, two insurgent positions near Fort Montrouge were carried at the point of the bayonet, but subsequently abandoned. Some desultory fighting, with varying success, also took place on the two following days. The battering fire was renewed with the utmost vigor on the night of Saturday, the 20th, and continued until immense breaches were effected in the ramparts, which the defenders on Sunday gradually began to abandon, re-entering the city in the greatest disorder. In the afternoon the Government troops finally entered the capital; General Douai marching in from the southwest, by the battered-down St. Cloud Gate, at Point du Jour, and General Cissey from the south, by the Gate of Montrouge; the latter having shortly before occupied the positions at Petit Vanves and Malakoff, and Fort Montrouge, without a struggle. On the two extremes of the field alone, in front of Batignolles on the northwest, and between Gentilly and Ivry on the southeast, Generals Dombrowski and Wroblewski endeavored for a time to continue the contest outside of the *enceinte*.

On Monday morning, Dombrowski still made two assaults on the left wing of the Versailles forces, but his ranks were broken, and he himself wounded, and finally a panic seized his men, which was communicated to various detachments in the rear. All fled in wild confusion. The Government troops now advanced from every quarter, General Clinchant from the side of Clichy, Douai and Ladmirault along the Seine, Cissey from the south. There was hardly any resistance. The huge barricades at the Avenue des Champs Elysées and the Place de la Concorde were speedily abandoned; others but feebly replied to the guns of the assailants; the insurgents retreated towards Montmartre, hard pressed by Clinchant and Ladmirault; Cissey and Douai in the meanwhile occupying the southern and central portions of the city. In the evening, General Clinchant occupied Batignolles, and, on Tuesday morning, attacked Montmartre, the main stronghold of the insurrection, from the Avenue de Clichy on the west, and the Boulevard de Clichy on the south; while General Ladmirault attacked it from the southeast, having carried the fortified Northern Railway station by assault. Early in the afternoon, Montmartre was in the hands of the Government troops, and the insurrection was virtually, if not completely suppressed.

The history of the financial doings of the Commune, which are, perhaps, what will now prove of most importance to the unfortunate Parisians, will probably not be thoroughly known for a good while. There were strong fears entertained that they would seize on the "Grand Livre," or record of the public debt, and tamper with it; but of this there has been no news. They levied a contribution of $200,000 on the six railroad companies having termini in Paris, in the guise of "arrears of taxes," and must have stolen enormous quantities of plate from the churches and the private houses which they ransacked or placed "seals" upon. One of their decrees peremptorily forbade the imposition of fines for derelictions of duty on workmen or other employees in private establishments, "as an insult to the dignity of the laborer, and an outrage on his morality." Somebody appeared in London professing to be their agent, offering the pictures of the Louvre for sale; but it is to be hoped he was an impostor. There is, however, great reason to fear that large amounts of national valuables have been made away with, and the Versailles Assembly felt it necessary to pass an act warning people that the titles to property of churches, corporations, or individuals purchased from the Commune would not be respected. The anxiety on these matters is increased by the fact that the leading members of the Commune made no secret of their contempt for art and learning. Assy boasts of having read only one book—a history of Florence, with the frequent revolutions of which he was enchanted. On the whole, the reign of the Commune must be pronounced the most extraordinary episode of modern times, and strikingly illustrates the truth of the observation that the barbarians whose ravages the modern world has to dread, live not in forests, but in the heart of our large cities.

HOW PROTECTION AFFECTS LABOR.

Our explanation of the cause of the coal troubles was, as our readers may remember, that too many capitalists had gone into the business of mining and transporting coal, and each company was naturally unwilling to go out, and very anxious to have the others go out, and leave it to supply the reduced demand, the railroad companies to bring the mining companies to terms, and the mining companies the railroad companies. The companies, however, offer another, through the argument of their counsel, Mr. Gowen, before the Judiciary Committee of the Pennsylvania Senate, which, they say, is the only true one. Says Mr. Gowen:

"It is well known that during the late war the demand for coal was greatly increased. The navy required a large supply; and manufacturers—who are always the great consumers—were prosperous and active; coal-mining became exceedingly profitable; the coal-carrying railroads all made money; the miners and laborers were paid high wages; and it was no uncommon occurrence for a good miner to earn several hundred dollars a month. In consequence of this, a great impetus was given to the coal trade. New collieries were rapidly opened; new coal regions were brought into connection with the markets by new railroads, which were extended into every valley that contained a deposit of coal; and the high wages earned by the miner attracted from other countries a large immigration of skilled workmen, and diverted to the business of mining many who left other trades and occupations to gather the golden harvest which was spread before them. The natural result of this was, that after peace was declared and the war demand had ceased, the productive capacity of the anthracite coal regions was far greater than was required to supply the consumption of coal; and the laboring population had increased so rapidly that employment could not be given to all. The natural remedy for this state of things would have been enforced by the law of demand and supply. The badly constructed and ill-ventilated collieries that could not produce coal at the rate the public was willing to pay for it would have been abandoned, and the better class of collieries that could have supplied the market would have continued at work and given employment to as many men as were necessary to produce the amount of coal required by the wants of the community. The surplus population that could find no employment at mining would have gone back to other occupations, until the increased demand for coal resulting from low prices would have called them again to the coal regions. Thus a year or two of low prices would have supplied the cure for all the evils that were felt at the close of the war. But about this time there came into prominence an organization which is now known as the Workingmen's Benevolent Association. Embracing originally several distinct societies in the different regions, it gradually became a united and compact organization, chartered first by the courts and subsequently by the Legislature; and by the year 1868 it embraced nearly the entire laboring population of the anthracite coal region. The object of this organization was to secure employment for all of its members, and prevent the reduction of wages which every other class of labor had to submit to at the close of the war. Well knowing that if all its members worked a full day during the year, the production of coal would be much greater than the demand, they insisted upon an increased rate of wages and decreased amount of work, which would enable a man to earn in six or seven months as much as had previously been earned in a year—so that the entire population should receive employment without increasing the supply of coal above the demand. As it was also well known to them that such wages could not be paid unless the price of coal was kept up to a high rate, they suspended work whenever the price reached such a sum as made it impossible for their employer to comply with their demands.

"We, who thought we understood something about the laws of trade, and knew that natural causes would soon bring relief, remonstrated with the leaders of this organization in vain. The law of supply and demand, and every sound maxim of trade which experience has demonstrated to be correct, were thrown to the winds; and from the bowels of the earth there came swarming up a new school of political economists, who professed to be able, during the leisure hours of their short working day, to regulate a great industry and restore it to vigor and health. In the wildest flight of the imagination of the most pretentious charlatan there never was conceived such a cure for the ills with which we were afflicted as was suggested by these new doctors. In their hands, however, we were powerless: and with the eagerness of a student, and the assurance of a quack, they seized upon the body of a healthy trade, and have so doctored and physicked it that it is now reduced to the ghost of the shadow of an attenuation."

The miners, nevertheless, obstinately refused to go into any other occupation, and ignorantly and stupidly persisted in endeavoring, through combinations and threats, to force the companies to supply them with employment at rates of wages which it was, in the actual state of the public demand for coal, impossible for the companies to pay. We learn, furthermore, from the same argument, that the agents of the miners were daily to be seen on the floor of the Legislature coercing the senators and representatives into voting against any measures for the relief of the operators, and even into voting for measures intended to punish the railroad companies for their resistance to the miners' demands. In short, the capitalists charged the laborers with doing what we charged the capitalists with doing, and they proposed, as a remedy for the evils of the present state of things, that the laborers should transfer their labor to some other field of activity, or, in other words, should do with their commodity what we thought the capitalists ought to do with theirs.

We do not propose to review the argument in question in any detail this week. We have been deeply impressed in reading it, however, with the unconscious way with which the operators, who, as Pennsylvanians, are all warm supporters of the protection of native industry by Government, use against the miners the very arguments, and almost the very words, which the free-traders use against them. We have no hesitation in saying, too, that the very best answer the miners could make to these arguments they will find in the defences of the protective policy which have issued from the press during the last twenty years. That answer obviously is, that it is a good thing for the country that large numbers of persons should be engaged in mining industry; that if the market will not stand the supplies of coal which so many hands, if kept actively engaged, would pour into it, the prices must be kept up by artificial means; that legislation must be resorted to to supply these means, if possible, but that, in default of legislation, there must be strikes and intimidation of employers or of competing workmen. If the operators and the public do not like this, so much the worse for them; the business of the miners is to take care of themselves—by their votes first, and, if need be, by their clubs and knives. They are as much entitled to have their labor bought by the public at such rates as will enable them to live, and in such occupations as they think proper to follow, as the capitalists are to have their products bought at such rates as will yield them a fair profit, and in such fields of industry as they think proper to enter. In other words, in neither case is the market rate to be fixed by free competition, but by the creation of monopolies.

We took the liberty of pointing out, some weeks ago (March 2), that the disturbance, which becomes more violent every day, all over the world, in the relations of labor and capital, and the disinclination of the working-classes to look to any mode of bettering their condition, such as co-operation, which requires simply the display of intelligence and self-denial on their own part, is due in the main to the way in which the capitalists have for centuries familiarized the laborers with the spectacle of capital procuring legislation for its own benefit, hostile both to the laborer and the community at large. There is not a country in the world, the United States not excepted, in which capital has not succeeded in procuring legislation for the express purpose of increasing its profits, either by closing the market to certain classes of competitors, or punishing laborers for trying to raise wages in the only way in which they could be raised—by combination. This plan worked very well as long as the capitalist class had possession of the government. But that class has lost possession of the government, or only retains its influence over it by secret corruption, while the laborers are rapidly seizing on it, and are bent on using it, as they have seen the capitalists use it, for the purpose of maintaining an artificial scarcity of labor; or—to express the same idea in another way—of raising wages above the natural market rate, as settled by the proportion borne by the quantity of capital seeking investment to the quantity of labor seeking employment. In the earliest stages of the movement, which is all we have as yet witnessed in America and England, it consists simply in a demand, either express or implied, that the government shall not interfere to protect capital from the operation of such weapons of offence, whether simple combination or combination accompanied by violence, as the laborers may see fit to employ against it. In the more advanced stage, which is now to be witnessed in France, and was openly described by the International Congress of workmen three years ago at Geneva, it consists of the seizure of the government by the laborers, and the use of its authority to establish a new and artificial mode of dividing profits between the laborer and capitalist, in which the capitalist really gets nothing, and is reduced to the rank of a mere laborer. The insurrection in France having been put down, the socialist ideal in aid of which it broke out will doubtless not be realized yet awhile; but no intelligent observer doubts that this ideal is gaining ground among the

working-classes all over the world—that it is taking the place in the working-class mind of most of the motives by which society has hitherto been governed, such as patriotism or religion—and that it has within a few years received a great stimulus from the concentration of laborers in the manufacturing towns and mining districts, and, above all, from the steady and rapid descent of political power into the hands of this class. Thousands of demagogues are busy every day telling the workingmen of the civilized world of the power they now begin to possess over society, and the workingmen are nothing loth to exercise this power at the earliest possible moment. Few but the wilfully blind now fail to understand the exact nature of the danger with which we are threatened; and to those who imagine that America is going to escape the convulsion, we recommend a careful study of the history of the mining industry of Pennsylvania during the last ten years.

The way, and the only way, in which the laboring classes of all countries can be prepared for the active and direct control of the body politic at which they are now aiming, is the steady and persistent preaching and *practice*, by all classes, of the doctrine that, in the choice and pursuit of a calling, there is nothing so good either for the individual or the nation as liberty. The one thing government has a right to do about a man's business is to protect him in the exercise of it, and in some cases to see that he is properly qualified for it. To tempt him into a pursuit by bribes, or sustain him in it by subsidies or monopolies after his own incompetence or the state of the market has shown it to be impossible for him to follow it profitably, is not only economically inexpedient, but, as now begins to be plainly seen, is politically dangerous. In other words, protectionism contains the germ of communism; what may be in the hands of the sober, thoughtful capitalist a means of stimulating a useful industry, becomes in the hands of ignorant and fanatical socialists a justification of an equal division of goods. The only salvation for modern society lies in making governments let people alone in all that relates to the exercise of their faculties. Interference once begun, nobody can tell where it will end.

Mr. Gowen, in his argument, brings out the fact that the leading idea of the French Socialists, that no person should receive larger wages for his labor than another, and that it is an outrage on justice that a lawyer or capitalist should enjoy an income of thousands of dollars a year, while a laborer only receives a few hundreds, has found a lodgment in the mining districts of Pennsylvania also, and we fear it is not confined to Pennsylvania. The function of the capitalist in our day is one of enormous importance to the community, and, considering the losses which capitalists save to the community, and the profits they enable it to make, they are really, so far as money goes, greatly underpaid. The salary of any great director of industry consists solely of that portion of the profits which he spends in personal enjoyment. Whatever portion of his income is reinvested is devoted wholly to the employment of labor—or, in other words, is used for the benefit of the community at large, and especially for the benefit of the laborer; so that, when labor reform demagogues hold up the erroneous revenues of "Stewart and Astor" as subjects for popular indignation and as signs of rottenness in the State, they simply show that they do not understand what they are talking about. Whatever these gentlemen spend in food, clothing, and personal luxuries is the real amount of their income; the total of their receipts is only the apparent amount. The way in which our capitalists are overpaid, is in the power they acquire over legislation; and the problem we have to solve is to leave them in the free management of their revenues, without letting them control the government. The task they perform for us is the most important of all economical tasks, that of discovering the places and things in which the products of past labor may be invested without loss or with profit. The talent required for this duty is one of the rarest of gifts, as everybody knows who has ever had money of his own to invest, and who sees the tremendous mistakes which people, unprovided with the necessary experience and sagacity, make in trying to invest. The prosperity of a nation, it may be fairly said, in the long run, depends largely on the number of men it produces who are able to say what enterprises will "pay" and what will not, and the services of such men a nation can hardly reward too highly in money. The nation which produces plenty of them, and can keep them honest and public-spirited, is twice blest. There could hardly be a better proof of the ignorance and folly of socialism than the hatred and distrust of them which it entertains, and the great determination it always shows to get rid of them if it gets a chance. In the Socialist and Labor Reform Utopia, the delicate task of pointing out the ways in which the national wealth may be most safely invested, and the objects on which the national labor may be profitably expended, is usually assigned to a committee of Blatherskites, selected with rigid disregard of their mode of managing their own funds when they had any, and usually with more regard for their rhetorical powers than for anything else.

WHY WE DO NOT BELIEVE IN PROHIBITION.

A CORRESPONDENT asks us, on another page, for a confession of faith as to the possibility, or, if possible, the expediency of preventing the sale of alcoholic drinks, being prompted to do so by having perceived what he considers indications of hopelessness about it on our part, and by the increasing zeal of the prohibitionists in his own neighborhood. We supposed that our opinions on this point were pretty well known to such of our readers as cared anything about them, and were much interested in the question. We have not only, however, no objection to saying out fully all we have to say on the subject, but are glad to be furnished with an excuse for saying it.

We are opposed to prohibitory legislation, and consider all time spent in agitating for it almost wasted, first and foremost, because we believe no such legislation can be effective. In a certain sense, of course, this may be said of all legislation. No law is ever completely enforced; but a law prohibiting the sale of alcoholic liquors would, we believe, be disobeyed and evaded to an extraordinary degree, and by a large number of persons of good character who usually do obey the law faithfully; and, as a consequence of this, the proportion borne by the violations of it to the penalties inflicted for violating it would be so large as to weary the officers rapidly, and consign it to total desuetude. All laws in every country require a fair amount of support from public opinion to ensure their execution. This is true even of laws which affect matters in which only a small portion of the community has any personal interest. It is doubly true of a law like this, which would be highly inquisitorial in its operation, and involve incessant interference with the habits and inclinations of persons of ordinarily good repute. Suppose seven against five to represent the majority whose support is necessary to ensure the enforcement of a piece of ordinary legislation, and it is safe to say that a prohibitory liquor law would need the support of a majority of eleven to one. If you could count on such a majority, however, liquor-selling would be so thoroughly disreputable that either no legislation would be necessary for its suppression or there would be no opposition to it, and, therefore, none of the incessant discussion of its expediency which now goes on. The traffic would be given up to justice as readily as brothels and gambling-houses are, and the only debates to which it would give rise would be debates about the discipline and efficiency of the police.

If you ask the reason of the great difficulty which its advocates experience in procuring this legislation, the answer is, strange as it may seem, that the mass of mankind, including some of the best and purest of the race, do not believe the drinking of alcoholic liquor to be wrong; in fact, a vast body of them, in all countries, truly and sincerely believe it to be beneficial. The great majority have from the earliest ages been, in fact, moderate drinkers. No race or nation has yet been lighted on of which the great body of the males do not take stimulants in some form or other, not only without shame or fear, but with great gusto; indeed, the taking of stimulants is associated in their minds with the happiest moments of their lives, with births, with weddings, with the meeting of friends, and so on. The "drinking customs of society," to use the teetotaler's phrase, are, in short, apparently as old as the race itself, and may be almost said to have worked themselves into the very constitution of human society. We do not

say that this is a thing to be rejoiced over, or a thing not to be deplored. We simply say that an attempt to eradicate such a habit suddenly by legislation would, in *any* country, be hopeless enough to make it seem ludicrous. No habit so deeply rooted has ever been eradicated except by the influence of an accepted and revered prophet. Mahomet is the only prohibitory legislator who has ever succeeded, but he succeeded not as a prohibitionist, but as the founder of a new religion among a barbarous people. We could imagine liquor-dealing and liquor-drinking being swept away, here, by an outburst of religious or moral enthusiasm, in the nature of "a revival," if it were not that no communities are ever swept by storms of this kind which are not homogeneous. The American community is now anything but homogeneous. It is scored in every direction by differences of origin, religion, temperament, antecedents, and habits, and though you might light your fire very successfully among native Americans, and especially New Englanders, and make it blaze fiercely here and there, it would speedily be arrested by German and Irish patches, on which the flames of great "moral ideas" would find nothing to feed them. Moreover, there is little or no doubt that, for other reasons than this, "great uprisings" on moral or social questions will never again be seen. The intense publicity and intense activity of modern life, and the incessant criticism which results from publicity, have made them impossible, except where there is within reach some such sudden and energetic mode of expressing feeling as taking up arms. The work of reform, like the work of charity, is done more and more every day in cold blood, with books of statistics on the table. There are, however, features in American society and manners which make prohibitory legislation here seem more objectionable than in any other country within our knowledge. The manners and traditions of the people make all police interference with their habits peculiarly odious and offensive. They are not broken into it as Europeans are, and, though the custom of drinking in bar-rooms, which prevails here to an extent unknown in Europe, makes it apparently very easy to put a stop to liquor-dealing by merely closing the bar-rooms, we must remember that bar-rooms exist because they are convenient and lawful; close them, and the habit of secret drinking in houses will at once spring up, and has sprung up wherever they have been closed, as in Maine and Massachusetts; or, in other words, our drinking customs will be, to some extent, assimilated to those of the Old World, and our police would then find itself face to face with a more serious problem than any with which a European police has to deal.

But here, again, we come upon the greatest difficulty of all. We have no police, or anything worthy of the name of a police, and worse still, or better still, if you will, we have not the means of making one. A good police, by which we mean a force of vigilant, exact, methodical, shrewd, cunning, unscrupulous, and disciplined men, is hardly possible in the United States at present. Partly owing to the condition of the public mind with regard to the service of the state—or, to use the term most in vogue, the civil service—no man can be got to give himself up to this service with the thoroughness and self-abnegation of a European. All the habits and antecedents and social surroundings of an American unfit him for it, and he is not supported by public opinion in attempting it. There is a very good side to this American peculiarity, but it is fatal to the suppression of the liquor traffic. A force fit to put it down in any State of this Union would have to contain an amount of probity, self-sacrifice, devotion, and discipline which those who undertake the business of hunting up rum in other people's drawers have not as yet displayed on this continent, and are not likely to display. We do not need to enumerate here the objections to a law which cannot be enforced, especially in a community whose order and happiness are dependent so largely on the popular respect for law, and, above all, on the popular loyalty and *honesty* in obeying the law, as this is. This opens up a very wide field, which, however, anybody can explore for himself.

We are far from believing, however, that nothing can be done by law for the diminution of drunkenness. The liquor traffic cannot be abolished, and, in saying this, we do not take into account the spasmodic cases in which a town here and a county there has spilt a great deal of liquor, and stopped drinking for two or three weeks. But the traffic can be regulated, we believe, even with the machinery at our disposal, so as greatly to lessen the temptation to drink, and thus lessen the amount of crime caused by drinking, which, after all allowance has been made for the exaggerations and misrepresentations to which temperance advocates are, for some inscrutable reason, very prone, is undoubtedly large. In fact, all that the advocates of prohibition claim for their experiment, wherever it has been made, is that it does regulate and diminish drinking, not that it stops it; but this is dearly purchased by the creation of a habit of contempt for the law which illicit drinking surely creates. The great difficulty in the way of this regulation is everywhere in the Union to be found in the habits and character of the political class, which are too low to make effective dealing with so corrupting a question possible. Political reform, including reform of the civil service, lies at the back of temperance reform, and we believe we shall never see the liquor question reached in a rational and scientific manner except through a purification of the official class, both State and Federal.

What, then, "Truth-seeker" may ask, do we look forward to as the final solution of the temperance problem? Do we really think that the world is fated to remain as drunken as it is now? Nothing of the kind. We believe the time will come when drunkards will be as rare as thieves or swindlers, and as disreputable, not because the decent people of the world will be all teetotalers, but because those who drink at all will be "moderate drinkers." We think the notion that men will ever give up wine and beer as a great moral duty, is as wild a dream as has ever entered the brains of an agitator. We know that intemperance has greatly diminished under the influence of education and other moral and social agencies; we believe it will continue so to diminish, under the same influence, until drunkenness is as rare as is every other form of indulgence; and to strengthen the moral and social agencies which do notoriously diminish drunkenness, is the temperance man's first duty. Everybody who asks himself why the custom of getting drunk after dinner has disappeared from among the upper classes in Europe; why ministers do not go and guzzle in their idle hours at taverns, as many workingmen do; why a German artisan can confine himself to drinking beer through an evening at a public garden with his wife, instead of getting madly drunk on whiskey, as the Irishman does, will, if he tries to answer his own questions, get a great deal of light on the subject.

All that has been done for temperance in the world as yet, has been done by persuading men not to drink, or giving them better things than drinking to do; nobody really believes legislation could ever have done as much. When you get into a man's head and heart, you hold his will, which the policeman can never do, and it is through this will that drunkenness is to be conquered. The present movement in favor of prohibition we look on as one of those outbursts of impatience with objectionable practices in which the good people of the world have indulged every now and then ever since governments were set up. Nothing is harder than to refuse to use the powers of government to stop people's doing what you don't like, when you think those powers are within your reach. This is a feeling which has been at the bottom of all that legislation in aid of morals and religion from which the world has suffered so greatly, so much of which is now recognized as barbarous and inhuman, and so much of which we laugh over as silly. It has taken fifteen hundred years of experiment to satisfy us that men cannot be made pious by law; it is not wonderful, therefore, that in many places the faith should prevail that by law they will eventually be made sober.

There is nothing, however, in the lessons of history, or in what we see of the tendencies of society in our day, to warrant this conclusion. There have been three great attempts made in Christendom to police men into personal purity—Calvin's, at Geneva; that of the Puritans in England and America; and that of the Papacy at Rome. They have all failed, and failed hopelessly, and there is no chance of their ever being repeated. Moreover, the tendency of the day is against all coercion in aid of personal morality, or for the suppression of what Bentham calls the self-regarding vices. This is remarkably shown in the total change of views which has taken place with regard to the

education of children, from which the infliction of physical penalties may now be said to have almost disappeared. In other words, self-restraint has begun to play a part in practical education which, much as has been preached about it, it was in old times never called on to play.

Lastly, there is nothing in history or human nature to warrant the conclusion that it will ever be possible to incorporate in popular morals a prohibition of acts in themselves harmless, based simply on the fact that excess in the commission of them is hurtful, and that some persons are guilty of this excess.

There is no precedent or parallel for anything of the kind in civilized legislation. I may be, and often am, forbidden to do things which, though harmless in my case, would work mischief if *all* did them; but I am not prohibited from doing things which, if all did them, would still be perfectly harmless, lest some persons should do them in hurtful excess; and I am not likely to be. Whether, under the rules of Christian morality, I am my brother's keeper to the extent of being bound to refrain from acts of which his imitation may prove injurious to him, and, in other words, *not only to set him a good example, but to practise asceticism on his account*, and for his good, is doubtless a weighty question, but it is one which must be left to the individual conscience. No such theory of responsibility could be introduced into jurisprudence, without either making its application so sweeping as to be utterly intolerable, or surrounding it with so many modifications, and allowances, and restrictions as to make it farcical. Should a man, for instance, be prohibited from setting up a carriage, or living in a fine house, because the desire of luxury brings so many traders and cashiers to frauds and defalcations? Should the police see that a pretty woman wears sad raiment and goes veiled lest the plain ones should be made envious or driven into vice? Should a man who is industrious take no vacation, lest his example should demoralize the indolent and idle? The subject, in short, has hardly as yet been discussed at all, owing to the extraordinary heat with which nearly all those who are seriously interested in it approach it.

PROPOSED CHANGE IN THE CORPORATION OF YALE COLLEGE.

YALE COLLEGE, NEW HAVEN, May 20.

THE interest in the Corporation of Yale College which has arisen from the probable retirement of President Woolsey from the leadership of that body at the next Commencement has been quickened during the past week by two noteworthy publications—the annual message of the Governor of Connecticut, and a contribution of President Woolsey to the columns of the Boston *Congregationalist*. Both these papers refer to the office of Trustee.

President Woolsey deals with the subject abstractly, showing what relations should subsist in any higher institution of learning between the Governing Board or Corporation on the one hand, and the Teaching Board or Faculty on the other. Governor Jewell takes up the subject concretely, and proposes a change in the Corporation of Yale College by which the graduates may be allowed to participate in the management of the institution. His words are as follows:

"The connection of the commonwealth and Yale College is of increasing importance. The whole State will share in its prosperity or suffer by its failure to maintain the high rank which it holds among the great universities of the world. The Corporation now consists of eleven gentlemen, who fill vacancies in their own number, and the governor, lieutenant-governor, and six senators of the State. While the interest and representation of the State in this venerable college is very large, its official connection with it is, in fact, almost nominal, as it is rarely the case that any of the six senators attend meetings of the Corporation. The great body of the graduates, who have a deep interest in the college, and, being scattered throughout every State, can wield the strongest influence for its welfare, have no direct voice in its management. I therefore suggest whether it would not be well for the State, the college, and the alumni at large to surrender to the latter one-half of the State representation in its Board of Corporation—the new members to be elected by the alumni to serve for four years; one to go out each year. I do not know how this can be done, if at all, nor am I aware whether it would be agreeable to any of the parties concerned, but if it can be accomplished, I think the effect would be good."

We propose to make these official utterances, one of them emanating from the chief clerical member of the Corporation of Yale College, and the other from the chief civilian in that body, the occasion of some remarks on the possibility of effecting a change in the government of the institution.

An early decision of the question is inevitable. If the opportunity now presented is lost, many years may elaspe before it again occurs. Probably before the summer has passed, a favorable or an unfavorable conclusion will be reached. It is not the graduates of Yale College alone, but all its benefactors and patrons, and all who regard it as one of the most important educational foundations of the country, who are concerned in a wise and speedy solution of the problem.

The principles which should guide a conclusion may be stated, as it seems to us, under the following heads:

1. The government of a college or university should chiefly rest in the hands of permanent resident professors. They are the men whose lives, labors, and reputations are bound up with the institution. Being devoted exclusively to instruction and study, they are best acquainted with the relative importance and influence of different branches of learning, with the difficulties of college government, and with the requirements, deficiencies, and capacities of young scholars. The recognition of this principle has given dignity, permanence, and success to the universities of Germany and England. Heretofore, likewise, it has been a distinctive characteristic of Yale College that it has been governed by the resident officers. They have secured the endowments, determined the courses of study, established the interior regulations, and nominated most, if not all, of the professors. It is believed that their wishes have not been disregarded by the Corporation in any important particular, when once fairly expressed. It is this which has made Yale College, in spite of its poverty, so great a success. The offers of lucrative and honorable positions in other colleges have rarely, if ever, been potent enough to take away a professor from New Haven. The faculty have been willing to stay, plan, teach, and study, with manifold duties, incessant engagements, and the most meagre pecuniary return, simply because they encountered few obstacles. Whatever else it may have been, Yale College has been to the professors a place of personal and official freedom. Now, any modification of the Board of Trustees which should substitute outside interference for inside conclusions, would unquestionably be harmful in its tendency. Whether that interference should come from church or state, from benefactors or graduates, from friends or rivals, it would be dangerous. No advocate of sound learning should expect to benefit Yale College by substituting the indeterminate and illogical government of an outside authority for the definite, harmonious, and consistent administration of the inside workers.

2. It is, however, obvious that there must be a Board of Trustees apart from and superior to the teaching body. These Trustees should hold, solicit, invest, and expend the funds; they should be a support to the professors; and, at the same time, a protection to the public. Slow to originate any measure, they should be quick to help on whatever is clearly for the advancement of learning. Especially should they be wise counsellors in respect to the investment of gifts, the sale and purchase of real estate, the maintenance of the college credit, the protection of college property. But they should be very slow to impose on the professors fetters in the shape of formal laws or petty injunctions; they should regard the wishes of the faculties in the election of new professors and officers, unless there is the clearest reason for the contrary action. At the same time, in case the resident professors forfeit the confidence of the public, do wrong, or prove to be incompetent, the Trustees should be ready to interpose their final authority. The views which President Woolsey has expressed, after being for twenty-five years the presiding officer among the Trustees of Yale College, are an important exhibition of how much and how little the Corporation may attempt. It may be questioned, however, with all due respect to him, whether he has sufficiently stated what a service the Board of Trustees might render by communicating more freely with the public in respect to the progress of the college, its requirements, embarrassments, and encouragements. In all the efforts which have been made to secure new endowments for the different departments of Yale College, the efforts of the Corporation have, to say the least, not been conspicuous; nor can those who are most familiar with college publications recall any recent statement in respect to the college emanating from the Trustees more comprehensive and satisfactory than the annual catalogue. Even the Treasurer's statement, which is annually printed, and which might be a serviceable guide to those who are interested in the college finances, is not so widely circulated as to be readily referred to. But a corporation which should be the organ of communication between the professors on the one hand, and the friends and graduates on the other, might be of equal service to both. Certainly Yale College now suffers

more from the ignorance of the public respecting what it is and what it may be, than it does from rivalry or indifference. An open, confiding, frequent, and official statement of its condition, in terms of enthusiasm and hope, could not fail to awaken the generous responses of the friends of learning. Here, it seems to us, there is a legitimate field for the Corporation to act, and which no other body can suitably occupy.

3. The constitution of the Trustees of Yale College is theoretically absurd, although, for the reasons already stated, it has hitherto in many respects worked well. Like the British Constitution, it is an historic growth, more easily explained than defended, and requiring, from time to time, with the advancement of society, important modifications. Eleven Congregational ministers, resident in Connecticut, selected for life, and eight of the State officers of Connecticut, elected for a year, are the sole managers and trustees in law for all the group of institutions which now constitute Yale College. They hold all funds, appoint all officers, decide all ultimate questions, and do not even admit to their deliberations the professors and graduates of the college, or publish to the world any account of their most responsible trust, excepting a brief financial statement annually presented in manuscript to the Legislature of Connecticut, and placed on file in the archives of the State. It is true that the Corporation has been careful, honest, and wise, and that no official or personal reproaches are ever uttered against the members of the body individually or collectively. They are regarded with gratitude by many, with respect by all.

As a register of the wishes of the faculty, it was possibly all that could be desired so long as the faculty consisted of "Dr. Dwight and his three professors;" but, now that those three professors have become fifty, and the little collegiate school has become the nucleus of a university, it is clear that the trusteeship is far from being as well organized as it might be. It is now not merely "non-interfering," it is "non-co-operative." If it does not harm, neither does it help. Sometimes, from the very magnitude of its responsibilities, it fails to speak and act when its voice and energy would be powerful for good.

Moreover, it must be admitted that the Corporation has lost the moral support of large numbers of the graduates, who are clamorous for a change. These graduates are not the younger graduates only. Some of the best men in the land are among the number. Nor should it be forgotten that it was the President of the college himself, ripe in experience, conservative by nature and by habit, and devoted to the promotion of the college, who first proposed the reconstruction of the Corporation. This he did several years ago in his famous *New Englander* article. His views, which were met at first with distrust, dissent, and opposition, have at last been very generally accepted by the friends and graduates of the institution, and his administration seems likely to close with the achievement of this crowning glory.

Any one can see that some change must soon take place, or the present Corporation will fail to receive the support of the graduates; so far, at least, as this—that future gifts will be made under such restrictions and limitations as to leave the trustees but the slightest amount of discretion in respect to their management.

4. There are several ways in which a change can be effected.

For example, the eleven clerical members, now all of them Congregational ministers, resident in Connecticut, can, as vacancies arise, elect other persons than Congregational ministers to the empty fellowships. Whether or not they can admit laymen may be questioned, but there is no shadow of doubt that, if they choose to substitute other ministers of the Gospel for those of the Congregational body, they can do so. We are not claiming that they should be urged to take this step, but simply point out one of the possible changes, though, in our view, the least probable.

Or, secondly, the State of Connecticut can give up the right to be represented, as now, by eight civilians. It would be undesirable that the State should entirely yield its right of counsel and control, and all parties would doubtless prefer that the Governor and Lieutenant-Governor should henceforward, as now, hold their seats in the board. But for the six senators annually elected by the people and annually retired from their magisterial office, a substitution of the graduates, as recommended by Governor Jewell, would be quite feasible. Doubtless, the senators themselves, conscious of the awkward position in which they are placed by being nominally, for one meeting, members of a corporation so dignified and important as Yale College, would prefer, if they were consulted, to be released from their embarrassing responsibility.

Or, thirdly, without any nominal change in the present board of trustees, either by the clerical or the legislative action, there is another way in which a real change may be effected in the management of Yale College. Future givers of funds can bestow them on special boards of trustees, to maintain this or that department of learning. For example, if a classical scholar desires to provide for the perpetuity of philological instruction, by giving a farm like Bishop Berkeley, or a library and a professorship like Professor Salisbury, he can bestow his gift upon a special body of trustees, requiring them to make a connection more or less close, as may be mutually agreed upon, with the president and fellows of Yale College. While this method would be objectionable for gifts of small amounts for any purpose, and would *be more than* questionable for large gifts intended for the old or academic department of the College, it might be advantageous for new or unendowed branches of the university. It is working well for the Peabody Museum; it is supposed to have been adopted for the astronomical observatory; it would unquestionably be well for the Law School or Medical School. Indeed, respecting the last two institutions, it is not easy to see how they can be maintained without the formation of a board of trustees, jurists on the one hand, and physicians on the other, to advocate and uphold these special interests. Another way of accomplishing a similar end, without any nominal change in the Corporation, is by an act of the Corporation itself, inviting certain fit persons to attend and deliberate in the meetings of that body. There would be legal objections to conferring upon such persons a power to vote, but none which would prevent the president and fellows from seeking the advice as counsellors, or *adsessores*, of for example one or more of the professors, or some prominent graduates, a good lawyer, or a man of financial experience, like the college treasurer, and so on. If the alumni of the college could even in this way have a voice in the deliberations of the Corporation, it would, doubtless, promote the efficiency of the college.

5. The only one of these considerations which requires an early decision is in respect to the message of Governor Jewell. So far as it now appears, his suggestion has been received with great favor, both in the college and out of it. It is certainly an unusual conjunction of circumstances, that the president of the Corporation should suggest, and that a governor of Connecticut should formally recommend, a measure to which "Young Yale" can offer no objections, and for which "Old Yale" should be supremely grateful. The only remaining point now to be considered, is what details should be included in the modification thus proposed. As a basis for discussion, the following suggestions are made:

Yale College should be regarded as a society of scholars. To be admitted to the society, the candidate must receive a degree, either at the conclusion of a course of study, or in recognition of his merits by the bestowal of an honorary title. All such persons as have thus been graduated by the president and fellows of Yale College should be electors of the graduate fellows, and should be eligible to fellowships, with this proviso, that bachelors should be of five years' standing before beginning to exercise the privilege. The term for which a fellowship may be held should be of considerable duration—say a period of six years, and the details of arrangements in respect to the methods of nomination and election should be left to the president and fellows, who may be trusted to act in good faith.

D. C. Gilman.

ENGLAND.

London, May 12, 1871.

I wonder how many of your readers who have paid a visit to London have ever included Epping Forest in the list of sights to be inspected. The number will be small, indeed, if the proportion of foreign visitors who extend their travels so far is no greater than that of native Londoners who make the excursion from the West End. It has, however, great beauties, though of a kind very ill adapted for American tastes. In short, it is the one bit of wild unenclosed forest-land which can be reached with in a day's journey from the metropolis. There is a hill covered with really grand old trees and tangled underwood—a fragment of English scenery of the old type, which would form a suitable background to legends of Rufus or Robin Hood. It is within a few miles of the miserable back lanes of the East End, to which flows all the most hopeless poverty of London. On Sundays and holidays the population of that district pours out by thousands to enjoy a breath of fresh air and to refresh itself—not, it is to be feared, exclusively by the sight of real trees, and grass, and sky. Indeed, it is a curious fact that the weavers of Spitalfields maintain some flourishing entomological societies which have their collecting ground in Epping Forest. Some of them, it is said, have really acquired a remarkable knowledge of the subject, and have their houses filled from top to bottom with the insects collected by themselves. Something like

3,500 acres are still unenclosed, and the value of such a playground to the crowded population of a district generally pervaded by the quintessence of London fog and coal-smoke may be easily imagined. Hitherto the forest has been kept open because the crown possessed certain rights, originally enforced for the sake of the game, which has long been extinct. The deer having vanished, it occurred to the Government of some twenty years back that the forest was useless, and they accordingly proceeded to sell the rights to neighboring landowners. The forest was partly enclosed, and suburban residences began to cover the previously wild tract. The House of Commons, however, was very properly indignant at this mode of throwing away for a trifle a natural park, which, once destroyed, could never be replaced, and passed a vote that no rights should be sold in future. Hereupon the Government judiciously discovered that, though they were no longer to sell their rights, it would not pay to enforce them. An action at law would cost a good deal, whereas the pecuniary value of the crown rights was next to nothing. Accordingly, the landowners enclosed without paying, and the forest was in greater danger than ever. This objectionable policy was simply the result of the red-tape traditions of a Government department, which did not consider itself entitled to regard anything more than the immediate question of pounds, shillings, and pence; and, on an agitation being raised to preserve the remnant of the forest, Mr. Gladstone promised that a more liberal system should be adopted in future.

This preface is perhaps necessary to explain what took place just after my last letter to you. Mr. Cowper Temple had introduced a motion calling upon the Government to give effect to their good intentions. A measure which they had introduced last session had been abandoned as unsatisfactory, and they were asked to take more effectual measures for securing the public enjoyment of the forest. Now, Mr. Lowe had just produced great excitement in the East End by his proposed tax on matches. Here was an opportunity, it might be supposed, for gaining a little popularity: the sincere desire to preserve the forest for popular recreation would have been some set-off against the indifference to popular interests supposed to be manifested in the match tax. What, moreover, could be a worthier object for a Government whose greatest claim to favor is its presumed regard for the interests of the lower classes? Nobody, one might have thought, would be more anxious than Mr. Gladstone to show the warmth of his sympathy with the poor East Enders, and there could hardly be a time at which it was more important to show that his sympathy was sincere. And yet, for some reason or other, Mr. Gladstone and Mr. Lowe opposed the motion with even unusual eagerness. They raised all kinds of difficulties, and did their best to argue that the proposed action would produce no possible effect. The result was that the strongest Government of this generation was ignominiously defeated to the general satisfaction by a majority of 101, and defeated in an attempt to obstruct a popular measure, approved by men of all parties. It is scarcely possible to imagine a more infelicitous proceeding altogether, and it has led to the most decided rebuff that Government has hitherto received.

I have dwelt upon this incident because it supplies some answer to a question over which the *Spectator* has puzzled its brains not a little. Why, it asks, has Mr. Gladstone's Government become unpopular? What popularity, it might be asked in turn, could stand such extraordinary freaks as these? Mr. Gladstone came in as the representative of the Liberal party, but he has not the instinct of a Liberal leader. His mind, it may be, is too much given to intricate experiments, or he has not the necessary strength of will to govern his own colleagues, or he has tried to be clever in reconciling different parties; but, whatever the cause, he is incapable of taking up a decided policy and sticking to it. He has alienated the Radicals and excited the contempt of the Conservatives; and if an election were to be held to-morrow, the cry of Gladstone for ever! which rallied the majority on the last occasion, would be changed for a studied avoidance of Mr. Gladstone's name. It is a real misfortune that so great a power has been frittered away, and that the majority, which was at first so compact and imposing, has become an aggregate of discordant atoms, which (it is hardly too much to say) agrees in nothing but distrust of its official leader. The budget, as you know, has utterly broken down. The present proposal of an additional twopence in the income-tax was little more popular than Mr. Lowe's previous proposals. The Government succeeded in carrying it by a strict party vote, to obtain which they had to strain their influence to the uttermost. They managed to carry their supporters with them, for a reason which was very candidly explained by one of the members thus coerced. He quoted the well-known saying of Charles II. to his brother: "Nobody, James, will kill me to get you put in my place;" and, on the same principle, Liberals would not turn out Mr. Gladstone to give a chance to Mr. Disraeli. But, though this very cogent motive preserved a majority for ministers, those who voted for them generally relieve their minds by private denunciations. Party discipline triumphed, but it was at the expense of party zeal; and if anybody wishes to hear Mr. Gladstone heartily abused, he cannot do better than talk to many of the members whose votes keep Mr. Gladstone in office. The Liberal party now resembles an army which fights because it feels that its own safety depends upon victory, but which has lost all enthusiasm, and dislikes its own generals fully as much as the leaders of the hostile army.

What the effect of this state of things will be upon the future of the session remains to be proved. Probably it will result in a great obstruction to business. Government will still be able to command a majority on critical occasions, but reluctant followers cannot be driven fast, and the opposition will be able to make a longer and more doubtful fight. Mr. Gladstone has already been obliged to commence the process known as the Massacre of the Innocents at an unusually early period. Two complicated measures, one of them for imposing additional restrictions on the sale of spirits, the other for effecting certain reforms in local administration, have been thrown overboard, with few lamentations over their fate. The Army Bill still drags its slow length along. At the present moment, it is trying to get into committee, and though volumes of talk have been expended upon it, there are still many volumes to come. In some form or other, it will probably get through Parliament, in a mutilated condition. The purchase system will be abolished, but no other very sensible change will be produced. It seems likely, too, that the Ballot Bill will be passed, and the bill for abolishing tests at the universities has a fair chance of success, though Lord Salisbury succeeded in engrafting certain amendments upon it by a very small majority. There can be no doubt that they will be thrown out in the House of Commons, and the Lords will scarcely have the courage to maintain them; but it does not seem probable that any other measure of importance will be carried during the session, and I fear that the net result will be a considerable disappointment to enthusiastic Liberals. Of that, however, it will be time to speak hereafter.

Meanwhile, I would remark that the advocates of women's rights have had their usual field-day. The bill for granting them the franchise was thrown out by 220 to 151, whereas last year it was carried by a small majority through the same stage. I still, however, hold that their cause is rather improving than otherwise. Mr. Gladstone made a speech chiefly in favor of the measure, although he voted against it. He showed that kind of vacillation which may be held to precede a conversion. Unfavorable critics will explain his partial change of opinion by the fact that some of the Conservative leaders, including Mr. Disraeli, Mr. Ward Hunt (late Chancellor of the Exchequer), and Lord J. Manners, have taken up the ladies' cause. It may be supposed that Mr. Gladstone does not wish to see his cards trumped, and his opponents making such a bid for the votes of his supporters. I would rather believe that Mr. Gladstone is yielding in his usual fashion to a current of opinion with which he does not quite sympathize, and that very little more would be wanted to induce him to fall into line. If so, the bill would probably be carried through the House of Commons, if he were still leader. The only symptom on the other side is that the expression of dislike to the change has become rather more open than before; and that, as the question passes from theory to practice, there is a probability of a more serious opposition. Certainly, however, the ladies may cherish hopes which would have sounded chimerical enough two or three years ago, and may congratulate themselves as having passed the stage at which simple ridicule is considered to be argument. Whatever may be the blessings of enjoying a vote—and I need not argue the point at this moment—there is a fair chance that they will be granted to Englishwomen within the next few years. If so, we shall be trying an experiment of a very novel kind; and the only thing that need be said just now, is that the complacency or indifference with which a change so great and till recently so startling is contemplated, is a curious illustration of the rapidity with which some revolutionary ideas have been recently making their way in English society. There is, it would sometimes seem, scarcely any institution strong enough to resist a lively agitation, and the chief difficulty is that our legislative machinery works so slowly and stiffly that a long time passes before changes which everybody knows to be inevitable get themselves carried out in practice.

Correspondence.

THE FISHERIES IN THE TREATIES.

To the Editor of the Nation:

Sir: Will you give to a constant reader of your excellent journal the privilege of saying a word or two in regard to the state of our treaty arrangements with Great Britain touching the fisheries?

1. In the reciprocity treaty of June 5, 1854, "it is agreed by the high contracting parties that, *in addition to the liberty secured to the United States fishermen by the above convention of October* 20, 1818," etc., this treaty could be terminated after ten years. Of course, on its expiration, that treaty or convention remained in force to which it was an addition.

2. The convention of Oct. 20, 1818, contains the following words: "And the United States hereby renounce, for ever, any liberty heretofore enjoyed or claimed by the inhabitants thereof to take, dry, or cure fish on or within three marine miles of any of the coasts, bays, creeks, or harbors of his Britannic dominions in America, not included within the above-mentioned limits"—to which it is directly added that American fishermen may enter such bays or harbors for the purposes of shelter, wood, or water, but "for no other purposes whatsoever."

Does it not follow from this perpetual renunciation that the treaty of 1783, even if there had been no war to dissolve it, was to be of no avail as far as the fisheries were concerned?

Mr. J. Q. Adams, at the time of the treaty of Ghent, made an argument—which is given in its leading points by Dr. Wheaton in his "Elements"—to show that the right, or liberty rather, as the treaty of 1783 has it, of fishing along certain coasts belonging to Great Britain, was not dissolved by the war of 1812. We must profess our conviction that his argument will not stand in international law. But this is really a question of no practical importance. The renunciation of 1818, above-mentioned, put an extinguisher on such claims *for ever*.

The result of all this is, that on the expiration of the reciprocity treaty, the treaty of 1818, to which it was only an addition, remained in force, and no other treaty on this matter had any validity. And the point we wish to make is this: that the recent admirable treaty is a great enlargement of liberties of fishing beyond anything we had a right to before.

New Haven, May 15. W.

PROHIBITIONIST LEGISLATION.

To the Editor of the Nation:

Sir: In the notice which appeared in the *Nation*, No. 305, of Dr. Dio Lewis's "Our Girls," while speaking hopefully of "cure" for the evils which that book attacks, and while, apparently, concluding that the physical and mental renovation of *young women* is immediately practicable, and a matter the consideration of and action in which demand "our clearest thought and best strength," your reviewer says: "We all know in our hearts that human nature must undergo a radical change before the temperance reform will amount to more than a superficial agitation; . . we confess with weary impatience that certain sins we shall rid ourselves of only by a slow process of growth." Among which sins your reviewer evidently places the use of "bad language and bad whiskey" by *Our Boys*.

I make this citation without any intention of criticising your critic—although I confess he appears to me to have taken herein a sufficiently assailable position—but because it contains the most recent expression of the *Nation's* very hopeless attitude in relation to the "temperance question," and because I am anxious to obtain more light upon, and a fuller presentation of, your view of what I may term the Politico-Temperance Movement. You are perhaps aware that a movement has been recently inaugurated in this State—backed by the authority and sustained by the entire clerical force of the M. E. Church, and at least sanctioned by the governing powers of one or more of the other churches—the avowed object of which is the procurement of prohibitory liquor laws for the State, and, if I mistake not, for the United States. Now, I dare say I speak the mind of hundreds of your readers when I say that the *Nation* has been to me for several years as "the shadow of a great rock in a weary land" of political literature; tempering the fierce blaze of the "abstract truth" of the radical reformers, and affording shelter from the dust and muddy rain of the "party" fire-companies. It is a very comfortable thing for one who is "yoked to a daily experience in life incompatible with any considerable"—independent study if not—"elevation of thought," to rest in such a shadow, but when the reformers surround one and begin to adjust their grand solar reflectors at short range, is it surprising if one grows a little anxious and looks up enquiringly for reassurance that it is indeed a rock that overshadows him, and that it will not melt or topple over? In short, is it too much to ask of you that you make one connected statement (as full as circumstances permit) of the argument against prohibition by law of the liquor traffic, disposing of the charge made by prohibitionists that this "traffic" is the chief source of intemperance in alcoholic drink, and the "direct cause of a vast proportion of all the crimes and evils against which we *do* legislate;" giving also the "Lessons of History" upon the subject, or such references as will enable a tolerably preoccupied man to discover them. By so doing, you will materially increase the national debt—to you-ward—always provided that your argument is sound and helpful to a

Truth-seeker.

Rushford, Minn., May 14, 1871.

PRESIDENT BARNARD AND "UNIVERSOLOGY."

To the Editor of the Nation:

Sir: Your amusing notice of "The Primary Synopsis of Universology and Alwato," by Mr. Stephen Pearl Andrews, seems to call for a word or two from me. As I never heard of "Alwato" before, I have nothing to say about that.

It is now some months since Mr. Andrews did me the honor to call upon me, for the purpose, as he said, of stating to me the outlines of a plan of his own, for the classification of human knowledge in such a manner as to exhibit clearly the affiliation and interdependence of all the sciences. As this subject is one which has much occupied the deepest thinkers of all time, from Aristotle down to Herbert Spencer, it ought to have, and perhaps has, a certain degree of "importance." For myself, if I have a special weakness, it is for logical methods, and this may account for the fact that I was interested in the scheme of Mr. Andrews.

In conversation Mr. Andrews does not speak in Alwato, nor (always) in the jargon of which your article furnishes so amusing examples. In explaining his system to me, he used very good American, and made himself, I venture to affirm, very nearly intelligible, an assertion which I should hardly dare to make of Comte, and which no one, I think, who regards his reputation for truthfulness, would dare to make of Hegel or Oken, upon the same subject. As I have heard nothing of "descending wings," or elements "upward and frontwise tending," or other elements "pointing downward and behind," I wish to say that I hardly admit myself to have been guilty of that "culpable amiability" for which you lament the want of a name. Very respectfully, etc.,

F. A. P. Barnard.

Columbia College, May 20, 1871.

Notes.

Messrs. G. P. Putnam & Sons publish immediately "The Young Mechanic," a book intended to teach boys, and not improbably adults, the use of tools and the construction of mechanical models, together with the art of turning in wood and metal; also, "Till the Doctor Comes," a manual of directions in cases of accident; and, by arrangement with the London publishers, "Thoughts on Health," by James Hinton, M.D.

—A quarterly periodical, called the *School Laboratory of Physical Science*, edited by Professor Gustavus Hinrichs, formerly the scientific editor of the Iowa *School Journal*, is published at Iowa City by Griggs, Watson & Day, at one dollar per annum. Its aim is very concisely set forth in its motto: "Let us hasten the day when an experimentative table, with physical apparatus and specimens, shall be as indispensable an appurtenance of the smallest school-house as a blackboard is now; and when every town of a thousand inhabitants shall possess a good school laboratory, wherein twenty-five pupils can experiment at the same time." The March number is mainly made up of original and selected arguments in favor of laying the foundations of scientific knowledge in the common schools. A few pages are given (presumably, not so many as hereafter) of "Practical Laboratory Notes," describing various instruments by reference to another work of the editor's; "Laboratory News," chiefly relating to Iowa; and brief reviews. This publication may serve to awaken a proper interest in the subject, but its end is to be reached, if at all, by enlarged facilities for the training of teachers—such, for example, as those afforded by the Boston Institute of Technology. It is mortifying to think what sums have been wasted in supplying schools with philo-

sophical apparatus which the teachers did not know how to use, and with libraries of which the scholars had no need.

—The late Mr. George Ticknor's bequest of Spanish works to the Boston Public Library has been ascertained to consist of 3,760 printed volumes, 14 bound manuscript volumes, 598 pamphlets, and several unbound manuscripts. It is stated that no single library in Spain possesses all the books of this collection, while the only collections of equal value are the Spanish Library in the British Museum and the private library of Lord Holland. The choiceness of it, indeed, may be judged from the fact that it was substantially gathered together between the years 1817 and 1838—the interval having been spent in completing rather than in merely adding to it; and as Mr. Ticknor spared no expense to procure the works he desired, it is quite credible, as is asserted, that he raised the prices of Spanish books in all the principal markets. This eminent scholar also bequeathed to the city the sum of four thousand dollars for investment, from the income of which he directed that his collection should be enlarged by the outlay of at least one thousand dollars every five years, for twenty-five years; but in order that its quality might be maintained, he expressed a wish that only such books should be purchased as had been published in some one edition at least five years—"books of permanent value and authority, and neither newspapers, periodicals, nor other popular publications not likely to be of lasting consideration." At the end of the twenty-five years, the income of the fund may be devoted to the purchase of solid books in other than the Spanish and Portuguese languages, if thought advisable. The collection is to be kept together, like the Bates, Bowditch, and Parker collections.

—"Mr. E. P. Knowles's 'Matchless Truth,' a bust in Carrara marble," is thus described by a Wisconsin critic—what it is, and what it "does." We had no idea before of the capacities of American art:

"Truth, carved in marble, must be an intensified composure; an impassioned equanimity; an all-alive repose; a consciousness gathering to itself every separate human consciousness, each in completest subjection to all others. Mr. Knowles's work so does this that a genial awe rises in the beholder while passing from the impressive whole of the face out to the skilful blending which make it up, each feature and line touched with the one vital concept—TRUTH. The bisecting, facial line falls enough to the left, to rest in the anatomical heart, thus happily coupling the seat of the affections with the grandly enthroned moral and intellectual natures above it. The mouth and chin, very critical points in the work, have firmness enough to exclude all *equivocal* conditions of character; but not so much as to suggest combative or incorrigible soul-posture; the right segment of the mouth shows a slight love curve in the lips; the left portion, more the sanctity of assured rectitude. The moulding of the chin is more of grace than of strength; and if pressed to name a fault in the work, we should query, at least, if there is strength enough here to sustain the royal dignity and grace above it."

—Mr. Lowe's mistake in proposing a match-tax lay not in his borrowing the idea from the United States, but in overlooking the widely opposite conditions of the manufacture in the two countries. The almost exclusive use of machinery for that purpose with us renders the tax one of the soundest and least unpopular of all our ways of raising what we call the internal revenue. It is not on that side, certainly, that we merit the sarcasm which Mr. Lowe's opponents have visited upon us for our financial absurdities. We have even come to be envied a contrivance which we ourselves regard as a necessary nuisance—nothing less than our fractional, postage, or "shinplaster" currency. The London *Bookseller* for May complains that the new Postmaster-General, Mr. Monsell, has cut off an indispensable privilege of the British public—the redemption, namely, of postage-stamps at the post-office itself, or any of its branches. Heretofore, persons wishing to transmit small sums by mail without the trouble and expense of procuring a money-order, have been in the habit (as is common enough with us) of enclosing postage-stamps:

"So universal has this practice become," says the *Bookseller*, "that not a day passes without some reaching us. In our own case, we contrive to use nearly all that come to hand; but, had we any wish to do so, could dispose of them at a neighboring post-office. Now this privilege is to be done away with, and stamps will no longer be salable. What we require is a series of small currency notes, such as may easily be placed in letters; these may be of the value of sixpence, one shilling, and upwards, and pass from hand to hand at full value, or be cashed at any post-office at a small percentage. They would be in general request, and might be made to produce even a greater revenue than the new scheme of the post-office orders."

—In the same number of the *Bookseller* we find the following item confirmatory of its recent exposure of the reckless habits of the English editor and his reviewers:

"A publisher informs us that a few months ago, he on Saturday sent out some review copies of an 8vo volume which, on the following Monday he subscribed [put out to the trade?]; and that when he reached the Strand, a bookseller to whom he offered the volume, showed him a copy which he had purchased on Saturday evening. Not a single leaf had been cut open; it was stamped 'presented by the publishers;' and, as the bookseller said, therefore could not have been stolen; and, being uncut, produced a higher price than if it had been cut open. Stamping books is, therefore, a useless disfigurement. It will be better to cut them open, so that needy 'critics' may have no pecuniary interest in not reading the books they profess to review."

—The most noticeable recent and forthcoming English publications are as follows: The fourth volume of Freeman's "History of the Norman Conquest;" "Russia in 1870," by Herbert Barry, in which some attentions are paid to Mr. Hepworth Dixon's romancing; "The New Slavery: an Account of the Indian and Chinese Immigrants in British Guiana," by Joseph Beaumont; "Kidnapping in the South Seas," by Captain Palmer, R.N.; "A New Sea and an Old Land," some rather fresh descriptions of Egypt in connection with the opening of the Suez Canal, by W. G. Stanley; "The Desert of the Exodus: or, Journeys on Foot in the Wilderness of the Forty Years," by E. H. Palmer; "A Land Journey from Asia to Europe," by Wm. Athenry Whyte, who travelled by camel and sledge from Canton to St. Petersburg, through the plains of Mongolia and Siberia; and Col. Henry Yule's new version of the "Book of Sir Marco Polo, the Venetian." Tourists will do well to examine Captain J. R. Campbell's "How to see Norway" (Longmans); and "Saturday Afternoon Rambles round London, Rural and Geological," a series of articles by Henry Walker, first printed in the *City Press* (Hodder & Stoughton). Mr. Murray publishes "Rude Stone Monuments in all Countries: their Age and Uses," by James Fergusson, F.R.S.; and a "History of British Commerce from the Conclusion of the Seven Years' War to the Present Time," by Professor Leone Levi, F.S.A. From Macmillan & Co. we are to have "A Treatise on the Origin, Nature, and Use of Wine" by J. W. L. Thudichum and Auguste Dupré; and "Principles of Political Economy," by W. Stanley Jevons. In biography, we have, following close upon Miss Wedgwood's "John Wesley," three works upon the same subject: "Wesley his own Biographer," with an introduction by Geo. Stringer Rowe; "Wesley, his Life and Work," from the French of Rev. Matthew Lelièvre; and "Life and Times of Wesley" (Vol. III.), by Rev. L. Tyerman. In social science, William Logan's "The Great Social Evil: its Causes, Extent, Results, and Remedies," may be recommended as a useful and suggestive work, by a person of large observation. The last edition of John Henry Newman's "Arians" having grown very rare, a new one, almost completely rewritten, is to be published shortly. A volume of poems by a young man named Marston, who is blind, is looked for with some interest, owing to the warm terms of commendation with which his friends speak of his productions.

—The collection of books belonging to Baron Kirkup, of Florence, about to be broken up in London, contains, besides the codices of Dante noticed before, a Petrarch of the fifteenth century, beautifully illuminated in the school of Mentagna, the drawings on dark vellum in gold and silver ink; a MS. Lancelot of the Lake, early fifteenth century, with water-color illumination; a printed Dante on vellum, for which over 1,000 frs. were paid; a beautiful Horæ Beatæ Virginis, printed on vellum, with the woodcuts worked over in water-color; a copy of the second edition of Vespucci's Voyages, with the title: "Paesi novamente ritrovati per la navigazione de Spagna in Calicut et da Albertutio Vesputio Fiorentino intitulati Mondo Novo, etc." There is also a MS. Dante of 1417 with illuminated initials. Inside the cover of one of the little Italian books is Kirkup's drawing of Giotto's portrait of Dante, discovered by Kirkup in 1848 on the walls of the Bargello prison, now the Museo Nazionale. The copy is a facsimile of the original in the state in which it was found. There is also a copy of Lord Vernon's edition of Dante in three volumes, presented by him only to members of the English nobility whose libraries were supposed to be entailed, Baron Kirkup being probably the only exception to the rule. There is also a most curious collection of antique books on astrology and necromancy, and a miscellaneous lot of ancient and rare modern books, superb bindings, missals, etc., which cannot be described except by catalogue. They will be sold under the direction of Ellis in July. It is more than doubtful if the catalogues will be ready to be sent to America in time to be of any use to our collectors, so that our note may be some guide to the latter.

—There will be a sale of choice impressions of Dürer's copperplates in London, in July. This will include all the most important plates, with some examples of rare excellence. Such a lot, according to the connoisseurs, has not been offered for many years, if ever. Ellis is publishing a

set of our compatriot Whistler's etchings, of Thames River subjects. In England, Whistler is considered the greatest genius amongst the painters of America, and his etchings as the best contemporary work of their class. The Thames furnishes perhaps the most picturesque material of all the rivers of the Old World, and amongst the decaying wharves and decrepit buildings along its banks Whistler has labored diligently. Most of his plates have been destroyed by want of care or by intention, but those from which this series are printed have been rescued almost *malgré lui* by his friends and admirers. Amongst them "St. George's Wharf," with a charming composition of river craft; the "Eagle Wharf," with a mass of old stores, which Hogarth may have painted much in their present state, and which Whistler has rendered with a delicacy of drawing quite unsurpassabie; "Wapping Wharf," an especially picturesque subject, with shipping stranded at low tide, are as choice examples of what etching can do as any man since Rembrandt has produced. Some of the plates are evidently far from finished, but on the whole they are a valuable lesson in etching and an acquisition to any collector of works in line. There are in all 16 plates, of which one is a curiously Rembrandtesque portrait of the artist, published at £12 12s. the set, only an edition of 100 being printed.

—May brings round the annual picture sales in London, at which the capitalists who invest in pictures turn their money over and clear out for another lot. The profits of picture-dealing in England are for wise investments quite extraordinary. A picture in the last year's Academy exhibition which was sold at the opening for £800, resold before the close for £1,500; and pictures which have been favorably noticed by an influential critic have quadrupled the money they were sold for on opening-day. The picture business in London resembles the tulip-mania in Holland in the days when Dutch merchants had more money than they could invest in rational ways. A Millais, a Rossetti, or a Mason passes from buyer to buyer, rising in value as it goes, until, in some cases, a picture has realized for the last seller during the life of the painter ten times the price he got for painting it, and a remarkably fine example of a popular English painter rises to the scale of prices paid for the greatest of the old masters.

—One of the best of the foreign correspondents of a Boston paper speaks of "the attempt to establish the mediæval commune in Paris." It is natural that in regard to so distant and obscure times knowledge should be vague and inaccurate, and that some of the glory of the mediæval commune should be reflected upon its spurious namesake. But, in point of fact, the two institutions have nothing in common but the name, and a certain fact of community; the nature of the community is entirely different. The Commune of the present day, as we have already shown, aims at a community of *property;* if they had their way, the insurgents would like to abolish private property as well as all social distinctions. The historical commune, on the other hand, implies merely a community of *interests*, and a banding together to protect them. Its origin was the guild; that is to say, it was essentially a *brotherhood*, a personal and purely voluntary relation. It was called *communia jurata*, "sworn commune," an expression which shows that it rested upon an oath taken individually by each member; and this oath bound the members (*jurati*) among other things to the duty of mutual aid and defence. Nothing was further from the thoughts of these men than modern communism, or any interference with established institutions or vested interests, further than was required for the establishment of their local self-government. The commune of the twelfth century was simply one of the many forms of municipal republics that sprang up at that time, using the principle of private association, or brotherhood under oath, as the basis of municipal organization.

—The more or less lamented Gustave Flourens published a few days before his death a work "for the benefit of mankind," called "Paris Livré"—a sort of history of the city from Sedan to the surrender in February. The reading of it will dispose the fair-minded to think better of this Revolutionist than they may have done heretofore. We have only space for one or two extracts, premising that the author always speaks of himself in the third person. The first is sheer lunacy, but reveals the curious history of the man:

"Meanwhile, Flourens, constantly planning how to liberate his friends who had been condemned by the Imperial tribunal at Blois, tried to provoke an insurrection at Athens. His old comrades of the Cretan revolt, the best sub-lieutenants of the Hellenic army, were enthusiastically bent on proclaiming the Republic in Greece. Flourens expected to overthrow without difficulty the feeble bastard government, and then to embark from the shores of Attica sufficient troops for upsetting the authorities at Marseilles, and marching on Paris, if the Empire should not fall before that time. But events followed in such rapid succession that he had scarcely made his arrangements, when he received the news of the French defeats. He left Athens at once, his heart full of grief, but at the same time abounding in hopeful anticipations. Landing at Trieste," etc., he arrived, after many adventures, in Paris, Sept. 8.

—In the following there is, *per contra*, an amount of sense of which, a few months ago, the ablest Frenchman seemed incapable; and it furnishes, as Karl Blind has pointed out in a letter to the London *Times*, a complete justification of Germany's conduct after Sedan:

"Two reasonable and manly solutions of the all-absorbing question were possible on the fourth of September, the American and the French solutions. The *American* solution, which was proposed and sustained by practical people, consisted in immediately concluding peace with Prussia, and in ceding to this power what it claimed and what it had a right to claim; for Prussia was victorious, and had been attacked unjustly by France. In the losses we had experienced we could see only the effects of the Imperial system, not those of the Republic; for the Republic could not be made responsible for the crimes, follies, and rapacity of its murderer. The Empire had become bankrupt; its balance closed with a gigantic deficit. It behooved the new Republic not to assume this miserable burden, but to liquidate as soon as possible. . . .

"The second or *French* mode of solving the question originated among political enthusiasts, and consisted in the continuation of the fight. This way of getting rid of the invaders involved a war to the knife—stripping the country of all its resources, and hurling all its men and strength against the enemy with the fury of despair. The country could be victorious only by its own ruin.

"Each of these solutions possessed its peculiar advantages, and each of them might, if well applied, have saved France. Certainly, no third way of saving the country existed in the minds of reasonable men, nor could there be any compromise between these two alternatives. Yet it was just this third, hybrid policy which was adopted by the Committee of National Defence. The men composing that body continued the war according to the Imperial system, allowing the generals of the Empire to retain their charge. Such measures were of course equivalent to inevitable defeat."

When we add that Flourens does not waste breath in abusing the Germans as barbarians, and that he ridicules the barricade system of his friend Rochefort, we shall have given enough of the contents of his book to prove it worthy of examination.

CULTURE AND RELIGION.*

This little volume, which has excited, and deservedly excited, a great deal of interest both here and in England, consists of a series of five lectures, delivered by Principal Shairp to the students of the United College of St. Salvator and St. Leonard, last winter, in which he attempts to show that there can be no real culture in which religion does not play the leading part. He takes up the two theories of culture—the scientific, as propounded by Huxley, and the literary, as propounded by Matthew Arnold—and endeavors to prove that the former is false, owing to the total exclusion of religion, and the latter defective, owing to the subordinate position assigned to religion in the composition of the ideal on which it rests. The Huxley theory of culture may be gathered from this gentleman's definition of a truly well-educated man. "That man," he says, "has had a liberal education who has been so trained in youth that his body is the ready servant of his will, and does with ease and pleasure all the work that, as a mechanism, it is capable of; whose intellect is a clear cold logic engine, with all its parts of equal strength, and in smooth working order; ready, like a steam-engine, to be turned to any kind of work, and spin the gossamers as well as forge the anchors of the mind; whose mind is stored with a knowledge of the great and fundamental truths of nature, and of the laws of her operations; one who, no stunted ascetic, is full of life and fire, but whose passions are trained to come to heel by a vigorous will—the servant of a tender conscience; who has learned to love all beauty, whether of science or art, to hate all vileness, and to respect others as himself." Elsewhere he explains his view of the part played by man in this world by the striking and well-known figure of the game of chess, played on one side by man himself, and, on the other, by a "calm, strong angel," hidden from mortal sight, and who, though "his play is always fair, just, and patient, and though he would rather lose than win," "never overlooks a mistake, or makes the smallest allowance for ignorance." The aim of man in cultivating himself, therefore, should be, he holds, to learn the rules of this mighty game, or, in other words, to find out what are the laws of nature, and to bring his whole being, as far as he can, into harmony with them. In this theory of culture, as is easily seen, religion, in the ordinary accep-

* "Culture and Religion in Some of their Relations. By J. C. Shairp, Principal of the United College of St. Salvator and St. Leonard, St. Andrews." (Reprinted from the Edinburgh edition.) New York: Hurd & Houghton. 1871.

tation of the term, holds no place whatever. The sphere in which the religious sentiment finds its food is shut out from us by an impenetrable veil.

According to the literary and æsthetic theory of culture, on the other hand, the aim of culture is, says Mr. Arnold, "to make reason and the kingdom of God prevail." As a means to this end, it seeks the perfection of human nature on all sides and in all its capacities; and, in order to discover in what this perfection consists, it seeks aid from science, poetry, philosophy, history, and religion, but from religion in no greater degree than from the others. Religion is an instrument of culture, but only one of many. The Hebrew (or Puritan) training is defective, because religion plays too large a part in it; the Hellenic, because in it religion does not play a part large enough. The aims of culture, however, coincide with the aims of religion, for it places perfection in an internal condition of soul, and makes a progressiveness, or "a growing and becoming," and not "a having and resting," its great characteristic, and maintains that true perfection must not be self-contained, but must embrace the good of others equally with our own.

Principal Shairp's objections to the scientific theory of culture might be readily guessed. The first is, that it divides all possible objects of thought into two classes of phenomena—"sensuous objects, and our unsensuous ideas of them;" whereas, there is, to the religious man, a third class of objects of thought—"the unsensuous percipients, or spirits, which each of us is conscious that he himself is." The second objection is, that this theory wants a lever, or adequate source of whatever is good in it Where does it get "the tender conscience," and the respect for others, which it holds to be so important, if man lives solely under the operation of fixed laws? A mere study of these laws would not supply them. Moreover—and this seems to us the strongest and certainly the most impressive of Mr. Shairp's points against it—the great game of life has two sides, a side which is visible and tangible, and a side which is moral and invisible. According to all outward appearance, a man may be losing at every move, through ignorance or mistake. Pain, sorrow, poverty, death, and all other woes of this life, if other woes there be, may come upon him in spite of what Professor Huxley pronounces the proper training, and yet he may be on the moral side, winning all the while, and may close victorious, with every prize he set before himself firmly in his grasp. To the literary theory of culture, Mr. Shairp objects that it makes primary what ought to be secondary, and secondary what ought to be supreme; that is, Mr. Arnold errs in treating religion as only one of many means of culture. Religion is, Mr. Shairp holds, however, an end in itself, to which culture is but a means; a good in itself, to be pursued for its own sake, or not at all; and, in support and illustration of this view, he cites the remarkable law of ethics which Dr. Newman has expressed so happily that it has been proposed to name it "Newman's law." "All virtue and goodness tend to make men powerful in this world, but they who aim at the power have not the virtue. Again: Virtue is its own reward, and brings with it the truest and highest pleasures; but they who cultivate it for the pleasure's sake are selfish, not religious, and will never gain the pleasure, because they never can have the virtue." Applying this law to the relations of religion and culture, Mr. Shairp maintains that, if we seek religion as a means of culture, we can never have the religion; it cannot play any real part in shaping our lives. If, on the other hand, we start with some sense of God, and our relations to him, and go on from this centre, we shall attain the highest culture—that is, something which ceases to be culture merely, and becomes religion itself—the idea, in short, which is expressed in Christ's saying, "Seek ye first the kingdom of God, and all other things will be added unto you."

His second objection to the literary theory of culture is, that the consciousness of the effort after perfection which it prescribes must make the attainment of that perfection impossible, because all such efforts must involve constant self-reference, a thought of self, which is entirely incompatible with perfection. Lastly, he maintains Mr. Arnold's culture could hardly ever prove a bond of brotherhood, because the great mass of mankind must be for ever incapable of laying hold of it. Those who achieve it, therefore, must always find themselves in the position of a fastidious and exclusive class.

It can be readily gathered from the foregoing what Principal Shairp's own theory of culture is, though we recommend a careful reading of the lecture on the "Combination of Religion and Culture" as essential to a complete understanding of his position. Religion, in other words, a constant sense of God's presence and power, a constant reference to his will, as the great source of light and life, and a constant striving after "oneness" with him, or, in plainer English, harmony with his will, are in Mr. Shairp's mind, not only the great and only means of culture, but, finally, culture itself. Nothing can be sweeter, simpler, clearer, than his exposition of his views, and he has the still rarer merit of clearly understanding his opponents' position, and strives earnestly and successfully to do them full justice. In short, there has of late been no contribution so valuable to a discussion which grows in interest and importance from year to year, and which every thoughtful man now follows with real anxiety. All those of us who have risen above the gratification of the mere animal wants—that is, all that portion of mankind which is making contributions to the work of civilization—live in pursuit of an ideal of some kind; and the character of both individuals and nations undoubtedly depends on the nature of this ideal, and on the earnestness and persistence with which it is pursued. Ideals, of course, differ; but all that portion of society which occupies itself with ideals at all, has been of late divided in its worship between the three which Mr. Shairp sketches. The religious ideal has for many ages had the world to itself; it now finds formidable rivals in the scientific and literary ideal. The two latter now win over every year greater and greater numbers of those who call themselves "men of culture," or who value culture. The religious ideal, too, has lost much of its hold on the minds of those who make no pretensions to culture, owing to the changed part which theology has of late played in the regulation of life. When it furnished rules of conduct for practical use, it had for a great number of minds of coarse fibre all the attraction of a useful body of law; and when it threatened the masses with future and easily pictured penalties for present transgressions, it secured an attention which is always paid to a means of protection against a much threatened danger. But we confess that, considering the actual condition of men's minds, it is impossible to rise from Principal Shairp's account of it, and of the means by which he still proposes to enable it to retain its supremacy over human life, without a painful sense of disappointment; without feeling that, if this be the only mode of bringing religion and culture into harmony, and furnishing the race with that strongest of all bonds of brotherhood, a common and lofty conception of the ends of living and doing, we are still far from the end of the existing anarchy. There is, as it seems to us, this defect in the means to which he and many religious men look for the grand reconciliation of conflicting aims and creeds. He withdraws his theory of culture totally and completely from the examination of the intellect. He will not suffer it to be tested by the scientific method. He says it must be apprehended by the "spiritual sense," an inner light, lying behind the mind, and illuminating it, and informing it, and furnishing the simplest and humblest with means of laying hold of religious truth—that is, the highest truth—the knowledge of God's character. Of the existence of this truth in the mind there is, however, no test whatever to which any two persons can appeal. We cannot judge of its existence by results or "fruits," as displayed in external conduct, for they may, to our eye, be precisely similar in a Huxleyite or Arnoldite and in a Spiritualist. Religious culture is thus reduced to a matter of individual experience, which may differ in every different person, and which it would be, as we indeed know it to be, useless to attempt to treat as the basis of a common ideal. Spiritual truth, as Professor Shairp describes it, and apprehended as he says it can alone be apprehended, produces phenomena so widely separated as Spurgeon, John Henry Newman, and Theodore Parker, Loyola, Torquemada, and Miss Jones, who died a real martyr as a nurse in a Liverpool workhouse, and whose eulogy Florence Nightingale has written. The true kingdom of God on earth must, however, whenever it comes, be surely the result of a general unison not simply of feelings, but of ideas about the great problems of life.

There is an enormous class of minds for which Mr. Shairp's system really makes no provision—minds which are prevented by their very constitution from wandering on the dimly-lighted border-land which men of a saintlier or more mystic turn so dearly love, who must see clearly or not at all, and must apprehend through the intellect, or remain totally ignorant. It is useless to tell them that they can if they will. They have been hearing this for two thousand years, and are no nearer spiritual culture, as Mr. Shairp describes it, than ever. Nay, they are daily going off in larger and larger numbers, and framing theories of culture and duty adapted to their special needs, but which, whatever their scientific claims to attention may be, there is no denying, have as yet done little to supply any solid rule of conduct, or give as yet but little sign of shedding on the latter stages of the way appointed for all living the tender radiance of the older beliefs.

A Medico-Legal Treatise on Malpractice and Medical Evidence. Comprising the Elements of Medical Jurisprudence. By John J. Elwell, M.D., Member of the Cleveland Bar, etc. Third edition, revised and enlarged. (New York: Baker, Voorhis & Co.)—The number and importance of American contributions to the literature of medical jurisprudence are noteworthy facts. Since Professor Beck first brought his ponderous book into the world, there have been several laborers in the same field who are entitled to rank in the first class; notably Wharton and Stillé, whose admirable philosophical treatise is as attractive to the student as it is useful to the practitioner; and, in one department, Dr. Ray. This book of Dr. Elwell's, though limited in scope and unpretentious in its claims, will, perhaps, be oftener taken from its shelf in a working library than some of its bigger predecessors. Its special value is in two points: 1st. Regarding malpractice, the law of which gets, in twelve chapters, a more satisfactory and convenient statement than we know of elsewhere, with copious citations of adjudicated cases; and, 2d, Concerning the judicial bearings of insanity. Although the author treats this subject at less length than the first-mentioned, yet his views of it are so judiciously conceived and so clearly expressed as to give particular value to this part of his book. The doctrine of momentary moral insanity finds scant favor at his hands. It is singular that we have as yet no convenient name for this disease, latterly of almost epidemic prevalence in America, and which, besides sometimes involving its subjects in considerable temporary inconvenience, threatens to place our social order at their mercy. The disorder which the eye-doctors, with that passion for Greek roots which is a part of their very being, now love to call dyschromatopsia, and which is known to the vulgar as color-blindness, went for a while under the name of Daltonism, in commemoration of the great chemist who offered an eminent example of it in his own person. Dr. Elwell's citation of the well-known case of one of the early sufferers from this unnamed mental disease (since happily restored to great usefulness as a warrior and statesman) suggests that the name "Sicklesism" might fill the nosological hiatus that we deplore. Disputed claims for life-insurance and for indemnity for bodily injuries against railways are so frequent nowadays that somebody will have to make a book on the subject. There is a little book by Mr. Erichsen, a distinguished London surgeon, which we believe is regarded with extreme disfavor by respondent railways and accident insurance companies, but it treats of such injuries merely from the surgical point of view, and something of wider scope is required. Dr. Elwell has done so well and so practically in some of his chapters, that we regret that he did not amplify his third edition in this direction. The need of some such authority is illustrated by the statement lately made to us by the claim-adjuster of a company whose specialty is insurance against injury and death by accident: "I have found $200,000 worth of 'dead men' for my company;" his latest *coup* in this line having been to produce in open Court a $5,000 "dead man," walking between two constables, and then and there to restore him to the more or less reluctant bosom of his stricken but litigant heirs. Of course, where we have fictitious deaths occurring with such frequency, we must expect fictitious injuries in due proportion, and the investigation of either is often a perplexing puzzle.

This being the third edition of Dr. E.'s book, it would not be captious to ask a more immaculate typography than it has to show. The Ohio printers have had their wicked will with some of the law Latin and hard names; they send forth two standard chemists, Reinsch and Scheele, disguised as Wrensch and Sheilds. It is hard, too, that even so exemplary a criminal as James Stephens should have been *sus. per coll.* in New York in 1859, just after the first edition, and yet in 1871 be kept *in gremio legis* by having his case "still before the Court of Appeals, on important questions of law."

HARVARD AND YALE,

together with many other leading institutions, in their courses of

WHITNEY'S GERMAN COURSE,

OTTO'S FRENCH AND GERMAN COURSES,

KEETEL'S GERMAN COURSE,

PYLODET'S FRENCH COURSE.

In addition to the foregoing, the same publishers issue a large number of minor works in these departments, including many complete dramas and novelettes by the most eminent writers, annotated for the use of students. The occasional works read at the leading American Colleges are almost always selected from their lists. For testimony in regard to the accuracy of the texts and general judiciousness of the annotations, reference is confidently made to the faculties of nearly all American institutions of standing.

Full descriptive catalogues will be forwarded gratis, on application.

NEW BOOKS.

THE POETS AND POETRY OF EUROPE.

A New and Revised Edition, just completed, with the addition of 150 pages of entirely new matter.

BY PROF. HENRY WADSWORTH LONGFELLOW.

Illustrated with engravings on Steel. Imp. 8vo, cloth, extra gilt top, bevelled boards, $6.

THE PROSE WRITERS OF GERMANY.

A New and Revised Edition. With Introduction, Biographical Notices, and Translations.

BY FREDERICK H. HEDGE, D.D.

With six Portraits on Steel. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5.

THE PROSE WRITERS OF AMERICA.

With a Survey of the Intellectual History, Condition, and Prospects of the Country.

BY RUFUS W. GRISWOLD, D.D.

New and Revised Edition to the present time. With a Supplementary Essay on the Present Intellectual Condition of the Country.

BY PROF. JOHN H. DILLINGHAM.

With seven Portraits on Steel. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5.

Harvard University, Cambridge, Mass.,

COMPRISES THE FOLLOWING DEPARTMENTS:

Harvard College.
The University Lectures.
The Divinity School.
The Law School.
The Lawrence Scientific School.
The School of Mining and Practical Geology.
The Episcopal Theological School.
The Medical School.
The Dental School.
The Botanic Garden.
The Astronomical Observatory.
The Museum of Comparative Zoölogy.
The Peabody Museum of Archæology.
The Bussey Institution (a School of Agriculture and Horticulture).

The Academic Year begins in all departments on the THURSDAY FOLLOWING THE LAST WEDNESDAY IN SEPTEMBER, and ends on the last Wednesday in June.

The first examination of 1871–72 *for admission to Harvard College will be held on June* 29, 30, *and July* 1, *beginning at* 8 *A.M., on June* 29. *The second examination for admission to Harvard College will be held on September* 28, 29, *and* 30, *beginning at* 8 *A.M. on September* 28.

The examinations for admission to the Engineering Department of the Lawrence Scientific School, the Mining School, and the Bussey Institution, will be held on September 28, *beginning at* 9 *A.M.*

SCIENTIFIC DEPARTMENTS.

Instructors.

LOUIS AGASSIZ, LL.D., Professor of Zoölogy and Geology.
BENJAMIN PEIRCE, LL.D., " Astronomy and Mathematics.
ASA GRAY, LL.D., " Natural History.
THOMAS MOTLEY, Instructor in Farming.
JEFFRIES WYMAN, M.D., Professor of Anatomy.
HENRY L. EUSTIS, A.M., " Engineering.
JOSIAH D. WHITNEY, LL.D., " Geology.
HERMANN A. HAGEN, M.D., " Entomology.
WOLCOTT GIBBS, M.D. " the Application of Science to the Useful Arts.
FRANCIS PARKMAN, A.M., " Horticulture.
DANIEL D. SLADE, M.D., " Applied Zoölogy.
JOSEPH WINLOCK, A.M., " Astronomy and Geodesy.
JOSIAH P. COOKE, A.M., " Chemistry and Mineralogy.
JAMES M. PEIRCE, A.M., Professor of Mathematics.
FRANCIS H. STORER, A.M., " Agricultural Chemistry.
—— —— —— " Topographical Engineering.
RAPHAEL PUMPELLY, " Mining.
WILLIAM H. PETTEE, A.M., Instructor in Mining.
NATHANIEL S. SHALER, S.B., Professor of Palæontology.
FRANCIS G. SANBORN, Instructor in Entomology.
JOHN TROWBRIDGE, S.B., Assistant Professor of Physics.
PIERRE J. BORIS, Instructor in French.
WILLIAM G. FARLOW, M.D., Assistant in Botany.
CHARLES L. JACKSON, A.M., Assistant Professor of Chemistry.
JOSIAH C. BARTLETT, A.B., Instructor in Mathematics.
HENRY B. HILL, A.B., Assistant in Chemistry.
—— —— Instructor in German.

LAWRENCE SCIENTIFIC SCHOOL.—This school has been reorganized, and now offers:

1. A four years' course of study in CIVIL AND TOPOGRAPHICAL ENGINEERING, as follows: *First Year*—Spherical Trigonometry, Analytical Geometry, Descriptive Geometry, Chemistry, Surveying and Plotting, Free-hand and Water-color Drawing, French. *Second Year*—Differential and Integral Calculus, Mechanics, Physics, Mathematical and Physical Geography, Elementary Geology, Crystallography, Mineralogy, and the use of the Blowpipe, Mechanical Drawing, French, German. *Third Year*—Applied Mechanics, Practical Astronomy and Geodesy, Hypsometry, Topographical Surveying and Drawing, Structural and Dynamical Geology, Photography, German. *Four'h Year*—Building materials, and their applications in railroads, canals, bridges, etc.; Applications of Descriptive Geometry to masonry and stone-cutting; Hydraulics; Heat and its Applications; Discussions of existing structures, and Working out of projects.

Candidates for admission to this course on Engineering (unless they are graduates of colleges) will be examined in Arithmetic, Algebra, Geometry, and Trigonometry, and will also be required to show that they are reasonably proficient in English Grammar and Geography.

2. A one year's course of study in the elements of NATURAL HISTORY, CHEMISTRY, AND PHYSICS, as follows: Physical Geography, Structural Geology, and Meteorology; General Chemistry and Qualitative Analysis; Physics; Botany; Zoölogy; Entomology.

This course is especially intended for teachers, or persons who intend to become teachers. The instruction will be mainly given in the laboratories and museums of the University; it will be of the most practical character, every student being taught to make experiments and study specimens himself.

3. Thorough instruction for *advanced* students in any of the following subjects: PHYSICS (Heat and Light), CHEMISTRY, ZOÖLOGY, GEOLOGY, BOTANY, and MATHEMATICS.

Professor Gibbs will receive special students in Heat and Light at the Rumford laboratory. Professor Cooke will receive special students in Chemistry at the laboratories in Boylston Hall. Professors Agassiz, Hagen, and Shaler will receive special students in Zoölogy and Geology at the Museum of Comparative Zoölogy. Professor Gray and Assistant Farlow will receive special students in Botany at the Botanic Garden and Herbarium. Professors Benjamin Peirce and James M. Peirce will receive special students in Mathematics.

The opportunities for advanced students in all branches of Natural History and in Physics, Chemistry, Astronomy, and Mathematics will be much greater next year than ever before. The Museum of Comparative Zoölogy has been more than doubled in size during the current year; a laboratory, lecture-room, and greenhouse have been added to the equipment of the Botanical department; a laboratory of Physics is to be created during the summer in Harvard Hall; the chemical laboratories are to be greatly enlarged and improved; the interior of the Scientific School Building is to be completely reconstructed; and a distinct physical laboratory and cabinet are to be assigned to the Rumford Professor. At the same time, the scope and volume of the instruction will be greatly enlarged.

MINING SCHOOL.—The full course, prescribed for candidates for the degree of Mining Engineer, occupies four years, the first three of which are identical, as regards the subjects of instruction and the order thereof, with the first three years of the Engineering Course above specified. The terms of admission are the same as those of the Engineering Course. The fourth year of the course is as follows: Economical Geology and the Phenomena of Veins; Mining Machinery and the Exploitation of Mines; General and Practical Metallurgy; Assaying; Working up, Plotting, and Writing out notes of summer excursions.

BUSSEY INSTITUTION.—The School of Agriculture and Horticulture, established in execution of the Trusts created by the Will of Benjamin Bussey, will give thorough instruction in Agriculture, Useful and Ornamental Gardening, and Stock-raising.

The regular course of study will fill three years. *First year.*—Physical Geography, Structural Geology, and Meteorology; General Chemistry and Qualitative Analysis; the elements of Physics; Levelling and Road-making; the elements of Botany, Zoölogy, and Entomology; French; German. The instruction of the first year's course will be given at Cambridge, and students of the first year must live in or near Cambridge. The instruction of the second and third years' courses will be given at the Bussey Institution, and students of those courses must live within easy reach of the Institution, which is situated near the village of Jamaica Plain, about five miles southwest of Boston, and close to the Forest Hill Station on the Boston and Providence Railroad. The subjects to be taught at the Bussey Institution during the year 1871-72, being subjects of the second year's course, are as follows: Theory and Practice of Farming, Horticulture, Agricultural Chemistry, Applied Zoölogy, Entomology, Quantitative Analysis. The third year's course will be hereafter arranged, and will be given for the first time in 1872-73.

The teachings of the School will be amply illustrated by the rich scientific selections of the University, and by a Botanic Garden, a large and profitable farm, greenhouses, propagating-houses, and field experiments.

FEES AND EXPENSES.—The tuition fee for the Academic year in any of the above departments or courses is $150; for half or any smaller fraction of a year, $75; for any fraction of a year greater than one-half, the fee of the whole year is charged. In the Bussey Institution there are also separate fees for certain distinct courses of lectures; and in that Institution tuition fees will be freely remitted to poor and meritorious students.

The other expenses of a student for an academic year may be estimated as follows: Room, $30 to $100; Board for 38 weeks, $152 to $304; Books, $20 to $25; Fuel and Lights, $15 to $35; Washing, $19 to $38.

For University catalogues, descriptive circulars, examination papers, or information about any department of the University, address J. W. HARRIS, Sec.

GINN BROTHERS,

13 BEACON STREET, BOSTON, MASS.,

Publish THE NEW CLASSICAL COURSE. Goodwin's Greek Grammar (Lessons and Reader in press); Allen's Latin Grammar, Primer, Lessons, Reader, and Composition, for the Preparatory Schools; Madvig's Grammar for the Colleges; English and Shakespeare; Hudson's School Shakespeare; Our World.

To be published in June, July, and August.

Greek Lessons,

Prepared to accompany Goodwin's Greek Grammar:

Goodwin's Greek Reader. Consisting of Extracts from Xenophon (Retreat of the 10,000), Herodotus (the connected story of the Persian Wars), Plato (Trial and Death of Socrates), and Thucydides (Sphacteria); being a full equivalent for the Seven Books of the Anabasis, now required for Admission at Harvard.

Second Series of the School Shakespeare. To include The Tempest, The Winter's Tale, King Henry the Fifth, King Richard the Third, King Lear, Macbeth, Antony and Cleopatra.

TEUBNER'S TEXT EDITIONS

OF

GREEK AND LATIN CLASSICS.

Edited and Revised by the most eminent Philologists of Germany: Profs. AHRENS, BEKKER, DINDORF, FLECKEISEN, HALM, KLOTZ, MRINECKE, RITSCHL, and others, recommended by Prof. B. W. DWIGHT, and, from their Philological and Typographical merits, now used in nearly all the Gymnasiums and other High Schools of learning in Europe.

Printed in small 8vo, with clear type, on good paper, and bound in paper cover. Each Volume or Part sold separately. Prices payable in Currency.

L. W. SCHMIDT, 24 Barclay St., New York, General Agent for the United States.

LIBERAL DISCOUNT TO THE TRADE.

L. W. SCHMIDT, 24 Barclay Street, New York.

EDUCATIONAL BOOKS

PUBLISHED BY

G. P. PUTNAM & SONS, New York.

BASCOM. Principles of Psychology. By John Bascom, Professor in Williams College. 12mo, cloth, $1 75.

——— Science, Philosophy, and Religion. 12mo, cloth, $1 75.

CAVÉ. The Cavé Method of Learning to Draw from Memory. By Madame E. Cavé. From 4th Parisian edition. 12mo, cloth, $1.

——— The Cavé Method of Teaching Color. 12mo, cloth, $1.

CHADBOURNE. Natural Theology; or, Nature and the Bible, from the same Author. By P. A. Chadbourne, President of University of Wisconsin. Student's edition, $1 75.

COLUMBUS: His Life and Voyages. By Washington Irving. Student's Edition. Prepared by Mr. Irving. With Illustrations. 12mo, half-bound, $1 75.

DENNISON. Astronomy without Mathematics. By E. B. Dennison, LL.D. Edited by P. E. Chase, A.M. 12mo, cloth, $1 75.

FAY. A new System of Geography. By Hon. Theo. S. Fay. With finely executed Maps. For Families and for Students. 12mo, with Atlas, 4to, cloth extra, $3 50.

GODWIN. The Cyclopædia of Biography; A Record of the Lives of Eminent Persons. By Parke Godwin. Crown 8vo, cloth, $3 50; half-calf, $5.

GUILLEMIN. The Heavens: An Illustrated Hand-Book of Popular Astronomy. By A. Guillemin. New edition. (Edited by Messrs. Lockyer and Proctor, the Astronomers.) With numerous Illustrations. 8vo, cloth extra, $4 50.

"The publication of this splendidly illustrated handbook on popular astronomy is quite an era in the art of popularizing that most exciting of sciences. No book has ever been published calculated in an equal degree to realize the different astronomical spectacles of the heavens to the mind of an ordinary reader. Of all the marvels of astronomy, M. Amédée Guillemin and his gorgeous illustrations give us a far more vivid conception than any work on the subject known to us."—Spectator.

HAYDN'S Dictionary of Dates, relating to all Ages and Nations. Thirteenth London edition. With an American Supplement by G. P. Putnam. Large 8vo, $9; half-russia, $10 50. Discount to teachers, 10 per cent.

IRVING'S Sketch-Book. The Sketch-Book of Geoffrey Crayon, Gent. People's edition. 16mo, blue cloth, $1 25. [This edition is used as a School Reader.]

"It is positively beautiful."—Sir Walter Scott.
"This exquisite Miscellany."—J. G. Lockhart.

LOSSING. A History of England. With special reference to the Progress of the People in Civilization, Literature, and the Arts in Social Life. With Illustrations. By Benson J. Lossing. 1 vol. 12mo. In press.

This volume will combine the best features of several new works published in England, with some essential additions.

MOLLOY. Geology and Revelation; or, The Ancient History of the Earth. By Prof. Molloy. With numerous illustrations. An exact reprint of the English edition; with a chapter on Cosmogony, by Prof. J. D. Dana, and an introduction by Prof. Silliman. 12mo, cloth extra, $2 50.

PUTNAM. The World's Progress. By G. P. Putnam. In one large vol. 12mo, cloth, $3 50; half-calf, gilt, $5. A new edition, continued to 1867.

"It has been planned so as to facilitate access to the largest amount of useful information in the smallest possible compass."—Buffalo Courier.

"The best Manual of the kind that has yet appeared in the English language."—Boston Courier.

RECLUS. The Earth: A Descriptive History of the Phenomena of the Life of the Globe. By Elisée Réclus. Translated from the French. Profusely illustrated with plain and colored maps and engravings. In 2 vols. royal 8vo, $10.

This elaborate work has been produced at very large expense, but our arrangements with the English publishers enable us to publish it at a moderate price.

SMITH. A Manual of Political Economy. By E. Peshine Smith. 12mo, $1 50.

A comprehensive text-book, specially suggested and approved by Henry C. Carey and other eminent political economists.

STEARNS. Shakespeare Treasury of Wisdom and Knowledge—displayed in a comprehensive arrangement of "Themes from his Works." By Chas. W. Stearns, M.D. High School edition. 12mo, cloth, $2.

ST. JOHN. Elements of Geology, for the use of Students. By Samuel St. John, Prof. of Chemistry in the College of Physicians and Surgeons. Illustrated. 12mo, cloth, $1 50.

MACMILLAN & CO.'S

The Three Kingdoms of Nature. With numerous Illustrations, $5.

Cassell's Popular Drawing Copies.

In Five Sets of Books, adapted to the use of Schools, Schools of Art, and Private Study.

Series A. Floral and Vegetable Forms. Twelve parts, each 25 cents.
" B. Model Drawing. Twelve parts, each, 25 cts.
" C. Landscape Drawing. Twelve parts, each, 25 cts.
" D. Figure Drawing. Twelve parts, each 25 cts.
" E. Animal Drawing. Twelve parts, each 25 cts.

Each set bound in one volume, cloth, $3 50.

Technical Series.

Consisting of a Series of Volumes which contain all the essentials of a Technical Education, the principles of Science and Art being laid down with every possible clearness, and their practical application to the various branches of skilled workmanship being demonstrated and illustrated, so as to enable any one of ordinary intelligence to avail himself of the advantages which a technical education is calculated to confer upon the well-instructed artisan.

☞ The following Volumes of the Technical Series are now ready:

Linear Drawing. Adapted to Trade, Manufactures, Engineering, Architecture, and Design. With about 150 illustrations, and six whole-page Diagrams of Working Drawings. Cloth, limp, $1.

Orthographic and Isometrical Projection. Projection of Plans, Elevations and Sections of Solids, and the Development of Surfaces, for Masons, Carpenters, Builders, Architects, Metal-plate Workers, Plumbers, and Artisans generally. With about 40 whole-page Diagrams. Cloth, limp, $1.

Linear Drawing and Projection. The two volumes in one. Cloth, lettered, $1 75.

Building Construction. The Elements of, and Architectural Drawing. With 130 Illustrations. By Ellis A. Davidson, Author of "Linear Drawing," "Projection," "Right Lines," etc. Cloth, limp, $1.

Systematic Drawing and Shading. By Charles Ryan, Head Master, Leamington School of Art. Gives Practical Lessons on Drawing and Shading, Methods of Study, Models, Subjects, etc., etc. Cloth, limp, $1.

Drawing for Carpenters and Joiners. By E. A. Davidson. Containing a description of the construction of the subject of each study and the method of drawing it. With Elementary Lessons in Freehand and Object Drawing. With 253 Illustrations and Drawing Copies. Double vol., $1 75.

Practical Perspective. By E. A. Davidson, Containing Perspective, Projection of Simple Points, Lines, Planes and Rectangular Solids, Polygons and Prisms, Pyramids, Circles, Cylinders and Full Arches, etc. With 36 full-page illustrations, drawn on wood by the Author. $1 50.

Drawing for Machinists and Engineers, $2.

Catalogues on application.

CASSELL, PETTER & GALPIN,

596 Broadway, New York.

EDUCATIONAL TEXT-BOOKS,

PUBLISHED BY

D. VAN NOSTRAND,

23 Murray Street and 27 Warren Street, New York.

Mechanics of Engineering, and of the Construction of Machines. By Julius Weisbach, Ph.D. Translated from the fourth augmented and improved German Edition. By Eckley B. Coxe, A.M., Mining Engineer. Vol. I. Theoretical Mechanics. 8vo, 1100 pages and 902 woodcut illustrations. Revised edition, cloth, $10.

"The present edition is an entirely new work, greatly extended and very much improved; it forms a text-book which must find its way into the hands not only of every student, but of every engineer who desires occasionally to refresh his memory or acquire clear ideas on doubtful points. The charm of Weisbach is his clearness and pointedness. An earnest student might take this work, and, even without the aid of a teacher, acquire a very thorough knowledge of the subject."

"We earnestly desire to see the works of Julius Weisbach in the hands of every American student of mechanics and engineering."—The Technologist.

Link and Valve Motions. By W. S. Auchincloss. Illustrated with 22 copperplate engravings and 38 woodcuts, including the Travel Scale. Third edition, revised and enlarged, 8vo, cloth, $3.

"We have never opened a work relating to steam which seemed to us better calculated to give an intelligent mind a clear understanding of the department it discusses."—Scientific American.

Blowpipe Analysis. A system of instruction in its practical use, being a graduated course of analysis for the use of students and all those engaged in the examination of Metallic Combinations. Second edition, with an Appendix and a copious Index. By Professor G. W. Plympton, of the Polytechnic Institute, Brooklyn. 1 vol. 12mo, cloth, illustrated, $2.

"This manual probably has no superior in the English language as a text-book for beginners or as a guide to the student working without a teacher. To the latter the many illustrations of the utensils and apparatus required in using the blowpipe, as well as the fully illustrated description of the blowpipe flame, will be especially serviceable.—New York Teacher.

A Compendious Manual of Qualitative Chemical Analysis. By Charles W. Eliot and Frank H. Storer, Professors of Chemistry in the Massachusetts Institute of Technology. Illustrated, 12mo, cloth, $1 50.

"We wish every academical class in the land could have the benefit of the fifty exercises of two hours each necessary to master this book. Chemistry would cease to be a mere matter of memory, and become a pleasant experimental and intellectual recreation. We heartily commend this little volume to the notice of those teachers who believe in using the sciences as means of mental discipline."—College Courant, New Haven.

JOHN WILEY & SON,

15 Astor Place, New York,

Publish Colburn's Locomotive Engineering, 17 Nos., $1 00 each; Dana's Mineralogy, $10 00; Downing's Fruits, $5 00; Fresenius' Qualitative Analysis, $4 50; Fresenius' Quantitative Analysis, $6 00; Kerl's Metallurgy of Silver, Gold, etc., $10 00; Kerl's Metallurgy of Copper and Iron, $10 00; Kerl's Metallurgy of Steel, etc., $10 00; Miller's Chemistry, 3 vols., $18 00; Mahan's Civil Engineering, $4 00; Moseley's Mechanics, etc., $5 00; Norton's Astronomy, $3 50; Warren's Machine Drawing, 2 vols. $7 50; Willis' Principles of Mechanics, $6 50. With many other practical scientific works and text-books.

And also offer at Wholesale and Retail

10,000 Words and meanings not in other Dictionaries.

"In this country (England) as well as that which gave it birth, it is now generally admitted to be the best. In the copiousness of its Vocabulary, and in the clearness and accurate correctness of its Definitions, it has no rival—and it is in these points the value of a Dictionary consists."—London Bookseller and Handbook of British Literature, June, 1869.

"Superior in most respects to any other English Dictionary known to me."—Hon. Geo. P. Marsh.

"One of my daily companions. My testimonial to its erudition, the accuracy of its definitions, and the vast etymological research by which it has been enriched through the labors recently bestowed upon it can hardly be of much value, sustained as the book is in the world-wide reputation by so general an approbation; but I have no hesitation in thus expressing my sense of its merits."—John L. Motley, the Historian, and now Minister at the Court of St. James, 1868.

THE STANDARD.

George P. Marsh, in 1860, thus wrote in reference to Dr Worcester's Quarto Dictionary:

"The principal points to be aimed at in a hand-dictionary are—Accuracy in orthography and orthoepy; the written and spoken forms of words; precision and distinctness in definition; fulness in vocabulary, and truth in historical etymology. The work of Dr. Worcester is unquestionably much superior to any other general dictionary of the language in every one of these particulars, and is therefore entitled to rank first among the existing helps to a complete knowledge of English philology."

13 ASTOR PLACE, NEW YORK,

THE RIVERSIDE PRESS, CAMBRIDGE, MASS.

Will Publish June 1:

I.

Wake-Robin. By John Burroughs. In 1 vol. 16mo, price $1 50.

"Wake-Robin" is the common name of the white trillium which blooms in all our woods, and which marks the arrival of all the birds; and this volume is of birds, the author attempting, as he says, "to present a live bird—a bird in the woods or the fields—with the atmosphere and association of the place, and not merely a stuffed and labelled specimen."

II.

A Poet's Bazar. By Hans Christian Andersen. In 1 vol. crown 8vo, price $1 75.

Sketches of travel in Germany, Italy, Greece, the Orient, and up the Danube. The reader of Andersen will recognize the first suggestion of many of the charming passages in "The Improvisatore," and will find those inimitable touches by which the poetic and humorous traveller sets before the eye scenes and incidents of the most varied character.

III.

Castles in the Air. By Barry Gray. In 1 vol. crown 8vo, price $1 50.

Barry Gray's latest volume has the same light, tea-table, gossipy reading which marks his previous books. It has a number of ingenious, fanciful sketches, strung upon familiar conversation.

IV.

Notes on the Gospels. By Charles H. Hall, D.D. In 2 vols. 12mo, price $3.

Familiar Notes on the Gospels, terse, pointed, and practical. The volumes will be found very serviceable, both for family use and for Sunday-school teaching.

V.

(For the American Social Science Association.)

Journal of Social Science. Containing the Transactions of the American Association, No. 3. Price $1 50.

The third number contains papers by Prest. Woolsey, E. L. Godkin, F. L. Olmsted, C. C. Perkins, and others, on Public Parks, Art Education in America, Houses in the Country for Workingmen, etc.

VALUABLE BOOKS AND REVIEWS,

FOR SALE CHEAP.

WESTMINSTER REVIEW. Complete from the Commencement in 1824 to 1864. 39 vols., bound in half-morocco, neat, $60.00.

CHOICE EDITIONS OF

Valuable Standard Works,

Which should be in every Library,

PUBLISHED BY

GEORGE ROUTLEDGE & SONS,

NEW YORK.....416 Broome Street.
LONDON..... The Broadway, Ludgate.

Routledge's Illustrated Shakespeare. Edited by Howard Staunton. With copious original notes, glossary, and life, and containing 1,700 illustrations by John Gilbert, engraved by the Brothers Dalziel; and a steel portrait from the bust of Stratford-upon-Avon, engraved expressly for this edition. In 3 vols. royal 8vo, cloth, $22 50; half-calf extra, $30; tree-calf, gilt edges, $42 50; full morocco, $45.

The Illustrated Natural History. By the Rev. J. G. Wood. Illustrated with nearly 1,500 engravings beautifully executed by Dalziel Brothers, from designs from Harrison Weir, Wolf, Harvey, Coleman, and others. In 3 vols. royal 8vo, cloth, $21; half-calf, $28 50; tree-calf, gilt edges, $40.

Written in a style at once popular and scientific, containing numberless interesting anecdotes, and illustrated in a manner worthy of the subject.

The Illustrated Natural History of Man. Being an Account of the Manners and Customs of the Uncivilized Races of Men. By the Rev. J. G. Wood. Illustrated with nearly 1,000 engravings, beautifully executed by Dalziel Brothers, from designs by Angas, Danby, Zwecker, Harvey, Weir, Wolf, Coleman, and others. 2 vols. royal 8vo, cloth, $14; half-calf, $19; tree-calf, gilt edges, $27.

A companion work and supplement to the Illustrated Natural History.

Froissart's (Sir John) Chronicles of England, France, Spain, and the adjoining countries. With the Illuminations (72 in number), as reproduced from the MS. Froissart in the Bibliothèque Royale, Paris, and other sources. 2 vols. royal 8vo, half-crimson morocco, gilt edges.

An edition without the illuminations. 2 vols. half-Roxburghe binding, $12.

Monstrelet's Chronicles. Containing an account of the cruel Civil Wars between the Houses of Orleans and Burgundy. Beginning where that of Sir John Froissart finishes, and ending at the year 1467, and continued by others to the year 1516. Translated by Thomas Johnes, Esq. Illustrated with numerous wood engravings. 2 vols. super-royal 8vo, half-Roxburghe binding, $9.

The Old Dramatists and Old Poets. In royal 8vo vols. With portraits and vignettes, as originally published by Mr. Moxon, beautifully printed upon fine paper, and each, with one exception, complete in one vol. The greatest care has been taken in giving the text in its utmost attainable purity; and the edition has been rendered still more desirable by the addition of interesting biographical memoirs and critical notices from the able pens of Gifford, Coleridge, Barry Cornwall, Leigh Hunt, Dyce, Cary, and others. At their now reduced prices they are peculiarly adapted for the use of literary students.

THE OLD DRAMATISTS.

Shakespeare	$6	Beaumont and Fletcher, 2 vols	$10 00
Ben Jonson	6	Massinger and Ford	5
Wycherly, Congreve, Vanbrugh, and Farquhar	5	John Webster	4 50
		Christopher Marlowe	4 50
		Greene and Peel	6 00

THE OLD POETS.

Spenser	$4 50	Dryden	$4 50
Chaucer	4 50	Pope	4 50

THIRD EDITION NOW READY.

CALVINISM.

An Address Delivered at St. Andrews, March 17, 1871,
By JAMES ANTHONY FROUDE, M.A.,
Author of "History of England," etc.
1 vol. 8vo, in cloth, 75 cents.

CRITICAL NOTICES.

"It is an essay full of original thought, and quite worthy its accomplished author."—Albany Evening Journal.

"One of the most remarkable contributions to theological literature of late years."—N. Y. Evening Mail.

"The style is splendidly eloquent—a fine specimen of classical English."—Philadelphia Age.

"The address has commanded wide attention, and will stand as one of the most masterly opinions ever given on the subject."—Cleveland Daily Leader.

Fourth Edition Now Ready
OF
WHAT BOOKS SHALL I READ,
AND HOW SHALL I READ THEM?
By Prof. NOAH PORTER, of Yale College,
Author of "The Human Intellect."

1 vol. crown 8vo, with a complete Index, price $2.

In this edition, just issued, an important deficiency which existed in the earlier editions has been supplied in a carefully prepared index. This index answers every purpose of a list of the most valuable works in the different departments of English literature, besides most admirably supplementing a work which may safely be characterized as the best of its kind in the language.

The above book sent to any address, post-paid, upon receipt of the price by the Publishers,

CHARLES SCRIBNER & CO.,
654 Broadway New York.

FULL CATALOGUE, POST-FREE, ON APPLICATION.

POTT & AMERY, Cooper Union, Fourth Avenue, New York.

TWO NEW VOLUMES OF

LANGE'S COMMENTARY.

MESSRS. CHARLES SCRIBNER & CO.

have the gratification of announcing for immediate publication the long-anticipated commentary upon

The Gospel of John.

Translated and edited by Rev. Philip Schaff, D.D., assisted by E. R. Craven, D.D., and the late E. D. Yeomans, D.D.

1 vol. 8vo, 650 pages, cloth, $5.

This volume will universally be regarded as the Commentary of Commentaries upon the "Gospel of Gospels." It gathers up the results of the latest research, and is, besides, enriched with the fruits of the original labors of some of the first living Biblical scholars. Completing the Gospels, it worthily finishes an important section of what is universally regarded as the most important Biblical enterprise of the age.

Extract from Dr. Schaff's Special Introduction.

"The American edition is to a large extent a new work. It exceeds the German, which numbers only 427 pages (third edition), by more than one-third. It has not only 228 more pages, exclusive of the Preface, but each page, owing to the smaller type, contains two more lines (70 to 68). Add to this the fact that the whole Critical Apparatus (which is almost entirely new) and many of my exegetical notes are set in still smaller type; and it may be fairly said that the contents of this one volume, if leaded and printed in larger type, would fill four ordinary octavo volumes."

ALSO JUST PUBLISHED,

Another Old Testament Volume.

JEREMIAH.

Translated and edited by the Rev. C. R. Asbury, of Andover, Mass.

LAMENTATIONS.

Translated and edited by Rev. Dr. Hornblower, of Paterson, N. J. Under the general editorship of Rev. Dr. Schaff.

1 vol. royal 8vo, cloth, $5.

The Ten Volumes previously issued are in the

OLD TESTAMENT.

I. Genesis. II. Proverbs, Song of Solomon, Ecclesiastes.

NEW TESTAMENT.

I. Matthew. II. Mark and Luke. III. Acts. IV. The Epistle of Paul to the Romans. V. Corinthians. VI. Thessalonians, Timothy, Titus, Philemon, and Hebrews. VII. Galatians, Ephesians, Philippians, Colossians. VIII. The Epistles General of James, Peter, John, and Jude.

Each 1 vol. 8vo. Price per vol. in half-calf, $7 50; in sheep, $6 50; in cloth, $5.

IMPORTANT NEW WORKS,

SUPPLIED BY

SCRIBNER, WELFORD & CO.,

654 BROADWAY, NEW YORK.

1. Historical Maps of England during the First Thirteen Centuries. With Explanatory Essays and Indices. By Charles H. Pearson, M.A., Fellow of Oriel College, Oxford. Second edition. Imperial folio, $15 75.
2. The History of Egypt, from the Earliest Times till its Conquest by the Arabs, A.D. 640. By Samuel Sharpe. New edition, revised and enlarged. 2 vols. large post 8vo, with numerous Illustrations, maps, etc., cloth, $9.
3. The History of Pompeii: its Buildings and Antiquities. Edited by T. H. Dyer, LL.D. Second Edition. 8vo, illustrated with nearly 300 Wood Engravings, etc., $6.
4. The Epigrammatists: Selections from the Epigrammatic Literature of Ancient, Mediæval, and Modern Times. Edited by the Rev. Henry Philip Dodd, M.A., of Pembroke College, Oxford. $5 25.
5. Q. Horatii Flacci Opera. Illustrated from Antique Gems, by C. W. King, M.A. Edited by H. A. J. Munro, M.A. 8vo, with nearly 300 gem illustrations, $10 50.
6. The Schools for the People. Containing the History, Development, and Present Working of each Description of English School for the Industrial and Poorer Classes. By George C. T. Bartley, Examiner, Science and Art Department. 8vo, with 12 page Woodcuts and Plans, $10 50.

The cheapest Universal Gazetteer ever published. 30,000 References.

7. The Bijou Gazetteer of the World. Briefly describing, as regards Position, Area, and Population, every Country and State, their Subdivisions, Provinces, Counties, Principal Towns, Villages, Mountains, Rivers, Lakes, Capes, etc. By W. H. Rosser. In 48mo, cloth extra, 50 cents.
8. Who was Junius? Now ready, with Facsimiles and Woodcuts, 4to, $31 50. The Handwriting of Junius. Professionally Investigated. By Mr. Charles Chabot, Expert. With Preface and Collateral Evidence. By the Hon. Edward Twisleton.

"We congratulate Mr. Twisleton not only upon having settled, as we think, once for all, the long-disputed controversy respecting the authorship of the Junian Letters, but upon having produced the only work which has yet appeared, in the English language, conveying systematic instruction on the comparison of handwritings. The book opens a new and interesting vein of enquiry, which will be essential to all engaged in antiquarian or legal pursuits, and ought to find a place in every well-appointed library."—Quarterly Review, April, 1871.

9. Friendship's Garland: being the Conversations, Letters, and Opinions of the late Arminius, Baron von Thunder-Ten-Tronckh. Collected and edited, with a Dedicatory Letter to Adolescens Leo, Esq., of the Daily Telegraph. By Matthew Arnold. Small crown 8vo, $2 25.
10. A Manual of Human Culture. By M. A. Garvey, LL.B. Crown 8vo, price $3 75.

"Those who make education a study should consult this volume."—Athenæum.

11. Practical Hints on Teaching. Containing Advice as to Organization, Discipline, Instruction, and Practical Management. By the Rev. John Menet, M.A., Perpetual Curate of Hockerill, and late Chaplain of the Hockerill Training Institution. Second edition. Crown 8vo, cloth, $1.

ROBERT CLARKE & CO.'S

Ohio Valley Historical Series.

NOW COMPLETED.

Vols. just issued.

McBride's Pioneer Biography, Vol. 2. No. 7. Miscellanies.

The following works comprise the Series:

No. 1. Bouquet's Expedition against the Ohio Indians in 1764. With a Preface by Francis Parkman, author of "Conspiracy of Pontiac," etc. Maps and plates reproduced by the photo-lithograph process. 8vo, cloth, uncut or gilt tops, $3; large paper, imp. 8vo, $6.

No. 2. Walker's History of Athens County, Ohio, the Ohio Land Company, and the First Settlement of the State, at Marietta. Five Portraits and an Historical Map. 8vo, cloth, uncut or gilt top, $6; large paper, 2 vols. imp. 8vo, $12.

No. 3. Colonel George Rogers Clark's Sketch of his Campaign in the Illinois in 1778-79. With Introduction by Hon. Henry Pirtle, of Louisville, and Major Bowman's "Journal of the Taking of Post St. Vincent." 8vo, cloth, uncut or gilt top, $2; large paper, imp. 8vo, $4.

No. 4. McBride's Pioneer Biographies, Sketches of the Lives of some of the Early Settlers of Butler County, Ohio. With Portrait of the author. 2 vols. 8vo, cloth, uncut or gilt top, $6 50; large paper, imp. 8vo, $13.

No. 5. Colonel James Smith's Account of his Captivity with the Indians in Ohio, in 1755-59, and subsequent Adventures. With a Sketch of his Life; and Illustrated Notes by W. M. Darlington, Esq., of Pittsburgh. 8vo, cloth, uncut or gilt top, $2 50; large paper, imp. 8vo, $5.

No. 6. Dr. Daniel Drake's Pioneer Life in Kentucky, in a Series of Reminiscential Letters addressed to his children. Edited with Notes and a Biographical Sketch by his son, Hon. Charles D. Drake, of St. Louis. 8vo, cloth, uncut or gilt top, $3; large paper, imp. 8vo, $6.

No. 7. Miscellanies. I. Tour in the States of Ohio and Kentucky and Indiana Territory, in 1805. By Josiah Espy. II. Two Western Campaigns in the War of 1812-13. By Samuel Williams. III. The Leatherwood God. An account of the appearance and Pretensions of Joseph C. Dilks in Eastern Ohio in 1828. By R. H. Taneyhill. In 1 vol. 8vo. cloth, uncut or gilt top, $2 50; large paper, imp. 8vo, $5.

Any of the above sent by mail or express, prepaid, on receipt of the price.

ROBERT CLARKE & CO. ALSO PUBLISH:

Pioneer Record and Reminiscences of the Early Settlers and Settlement of Ross County, Ohio. By Isaac J. Finley and Rufus Putnam. 8vo, cloth, uncut or gilt top, $2 50.

Legends of the West; Sketches Illustrative of the Habits, Occupations, Privations, Adventures, and Sports of the Pioneers of the West. By James Hall, author of "The Wilderness and War Path," "Tales of the Border," etc. 12mo, cloth, gilt top or entirely uncut, price $2.

BY THE SAME AUTHOR.

Romance of Western History; or, Sketches of History, Life, and Manners in the West. 12mo, cloth, gilt top or entirely uncut, price $2.

Historical Collections of Ohio; containing a collection of the most Interesting Facts, Traditions, Biographical Sketches, Anecdotes, etc., relating to its Local and General History, with Descriptions of its Counties, Cities, Towns, and Villages. Illustrated with 177 Engravings. By Henry Howe. 8vo, 620 pages, price $6. One hundred copies printed on tinted paper and bound in cloth, gilt top or entirely uncut, uniform with the "Ohio Valley Historical Series."

IN PRESS:

Journal of Captain William Trent, from Loggstown to Pickanillany, 1752. Now published for the first time. From a copy in the archives of the Western Reserve Historical Society, Cleveland, together with Letters of Governor Robert Dinwiddie, an Historical Notice of the Miami Confederacy of Indians, a Sketch of the English post at Pickanillany, with a short Biography of Captain Trent, and other papers never before printed. Edited by A. T. Goodman, Sec. W. R. Hist. Soc'y. Will be ready about June 1.

ROBERT CLARKE & CO., Publishers,
Cincinnati, Ohio.

EXCELLENT NEW BOOKS.

Alfred the Great. By Thomas Hughes, Author of "Tom Brown's School-Days at Rugby," "Tom Brown at Oxford," etc. With Illustrations and Map. 1 vol. 16mo, $1 50.

"Mr. Hughes has indeed written a good book, bright and readable, we need hardly say, and of a very considerable historical value."—*London Spectator.*

Ten Great Religions. By James Freeman Clarke. 1 vol. large 12mo, $3.

This book treats of the great systems of religious faith which have held, and some of which still hold, commanding sway over the hearts of mankind. The Classic Mythology, the teachings of Confucius, Zoroaster, and Mohammed, the characteristic features of Brahminism and Buddhism, the Mosaic doctrine and ceremonial—these and other leading religious systems are described, and their relations to one another and to Christianity are indicated, with the great learning and the remarkable catholicity for which Mr. Clarke is distinguished. It is a work of great value, and written so simply and clearly as to interest all thoughtful readers.

John Woolman's Journal. With an Introduction by John G. Whittier. 1 vol. 16mo. Uniform with the *Merrimack Edition* of Whittier's Prose Works. $1 50.

"Get the writings of John Woolman by heart."—*Charles Lamb.*

"A Friend's Gift.—Such, in more senses than one, is 'John Woolman's Journal,' just published by J. R. Osgood & Co. It is the record of a Friend, and is given to the American public by an eminent disciple of that benign fraternity. How calm and sweet and salubrious, in the feverish, overstrained literary atmosphere and ecclesiastical contentions of our age, come the gentle, pure, and holy counsels of John Woolman! How appropriate is it that he should be revived to the love of thoughtful minds by the gracious and grateful words of Whittier!"—*H. T. Tuckerman.*

Topics of the Time. By James Parton. 1 vol. 12mo, $2.

CONTENTS.—Uncle Sam's Treatment of his Servants, The Yankees at Home, Congressional Peccadilloes, International Copyright, Our Roman Catholic Brethren, How Congress Wastes its Time, The Clothes Mania, Log-Rolling at Washington, Our Israelitish Brethren, Correspondence of Napoleon Bonaparte, The Government of the City of New York.

"Mr. Parton's 'Topics of the Time' comprise his later essays and papers in the magazines, and embody much good reading. His incisive, bright, statistic-crammed sentences are very entertaining. He is always suggestive, always fresh, never dull, and one cannot escape the feeling that he has you face to face, and is saying all his good things for your sole and especial benefit. And this is an admirable quality in an author."—*Boston Commonwealth.*

William Winston Seaton, of the *National Intelligencer.* A Biographical Sketch, with passing Notices of his Associates and Friends. Prepared by his Daughter. 1 vol. 12mo, $2.

"It is rarely that one is surprised with so delightful a biography as that of William Winston Seaton, the veteran editor of the old *National Intelligencer*, the bosom friend of Webster and of the greatest men of our country, and himself a factor of no little importance in what the United States has had to do in the making of history. The book is an American 'Diary of Crabb Robinson.'"—*N. Y. Evening Mail.*

My Study Windows. By James Russell Lowell. 1 vol. 12mo. Uniform with "Among my Books." $2.

CONTENTS.—My Garden Acquaintance, A Good Word for Winter, On a Certain Condescension in Foreigners, A Great Public Character (Hon. Josiah Quincy), Carlyle, Abraham Lincoln, The Life and Letters of James Gates Percival, Thoreau, Swinburne's Tragedies, Chaucer, Library of Old Authors, Emerson the Lecturer, Pope.

"This latest book of essays by Mr. Lowell opens with two which are perhaps the best. That is hardly the right word, either, there are so many kinds of goodness in the book—as of criticism often unsurpassable in acuteness; of criticism unsurpassable often in the delicacy of its sensibility to imaginative beauty; of humor; of wit, sarcastic or playful, or almost poetically fanciful; of penetrative thought; of a cheerful hopefulness for the future; of righteous indignation at certain things, yet of unfailing kind-heartedness; of keen enjoyment of nature; of poetry."—*The Nation (New York).*

☞ For sale by all Booksellers. Sent, post-paid, on receipt of price by the Publishers.

JAMES R. OSGOOD & CO., Boston.
Late Ticknor & Fields, and Fields, Osgood & Co.

GEORGE MACDONALD'S
Adela Cathcart,

Uniform with "Robert Falconer," "David Elginbrod," and "Phantastes." Price, $1 75.

"LORING has done the reading public of this country a great service in republishing the works of George MacDonald. The best portion of the readers of fiction have, during the last three or four years, come to regard him as one of the very few novelists of genuine genius, and his books are continually growing in the popular favor. Indeed, were we required to recommend a half-dozen of the very best novels in interest and healthiness of tone, by any living novelist, it should be the stories of George MacDonald."—*Chicago New Covenant.*

THE PORTENT:

A Story of the Inner Vision of the Highlanders, commonly called the Second-sight. Uniform with those published. Will be ready early in June.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

J. ROSS & CO., 27 Rose St., New York.

Pratt's Astral Oil!

THE SAFEST AND BEST ILLUMINATING OIL FOR FAMILY USE EVER MADE.

Took the First Premiums and Diploma at American Institute Fairs for both years, 1869 and 1870, for safest and best Oil.

Endorsed by over 100 leading Fire Insurance Companies of New York.

If the Lamp becomes upset and broken, the contents will not explode nor take fire.

The Astral Oil has received the unqualified endorsements of eminent scientific men, dealers and consumers in all parts of the country.

Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have ever occurred from burning, storing, or handling it.

The *Scientific American*, in an article on unsafe oils, March 4, 1871, says :

"There are notable exceptions, of which we might mention Pratt's Astral Oil, an article which we have used for many years, and found to be excellent in all respects. Moreover, we have never heard of an accident arising from its use."

Dr. G. Tagliabue says : "I have to pronounce it the safest illuminating oil in the market."

The *American Agriculturist* says : "We would not use any other oil, if it cost $5 per gallon."

Beware of Adulterations. See that the seals of the cans have not been tampered with.

NEW YORK, THURSDAY, JUNE 1, 1871.

The Week.

THE Senate has ended its session most ingloriously by voting the discharge of the imprisoned correspondents, which showed no great magnanimity or good sense, however, as they would have been discharged in any case on *habeas corpus* immediately after the adjournment. The enquiry has grown mainly out of the desire of Mr. Conkling to prove Mr. Fenton guilty of giving or conniving at giving illicit news to the correspondent of the *Tribune*, or, in other words, was simply a prolongation of the long-standing quarrel about "offices" which rages in this State between these two gentlemen, and which is every now and then declared to be ruining the Republican party in New York, and which leads to periodical attempts on the part of the President to set up the party by taking "offices" away from Fenton men and giving them to Conkling men, or *vice versâ*—an abstruse process of statecraft which the party papers watch with intense interest, and from which they usually predict the happiest results as likely to flow, both for the party and for humanity. In this instance, however, fortune seems to have favored neither side. It appeared clearly from the evidence that nobody connected with the Senate, and nobody in the Senate chamber or in the rooms attached to the chamber, gave the treaty to the *Tribune*. This ascertained, the Senate ceased to have any jurisdiction of the matter; where else the *Tribune* got it was none of its business, any more than the source from which the *Tribune* procures its editorial articles; but it kept up the enquiry to the last, kept the correspondents in prison to the last, was noisy, silly, and ridiculous to the last, and kept two nations waiting for it to attend to its proper business for nearly ten days.

We must observe, however, that the *Tribune* is estopped from making the solemn protest it has made against the Senate's claim to the right to seize telegraphic dispatches. That right was impudently asserted by the House in favor of Gen. Butler's Committee, when that statesman was engaged in trying to find out whether Messrs. Trumbull and Fessenden were not as bad as himself, and no protest against it came from the *Tribune* or most other Republican papers. To have these iniquitous precedents turned against their authors and supporters must, therefore, give satisfaction to every friend of good government. Some skulls are so thick that it seems impossible to make their owners sensible of the danger and folly of bad precedents without subjecting them to personal experience of their operation, though the great use of human memory and judgment is to enable people to see by inference what a course of conduct will lead to, without working the whole thing out every time a certain state of facts comes up.

Governor Hoffman has vetoed the Code Amendment Bill, and one hundred and fifty others of various degrees of rascality, or mischief, or negligence, which, it must be said, shows that he at least is attending to his business, and doing it honestly; but what are we to think of a Legislature, almost half of which is Republican, which gives him so much of this sort of work to do? The guilty Winans, as he blushes and weeps over the wages of his infamy in his degraded home, must certainly find a good deal of comfort as he surveys the stuff which the Governor has rejected, and which his sixty-three immaculate associates either voted for or allowed to pass, without letting the public know what was going on. If there is going to be any praying in churches over Winans, as one of his denouncers predicted, we hope a word or two will be put in for the incorruptibles who let the Code Amendment Bill, empowering Barnard to muzzle the press of the State, pass without a sign that they knew anything about it. Winans, we perceive, and much as we expected, has just been presented with a $1,000 gold watch by his admirers.

Mr. Vallandigham's programme for the national Democracy has not been universally accepted by the party, and perhaps is not destined to be; but already the weight of opinion is with it, and, speaking broadly, it may be said the ablest Democratic journals of the North, and especially those which are the breath of life to the country press in all points of doctrine and policy, have given in their adhesion. In Ohio itself, there is naturally a division of feeling on account of local differences and jealousy, Mr. Vallandigham being strongly suspected of having an eye to the main chance, and of hoping to acquire a decisive influence in electing the next governor of Ohio. The Montgomery County resolutions, as his are called, have accordingly been offset by the Butler County resolutions, for which Mr. Lewis D. Campbell stood sponsor. These latter propose no "new departure," and advocate no burying of dead issues; and admit the validity of the Constitutional amendments and reconstruction acts only until they can be set aside. There can be no doubt that Mr. Vallandigham has loosed the tongues of a great number of sensible but party-bound Democrats, and those of them who happen to be editors are taking a huge delight in putting off restraint. In a comically solemn way they go about explaining that Democrats have always been in favor of "the Constitution as it is," and that they mean to be no less true to the present one than to that other "which has fallen never to rise again." Southern journals are of course longer in making up their minds. The Memphis *Avalanche* professes to have been before Vallandigham in urging the turning over of a new leaf; the Mobile *Register*, on the other hand, repudiates the movement except as concerns submission to the thirteenth amendment, which abolishes slavery. All other Radical legislation it pronounces, in the language of the New York Convention of 1868, "unconstitutional, revolutionary, null, and void."

Mr. George Ticknor Curtis has done a very discreditable thing, which we were very desirous not to notice, but which we are forced to notice by the publicity given to it by himself and his ill-advised friends. He has taken a fee from one of the parties in the Barlow-Field controversy for an opinion on its merits—a transaction to which there is no sort of objection. Nor is there any objection to his going to work, as he has done, and examining the case strictly *ex parte*, and under the influence of the bias in favor of one of the parties which an advocate naturally feels towards the persons who pay and employ him. But when he places the opinion thus formed before the world as the *judicial* finding of an old and experienced lawyer and philosopher upon a matter of great public interest, he does something which honest men would not forgive a very young and foolish lawyer for doing, and which, in Mr. Curtis's case, merits more reprobation than we fear it will receive. The controversy which Mr. Curtis has given judgment on turns almost entirely on the question whether Judge George G. Barnard is a corrupt judge, and whether Messrs. D. D. Field and T. G. Shearman know or believe him to be corrupt. They *do* believe him to be corrupt, and have both done good service in trying to expose and bring him to justice; and their opinion is shared, and Mr. George Ticknor Curtis knows it is shared, by the great majority of the bar of New York. Nevertheless, in the pamphlet before us he has the audacity—we cannot use a milder word—to pretend that Barnard's corruption is not a thing to be even imagined, an assumption not to be entertained or even enquired into. Upon the point *where* Judge Barnard signed the shameless *ex-parte* order, appointing James Fisk, the most notorious rogue in the State, receiver of the property of a great corporation, which the Judge left his mother's death-bed to sign (on the request of Coleman, the man whom he afterwards, on Fisk's motion, appointed receiver of the stolen shares of Heath and Raphael)—and which there is good reason to believe he signed either in the house of Fisk's mistress or did not sign at all—where does the reader suppose Mr. Curtis went for information? Why, to Judge George G. Barnard himself. And where does the reader suppose the learned judge told the innocent lawyer he signed it? Why, in a "real-estate office," near which he

happened to meet Mr. Field's clerk in the street, after ten o'clock at night. Mr. Curtis's opinion—as we shall show more at length when we get time, especially if there are not speedy signs that he feels thoroughly ashamed of it—is, in fact, one of the least reputable pieces of whitewashing we have seen for some time; and we find a fitting sequel to it, which may serve to explain to country readers the system by which the stream of justice in this city is befouled, and the bar debauched and muzzled, in the following from the law reports of the New York *Transcript*, the official paper of the city government, of May 24:

"*Before* BARNARD, J.—Johnston *vs.* the Kansas Pacific R. R. Co. Referred to Hon. George T. Curtis, to hear and determine."

We find we understated the effects of Judge Mullin's observations about the conduct of counsel in the Susquehanna case, in delivering the judgment of the General Term, to which we referred last week. The report from which we quoted made the Judge say he had seen nothing unbecoming in their conduct "in these proceedings and the action," meaning, as we thought, in the case of the *People agt. the Albany and Susquehanna Railroad Co.*, in which nobody ever said their conduct had been unbecoming. The correct report of the Judge's language shows we were right. He said: "in the proceedings in the action"—that is, the action in which he was giving judgment, and not the proceedings about which Judge Darwin E. Smith expressed himself so unpleasantly.

Probably the severest blow prize-fighting has ever received was dealt against it in this city last week, when the two principals in a hard-fought "mill" were sent to the penitentiary for one year, with the addition of a heavy fine, and the wretched umpire for six months. We believe no such penalty has ever before been inflicted for this offence, and it has cast a gloom over hundreds, if not thousands, of ugly "mugs." The two culprits are Englishmen, and their counsel urged in extenuation, and not without some foundation, that their art was held in favor by good society in their native country, but he put it a little too strong when he said the ring was patronized by Lord Palmerston and the Archbishop of Canterbury. Lord Palmerston had the sneaking admiration of the sport with which men of his generation grew up. Probably few things in literature read more strangely than the entries in his diary, in the midst of searching observations on the condition of his own heart, criticisms on his own conduct, and observations on art and literature, showing rare culture and acumen, which the delicate, fastidious, high-minded, and scholarly Windham makes about the "mills" he attended. But no prelate has, we believe, ever witnessed a "stand-up fight," and we doubt very much whether either the present or late Archbishop of Canterbury ever even took or gave odds on any match, either between the light or heavy weights. Even if he had appeared at the ropes, it would not serve the interests of pugilism to mention it in open court.

Trade during the past week has been reasonably active. The imports continue liberal, the exports of cotton fair, and of grains large. The unfavorable weather for cotton growing, and the persistent reports of a declining acreage planted, have caused a further advance in the price of this important staple, while a remarkably unanimous account of mediocre crop prospects in all parts of the world has in a similar manner advanced the prices of breadstuffs in Europe, and prevented the generally anticipated decline here. Here, too, the weather in large parts of the country has, until within the last few days, been unfavorable to the growing cereals, and nothing but the conviction that there are large stores still in the country has prevented a further advance in price. The rise in cotton has resulted in some failures of no great importance, and one or two large failures are reported in other branches of business, but generally collections and payments are better than they have been for a long time. The foreign exchanges continue unfavorable, and the specie shipments, though somewhat less heavy, are uninterrupted.

Money remains cheap and abundant. The upward speculation on the Stock Exchange has been resumed; fresh consolidations, combinations, and stock dividends are talked of. Large amounts of railroad bonds are reported daily as bought for European account, and prices of this description of security have largely advanced. Government bonds are dull and almost stationary, gold scarcely ever fluctuates, and the funding, in spite of various rather incredible rumors, appears to have come to a complete stop. Mr. Boutwell's announcement that he will only buy four millions of bonds, but sell seven millions of gold, foreshadows a decline of revenue which may somewhat retard the progress of debt reduction during the summer months. Real estate, under the impetus of superabundant funds seeking employment, has become active, and everything appears to be shaping for one more burst of speculative inflation in everything. There is no end to new railroad enterprises, new mining, manufacturing, banking, and other financial corporations, all of which seem to be readily accepted by a public once more under the influence of the growing speculative tendency.

We have endeavored to explain on another page some of the difficulties of M. Thiers's position. There is no doubt they will be enormously increased by the sanguinary way in which he has had to suppress the rebellion in Paris. The slowness with which he did it, and which, we believe, was largely due, as the leaving Paris in the hands of the National Guard at the outset showed, to a foolish hope that he would be able to accomplish his object without much bloodshed, has brought on him the reproach of weakness and incapacity among the Conservatives; the enormous loss of life and property which has attended it, besides bringing on him the bitter hatred of the Reds, has probably at least lost him his popularity with the Parisian bourgeoisie. In fact, the fate has probably overtaken him which every attentive observer of French politics might have predicted, *à priori*, three months ago, would overtake him. Anybody who undertakes to govern Paris, if he refuses to adopt harsh or oppressive measures, like Louis Philippe, is driven out and despised as an imbecile; if he puts down disorder with a strong hand and hard heart, like Louis Napoleon and Thiers, he is pronounced a tyrant and a butcher, and this by the very men—the Communists, for instance—who in his place would have acted in a like manner. The way in which this last insurrection has been suppressed has been horrible, but any man who condemns it is bound to ask himself what he would have done in presence of the same problem. The most merciful man cannot be merciful to a foe who will not surrender, but fights on like a wild beast to the last. It is very unfair to compare Thiers's course to ours in dealing with the rebels of the late war. The Southerners were soldiers and politicians who fought under the rules of civilized warfare, and like rational beings laid down their arms when fighting was plainly useless. In judging him, we must ask ourselves how we should feel towards, and deal with, a mob like that of 1863, which, while holding New York for three months against the State troops, and finding themselves hard pressed, should set fire to the upper part of the city, and the wharfs, and the shipping, and the public buildings, and seize on the Protestant ministers and hang them, and open groggeries and faro-banks in the principal churches, and then, rejecting all terms, should get into holes and corners and deal out murder on every soldier and policeman who came near the spot. We doubt if, under these circumstances, the State militia and the decent men would behave like sages or saints. We may add, however, that our admiration for the horror of other people's wars which we see growing in every direction, fills our breasts with hope and rejoicing.

What Thiers will do now, it is difficult to guess. His main difficulty, since February, has been, it is said, the growing fierceness and implacability and royalism of the Assembly. The probabilities are that the eagerness for a monarchy has now become almost too strong to be controllable, and that he has sense enough to recognize the folly of setting up such a monarchy as the Assembly would desire to see, but feels too weak to control that body, if any attempt at forming a regular government should now be made. He will accordingly, per-

haps, try to compromise matters, and hold his own by getting rid of his radical surroundings, such as Favre and Picard, and then stave off a decision on the question of the form of the government, as Prim did in Spain, for a year, until the country grows calm, and industry has resumed its course, in the meantime reorganizing the army and holding the great towns with a strong hand.

The most horrible incident of the struggle has been the massacre of the Archbishop and the priests. This was worthy of Greek brigands or Feejee Islanders. Indeed, it was worse than the brigands, for they only massacre their hostages to prevent their threats being treated as empty the next time they hold anybody for ransom; but in this case, the slaughter was committed apparently in pure deviltry, when all hope of success was gone. The fact, too, that it was committed by men who have charged themselves in all seriousness with the task of reorganizing society on a juster and more humane basis, furnishes one of those horrible glimpses we get every now and then of the thinness of the crust which we call our civilization, and of the fierce fires which burn below it. Montalembert, however, distinctly foretold, five years ago, that at the next outbreak the church and the priests would be the great objects of hostility to the French Reds, owing to the unfortunate alliance into which, in 1851, they entered with the Empire. If ever there was a man whom it ought to have been impossible for a church to endorse, it was the hero of the Second of December, and the enthusiastic adherence of the clergy to him opened a moral abyss in the great cities such as will not soon or easily be filled up. Archbishop Darboy was an excellent old man, and, indeed, one may say of the whole French Catholic clergy that, in spite of much narrowness and bigotry, they are not surpassed in charity, in devotion, in self-denial. They pay freely with their person in all times of danger, necessity, and tribulation. This is the second Archbishop of Paris who has fallen before Red balls within twenty-three years.

It would be a great mistake to suppose that the bloody overthrow of the Commune in Paris makes an end of the ideas on which the Commune rested. These, we may be sure, will live and grow. They have grown greatly since 1848, and they are spreading all over Europe; and they will, in our opinion, not cease to spread until they have made one great attempt for the conquest of modern society, and have in that attempt shaken our present civilization to its foundation. Our present civilization is based on contract—that is, on the theory that each individual is and should be free to make such use of his faculties as seems best to him, and is or should be bound to accept and be content with such rewards as they bring him. The Commune theory, in its real, though not generally confessed, meaning, allows contract no place whatever, but goes back to status, and seeks to treat every man as the agent or slave of society, working under its orders, and carrying his earnings to its store, and perpetuating the species, not through the family, but through simple pairing, like the animals; and this doctrine is raising up in its support fanatics who not only face death freely on the battle-field, but would face it in the flames or among the beasts in the arena. People who are interested in sociology would do well to consider this, and all itinerant Tongues would do well to have a little thinking about it done for them before they go wagging round the country about "labor and capital."

In the afternoon of the 23d, shortly after the capture of Montmartre, General Vinoy occupied the Ministry of War; Clinchant moved, by the Rue de Clichy, on the New Opera House, and Ladmirault's troops held the stations of the Northern and Eastern Railroads. The insurgents, however, continued to defend their main central positions on both sides of the Seine, including the Place Vendôme, the Tuileries, the Prefecture of Police, and the Hôtel de Ville. Their batteries on the Boulevard Haussmann, the Place Vendôme, and in the garden of the Tuileries, still presented a formidable front towards the west and northwest; but their right and rear were threatened by the flanking movements of General Ladmirault, against which they were not sufficiently guarded. This seems to have chiefly compelled their retreat in the night, or on the following morning, towards the eastern faubourgs, the beginning of which was accompanied by the setting on fire of the Tuileries and Louvre, and of the Palaces of the Legion of Honor and of the Council of State on the opposite bank of the river. The conflagration was exceedingly violent, so that of the four palaces only a portion of the Louvre could be saved, including its main treasure, the collection of art, while its library became a prey to the flames. But this act of vandalism was not to be the foulest stain on the memory of the Commune; for, in the same night, scores of so-called hostages were slain by its executioners in their prison, and among them Darboy, the Archbishop of Paris—the Abbés Susa and Duguerry, a large number of other priests, according to Minister Washburne, not less than sixty-seven—and the noted banker, Jecker.

The Place Vendôme was occupied on Wednesday morning; the insurgents made a strong stand at the Rue St. Honoré, and, on retiring, fired the Palais Royal; the Palace of Finance, the Barracks on the Quay d'Orsay, the Court of Accounts, the Prefecture of Police, and the Mont de Piété blazing up about the same time with petroleum. The Hôtel de Ville came next. The centre of Paris, on both sides of the Seine, was thus enveloped with flames and smoke, which spread towards the extremities. Still the fighting continued fierce. The Versailles troops, having carried the barricades in the Boulevards Bonne-Nouvelle and Poissonière, and some adjoining positions, which were stubbornly contested, finally became undisputed masters of the centre. The Quartier du Temple was the next theatre of the carnage, which was merciless on both sides. Women and children shared both in the fiendish fight and the pitiless retribution. From the Buttes Chaumont the insurgents bombarded the city with petroleum shells. Numberless insurgents caught with arms in their hands were shot; others were drawn from their hiding-places to share the same fate. The same was the aspect of affairs in the eastern half of Paris on Thursday, during which day the insurgents, after having blown up or evacuated all their positions south of the Seine, including the forts of Bicêtre and Ivry, still held Bercy, Charonne, the Père la Chaise, Ménilmontant, Belleville, the Buttes Chaumont, La Villette, La Chapelle, and the environs of the Place de la Bastille.

On Friday, the Government troops attacked both Belleville—upon which batteries of marine guns erected at Montmartre poured a terrible fire—and the Place de la Bastille. The fighting at both places was very severe, and was soon extended over the adjoining districts. The havoc among the insurgents became frightful. Several thousand surrendered, others fled beyond the *enceinte*, where they were disarmed and arrested by the Prussians. On the following day, Picard announced in the Assembly that "Generals Vinoy and Douai, after capturing the Place de la Bastille, had occupied the Faubourg St. Antoine as far as the Barrière du Tr ne, and that Generals Clinchant and Ladmirault had advanced to the foot of the Buttes Chaumont." This announcement probably summed up the results of the operations of Friday, which were completed on Saturday, the 27th, by the capture of the Buttes Chaumont and Ménilmontant by Ladmirault, and of the Cemetery of Père la Chaise by Vinoy. The fighting at all these places is described as desperate in the extreme, the Versailles troops, after a last summons by Marshal MacMahon, having ceased to give quarter—"to man, woman, or child," says the report—and men, women, and children were fighting. Remnants of various bands, hunted up in their last place of refuge, the Bois de Vincennes, surrendered on Sunday. General La Cecilia surrendered the Castle of Vincennes shortly after. The Commune had been stifled in the blood of tens of thousands. Most of its leading members had been slain, some fighting, others as prisoners. Among the captured and shot are mentioned Dombrowski, Vallès, Brunel, Amouroux, Rigault, and Billioray—the last, Minister of War, the "Brittiorari" of our late despatches; his predecessor, Delescluze, was found dead; Courbet, the painter, who presided at the demolition of the Vendôme Column, is reported to have taken poison. Some reports announce the execution of Cluseret, Okolowicz, Millière, and Rochefort. Assy and numberless others await trial. The extradition of the fugitives to foreign countries is urged by the French Government.

THE NEW RULES OF NEUTRALITY.

As the treaty of Washington has been ratified by the Senate of the United States, and as its ratification by the British Crown is certain, we may assume that the two great maritime and commercial nations have in the most formal manner adopted three new rules to govern their interstate relations, and that these rules will, through their example and influence, become parts of the code acknowledged by all civilized peoples. The importance of this action demands for it a more special examination than we were able to give it while describing the treaty at large in a recent article. It is plain that the effect of these rules is to limit neutral rights, and to define neutral duties. Do they abridge these rights and enlarge these duties? If so, they are opposed to the traditional and uniform policy of our own Government down to the time when the civil war placed us in the condition of a belligerent; for, while the United States, both through the executive and the judicial departments, has been firm and consistent in preserving and enforcing neutral duties, it has been equally firm—indeed, has been a leader among nations—in upholding neutral rights. Let us, then, compare these three rules with the municipal legislation of the United States and of Great Britain.

The *first* requires due diligence on the part of a neutral to prevent the equipping, fitting out, or arming within its jurisdiction, or the departure therefrom, of any vessel intended to cruise or carry on war against a power with which it is at peace. The *second* forbids the use of neutral ports or waters as the base of naval operations by either belligerent, and the augmentation of military supplies or arms therein. The *third* simply holds the neutral responsible for the exercise of due diligence in enforcing the two former ones.

An act of Congress, passed April 20, 1818, provides in § 3 that "if any person shall, within the limits of the United States, fit out and arm, . . . or shall knowingly be concerned in the furnishing, fitting out, or arming of any vessel, with the intent that such vessel shall be employed in the service of any foreign prince or state, or of any colony, district, or people, to cruise or commit hostilities against the subjects of any foreign prince or state, or of any colony, district, or people, with whom the United States are at peace," he shall be guilty of a misdemeanor, shall be liable to fine and imprisonment, and the vessel shall be forfeited; and in § 5 that, "if any person shall, within the territory or jurisdiction of the United States, increase or augment . . . the force of any ship of war . . . which, at the time of her arrival within the United States, was a ship of war . . . in the service of any foreign prince or state, or of any colony, district, or people, . . . the same being at war with any foreign prince or state, or with any colony, district, or people, with whom the United States are at peace, by adding to the number of guns of such vessel, . . . or by the addition thereto of any equipment solely applicable to war, every person so offending" shall be guilty of a misdemeanor, and be liable to fine and imprisonment. These sections are identical with those of an act passed in 1817, which was superseded by the later statute. Prior to 1817, an act passed in 1794 was in operation, the provisions of which were substantially the same as those already quoted in forbidding the arming or equipping, or the augmentation of the force of vessels in the service, or intended to be used in the service of any "foreign prince or state," and differed therefore only in omitting all reference to "any colony, district, or people." In the year 1819, the British Parliament passed a statute almost identical in language, and absolutely the same in meaning, with the American act of 1818. It provides in § 7 that, "if any person within any part of the United Kingdom shall equip, furnish, fit out, or arm . . . any vessel, with the intent that such vessel shall be employed in the service of any foreign prince or state, or persons assembling to exercise government," etc. (proceeding substantially as in the American statute), such person shall be guilty of a misdemeanor, and the vessel shall be forfeited; and in § 8 that "any person who shall, within any part of the United Kingdom, by adding to the number of guns of such vessels, or by adding other equipments, increase or augment the warlike force of any vessel of war," etc. (as in American statute), shall be guilty of a misdemeanor. The recent legislation of the British Parliament need not be referred to, because it does not affect the question we are discussing.

It is plain that the new rules of the treaty of Washington do not enlarge or add to the legal responsibilities of citizens of the United States, or of subjects of Great Britain, or of persons within the jurisdiction of either country. The statutes cited forbid all the acts described in the treaty, and apply the penalties to individual offenders. The language of the treaty is not more comprehensive than that of the statutes; and although the phrase, "such vessel having been specially adapted, in whole or in part, within such jurisdiction, to warlike use," found in the first rule, was doubtless intended to prevent a too narrow construction of the words "fitting out" and "equipping," yet the two rules plainly apply to no case not fully covered by the municipal legislation of both countries. The United States has not, therefore, subjected its citizens, and persons within its jurisdiction, to any legal restrictions or penalties which have not existed since 1794.

But those statutes are addressed by the Government of each country to private individuals. They create personal duties, and impose personal punishments; they do not assume to create a national obligation, or to provide for any national reparation or indemnity as for a breach of international law. Has the Government by the treaty raised any such national obligation which it did not recognize as existing before? Our own political history answers this question in the negative, so far as the United States is concerned. The judicial department, in a series of solemn judgments, has adopted the principles expressed in the three rules of the treaty, and treated them as parts of the international law, which the Government is bound to observe independently of statutes, and which the court must enforce by all the sanctions within its power. We will only refer to the celebrated case of the *Santissima Trinidad* (7 Wheaton, 283). Stripped of all unnecessary detail, the facts of the case were: the *Independencia*, a public man-of-war belonging to Buenos Ayres, in the year 1816, came into Baltimore, and her force was there augmented. She afterwards captured the Spanish vessel, *Santissima Trinidad;* and a part of the cargo thus captured having been brought within the United States, it was libelled in admiralty by the original owner. The statute of 1794 was then in force. It was urged, in support of the capture, that the statute did not apply to the case, because it only imposed personal penalties, and did not provide for the international duty of restoration. The position was correct. The proceeding did not fall within the statute, and if there had been no violation of international duty, independent of the statute, the Spanish owner would have been remediless. In pronouncing the judgment of the court, Mr. Justice Story said: "As to capture made during the same cruise, the doctrine of this court has long been established, that such illegal augmentation is a violation of the laws of nations, as well as of our own municipal laws, and, as a violation of our neutrality, by analogy to other cases, it infects the captures subsequently made with the character of torts, and justifies and requires a restitution to the parties who have been injured by such misconduct." This case—and there are several others to the same effect—covers the whole ground; for if augmentation of force in a neutral port is a violation of international law, imposing upon the neutral the international duty of making restitution under the circumstances described in this case, *a fortiori* must the equipping, fitting out, or arming in a neutral port a vessel intended to cruise against a friendly power be a violation of the same code, imposing a heavier duty to make reparation for the injurious consequences.

In the same opinion, Judge Story said that the sending the vessel (the *Independencia*) fully armed and ready for use in war, under American colors, papers, and command, to Buenos Ayres, for a bona-fide purpose of offering her there for sale in the market as a commercial enterprise, though it subjected her to capture as contraband, would not be a violation of our national neutrality. As is well known, the British Government relied upon this portion of Judge Story's decision as an answer to our demands respecting the Confederate cruisers. Mr. Dana, in his—as it seems to us—anxiety to sustain the American claims, declares in his notes to Wheaton that this was a dictum of Judge Story's, unnecessary to the decision made by the court. We venture to differ with him. This passage was no dictum; it was based upon the exact facts of the case, and disposed of a position most strongly advocated by the counsel for the owner. Above all, it

expresses a neutral right which our statutes did not give up, and which, in our opinion, the treaty has not given up. For it must be noticed that, when the case of *Santissima Trinidad* arose, the statute of 1794 was in force, which forbade the arming or equipping of vessels intended to cruise against a friendly power, by language as comprehensive and as direct as that contained in the first rule. Notwithstanding this, the Supreme Court held that a purely commercial enterprise, as described above, was not covered by the statute, nor by the inhibitions of the law of nations, any further than the contraband character impressed upon it. We cannot suggest any reason why the same construction may not be put upon the treaty. We believe, therefore, that the three rules have stated our international obligations exactly as they have been understood by the Government throughout our whole history, and have not abridged the commercial activities of our citizens by subjecting their purely contraband commerce to any restrictions or penalties except the ordinary risk of capture.

In the legislation of the British Parliament, we find provisions almost identical in terms with those contained in our own statutes, and beyond doubt the same in meaning. The operative words are "equip, furnish, fit out, or arm." And yet, in the celebrated case of the *Alexandra*, the English courts gave to this language an interpretation which made its evasion a matter of the utmost ease, and which indeed destroyed all the preventive and penal character of the statute. The judicial proceedings were commenced before the vessel was completed, and of course before anything had been done in the way of arming her. The prosecution showed the purpose and design for which she was built, and that in her construction she was adapted solely to warlike and not to commercial uses, and the Crown officers were obliged to rely mainly upon the descriptive word "equip" found in the statute. Chief Baron Pollock, who presided at the trial, expressed an opinion during its progress that "equipping" *ex vi termini* must include "arming." In his charge to the jury, he did not say in so many words that there could be no equipping without arming, but he told them that in order to be "equipped," "furnished," or "fitted out," so that the prohibitions and penalties of the statute could attach, the vessel must be in such a condition as to be substantially capable of hostile operations. As this was not the fact with the *Alexandra*, the jury could only find for the defendants. In the well-known correspondence which preceded and followed this decision, the British Government assumed two positions which it has maintained until their abandonment by the Treaty of Washington. These were, first: that Great Britain was not responsible to any foreign country for the condition of her own purely municipal law, for any defects in its provisions, or in its administration, and this whether that municipal law related to matters exclusively internal and private, or to matters external and public; and, second, that the statute in question was not declaratory of the international law, but was additional thereto, and that consequently no international obligation had ever rested upon the British Government to prevent the fitting out, equipping, or arming of the Confederate cruisers, or their escape from British ports. The three rules of the treaty are, therefore in every sense new to the British Government; they involve a complete abandonment by it of the positions before occupied, and an adoption of the principles and doctrines upheld by the executive and judicial departments of the United States.

If we examine the language of the rules more closely, we shall find that most of their operative terms were copied from the statutes which have been described. There are, however, some additions which produce distinctness and accuracy of meaning, but which do not, as we believe, extend the effect of the rules beyond that invariably given by the United States to its own legislation. "Preventing the departure" of a vessel is not found in the act of Congress, but is plainly included in the duty to prevent the "equipping, furnishing, or arming." We have already remarked that the phrase, "such vessel having been specially adapted, in whole or in part, within such jurisdiction, to warlike use," was probably inserted in order to prevent any such narrow construction of the words "fit out" and "equip" as that given by Chief Baron Pollock. The British courts would doubtless hold that it enlarged the neutral duties of their Government and citizens, by prohibiting what was not forbidden before. In the second rule, the provisions in reference to illegal augmentation are plainly taken from the statutes. The prohibition upon the use of neutral ports or waters as a base of naval operations by belligerent parties is not found in the municipal legislation to which we have referred, but it is certainly a familiar doctrine of international law. Finally, neither country is made an insurer against the unlawful and clandestine acts of its own citizens or of persons within its jurisdiction. The requisite of "due diligence" on the part of each nation makes it responsible for the negligence of its own officers in enforcing the rules, and for their complicity with those who may be engaged in the acts made unlawful by the treaty.

THE ASSEMBLY AND THE COMMUNE.

We are not admirers of M. Thiers, and, as our readers may remember, expected nothing very remarkable from him in the way of statesmanship when he was put into his present position. Nor have we at any time had a very exalted notion of the political capacity of the persons who were sent up to form the Assembly now sitting at Versailles. They were elected when the country was laboring under mortal anxiety, caused in part by the horrors and disasters of the war, and in part by the follies of M. Gambetta and his prefects, and while it was in large part occupied by the enemy, and without time for discussion or the interchange of opinion. They had then set before them the most painful task that has ever fallen to the lot of a deliberative body. It did not call for statesmanship, but it did require a great deal of courage. They had not to choose between different lines of policy, for the Germans were complete masters of the situation. The precise service which the Assembly and its president, M. Thiers, were called upon to render to France was to be the body of persons to bear the odium and disgrace which, as everybody knew, were sure to be heaped upon those who made a treaty which would not only humiliate France in the dust, but dismember her. Everybody shrank from rendering the country this service as long as possible, and it was freely predicted that any single man who made himself prominent in the performance of it, would have either to retire into private life or go abroad. The Assembly, however, did not shrink, though we doubt if it could have screwed its courage up to the sticking point if Gambetta had not been operating in its rear. But as soon as it went to work, it seemed to ordinary eyes to act very sensibly. It elected as chief executive officer the man who, whatever his faults, was acknowledged universally to be the foremost French politician of the day, both as regarded talents, character, and experience, and it ratified the treaty—with groans and tears to be sure, but still it ratified it. The terms were hard, but the Germans stood ready with 400,000 men to ravage France down to the shores of the Mediterranean in case they were rejected.

The result that everybody expected followed. The news was received by the Republicans with howls of execration, and as Paris was the headquarters of Republicanism, and the place which had suffered most from the war, the members of the Assembly were given to understand plainly they need not show their faces there. This was no empty menace, inasmuch as, by an extraordinary provision of the treaty, while the troops of the line were all disarmed and held as prisoners, and the Garde Mobile disarmed and sent home, the National Guard of Paris, which contained a large force of Reds, was left in possession of the city. The Assembly consequently, having the fate of several of its predecessors before its eyes, went meekly to Versailles—that is, as near Paris as it dared—and opened its proceedings there. This, however, was far from appeasing its enemies. In fact, in their eyes it only deepened its guilt. It had now not only sold the country to the Prussians, but it had "insulted" Paris and "the people" by refusing to come to the capital. This was bad enough; but worse remained. Before it had begun its deliberations, it was accused of designing to establish a monarchy. Moreover, it was charged with having been elected by the votes of an "ignorant majority," and sent up to rule over the enlightened inhabitants of the great towns; and this ignorance of the peasantry was spoken of with the most comical wrath, as if it was something which was found out after the election had taken place, and which ought of right to vitiate the returns. The rule of the majority, too, began to

be denounced savagely, as if it was a monarchical device suddenly contrived for the destruction of the Republic, as if Republicans had never heard of it, and as if the restriction of the suffrage by the Assembly of 1851 had done nothing to reconcile the Reds to the *coup d'état*. Accordingly, a new government was set up in Paris, the ministers of the Assembly put to flight, two of its generals murdered, and the public offices seized on; and, to crown the joke, an army was organized and began its march on Versailles to break up the organization which thirty-eight millions of Frenchmen had just created, and which was the only government they had. It was the arrest of this march by the fire of Fort Valérien which began the civil war. Up to that moment the new government had done everything it could to soothe Parisian susceptibilities, except sit in Paris, and had done nothing but what the country had elected it to do. It had signed the only attainable treaty of peace, and by that treaty it had exacted from a reluctant enemy the surrender of Paris and about 400 cannon to the armed National Guard of the city; it had refrained from sitting in Paris, in deference to the apprehensions, widely and reasonably felt, that if it did, it would be dispersed by a *coup d'état*, and the country plunged into the turmoil of another revolution. It had not uttered a single word indicating any intention to deal with the form of the government without a fresh appeal to the country.

M. Thiers now found himself charged with a fresh and horrible duty. He had to retake Paris, and he had no army to do it with. He had 30,000 or 40,000 men at Versailles, but there was not a regiment amongst them which he felt sure of, and they were all in a state of disorganization. So he had to wait for men, officers, supplies, and artillery, and moral support from the provinces. In the meantime, the 25,000 or 30,000 "men of order" in the city, who had at first stood by the Assembly, finding they were receiving neither succor nor orders from without, dissolved or joined the Commune. By the time he began the siege in earnest, however, he and the Assembly had become an object of more widespread execration than ever. They were abused by the well-to-do classes for not attacking the city sooner; then, when they did begin to attack it, they were abused for doing it so slowly, and also for destroying property by the bombardment. The Communists proper, of course, abused them still more fiercely, first for resisting the army which marched out to capture or disperse them; secondly, for killing people who were defending the city; and, thirdly, for wanting to rule Paris by the votes of the majority of Frenchmen.

To this tide of home denunciation was soon added a strong affluent from abroad. The London Comtists, headed by Mr. Frederick Harrison, can hardly find words to express their contempt and abhorrence of the "Versaillists" and their admiration for the sages of the Commune. They—and especially Mr. Harrison—display so much heat in their criticisms, however, as not only to deprive one of all respect for their judgment, but to suggest a resemblance to M. Veuillot's outpourings in the *Univers*, and to recall forcibly Professor Huxley's happy *mot* about the new religion, "that it was Catholicism with Christianity left out." The doctrine of these philosophers is, that the Communists were a parcel of sages and patriots, laboring to deliver the Holy City from the dominion of ignorant peasants and conceited literary men, from which it had suffered so much, and secure for it municipal independence; and that although they committed many mistakes, which was not unnatural, their general aim and intentions were good, and such as should secure them the sympathy of foreign liberals. Unfortunately this theory, plausible as it is, derives no support from the facts, and is in reality an afterthought. The men who were at the head of the Communist movement throughout—the Duvals, Bergerets, Courbets, Pyats, Blanquis, and Assys—were either common adventurers in search of a living, and for whom all forms of government which give them power and notoriety possess equal attractions, or else enthusiasts who, long ago, repudiated all regard for political forms which had not some new mode of distributing property as their end. The political arrangements which have for their object the protection of the rights of minorities, and the proper distribution of functions among different classes of officers, which occupy so much of the attention of the old school of politicians, have not, and have not had for many years, the slightest interest for the class of men who led the French Communists. They care nothing about "checks and balances," about the independence of the judiciary, the freedom of the press, the protection of personal or local self-government, personal liberty, or any of the other great questions over which the Western world has so long contended. They care nothing even about a republican form of government, as Americans understand it. Municipal independence, too, such as American cities and towns enjoy, in which property and liberty are shielded by the Constitution as expounded by the courts, from the attacks of the majority for the time being, would excite in their minds nothing but ridicule and contempt. The Republic they ask for is what Louis Blanc called in 1848 the "république appliquée"—that is, not a government providing certain modes of choosing officers or imposing certain restrictions on their authority—but a government which should actively superintend the work of production, and the division of the results of production among the workers. No machinery of administration and no distribution of the powers of government which do not serve as a means to this end, possesses the slightest value in their eyes, and anybody in America who fancies that what the Communists have been fighting for is that power of managing their own local concerns which is enjoyed by the inhabitants of an American city or town, only does so because he is ignorant of the history of the French Socialist. The attempts which some Englishmen and Americans have made to give their performances a purely political complexion, have been of about the same degree of intellectual respectability as the attempts made early in the war to persuade people that a republic had been set up in Paris, and, at a later period, that the Prussians were going to be driven out by a popular rising.

We have described the objects of "the Commune," however, a great deal too mildly. What we have said of them is what might have been said, and was said, in 1848. Since then, the doctrines of the leaders have made progress that may truly, in the light of recent events, be called frightful. The pretence that they have during the last two months been fighting for autonomy was only set up when they found that they would have to fight, and that the Versailles Government was not going to be swept away by a series of "fraternizations" on the part of the regular troops. Their real creed, which was temporarily kept in the background to avoid creating too great a panic in the city, and on which the Communal Government in Paris was to be based, in case they had triumphed, included the total denial of the existence of God and of a future life, the prevention of any religious observances, and the treatment of priests and ministers as impostors; the abolition of marriage, and the substitution of temporary connections, based on the inclination of either of the parties; the rearing and education of children by the Commune as in a vast foundling hospital; the outlawry of all persons not living by the labor of their hands, or, in other words, the creation of an aristocracy of *ouvriers;* the expulsion of the literary or educated class from all places of trust or dignity; the substitution of "natural justice" in the courts of law for all artificial systems of jurisprudence; the appropriation of all property to public use, and the provision of labor for all persons able to labor, and support for those who were not able, out of the public purse. If they could not have all this, they would have nothing, and were ready to go to any extremes in the attempt to get it. One of the most remarkable features in the history of the Commune is, that much stress as its champions and sympathizers have laid on the ignorance of the peasantry as a reason why there should be a political separation between town and country, not one word has there come from them about the possibility of building up a better state of things, and uniting them both once more in a happy, prosperous, and intelligent France, by *educating* the peasantry. Of the thirty-eight millions of honest, industrious, simple-minded people who till the fields of France, fight her battles, fill her treasury with gold, and, in the long run, pay the cost of all the faults and follies of the capital, neither Communists nor Comtists have, during all the recent discussions, ever spoken, except with hatred and contempt. Of the desirableness of enlightening them and elevating them, of any sense of responsibility for them or community of interest with them, we venture to say there is not to be found in their speeches or writings a single mention. And yet no intelligent man can doubt that in the peasantry, great as their

faults may be, the hopes of France for the future must rest. What of honor, of loyalty, of self-sacrifice, of patriotism, of love of home and industry, there is left in the country is to be found amongst them, and not among the crazy and unclean charlatans, loafers, and apes who make revolutions in Paris and Lyons. It was the peasants who, undrilled, and unofficered, and unorganized, faced the Prussian batteries all over France last winter, when the Parisian patriots were giving tongue in the clubs, and guzzling under the ramparts, and cursing Bismarck at long range. The peasant marched and fought, it is true often blindly, but he gave all he had to the country. George Sand says finely and truly, in speaking in a recently published diary of his share in the war: "I cannot, without pain, listen to abuse of the poor in spirit who marched to their death on the battle-field—what is worse, to their death of cold, and hunger, and misery in the snow and mud of the camps. If Jesus came back to the world, he would write with our blood on the dust of our highways, 'Verily, I say unto you, who marches with you without knowing why, is the best of you all.'"

In fact, it would be difficult to produce from history an expression of selfishness narrower or more material, more short-sighted and more devilish in its intensity, than the organization which has just perished in the flames of Paris, and we do not know anything more repulsive in its accompaniments than the apologies made for it, and the eulogies lavished on it, by the prophets and apostles of the "Religion of Humanity."

WHAT YALE COLLEGE NEEDS.

NEW HAVEN, May 20, 1871.

YALE COLLEGE has reason for gratulation in its benefactors, those of the alumni, and those—a noble band—not of the alumni. Only last year, Farnam Hall, containing 49 study-rooms and 80 bed-rooms, was erected—thanks to Henry Farnam, Esq., of New Haven. During the present year, by the liberality of Mr. B. M. C. Durfee, for a while a member of the class of 1867, Durfee Hall, containing apartments for 80 students, has been so far completed that it will be ready for occupation by next September. The late Aug. Russell Street, Esq., of the class of 1812, but a few years since endowed the Professorship of Modern Languages; S. B. Chittenden, Esq., the office of College Pastor; and an anonymous donor, in part, the professorship of History. The College has also nearly $50,000 toward a new chapel, mainly the gift of Joseph Battell, Esq., of New York. By the will of Philip Marett, Esq., of New Haven, one-fifth of his estate is devised to the College after the termination of certain life estates; and the estimated amount which will be received from this source is $120,000. Other legacies, the payment of which is dependent on the duration of one or more lives, are already vested by the death of the testators. These larger gifts amount to about $365,000; and, adding the smaller received during the twelve years past, they make a total of $440,000.

In addition, Mr. Street, but six years since, erected, upon a site on College ground, the Art Building, at an expense of $170,000—his own outlay, not that of the College—and he further endowed the department. Besides, a full salary for the Professor of Painting has been provided through the agency of Mrs. A. R. Street.

Five years ago, George Peabody, Esq., gave $150,000 to the Museum of Natural History, and land was set apart for it on the College square, the terms of the gift requiring that a site should be furnished free of cost to the museum. Again, very recently, Professor Edward E. Salisbury liberally endowed the department of philology.

Besides these, other departments of the university have, within twelve years, had large benefactions—the Sheffield Scientific School (or Sheffield College) nearly $300,000 (all from New Haven but $30,000), besides from the State the annual interest on $135,000; the Theological School, $271,000; and the public papers just now announce, though with some errors of statement, that a large endowment, with lands, for a first-class observatory, is soon to be given by O. F. Winchester, Esq., of New Haven.

But needs, not possessions, are a measure of poverty. Yale College is still poor—far beyond the knowledge of its friends. This poverty is due partly to prosperity, or the increase in the number of students; partly to the demands of the age as regards education; partly to a natural outgrowing of its old clothes, and not a little also to the cost of produce in the market. Whatever the source, it is real and reaches deep, and unless properly met by the Corporation and those who can give help, Yale College cannot keep up to its mark. Believing that the facts must be appreciated before relief can be expected, we propose to make a free exhibit of its poverty.

It is to be noted that Yale has necessarily few opulent alumni and friends in our small city of New Haven and its vicinity, and hence we have good reason for this appeal to a wider public. It is to be said about little New Haven, however, that her citizens have contributed to the different departments of the university within the past twelve years an aggregate of $900,000; and certainly the many friends of the university over the land should give at least four times the sum received from the few at New Haven. Such an amount would place all departments of the university in a good condition as regards instructors, books, buildings, scholarships, and beneficiary funds, and would not be too large for this end. The demand of the alumni, that Yale shall keep in the front rank of American institutions, if it be not followed by the required supplies, is but asking for bricks without supplying the straw.

But we seek now to mention only the *more urgent* needs of Yale College, such as are indispensable to its present life and position. They are the following:

1. *A Professor of English Language.* The age requires the establishment of such a professorship. It is desirable to divide the present chair of Rhetoric and English Literature, which, as the occupant has declared, is more than one man can properly fill, and make the new professorship that of English Language and Literature.

2. *A Professor of Physics.* Astronomy, Meteorology, Mechanics, and Physics are now represented by a single professor, and he is aided by a tutor. The professor, we understand, asks for a division of his professorship. Temporary instructors or tutors cannot well fill out what is deficient in the department of Physics—the department that has been vastly and wonderfully advanced within a few years, and demands eminently apparatus and experimental illustration. The new professor would take the place of one of the tutors.

3. *A Professor of German.* One professorship of modern languages, taking *both* the French and German, has been established. But Latin has its three instructors, and Greek three, and it is not possible that one man should satisfactorily perform the labor of teaching two modern languages to five hundred students. In fact, a second teacher has already been employed during one term of the year for an optional class, and the students required to *pay extra* for the instruction, which is a very objectionable means of eking out the system of education. A division of this chair is needed, and, if the present professor should take French, the new professorship would be that of German.

4. *A Professorship of Political Science, including Political Economy, Civil Polity, and International Law.* The duties of this professorship have been performed by the President; and on his retiring, the new chair will be demanded, since his successor cannot be expected to have his range of learning, or to perform the same amount of College duty.

5. *A Professor of Elocution.* At present the College has the services of an instructor in elocution about two months in the year. This is a very meagre allowance of time for so important a branch of education. Training in elocution should begin with the College course and end with its last exercise. Double the present outlay would suffice for a new professorship.

6. *A completion of the endowment of the Professorship of History.* This important professorship, established a few years since, has still only a half foundation.

7. *Three or four Assistant Professors,* to take the place of as many temporary instructors or tutors. The number of tutors now employed for the five hundred students is seven; and should the number of students increase, as is expected from the opening of a new régime, and thirty or forty be added to the Freshman class, two or three more tutors would be required. The accession to the faculty of a few recent graduates every year is a benefit to the College, as they are in a sense representatives in the faculty of the students, bringing with them an understanding of existing student life. But such officers remain for only one, two, or three years, often because they can get better salaries elsewhere; and to give the temporary officers any considerable portion of the instruction is obviously undesirable. It is needed that the more successful of the tutors should be raised, as may be required, to the office of Assistant Professor. This would have the effect to retain valuable instructors on the ground and prepare them for full professorships, either in this or some other col-

lege. Substituting three assistant professors for as many of the temporary officers, would require for additional salaries $500 each.

It would be still better if, at once, instead of an assistant professor, a full professor could be added to the departments of Latin and Mathematics, so as to make the number of professors two in each, as now it is in Greek. This could be done by an addition to the tutors' salaries of $1,500, or $3,000 for the two.

8. *Three additional Instructors.* The three divisions of the Junior class the present year average forty-five students each; and the four divisions of the Freshman class ordinarily contain forty students, and those of the Sophomore class but little less. The number of students in each is very much too large for satisfactory instruction by recitations, as it renders it difficult to do justice to each student and ensure a preparation for each exercise. Three additional instructors, temporary or permanent, for these classes, are therefore very desirable.

9. *New Buildings for Recitation and Lecture Rooms.* The rooms now used for these purposes are mostly too small, and, with few exceptions, are without proper ventilation. The president's lecture-room is not only no exception, but is one of the worst. The Athenæum, by a reducing of its three stories to two, and its rooms to four, has been improved, and these rooms will answer their purpose as long as the old building stands. Thirteen recitation and lecture-rooms are used at the same hour two or three times a day, and at least nine of them should be abandoned for something better: six or seven of the nine should be large enough to hold 50 students, and two or three, 200. One or two large buildings would therefore be required.

10. *A new building for Chemistry and Physics.* The old chemical laboratory still stands. Its destruction has long been desired, as it is unfit for its purpose, and poor every way, as well as a blot to the College square. Physics is also very inadequately provided for, and, with a new professor, the present arrangements would be altogether insufficient. Moreover, there should be connected with the structure a tower for a teaching astronomical observatory with a good telescope, to take the place of the present Athenæum observatory tower. Such an observatory for the instruction of students is a wholly different thing from a *working* observatory; to the latter, students should not have access except upon some special occasion.

11. *A new Chapel.* A death-warrant was years since passed on the old structure, when Mr. Battell made his generous gift toward a new one. But the amount on hand for the purpose is still insufficient. At least $35,000 more are needed. If the College had funds that could be spared to advance the interests of theological training in the university, they could not be better spent than on the chapel, as the College furnishes the larger part of the students of the Theological School.

12. *Additional funds for Beneficiary Purposes and Scholarships.* The existing funds enable the College to dispense only $8,000 toward needy students and scholarships; and, when the Ellsworth fund becomes available (to be used solely for those intending to study for the ministry), the amount will then not exceed $11,000. Harvard, we learn, is enabled to give away annually to its students $21,000. The papers have said, the past year or two, that Yale is falling behind Harvard in the number of its students. Although this is not true to the extent stated, there is in the fact just mentioned abundant reason for such a result. To put Yale on an equal footing with Harvard, which no Yale alumnus will consider too good a condition, would require an accession to the present fund of $150,000. Liberal benefactions tend greatly to bring worthy students to the College.

We now recapitulate the objects mentioned in the preceding statements, and add the amount of additional funds demanded to secure them. The salary of a professor is reckoned at $3,000 (the present rate, and about two-thirds of what he requires for a living if he has a family), and that is the interest, at six per cent., on $50,000. The average of tutors' salaries in the College is, at present, $1,350.

1. Professor of English Language and Literature	$50,000
2. Professor of Physics, to take the place of a Tutor	28,000
3. Professor of the German Language and Literature	50,000
4. Professor of Political Science	50,000
5. Professor of Elocution	25,000
6. Professor of History	25,000
7. Professor of Latin, in place of a Tutor	28,000
Professor of Mathematics, in place of a Tutor	28,000
Two Assistant Professors, in place of a Tutor	19,000
8. Three temporary instructors or Tutors	67,000
9. New buildings for recitation and lecture-room	130,000
10. A new building for Chemistry, Physics, and Astronomy	100,000
11. For the new Chapel	35,000
12. Additional beneficiary and scholarship funds	150,000
Total	$785,000

The above-mentioned needs are not the promptings of mere love of progress. Far from this; the College cannot retain its high position before the public with *no* professorship of the English languge for its five hundred undergraduates—and but one professor of the modern languages—and but one professor for the departments of astronomy, meteorology, mechanics, and physics—and also but one each for Latin and mathematics; with so large a part of its instruction devolving on temporary officers; with only two months of instruction in elocution a year; further, with no better lecture and recitation rooms; so poor accommodations for teaching chemistry, physics, and astronomy; so unsatisfactory a chapel; and with so small means for the aid of needy and deserving students.

It may be supposed that the College has some surplus funds. On this point we state that, for the current year, instead of a surplus, there will be, according to the estimates of the treasurer, *a deficit of five thousand dollars.*

The College has unproductive funds and bequests on which something will hereafter be realized. But expenses will rapidly roll up if the College flourishes and increases in number of students (as will certainly happen if optionals are further introduced into the system of instruction); so that such funds will certainly not be more than are needed to enable the institution to hold its own.

Less than forty years ago, the salaries of the professors in Yale College were only $1,140, and in 1831 the whole income from vested funds was $2,300. Even in 1854 the salaries were but $1,340. They were then raised to $1,800, which, considering prices, was better than $3,000 now. The sum of $3,000 was reached only this current year, after a period of $2,400 and $2,600. Yale College has *always* been poor; and it has made the money entrusted to it go greatly further in the way of education than the public had any right to expect. And yet the question is sometimes asked, Why has it not also lifted to prosperity the associated professional schools?—which means: why, after getting all it could by begging, and then only a half provision for its instructors and its necessities, did it (professors, president, or the corporation) not beg for enough more to lift the other sides of the institution, instead of leaving it for each faculty to lift its own side? or else, why did it not share with them its crust?

In this connection we may allude to some *university* wants that are of special interest to the College.

1. *A University Fund.* The Yale College funds now meet an annual expense of $9,000 for the library, treasurer's department, College catalogue, and some other expenditures of a strictly university character. The expenses, now so large, were but $450 in 1831. Only a small part of the funds of the College were contributed for university purposes; in fact, not a third of the sum of $150,000 represented by the $9,000 of outlay. A university fund of $100,000 would liberate from university uses money which belongs to the College proper. If, moreover, the fund could be increased to $200,000, university or post-graduate instruction might be carried forward in a manner that would more nearly meet the expectations of the alumni, now unreasonable in view of existing means.

2. *An adequate Library Fund.* The fund for the purchase of books for the University library yields annually, at the present time, only $1,800, while it should afford at least $10,000 a year, if the professors of the College are to keep up with the progress of science in their several departments. To make the income even $10,000 would require an addition to the fund of $135,000.

We might speak also of the needs of the Sheffield College, or Scientific Department—a branch of the university co-ordinate with the Academic, developed in obedience to the call for a liberal education on a scientific basis, as well as for special scientific training; and which, while going forward with great success, could make out another long list of real needs. But we leave it for others to present its claims and necessities, as well as those of the Theological, Law, and Medical departments.

JAMES D. DANA.

Correspondence.

PROHIBITION IN ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: As you have introduced the subject of prohibitory legislation, may I direct your attention to the state of opinion in England, as exibited in the discussion excited by Mr. Bruce's Licensing Bill, now before Parliament? I quote for your consideration from the London *Times* of May 4:

"The British Medical Association, through its parliamentary committee, has had under consideration Mr. Bruce's measure, and at a meeting held in its rooms, Greek Street, Soho, Dr. Ramsey in the chair, it was agreed, on the motion of Mr. Ernest Hart, seconded by Mr. Benson Baker, to petition Parliament to pass speedily into law those clauses of Mr. Bruce's Bill which provide for the regulation by the ratepayers of the number of public-houses, for the diminution of the facilities for tippling in those houses which remain, and for detecting and punishing the adulteration of alcoholic liquors."

Taking the first and last of these classes in connection, are they likely to conflict unnecessarily with the liberty of the subject? Can the most radical of political theorists object to such legislation as shall confer upon a majority of taxpayers the power to protect themselves against the directly injurious effect of the uncontrolled sale of liquor? Does not the point of adulteration come fairly within the province of the law, inasmuch as it immediately affects the physical welfare of the public? and, on that ground, is it not practicable for communities to limit and control the liquor trade without collision with any of the "first principles" of legislation?

The report quoted above closes as follows:

"The opinion was unanimously expressed that a very large part of the disease and misery among the poorer classes, calling for medical intervention, is due to the effects of drink, and that measures are imperatively called for to diminish the facilities for and temptation to tippling."

If it is permissible to regulate by law the drainage of towns, the arrangement of slaughter-houses, factories, and other establishments which are potential nuisances, why, then, may not this nuisance of drink, which, on the excellent authority of the British Medical Association, is so prolific a cause of disease, be also abated by legal means? And is not the American law in regard to adulteration in most of the States sufficiently strong and comprehensive to afford, when properly applied, a valuable defence against the difficulties arising from the common sale of liquor, and, more important still, a defence of which the tenderest political conscience need not fear to take advantage?

An American Woman.

MORAL INSANITY.

To the Editor of the Nation:

Sir: In the able criticism of Dr. Ray's work on the "Medical Jurisprudence of Insanity" which appeared in the *Nation* of May 11, with much that is true and pertinent, there is some lack of clearness. The fundamental distinction between insanity which ought, and insanity which ought not, to excuse criminal acts, is not, it seems to me, made sufficiently plain. To the cultivated reader or to the medical student, the difference between insanity which merely confuses the moral notions, and that which perverts the reason and overpowers the will, may be well marked; but the ordinary reader and the average juryman will require something more tangible—some test more easily applied. This will be found, I think, if we will consider for a moment the object of punishment.

Mill, in his "Examination of the Philosophy of Sir Wm. Hamilton," v. 2, chap. xxvi., has produced an elaborate and exhaustive argument to reconcile punishment with the necessarian theory. Incidentally, he brings out very clearly the purpose for which alone punishment is or ought to be inflicted. "If any one thinks," he says, page 294, "that there is justice in the infliction of purposeless suffering; that there is a natural affinity between the two ideas of guilt and punishment, which makes it intrinsically fitting that, wherever there has been guilt, pain should be inflicted by way of retribution, I acknowledge that I can find no argument to justify punishment inflicted on this principle." The good of the offender and the protection of society are the only grounds that will justify punishment; or, so far as our public tribunals are concerned, the latter only. If society has a right to exist, it has a right to the means necessary to its protection; and the only question pertinent to ask, when the facts of the crime and its author are established, is, Will the punishment of this offender tend to prevent a repetition of the act? If it will, let him suffer; if not, his punishment is useless cruelty. With the moral guilt or innocence of the man society has nothing to do. Its object is self-protection; its justification is the accomplishment of its purpose. The only plea is utility; the only defence, uselessness. The latter is the only just reason why lunatics are not held accountable. If punishment had any effect in restraining their crimes, it would be perfectly right to inflict it. If the opprobrium of society possessed any influence over their minds, they would deserve and receive the same measure of praise and blame that is meted out to others. It is because punishment is useless that humanity pronounces it cruel; it is because praise and blame are alike without effect, that society ceases to criticise, and contents itself with confining what it cannot otherwise control.

The only question, therefore, proper for a jury to consider in a case of insanity is, whether the certainty of punishment could influence the will. Would the knowledge or belief that immediate and certain punishment would follow the commission of a certain act tend to prevent the lunatic from doing the act? If it would, he is sufficiently sane to be held legally responsible for his conduct; if it would not, his punishment would be useless cruelty, and he should merely be placed beyond the power of further injury. S.

Dayton, O., May 17.

VERONESE OR RUNAWAYS.

To the Editor of the Nation:

Sir: I was much struck with your correspondent's proposed reading of *Veronese* for *runaways*, in the famous passage of "Romeo and Juliet," which he aptly describes as "that stumbling-block of the commentators." The suggestion is, at least, very ingenious and very plausible. I am not sure but it is something better than that. Still, I am quite confident that *runaways* is Shakespeare's true word, though I am far from satisfied with any of the explanations of it that I remember to have seen. Permit me to offer another.

I must note, in the first place, that the language involves the figure of speech which used to be called *Prolepsis*. It is upon this, I think, that the difficulty has mainly turned which editors have found in the passage. Shakespeare has the same figure repeatedly, though not always in the same form, as in this instance. Thus, in "Macbeth," act i. scene 6: "The air nimbly and sweetly recommends itself unto our gentle senses;" that is, the air *sweetens* our senses *into gentleness*, or *makes* them gentle, by its purity and pleasantness. So, again, in act iii. scene 4: "Ere humane statute purg'd the gentle weal;" which means, apparently, ere humane statutes *made* the commonwealth gentle by purging or cleansing it from the wrongs and pollutions of barbarism. Also, in act v. scene 4: "Let our just censures attend the true event;" meaning, no doubt, let our judgments wait for the actual result, the issue of the contest, *in order that they may be* just.

Now for the particular case in hand. Here the first question is, What does *runaway* refer to? the word being so general and indefinite that its special meaning, if it has any, is to be gathered from the context. I am satisfied that it is used as a descriptive epithet of Phœbus, the sun, or day. Juliet has just been urging the "fiery-footed steeds" of day to hasten towards their master's *lodging*, and give "cloudy night" possession of the world. She now proceeds to repeat the same thought in language and imagery still more intense. And she addresses night as the mistress and keeper of the bed where nimble-footed day is to sleep, that, in the silence and darkness of his sleep, Romeo may come to her "untalked-of and unseen." The verb to *wink* was often used thus for to *sleep*. Juliet *wishes* day to speed his course with fiery haste; and therefore she calls him *runaway*. In other words, she longs to have him play the runaway, and for this cause she would have night prepare his couch at once, that so his prying eyes and babbling tongue may be quickly bound up in sleep.

The poet elsewhere has a like use of *runaway*. Thus, in "The Merchant of Venice," act ii. scene 6, where the nocturnal theft and elopement of Jessica take place, Lorenzo urges her to make haste, because "the close night doth play the *runaway*." The difference of the two cases is that Lorenzo *fears* the night will run away too fast for his purpose, while Juliet is impatient to have day rush off into the arms of night forthwith. But this does not touch either the sense or the aptness of the image. I must add that only the first four lines of the speech are found in the copy of 1597. And it is a noteworthy point that, in the enlarged text, the poet changed *mansion* to *lodging*, as if on purpose to make that part of the speech cohere more semblably with the added imagery. "Phœbus' *lodging*" suits better with the idea of day's *sleeping-place;* all which, I think, accords smoothly with the explanation here given.

H. N. Hudson.

Boston.

Notes.

A new map of Jerusalem, 27x38, folded to book size, from the ordnance survey made under the direction of Col. Sir Henry James, R.E., and with over eighty references to historic localities, will be published by Messrs. A. D. F. Randolph & Co., of this city. They also announce "Aunt Jane's

Hero," by the author of "Stepping Heavenward;" "Belle Lovell," a tale for grown-up girls; a new edition of Mr. Da Costa's interesting "Guide to Lake George," and a handy edition of the same author's "Mount Desert," both well illustrated.——Messrs. Pott & Amery announce: "The Purchas Judgment," a letter of acknowledgment to the Rt. Hon. Sir J. T. Coleridge, by H. P. Liddon, D.D.; with a letter to the writer by the Rev. Dr. Pusey.

—No one can doubt the convenience of such a combination of dictionaries as is "Zell's Popular Encyclopædia," just completed in two volumes; but it would be too much to expect any one of its parts to be equal to the special work condensed in it—equal in fulness or in accuracy. The biographical portion, for example, could not be justly compared with the admirable dictionary of Dr. Thomas (also published in Philadelphia), of which, by the way, the mechanical execution is much superior to that of "Zell's Encyclopædia." One could not consult the latter with the same degree of confidence as the former, and not only because in the one case the editor has been tested by previous work, but because the greater the extent of field embraced the less possible is it for one man or corps of men to make a dictionary which shall be thorough and trustworthy in every particular. All works of reference, however, have a usefulness despite their liability to error. They serve, perhaps, as often to rub up and confirm old knowledge as to impart new; and for this purpose it is no little economy to have substituted two for twenty volumes, more or less. Used in this sense, and not as a final authority, "Zell's Encyclopædia" will not disappoint the purchaser. It has a merit which comes of being the last publication of the kind—that is, freshness; though it is a little noticeable that while the surrender at Sedan is mentioned in its proper place, and Thiers's barren mission to the European courts after that overthrow is also recorded, neither in the latter article nor under *Versailles* is any allusion made to the siege of Paris. But that is readily accounted for. There are copious illustrations which, oftener than not, were worth inserting; and the catch-words are easy to be seen on the printed page. Substantially bound, the two volumes occupy less than twice the room of Webster or of Worcester, or of Lippincott's Gazetteer; and of course far less than the New American Cyclopædia. The work may not be found superfluous in libraries already furnished with all of these.

—We shall be glad to see the Illinois Legislature, when it meets in November, pass a bill which was read once at the recent session, and is not calculated to excite opposition. This was House Bill No. 563, authorizing cities to establish and maintain free public libraries and reading rooms. It was made applicable to each incorporated city, and seems to have been carefully drawn to ensure a faithful and prudent execution of its trusts. It agrees in scope with the Free Public Libraries Act of England. It requires any city council, that shall have decided to establish a free public library and reading-room, to appoint a board of nine directors, "chosen from the citizens at large, with reference to their fitness for such office," only one of whom may be a member of the council, and of whom a third shall go out of office each year. This seems to us a case in which a popular election by the Hare system, or some other, of contingent representation naturally suggests itself; and as Illinois has been foremost in adopting this experiment, it would be well to seize every opportunity of putting it to the test. We are persuaded that it will never be extensively introduced into our politics until after its merits have been proved in elections with which politics have, or should have, nothing to do.

—Few countries, if any, offer better opportunities of applying and developing the science of hydrology than the United States. The Bonnet Carre crevasse on the Mississippi is an illustration of the neglect which this science has received; and it is safe to say that its professors are very far from being either so numerous or so skilled as the country needs to guard the land against encroachments and overflow, to drain its swamps and irrigate its plains, keep its rivers navigable, connect neighboring water-systems by canals, and in general to foster a public sense of the importance of this branch of physical economy. On all these subjects we may learn something from the Italian engineers, one of whom, Elia Lombardini, distinguished for his writings and long experience, having been for twenty years engaged upon the most variable arm of the river Po, has published a very thorough treatise with this title: "Guide to the Study of Fluvial Hydrology and Practical Hydraulics" (Milan). Besides the topics enumerated above, this work embraces the water-supply of cities, sewage and the utilization of it, and water-power as applied to machinery. Its examples are drawn from all parts of the world.

—Italy can teach us also in regard to the silk culture, an industry which seems destined to a great extension on the Pacific coast, with the aid of our brethren from Japan. Italian periodicals devoted to this specialty are already numerous. We may name the *Industria serica* of Turin, the *Rivista settimanale di Bachicultura*, and the *Sericultura Austriaca* of Goritz. To these is now added the *Selezione Microscopica*, a quarterly review, devoted, as the title indicates, to the microscopic examination of the eggs of the silk-worm, in quest of parasites. The first number appeared last month in Milan.

—No. 30 of the Journal of the Geographical Society of Berlin closes the fifth volume of this valuable publication. It is more than twice the size of the ordinary issue, and is divided in its contents between a review of the progress of the geographical sciences since 1867, and a classified list of geographical works (including articles in periodicals, as well as maps and plans) published during the year ending November 30, 1870. The latter embraces not far from 2,000 titles; of which 44 relate to the Suez Canal, and are mostly of separate works, and 118 are of maps of France and of the seat of war. The review of progress is by many hands, and covers not only travels and discoveries, but the advances in zoölogy, botany, geognosy, and physical geography, and devotes a chapter to the volcanic phenomena of 1868 and 1869. Nowhere else, probably, could one obtain such compendious information on the latest contributions to our knowledge of the earth and its creatures. No. 31 of the same journal gives a full and official account of the second German expedition to the North Pole, but the map to accompany it will be found in No. 32. Statistics of Sweden, given on p. 89, from the census of December 31, 1869, show a decrease of population, in the course of twelve months, amounting to more than 14,000. But this is a gain when compared with the census of 1868, which showed a falling-off of nearly 23,000. We observe that on the opposite page, in a note on the population of Cuba, on the authority of the *Revue des Cours Scientifiques*, Port-au-Prince is referred to as "the second city of importance on the island"—a curious error to meet with in this journal.

— An influential German magazine, the *Grenzboten*, whose editor, the son of the celebrated Robert Blum, is tolerably notorious for his political eccentricities, proposes the following efficacious mode of punishing the Swiss people for their open sympathy with France in the late war:

"The flourishing city of Zurich possesses two famous scientific institutions, a university and a polytechnic school. The greater part of the professors are of course Germans, and a professorship at Zurich is now considered by German scientists as a very desirable position. But Germany has just acquired two new territories, Alsace and Lorraine, for whose intellectual improvement she is bound to provide, in order to counteract effectively the consequences of the prevailing ignorance and French levity. Alsace has a prosperous industry, whose largest customer has hitherto been the French capital. This province already possesses a university, and it would be very appropriate to found at Strasburg a polytechnic institute, richly endowed, which would soon render Alsatian enterprise wholly independent of neighboring France. The best plan to obtain world-renowned teachers for the new institution would be to call thither such men as Culmann and Zeuner, with the other celebrated Zurich professors. Formerly Aix-la-Chapelle and Munich made exertions to secure these two men, and no doubt they would now gladly return to the Germanic Empire, their situations in Switzerland having become too precarious on account of the permanent and active hostility to German nationality. By this peaceful conquest, Germany would at the same time create elements of incontestable superiority for the new institution, and bestow a well-deserved reward on the French sympathies of the Swiss nation."

This advice, considered merely in the light of expediency, can hardly be judged sound, for several reasons. One is, that a polytechnic school at Strasburg would seriously impair the *German* polytechnic school at Karlsruhe, close by; while another and fatal objection is, that if this plan were carried out, since Germany abounds in technologists and scientists as competent as those now teaching in Zurich, and lacking only a position to become as distinguished, the Swiss Federal Council would have not the slightest trouble in supplying the places of the seceders.

—"Science has acted a great and terrible part in the defeats which we have just undergone. The discoveries of Ampère, the works of our military engineers have been cruelly used against us; and even the liberal organization of the German universities has been placed at the service of the hateful passions directed against us. Hence it is said on all sides, and rightly, that it is by science that we have been vanquished." This rather childish utterance of M. Henri St. Clair Deville's, at the sitting of the Paris Academy of Science of March 6, introduced a motion that the Academy should "enlarge the circle of its communications and deliberations, and bring into them all questions of scientific instruction of whatever order and of whatever origin." The earnest debate which followed

was in favor of a radical reform in French education, both higher and lower. There was unanimous complaint of the evils which government regulation and interference had wrought in all branches of public instruction. M. Deville said, pithily: "The university, as now organized, would lead us to absolute ignorance. The professor is nothing; the administration everything." M. Dumas likewise declared: "It is *centralization* applied to the university that, by general consent, has killed the higher teaching." Gen. Morin said:

"When I travelled in Germany in 1864, I found there twenty polytechnic institutes, whose studies were of as high a grade as those of our Polytechnic School. In France, for thirty-four millions of people, we have the Polytechnic School and its branches, and the École Centrale—one school of science to sixteen millions of people. In Germany, they have one to every five millions; and every institute has its special classes of engineers, of architects, of industrial chemists, etc. How can we compare our institutions with this powerful scientific organization?"

M. Chasles complained that his was the only chair of the higher geometry in France. "In Germany, even in Italy, this science is cultivated with increasing success. We are still to-day where we were in 1813."

"For eighty years," further remarked M. Deville, whose motion was finally referred to a secret session, "in order to speak of public education, it has been necessary to be a minister, a delegate, or a chief of bureau. Well, the Academy should put an end to these ways, and should say distinctly: Here is the true method; see how they have succeeded in Germany, in England. Let us shake off the yoke, and know how to borrow from others what constitutes their strength and their superiority."

COUNT RUMFORD.*

The Americans who chanced to be in Paris during the last winter of the First Empire had all of them, probably, their attention attracted to a sight which arrested that of Frenchmen, natives to the Boulevards, themselves, even at that anxious crisis of their fate. It was a chariot, with emblazoned arms upon its panels, of the style of the time, with the exception of its wheels, which were broad as six of the delicate attachments on which the fashionable equipages of the metropolis rattled over those famous pavements. Within the carriage might have been seen its master, a man past middle age, or, "by'r lady, inclining to threescore," who was dressed entirely in white, even to his hat, who seemed unconscious or regardless of the laughter which his equipage and his attire provoked among the busy idlers of the *pavé*. It was then as now, or before the present calamities, a strange thing that could excite the notice of those thronging multitudes, even when set off by a spice of ridicule; but this eccentric phenomenon never failed of observation and of passing comment. An American who should have asked who the personage might be that was thus observed of those observers, would have learned that it was, perhaps, the one of his countrymen who enjoyed the widest European reputation, not excepting, during his lifetime, that of Franklin and Washington themselves. His fame has paled before theirs, through the lapse of six-and-fifty years, but as long as he lived, Count Rumford—for he it was—was the best known of his race to the greatest number of Europeans. And even yet he holds a high place in the estimation of the world of science, though he has passed away in a great measure out of the popular memory.

Sir Benjamin Thompson, Knt., Count of the Holy Roman Empire, Knight of the Orders of the White Eagle and of St. Stanislaus, Fellow of the Royal Society, and Member of the French Institute, and of almost every learned body in Europe and America, was drawing towards the close of his brilliant and beneficent career at the time just mentioned. His latter days were, unhappily, not his best days. A philosopher himself, he had married *en secondes noces* the widow of the illustrious philosopher Lavoisier, to whom the sanguinary Committee of Safety refused the few days' respite from the guillotine which he asked only for the completion of a chemical experiment. But though his bride brought him mature beauty and talent, and a large fortune, she did not bring with these gifts the happiness he had hoped from them, and he had parted from her several years before. His health was broken, and his temper soured, and his manners had lost the grace, and his conversation the charm, as well as his person the beauty, which had made him for years the chosen companion of nobles and philosophers, the friend of princes, the admired of men, and the loved of ladies. He lived at Auteuil very much the life of a hermit, in the house where Franklin used to visit Madame Helvetius, between whom and him the gossips of the period had made a match, and where, a couple of years ago, Pierre Bonaparte murdered Victor Noir—a crime not without its influence on the downfall of the Second Empire. There he lived, amusing himself with his studies and his flowers, varied by the innocent and not too exciting diversion of playing billiards against himself. His daughter, of whom presently, afforded him some society towards the end of his career, which terminated in August, 1814, after a short illness. He was buried at Auteuil, where a simple monument marks the spot, which the piety of his countrymen has kept in good condition and repair.

The career of Count Rumford, which had this melancholy ending, was a singularly romantic one, marked by striking contrasts of condition, diversified by many adventures, and crowned with much success and many honors, well earned by substantial services to mankind. Born in a New England farm-house, at Woburn, near Boston, and with only the education of a yeoman's son, excepting such as he gave himself, he found himself at six-and-twenty a Fellow of the Royal Society, and at twenty-seven an Under-Secretary of State, and a welcome guest in fashionable and learned circles. At twenty-eight he was a full colonel in the British army; and at thirty was knighted by George III. His political and military promotions he owed to his services against his country in her war for independence, and, had his public life ended at that point, he would have merited no admiration from his countrymen, and no more from the side he served than is usually the lot of tools that have failed to do the work expected of them. Justly, or unjustly, he had excited the suspicions of his patriotic neighbors at home, and failed to obtain a commission from Washington, and so he remained loyal to the king, and was rewarded for the intelligence and advice he could give with the advancement and distinctions just described. His only actual military service, though he afterwards held high rank on the Continent, was directed against his countrymen, and with sufficient success to recommend him to notice and promotion. All this naturally made him an object of contempt and execration in his native land at the time, and it was no mean proof of the value of his later services to mankind that these sentiments were changed in the breasts of his countrymen to feelings of respect and admiration, which led them to excuse and forget, if they could not fully pardon, his sins against them.

After the peace of 1783, Sir Benjamin Thompson obtained the royal permission to take service with the reigning Elector of Bavaria, whose discernment had marked his eminent qualities at a short visit made to the court of Munich just before. He was given high military rank, in which capacity he introduced most material reforms into the service, making the private an industrious husbandman and artisan, without diminishing his efficiency as a soldier. He also extended his reforms into civil life, absolutely abolishing for the time and for long afterwards the beggary by which the heart of Bavarian industry was eaten out, providing humanely for the really impotent, while compelling the able-bodied to earn the bread they ate, and his measures combined kindness with energy in such wise proportions that these very vagabonds whom he had robbed of their lazy leisure made processions and offered up prayers for his recovery at a time when he was dangerously ill. Whoever has been at Munich will remember the beautiful park, called the English Garden, which the magic of his taste and skill conjured out of a hopeless desert of swamps and ragged woodland. Lately, the King of Bavaria has gratefully erected a statue to its creator, in a conspicuous part of the grounds. In the autumn of 1796, when Bavaria was likely to be destroyed between the French on the one hand, and the Austrians on the other, Count Rumford, to whom the Elector had delegated absolute powers, by his spirited action and skilful preparation saved the electorate from being overrun for the time, and postponed its fate for a season. Six years before this, in 1790, the Elector, as vicar of the empire during the *inter imperium* between the death of Joseph II. and the election of Leopold II., raised his favorite minister to the rank of a count of the empire. Upon this elevation Sir Benjamin Thompson chose the name of Rumford, now Concord, N. H., as the style of his new dignity, deriving it from the town to which he traced the first beginnings of his success in life.

It was there that he married at nineteen, in 1772, a rich wife—as riches were then esteemed—the widow of Colonel Rolfe, fourteen years older than himself. It was through this connection that he obtained an introduction to Governor Wentworth of New Hampshire, Governor Gage at Boston, and the Tory society of the day, which comprised much of the wealth and the cultivation of the period. Whether young Thompson was won over by the fascination of this society to the Royal side, or whether

* "Memoir of Sir Benjamin Thompson, Count Rumford. With Notices of his Daughter. By George E. Ellis." Boston: 1871. Published by the American Academy of Arts and Sciences, and to be had at their rooms, Athenæum Building, Beacon Street, and of Messrs. Little & Brown, Boston, and Messrs. Claxton, Remsen & Haffelfinger, Philadelphia.

the envy excited by his sudden elevation provoked unfounded suspicions to that effect, we cannot affirm. But he was driven from Concord by a mob, arrested and tried at Woburn, and, though acquitted, had the cold shoulder turned to him at Cambridge by the military authorities, and so shook off the dust of his feet against his country and proceeded to England, where he received the countenance and advancement of which we have spoken. He never returned to America, nor saw his wife again, who lived out her days at Concord and there died in 1792. They had one daughter, the Countess Sarah, who lived down to 1851, and is yet remembered about Boston as a stately old lady of foreign air and manner, acquired by long residence in Europe. We would say in passing that her portrait in the work of Dr. Ellis, to which we shall presently come, gives no just idea of her looks, as we remember her. She was the companion of her father in London, Munich, and Paris for several years at different times, and resided much abroad after his death. A very entertaining portion of Dr. Ellis's Life of the Count consists of large extracts from a narrative written in her old age, for the amusement of a friend, by the Countess Sarah, of her personal adventures and of court life and morals at Munich, as seen by a young American girl, whose life had been spent mainly at Concord and Woburn.

The mind of Count Rumford had a natural turn for science and an acquired bent for applying it to the practical uses and daily necessities of life. While in the service of the Elector, as we have seen, he brought scientific training to the solution of the problems of mendicity and pauperism with remarkable success. His earlier attempts had been in the direction of the improvement of artillery; but he turned his later attention to inventions for the comfort and happiness instead of the destruction of mankind. The economizing of heat in the warming of houses and the cooking of food, the curing of smoky chimneys, the construction of grates and fireplaces, improvements in cooking utensils, were among the many forms which his inventive benevolence took, and which really made revolutions in these domestic provinces, many of the benefits of which we still enjoy, often without knowing it. Heat and light, in the sense of lighting and heating, mainly were the objects of his study and experiment. And it was his success in the particulars of which we have spoken that gave him his great popular European reputation during his life. But while thus engaged in the investigation of these great elements of human existence, and especially of heat, for these domestic ends, he was led to discoveries which placed him in the first rank of scientific discoverers and made his name immortal. Into these, of course, we cannot enter at large. It is enough to say that his experiments overthrew the doctrine as to the nature of heat which had prevailed from the days of Aristotle and re-established it on the true basis from which all subsequent advances of science in that direction have proceeded, and without which they could never have been attempted. He first discovered and announced the truths which are known as the conservation and correlation of forces. Thus philanthropy conducted him to the heights of philosophy, and by aiming to be useful, he became illustrious.

In the year 1798, the elector appointed Count Rumford his Minister to St. James's, but George III. refused to receive him, on the ground that he was still his subject, and, as such, could not represent a foreign prince. He was deeply mortified at this repulse, but occupied himself in a much more important and durable service to England and the world, by organizing the Royal Institution for the Diffusion of Science and Useful Knowledge, and the Encouragement of Useful Inventions and Improvements. This institution has been of great benefit to science and its application to the arts of life, and if it had only been for the services of Davy—whom Rumford first discovered—and of Faraday, of which it was the scene, it would have amply justified the sagacity of its founder, even were it not still in full and beneficent operation. Earlier than this he had established a fund for the Rumford medals, to be awarded by the president and council of the Royal Society to the authors of the most useful discoveries as to light and heat. He also made what amends he could to his own country for his shortcomings towards her, by instituting a similar reward for the same services to mankind on this side, entrusted to the charge of the American Academy of Arts and Sciences, of which the seat is at Boston. He also made Harvard University his residuary legatee, for the purpose of founding a professorship to teach the application of science to the arts of life. This chair has been filled by men of the highest eminence from the time it was established to this day, and has abundantly answered the wise purposes of its founder.

It is to the foundation of the Rumford medals, of which the American Academy was entrusted with the dispensation, that we owe the valuable work which is the text of this discourse. The Academy have thought it due to Count Rumford that his works, all of which were out of print, and some of them almost impossible to be obtained, should be republished as the most fitting monument to his memory. Of this collection, the first volume has been printed. Besides this, it was thought right that a memoir of his life should be prepared, which has been done with great care, industry, and skill by the Rev. Dr. George E. Ellis. It is absolutely exhaustive, and leaves nothing for any future biographer to do. A biographer could not wish for a life of more striking contrasts and varieties, of more curious adventures and more useful service to relate, and Dr. Ellis has done it excellent justice. It is one of the finest specimens of printing the American press has ever produced, and is profusely and elegantly illustrated. The great pains and long labor which this elaborate work must have cost has been freely bestowed, and generously offered as a gift to the Academy, and to the memory of Count Rumford, by the author. It is an honorable contribution to the biographical literature of the country and the language, and well merits a place in public and private libraries.

LAWYER AND CLIENT.*

This little volume is made up of a lecture delivered before the Law School of the University of the City of New York, with some additions. The lecture excited a good deal of attention from the public, owing, in part, to the fact that, at the time of its delivery, the questions which it treats had been brought before the world in a tangible shape by the controversies arising out of the Erie litigation. Mr. Butler accounts for the hostility to the profession which has for so many ages shown itself in literature, the most respectable as well as the catchpenny, by the fact that the worst lawyers have been popularly taken as representatives of the whole profession (though this is an explanation which itself requires to be explained), and by the fact that lawyers, in conducting litigation, are constantly and necessarily compelling men to do what they would rather not do—pay debts they would like to evade, or fulfil contracts they would like to break. This seems to us also inadequate. Every lawyer who makes a debtor his enemy renders a service to a creditor—and indeed, it would seem as if no matter how many enemies the profession may at any time have in its front, it must have a corresponding number of friends behind it. The true reason of the prevailing and ancient hostility to lawyers we take to be the badness of the procedure, in all countries and all ages; or, in other words, the enormous difficulty and cost of getting justice done under all judicial systems. Bad lawyers have always been able to avail themselves of this to indulge in chicane; while the very best lawyers are unable to bring their clients through even a successful suit without long delays, much vexation, much apparent sacrifice of substance to form, and, above all, without great expense. The most intelligent client, too, is not able entirely to dissociate in his memory the lawyer from the machinery he assists in working, and no man probably who has ever gone to law has ever ceased to think of attorneys without more or less dread or bitterness, whether he won or lost his cause. Whether it is possible to make justice—genuine justice—cheap and speedy, is a large question, which we do not need to discuss here. The fact is, that thus far the race has never been treated to anything of the kind, and this alone will account for the popular hostility to the profession, and for the sorry figure it cuts in literature, and especially in English literature.

Mr. Butler's summing up of the rules which should govern practice at the bar is very clear and simple, and almost unimpeachable. A lawyer must be faithful to his client in all ways—that is, must in all cases tell him the truth plainly, as well as defend his interests zealously; he must not be a promoter of litigation either directly or indirectly; he must dissuade his client from going to law when he thinks he has no case; he must not aid him in doing an illegal act, in such manner as to evade the law or escape its consequences; he must "not make himself an accessory before the fact to crime or injustice;" the character of his client need not concern him, as a general rule, but Mr. Butler says, very properly, and he might have said it more strongly, that as lawyers do pick and choose among the cases offered them, either for the gratification of their own taste or for their own convenience—most of them, for instance, refusing criminal cases altogether—it is not too much for us to ask of lawyers to refuse to take up the cause of "parties so notoriously in league against the general interests of society as to make them common enemies." The lawyer has nothing to do, also, as a general rule, with the justice of his cause—that is the affair of the judge; but he must not be a cheat in the client's inter-

* "Lawyer and Client. Their Relation, Rights, and Duties. By William Allen Butler." New York: D. Appleton & Co. 1871.

est in court, or do anything else which the client might not lawfully do for himself. We wish Mr. Butler had, on this point, indulged in a little practical application. Is it, for instance, right for a lawyer to apply for the appointment of a man of notoriously bad character as receiver of a valuable piece of property, such as a railroad, even if the judge be willing to make it?

The question, To whom are lawyers responsible for the manner in which they practise their profession? is perhaps the only one which Mr. Butler does not deal with satisfactorily. They are responsible, he says, first of all to the courts before which they practise, but this check is of very little value, especially when the judiciary is elective. No matter how bad a lawyer is, the judge has, with reference to most species of misconduct, to wait till somebody arraigns the offender, and then the necessity of not making enemies is so constantly present to the mind of an elected judge that he is likely to be an indifferent disciplinarian. Secondly, the lawyer is responsible to public opinion; but public opinion "can only properly and finally pronounce upon what is undisputed, or established beyond any reasonable doubt, and accepted by common consent as a notorious fact." Further on, he says "that the public cannot proceed to judgment as long as the merits of the case are entangled in the meshes of a newspaper controversy." This is all rather too vague to be of much practical value. When is public opinion to know when a thing is "undisputed"? What is there in the shape of a charge against a member of the bar which the accused and a certain number of his friends will not always dispute? Here, for instance, during the past week, comes Mr. George Ticknor Curtis, and disputes the proposition that James Fisk, jr., is an improper person to be appointed, on motion of counsel, by a judge sitting in equity, receiver of the property of a great corporation. The same learned gentleman holds his hands up in horror over the popular belief that Mr. Justice Barnard is corrupt, and half-a-dozen newspapers concur with him. Is this "disputing" sufficient to cause honest men to hold their peace? Again, what is "reasonable doubt"? Who is to decide whether it exists? What is "common consent"? What is a "notorious fact"? What are "the meshes of a newspaper controversy"? If I say in a newspaper that James Fisk is a notorious rogue, and give divers reasons for so considering him, and James Fisk comes and says that he is not, and that I am a liar, is this a "newspaper controversy," and is the public to go about its business, and refuse to decide between us?

The lawyer's responsibility to his own conscience must of course, as Mr. Butler says, be the main check on misconduct, and the quality of a lawyer's conscience will always depend largely on the moral condition of the community in which he lives. Every man, therefore, who is just and fair in his dealings, and hates rogues, though he only sells pins and needles, helps to purify the law.

GUIZOT'S HISTORY OF FRANCE.*

ALTHOUGH the publication of "Guizot's History of France" was suspended when the siege of Paris commenced, still the period already reached —the reign of Charlemagne—is so distinct and important an epoch, that a very few pages more would give the work a certain completeness and unity, even if it never went any further. That is to say, it covers the early history of the territory of France, and that period of barbarian rule which was, in the true sense of the term, neither French nor German, but *Frankish*—or, it might be said, it was in an equal degree French and German. The author's expressions in regard to this empire are a little vague and inconsistent. He frequently uses the term "Gallo-Franco-Germanic monarchy," which is correct enough, even if a little clumsy. Generally, however, he says out-and-out "France" and "French"—the inaccuracy of which expressions, one would suppose, would have shown itself at once when he came to speak of general assemblies of the Franks at Worms and Paderborn, towns which are thoroughly German.

This history is "*racontée pour la jeunesse*"; but it must not be understood that the "rising generation" addressed by M. Guizot is that for which Scott, Dickens, and Hawthorne, or even Mr. Freeman, have written: he seems rather to have had in mind young people of some maturity. Even at this, however, we see no reason why it should have been addressed especially to the young, inasmuch as it is by no means peculiarly suited to them. For its kind, it cannot be pronounced a success. It is in great part philosophical and discursive; and even where it is merely narrative, it is not an easy, clearly-told story, but is heavy, confused, and full of digressions. Almost the only pieces of really good narration are the translations from Gregory of Tours, Frédégaire, and Eginhart. Even for the most mature and intelligent readers, who did not have a previous knowledge of leading events and relations, there are unaccountable omissions; as, for instance, we are nowhere told what became of the Visigoths after the wars of Clovis, nor what were the relations of the Lombards to the Exarchate which led to their dissensions with the Papal See, and through this to the intervention of the Franks in Italy. Again, too much is sometimes attempted. In the confused Merovingian period, for instance, there is a succession of brief stories, from which the reader would get nothing but an incoherent and lifeless impression. It would have been much better to have selected only one story, and told it with great minuteness; for, as the author remarks, the names and dates here are of no manner of importance in themselves, and all that is wanted is a vivid and accurate picture.

These are serious defects in a book written for the young. Of course the merits of the work are as great and manifest as its defects. It is something to have the history of a nation written by an historical authority of the rank of M. Guizot, for it embodies the results of the studies of his entire life. If the book is not very well adapted to give young people their first knowledge of French history, it cannot fail, on the other hand, to instruct those who already have some knowledge of that history. If it does not contain vivid pictures and animated narration, it abounds in just observations, and in the clear delineation of character and motives.

The translation is good, so far as idiom is concerned—the rock upon which translators from the French most commonly split. It is, however, neither perspicuous nor graceful, nor always elegant. Thus, p. 174, the Thuringians, Saxons, etc., are said to have been "frequently vanquished and subdued [by the Franks] to all appearance, but always ready to rise either for the recovery of their independence, or, again, under the pressure of that grand movement which, in the third century, had determined the general invasion by the barbarians of the Roman empire." Page 85: "Domitian alone [of the Flavian emperors] put in a short appearance," *i.e.*, visited Gaul. Page 218, at Roncesvalles, the Basques "descend and fall suddenly on the baggage-train and on the troops of the rear-guard, whose duty it was to cover all in their front, and precipitate them to the bottom of the valley"! There are also a good many single words, especially proper names, mistranslated. Thus, if the name *Placentia* is to be translated at all, it should be (in the English edition) into the Italian name *Piacenza*, not the French *Plaisance*. So with *Vercell* for *Vercellæ*. *J. Vindex* is no correct abbreviation of *Julius Vindex; Scylla* is neither the Latin *Sulla* nor its English form *Sylla*. *Frisons* is the French name of the Frisians. Perhaps it is excusable to use the French names of Mentz and Aachen—*Mayence* and *Aix-la-Chapelle*; but what excuse is there for *Ratisbonne?* We do not like the word *peoplet*, used incessantly for *peuplade*. Nero's "Golden House" is called a "palace of gold."

In the author's own work, we are surprised that he should lay down as an unquestioned fact that the Umbrians were of Celtic race, while all authorities upon the linguistics of Ancient Italy are agreed as to the essential unity of race of the Umbrians, Sabellians, and Latins. It is true that there are some arguments on linguistic grounds for inferring a near relationship of *all these* to the Celts, and that one or two ancient writers obscurely assign a Celtic origin to the Umbrians in particular; but even assuming that this gave the weight of probability to this theory, it is far from giving it the certainty that so categorical a statement ought to have. Again, the dates are curiously confused. At first, they are given *Before Christ*, and then, without any intimation of a change, the founding of the city Rome is taken as the standard; and then again the years after Christ.

The book is very handsomely printed, and illustrated with fine engravings; we do not believe, however, that it will be possible to get the entire work into twenty-four parts, judging from the ground covered by those already published.

Essays on Natural History.—By Charles Waterton. Edited, with a Life of the Author, by Norman Moore, B.A. With portrait and illustrations. (London: Frederick Warne & Co. New York: Scribner, Welford & Co.)—This plump volume, besides upwards of sixty essays on various topics of natural history, contains in the Life the larger part of the autobiography which Waterton prefixed to his Essays in the editions of 1837,

* "The History of France from the earliest times to the year 1789. Related for the rising generation by M. Guizot, author of 'The History of Civilization in Europe,' etc., etc. Translated from the French by Robert Black, M.A., etc. To be completed in about twenty-four monthly parts, each of which will be illustrated by at least four very beautiful full-page woodcuts, and many smaller ones, after designs by A. de Neuville." London: Sampson Low, Son & Marston. 1870. 3½ parts, 8vo, pp. 224.

and 1857; and as it also offers in the appendix a number of private letters hitherto unpublished, the reader is enabled to get a very just idea of the singular and pleasing character of the famous "Wanderer," whose alligator ride is his smallest title to immortality. Waterton's style, with its thick interlarding of quotations from the Latin poets, its familiarity of tone, and conversational discursiveness, was as different from that now used by the most popular scientific teachers, as his Catholic faith in miracles from the common notion of a truly scientific spirit. "I here state," he says, of a special reason for visiting Naples, "in the most unqualified manner, my firm conviction that the liquefaction of the blood of St. Januarius is miraculous beyond the shadow of a doubt. Were I to conceal this my conviction from the public eye, I should question the soundness of both my head and heart, and charge my pen with arrant cowardice. Nothing in the whole course of my life has struck me so forcibly as this occurrence." At Loretto, he says of the Santa Casa, the pretended house of the Virgin Mary in Nazareth: "There are authentic proofs of its miraculous transition; but the belief of it is optional with every Catholic, as the Church has pronounced nothing on the subject. . . . I believe in the miracle." So a medal of the Blessed Virgin worn about his neck saved him from drowning at Dover, and a consultation with a bone-setter, who afterwards restored his stiffened arm, providentially took place on "Lady-day," or March 25.

A mind thus subject to superstition was naturally strongly opposed to that tendency of modern science represented by Darwinism; and, at a time when comparative zoölogists are endeavoring to ascertain which ape is the nearest ancestor of man, this sentence from the essay on the gorilla seems to jangle out of tune: "In habits and propensities, they [the apes of Borneo and of Western Africa] perfectly agree. In anatomy they differ somewhat; but this difference can only interest those who find gratification in splitting a hair, and in producing words hard enough to set one's teeth on an edge." In fact, Waterton's statement (not to call it boast, for he was truly modest, though very combative) that he had dissected great numbers of other animals, and more than 5,000 birds, will not secure for him the reputation of a great anatomist. As an observer, he may be credited in all he professes to have seen, but his disputes with other naturalists show that he gave far too much weight to his non-experience in convicting his adversaries of invention and falsehood. With this caution, it is true, as the editor remarks, that "most of the essays might be read with profit, even in village schools. They would open the eyes of the children to the treasures of the fields, and would teach them humanity to bird, beast, and reptile."

Humanity was, indeed, a distinguishing trait of the gentle and hospitable old man, and we shall quote here two instances of it—to beasts and men—which leave a fragrant memory of the writer:

"I had long looked for the arrival of the day in which the Roman beasts of burden receive a public benediction. Notwithstanding the ridicule thrown upon this annual ceremony by many a thoughtless and censorious traveller, I had figured in my own mind a ceremony holy in itself and of no small importance to the people at large. '*Benedicite omnes bestias et pecora, Domine.*' I conceived that the blessing would ensure to these poor dumb animals a better treatment at the hands of man than they might otherwise receive; and the calling upon our kind Creator to give his benediction to a horse, which by one false step or an unruly movement might endanger the life of its rider, appeared to me an act replete with Christian prudence. I recalled to my mind the incessant and horrible curses which our village urchins vent against their hauling horses on the banks of the Barnsley canal. This aqueous line of commerce passes close by my porter's lodges; and as the first lock is only a short distance from them, the horrid din, of course, commences there, and is kept up by these young devils incarnate from week to week (Sundays not excepted) with the most perfect impunity."

The next scene is at Walton Hall, the home of Waterton, where all living creatures were made welcome, and no shot was heard the year round:

"In 1814, eight tailors and a tailor's boy left Wakefield on a Saturday night, to enjoy a fiddling party at a village called Himsworth, some six miles hence. In returning home on Sunday morning at three o'clock they were seized with a vehement desire of looking into my rookery. The keeper surprised them in the act of helping themselves, and as he knew personally the major part of them, they consented to appear before me. The fellow had a touch of a wag in him, and he introduced them thus: 'If you please, sir,' said he, 'I have catched eight tailors and a half stealing young rooks.' 'Well,' said I, 'after all this noise on Sunday morning you have not managed to bring me a full man' (for we all know in Yorkshire that it requires nine tailors to make a man); 'send them about their business; I can't think of prosecuting eight-ninths and a half of a man.'"

NEW BOOKS.

THE POETS AND POETRY OF EUROPE.

A New and Revised Edition, just completed, with the addition of 150 pages of entirely new matter.

BY PROF. HENRY WADSWORTH LONGFELLOW.

Illustrated with engravings on Steel. Imp. 8vo, cloth, extra gilt top, bevelled boards, $6.

THE PROSE WRITERS OF GERMANY.

A New and Revised Edition. With Introduction, Biographical Notices, and Translations.

BY FREDERICK H. HEDGE, D.D.

With six Portraits on Steel. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5.

THE PROSE WRITERS OF AMERICA.

With a Survey of the Intellectual History, Condition, and Prospects of the Country.

BY RUFUS W. GRISWOLD, D.D.

New and Revised Edition to the present time. With a Supplementary Essay on the Present Intellectual Condition of the Country.

BY PROF. JOHN H. DILLINGHAM.

With seven Portraits on Steel. Imperial 8vo, cloth extra, gilt top, bevelled boards, $5.

PORTER & COATES, Publishers,
PHILADELPHIA.

Sent by mail upon receipt of price, and for sale by all the principal booksellers.

THE YOUNG MECHANIC;

Containing directions for the use of all kinds of Tools, and for the construction of Steam-Engines and Mechanical Models, including the Art of Turning in Wood and Metal. Fully illustrated. 12mo, cloth, $1 75.

NEARLY READY.

AROUND A SPRING.

BY GUSTAVE DROZ.

"Written with just that art which redeems the most ordinary incidents from appearing commonplace. . . . A masterpiece of fiction. 'Around a Spring' is simple and pathetic. We shall not give an analysis of the novel which it is so easy to get, but shall content ourselves with praising its great merits. Regarded merely as a bit of workmanship, it has all the elegance which, perhaps, will immortalize the best of the present race of French writers."—Nation.

"A most graceful story, interesting from the beginning to the end. Portraiture of character, description of persons, dissection of motive, pictures of life in city and among the mountains, conversation, dialogue, development of plot, are all excellent."—Galaxy.

LATELY PUBLISHED:

M. for N. A Novel. By G. J. Whyte-Melville, Author of "Kate Coventry," "Holmby House," "Digby Grand," etc. 8vo, paper, 75 cents.

Hand-Book of Anglo-Saxon and Early English. By Hiram Corson, M.A., Professor in Cornell University. Post 8vo, cloth, $3.

Morelet's Central America. Including Accounts of some Regions Unexplored since the Conquest. From the French of the Chevalier Arthur Morelet. By Mrs. M. F. Squier. Introduction and Notes by E. Geo. Squier. Post 8vo, illustrated, cloth, $2.

HOLT & WILLIAMS, Publishers,
25 BOND STREET, NEW YORK.

Harvard University, Cambridge, Mass.,

COMPRISES THE FOLLOWING DEPARTMENTS:

Harvard College.
The University Lectures.
The Divinity School.
The Law School.
The Lawrence Scientific School.
The School of Mining and Practical Geology.
The Episcopal Theological School.
The Medical School.
The Dental School.
The Botanic Garden.
The Astronomical Observatory.
The Museum of Comparative Zoölogy.
The Peabody Museum of Archæology.
The Bussey Institution (a School of Agriculture and Horticulture).

The Academic Year begins in all departments on the THURSDAY FOLLOWING THE LAST WEDNESDAY IN SEPTEMBER, and ends on the last Wednesday in June.

The first examination of 1871–72 *for admission to Harvard College will be held on June* 29, 30, *and July* 1, *beginning at* 8 *A.M., on June* 29. *The second examination for admission to Harvard College will be held on September* 28, 29, *and* 30, *beginning at* 8 *A.M. on September* 28.

The examinations for admission to the Engineering Department of the Lawrence Scientific School, the Mining School, and the Bussey Institution will be held on September 28, *beginning at* 9 *A.M.*

SCIENTIFIC DEPARTMENTS.

Instructors.

LOUIS AGASSIZ, LL.D., Professor of Zoölogy and Geology.
BENJAMIN PEIRCE, LL.D., " Astronomy and Mathematics.
ASA GRAY, LL.D., " Natural History.
THOMAS MOTLEY, Instructor in Farming.
JEFFRIES WYMAN, M.D., Professor of Anatomy.
HENRY L. EUSTIS, A.M., " Engineering.
JOSIAH D. WHITNEY, LL.D., " Geology.
HERMANN A. HAGEN, M.D., " Entomology.
WOLCOTT GIBBS, M.D. " the Application of Science to the Useful Arts.
FRANCIS PARKMAN, A.M., " Horticulture.
DANIEL D. SLADE, M.D., " Applied Zoölogy.
JOSEPH WINLOCK, A.M., " Astronomy and Geodesy.
JOSIAH P. COOKE, A.M., " Chemistry and Mineralogy.
JAMES M. PEIRCE, A.M., Professor of Mathematics.
FRANCIS H. STORER, A.M., " Agricultural Chemistry.
—— —— —— " Topographical Engineering.
RAPHAEL PUMPELLY, " Mining.
WILLIAM H. PETTEE, A.M., Instructor in Mining.
NATHANIEL S. SHALER, S.B., Professor of Palæontology.
FRANCIS G. SANBORN, Instructor in Entomology.
JOHN TROWBRIDGE, S.B., Assistant Professor of Physics.
PIERRE J. BORIS, Instructor in French.
WILLIAM G. FARLOW, M.D., Assistant in Botany.
CHARLES L. JACKSON, A.M., Assistant Professor of Chemistry.
JOSIAH C. BARTLETT, A.B., Instructor in Mathematics.
HENRY B. HILL, A.B., Assistant in Chemistry.
—— —— Instructor in German.

LAWRENCE SCIENTIFIC SCHOOL.—This school has been reorganized, and now offers:

1. A four years' course of study in CIVIL AND TOPOGRAPHICAL ENGINEERING, as follows: *First Year*—Spherical Trigonometry, Analytical Geometry, Descriptive Geometry, Chemistry, Surveying and Plotting, Free-hand and Water-color Drawing, French. *Second Year*—Differential and Integral Calculus, Mechanics, Physics, Mathematical and Physical Geography, Elementary Geology, Crystallography, Mineralogy, and the use of the Blowpipe, Mechanical Drawing, French, German. *Third Year*—Applied Mechanics, Practical Astronomy and Geodesy, Hypsometry, Topographical Surveying and Drawing, Structural and Dynamical Geology, Photography, German. *Fourth Year*—Building materials, and their applications in railroads, canals, bridges, etc.; Applications of Descriptive Geometry to masonry and stone-cutting; Hydraulics; Heat and its Applications; Discussions of existing structures, and Working out of projects.

Candidates for admission to this course on Engineering (unless they are graduates of colleges) will be examined in Arithmetic, Algebra, Geometry, and Trigonometry, and will also be required to show that they are reasonably proficient in English Grammar and Geography.

2. A one year's course of study in the elements of NATURAL HISTORY, CHEMISTRY, AND PHYSICS, as follows: Physical Geography, Structural Geology, and Meteorology; General Chemistry and Qualitative Analysis; Physics; Botany; Zoölogy; Entomology.

This course is especially intended for teachers, or persons who intend to become teachers. The instruction will be mainly given in the laboratories and museums of the University; it will be of the most practical character, every student being taught to make experiments and study specimens himself.

3. Thorough instruction for *advanced* students in any of the following subjects: PHYSICS (Heat and Light), CHEMISTRY, ZOÖLOGY, GEOLOGY, BOTANY, and MATHEMATICS.

Professor Gibbs will receive special students in Heat and Light at the Rumford laboratory. Professor Cooke will receive special students in Chemistry at the laboratories in Boylston Hall. Professors Agassiz, Hagen, and Shaler will receive special students in Zoölogy and Geology at the Museum of Comparative Zoölogy. Professor Gray and Assistant Farlow will receive special students in Botany at the Botanic Garden and Herbarium. Professors Benjamin Peirce and James M. Peirce will receive special students in Mathematics.

The opportunities for advanced students in all branches of Natural History and in Physics, Chemistry, Astronomy, and Mathematics will be much greater next year than ever before. The Museum of Comparative Zoölogy has been more than doubled in size during the current year; a laboratory, lecture-room, and greenhouse have been added to the equipment of the Botanical department; a laboratory of Physics is to be created during the summer in Harvard Hall; the chemical laboratories are to be greatly enlarged and improved; the interior of the Scientific School Building is to be completely reconstructed; and a distinct physical laboratory and cabinet are to be assigned to the Rumford Professor. At the same time, the scope and volume of the instruction will be greatly enlarged.

MINING SCHOOL.—The full course, prescribed for candidates for the degree of Mining Engineer, occupies four years, the first three of which are identical, as regards the subjects of instruction and the order thereof, with the first three years of the Engineering Course above specified. The terms of admission are the same as those of the Engineering Course. The fourth year of the course is as follows: Economical Geology and the Phenomena of Veins; Mining Machinery and the Exploitation of Mines; General and Practical Metallurgy; Assaying; Working up, Plotting, and Writing out notes of summer excursions.

BUSSEY INSTITUTION.—The School of Agriculture and Horticulture, established in execution of the Trusts created by the Will of Benjamin Bussey, will give thorough instruction in Agriculture, Useful and Ornamental Gardening, and Stock-raising.

The regular course of study will fill three years. *First year.*—Physical Geography, Structural Geology, and Meteorology; General Chemistry and Qualitative Analysis; the elements of Physics; Levelling and Road-making; the elements of Botany, Zoölogy, and Entomology; French; German. The instruction of the first year's course will be given at Cambridge, and students of the first year must live in or near Cambridge. The instruction of the second and third years' courses will be given at the Bussey Institution, and students of those courses must live within easy reach of the Institution, which is situated near the village of Jamaica Plain, about five miles southwest of Boston, and close to the Forest Hill Station on the Boston and Providence Railroad. The subjects to be taught at the Bussey Institution during the year 1871–72, being subjects of the second year's course, are as follows: Theory and Practice of Farming, Horticulture, Agricultural Chemistry, Applied Zoölogy, Entomology, Quantitative Analysis. The third year's course will be hereafter arranged, and will be given for the first time in 1872–73.

The teachings of the School will be amply illustrated by the rich scientific selections of the University, and by a Botanic Garden, a large and profitable farm, greenhouses, propagating-houses, and field experiments.

FEES AND EXPENSES.—The tuition fee for the Academic year in any of the above departments or courses is $150; for half or any smaller fraction of a year, $75; for any fraction of a year greater than one-half, the fee of the whole year is charged. In the Bussey Institution there are also separate fees for certain distinct courses of lectures; and in that Institution tuition fees will be freely remitted to poor and meritorious students.

The other expenses of a student for an academic year may be estimated as follows: Room, $30 to $100; Board for 38 weeks, $152 to $304; Books, $20 to $25; Fuel and Lights, $15 to $35; Washing, $19 to $38.

For University catalogues, descriptive circulars, examination papers, or information about any department of the University, address J. W. HARRIS, Sec.

for Fine, Standard, and Antiquarian Books, either in large or small quantities.

Send to them also for the "American Bibliopolist," a Catalogue and Literary Journal. Specimen gratis.

Alison's History of Europe. 20 vols. crown 8vo, and atlas oblong folio, newly bound, half-calf extra, top edges gilt. London, 1847. $45.
A very handsome set.

Borrow. Lavengro, the Scholar—the Gypsy—the Priest. By George Borrow. Best edition. 3 vols. crown 8vo, newly bound, half-morocco extra, top edges gilt. London, 1851. $7 50.

Bunyan's Pilgrim's Progress. Bagster's pretty London edition. With nearly 300 illustrations. 12mo, cloth. New. 50 cents.

Encyclopædia. The London Encyclopædia. 22 vols. 8vo, half-calf, marbled edges. London, 1829. $25. (Very cheap.)

Hope. Anastasius; or, Memoirs of a Greek. 3 vols. crown 8vo, newly bound, half-morocco extra, gilt top. London, 1827. $8.
Very scarce in this fine condition.

Knight. The English Encyclopædia. Conducted by Charles Knight. 24 vols. in 12, newly bound, half-russia, marbled edges. Lond. $100.
A most magnificent set.

Mr. Punch, His Origin and Career. With a Facsimile of his MSS. Prospectus in the handwriting of Mark Lemon, the late editor. 18mo, sewed. London. 50 cents.

Ruskin's Seven Lamps of Architecture. Imp. 8vo, cloth. New. London, 1849. $9.

Campbell. The Lives of the Lord Chancellors and Keepers of the Great Seal of England. 8 vols. 8vo, polished calf extra, gilt tops. London, 1846-1869. $75.
A splendid Copy. Binding bright and fresh.

Smollett, Thomas. The Miscellaneous Writings of. With Memoirs by Anderson. London, 1817. 6 vols. tree-calf extra, $27 50.

Burton. The Anatomy of Melancholy. 8vo, half-calf, gilt top. London, 1845. $4 50.
A nice, clean copy, newly bound.

Thiers. The History of the French Revolution and of the Consulate and Empire. 2 vols. large 8vo, uniformly bound in half red morocco, gilt top. London, 1850. $10.

Plutarch's Lives. Clough's Edition. 5 vols. 8vo, cloth, new. Boston, 1871. $12.

Niebuhr. Lectures on Roman History. 3 vols. 16mo, cloth, new. London, 1855. $3.

Henry. The History of Great Britain. 12 vols. 8vo, calf. London, 1805. $10.

Newgate Calendar. 5 vols. 8vo. Numerous Illustrations. London. $11.

Warton, T. The History of English Poetry. 3 vols. 8vo, half-calf. London. $15.
Nice copy, best edition.

Hawkins. General History of the Science and Practice of Music. 2 vols. large 8vo, half-morocco, gilt tops, and 1 vol. of plates, portraits. London, 1853. $12 50.

Just arrived, a large collection of Cruikshankiana, the finest ever brought to this country. Catalogues will be issued shortly.

DODD & MEAD

HAVE JUST PUBLISHED

PAPERS FOR HOME READING.

By Rev. John Hall, D.D.,
Of Fifth Avenue Presbyterian Church, New York.

One elegant vol. 12mo, $1 75. With portrait engraved by Ritchie.

Its contents, which are of a highly popular and, at the same time, practical nature, are characterized by the terse and pointed style, directness of purpose, keen insight, and ready humor which are peculiar to the writer.

The publishers take pleasure in presenting the excellent portrait of the author, which they believe will be regarded as a particularly faithful likeness.

THE AMERICAN CARDINAL: A Novel.

One vol. 12mo, scarlet cloth, $1 50.

A story of intense interest and dramatic power. The plot turns on a well-authenticated incident in the life of a proselyte to the Roman Catholic Church, who obtained a Papal dispensation separating him from his wife that he might enter the priesthood. It is written by an eminent Evangelical Episcopalian, who will remain anonymous. It deals with the Catholic question from a new standpoint, and cannot fail to attract much attention and lead to much discussion.

For sale by all Booksellers.

DODD & MEAD, Publishers,
762 Broadway, N. Y.

THE AMERICAN TRACT SOCIETY,

BOSTON,

THROUGH ITS PUBLISHERS,

HURD & HOUGHTON, New York,
The Riverside Press, Cambridge, Mass.,

Has now ready Two New Books:

I.

SIX BOYS:

A Mother's Story, as told in Extracts from her Journal.

With Illustrations. 12mo, cloth, $1 25.

This is no ordinary "Sunday-school story," but a volume of great literary excellence and spiritual power, worthy to take rank with "Stepping Heavenward;" not, however, by way of imitation, as it was written before that admirable book was issued.

II.

BIBLE SKETCHES.

Third Series, illustrating the Life of Christ on Earth.

By REV. SAMUEL G. GREEN.

With Illustrations. 16mo, cloth, $1.

This volume is illustrated by five beautiful authentic pictures, including views of modern Bethlehem, the grotto of the Nativity, and Mount Hermon. Appended is a complete Harmony of the Gospels, showing all the events of Christ's life, as arranged by the best authorities, and with full references, so that by its aid the Gospel may be read in the order of the events narrated. This makes the volume invaluable to Sabbath-school teachers as well as scholars.

A full assortment of paper-covered books and tracts, with new styles, at the Society's Office, 117 Washington Street, Boston, and at 13 Astor Place, New York.

For sale by all Booksellers.

NOW READY:

TILL THE DOCTOR COMES;

AND

HOW TO HELP HIM.

By GEORGE H. HOPE, M.D.

Revised, with Additions, by a New York Physician.

A complete manual of directions in cases of accident. Indispensable to every household. 12mo, muslin, 60 cents; paper, 30 cents.

G. P. PUTNAM & SONS,
Fourth Avenue and Twenty-third Street.

IMPORTANT NEW WORKS

Supplied by

SCRIBNER, WELFORD & CO.,

654 BROADWAY, NEW YORK.

1. PRIMITIVE CULTURE: Researches into the Development of Mythology, Philosophy, Religion, Art, and Custom. By E. B. Tylor, author of "Mexico and the Mexicans," etc. 2 vols. 8vo, cloth, $12.

By the same Author.

RESEARCHES INTO THE EARLY HISTORY of Mankind, and the Development of Civilization. Second edition, 8vo, cloth, $6.

2. OVERLAND FROM CHINA TO INDIA. Now ready, 8vo, with Maps and Illustrations, $8.

TRAVELS OF A PIONEER OF COMMERCE IN Pigtail and Petticoats, on an Overland Journey from China towards India. By T. T. Cooper, late Agent for the Chamber of Commerce at Calcutta.

8. THE HEAVENS. An Illustrated Handbook of Popular Astronomy. By Amédée Guillemin. Edited by J. Norman Lockyer, F.R.A.S., F.R.S. A new edition, revised. With Notes by Richard A. Proctor, B.A., F.R.A.S. 1 vol. 8vo, profusely illustrated, cloth, elegant, $4 50.

CASSELL'S POPULA EDUCATOR.

COMPLETE IN SIX VOLUMES.

Price, $15.

"We have gone over its pages with sentiments of real wonder. We know no work like it. It has occupied and filled up a field of education vast and most important to the community."—Dublin University Magazine.

CASSELL, PETTER & GALPIN,
596 Broadway, New York.

Sever, Francis & Co.'s Standard College Text-Books.

Single copies of any book on this list will be sent, post paid, to teachers for examination, on receipt of one-half the regular price.

HAMILTON'S METAPHYSICS. Collected and abridged by Francis Bowen, Professor of Moral Philosophy in Harvard University. 12mo, cloth, $2.

"The students of our colleges are to be congratulated that the labors of the great master of metaphysical science are now rendered much more availing for their benefit than they were made, perhaps than they could have been made, by his own hand."

BOWEN'S LOGIC; or, The Laws of Pure Thought. 12mo, cloth, $2.

"As regards definition, clearness, and fulness of statement of the various points which make a complete scientific treatise, we think he has succeeded in producing a better text-book than any other before the American people."

COOKE'S CHEMICAL PHILOSOPHY. 12mo, cloth, $3 50.

"This book presents the philosophy of chemistry in such a form that it can be made with profit the subject of college recitations, and furnish the teacher with the means of testing the student's faithfulness and ability."

FELTON'S GREEK HISTORIANS. 12mo, cloth, $2.

"In this work the most famous events of Grecian history are given from different authors, chronologically arranged; so that the student not only becomes acquainted with the various writers, but also pursues a complete course of reading in this department."

FELTON'S PANEGYRICUS OF ISOCRATES. 12mo, cloth, $1.

"The text has been illustrated with copious English notes by Mr. Felton, who delighted to pour out on his readers the wealth of historic learning which he possessed, while the critical skill has been ably supplied by Professor Goodwin."

FELTON'S CLOUDS OF ARISTOPHANES. 12mo, cloth, $1 25.

"In this, the sixth edition of the Clouds, the commentary has been revised, altered, and, in some instances, enlarged; and the Table of Metres has been corrected. An Appendix has been added, containing references to Goodwin's 'Syntax of the Moods and Tenses of the Greek Verb.'"

FELTON'S BIRDS OF ARISTOPHANES. 12mo, cloth, $1 25.

"President Felton had intellectual gifts and attainments which especially fitted him for the difficult work of editing Aristophanes; and his edition of the Birds should be used in every college where not more than one play of that author is read."

GREEN'S ACHARNIANS AND KNIGHTS OF ARISTOPHANES. 12mo, cloth, $1 50.

"The Notes show a thorough study of the two Plays, an independent judgment in the interpretation of the poet, and a wealth of illustration, from which the editor draws whenever it is necessary."

BIGG'S THUCYDIDES. Books I. and II. 12mo, cloth, $2.

"No one can examine the essay which precedes or the notes which accompany the text, without being impressed with the learning and judgment brought to bear on the subject. The critique on the characteristics of Thucydides as a writer is masterly."

HESLOP'S OLYNTHIACS AND PHILIPPICS OF DEMOSTHENES. 12mo, cloth, $1 75.

"The annotations are scarcely less to be commended for the exclusion of superfluous matter than for the excellence of what is supplied. Well-known works are not quoted, but simply referred to, and information which ought to have been previously acquired is omitted."

JEBB'S ELECTRA OF SOPHOCLES. 12mo, cloth, $1 25.

"The explanations of grammatical points are singularly lucid, the parallel passages well chosen, the translations bright and graceful, the analysis of arguments terse and luminous. Mr. Jebb has clearly shown that he possesses the qualities most essential for a commentator."

GOODWIN'S MOODS AND TENSES OF THE GREEK VERB. 12mo, cloth, $1 75.

"No American scholar has, in so few pages, contributed so much that is important to students of the grammar of the classic tongues as Professor Goodwin. His treatise on Greek Moods and Tenses is the only important work on that subject in the English language."

CHASE'S MACLEANE'S HORACE. 12mo, cloth, $1 50.

"The high character of the English edition of Macleane, combined with the skill of the American editor in his preparation of the work, have made this edition the most acceptable form of the author in the many colleges and seminaries where it is used."

CHASE'S CICERO'S TUSCULAN DISPUTATIONS. 16mo, cloth, $1 25.

"The Notes of this edition have been ably prepared with a view to call attention to the most important peculiarities of construction, and to explain the most serious difficulties of syntax and interpretation, without entirely robbing the student of the pleasure and advantage of surmounting obstacles by his own effort."

STICKNEY'S CICERO PRO CLUENTIO. 12mo, cloth, $1.

"The present edition of 'Cicero pro Cluentio' has been edited with no less care than success. The Notes are designed to supply the student only with such information in respect to the facts of the case and the scope of the argument as is necessary to the proper understanding of the oration."

Nathaniel Hawthorne's Works

ILLUSTRATED LIBRARY EDITION.

VOL. I.

THE MARBLE FAUN; or, The Romance of Monte Bent. 1 vol. 12mo, 571 pages. With Illustrations. Handsomely stamped. $2.

This is the initial volume of a new library edition of Hawthorne's Works, uniform in size and general style with the Illustrated Library Editions of Dickens and the "Waverley Novels" which have been received with so marked popular favor. The edition will contain about ten volumes, and, it is believed, will meet the demand for a compact, handsome, and comparatively inexpensive edition of Hawthorne. "The Marble Faun" is not only one of his greatest works, but it is generally conceded to be one of the masterpieces of modern fiction. The distinguished critic, Mr. E. P. Whipple, reviewing this romance, says: "If Hawthorne had written nothing else, it would entitle him to rank among the great masters of English composition. . . . It is written in the sweetest, simplest, and clearest English that ever has been made the vehicle of equal depth, variety, and subtlety of thought and emotion."

☞ For sale by all Booksellers. Sent, post-paid, on receipt of price by the Publishers,

JAMES R. OSGOOD & CO., Boston.

THE STANDARD.

George P. Marsh, in 1860, thus wrote in reference to Dr. Worcester's Quarto Dictionary:

"The principal points to be aimed at in a hand-dictionary are—Accuracy in orthography and orthoepy; the written and spoken forms of words; precision and distinctness in definition; fulness in vocabulary, and truth in historical etymology. The work of Dr. Worcester is unquestionably much superior to any other general dictionary of the language in every one of these particulars, and is therefore entitled to rank first among the existing helps to a complete knowledge of English philology."

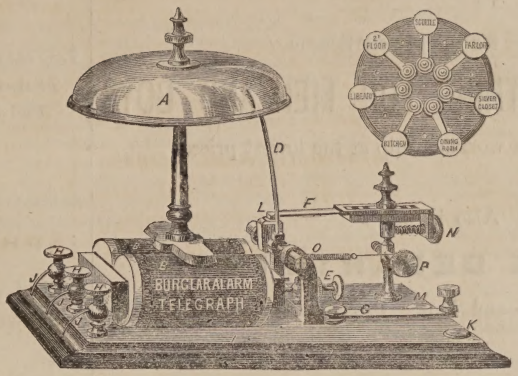
1111 Chestnut Street, Philadelphia, Pa.



OFFICES:

205 River Street, Troy, N. Y.

121 Washington Street, Boston, Mass.

This one bell, located in the sleeping room, rings upon the opening of each window and door of the house. It is a watchman that has but one house to protect, is always on the spot, never goes to sleep, cannot be bought off; and an experience of seven years without a failure proves that it is perfectly reliable.

This BURGLAR ALARM TELEGRAPH cannot be better described than as follows:

One bell only is required for the entire house.

The bell is located in the sleeping-room, and is operated upon the same principle, and by the same power, exactly, that operates our telegraphs throughout the country.

Every exposed door and window of the house is connected with this bell by telegraph wires and springs.

But not a wire, or spring, or machinery of any kind, but the bell, can be seen in the house.

The indicator, represented above, shows which window or door the burglar has opened.

It can be introduced into any house without defacing it in the least; not a board is removed, not a mark or scratch can be seen in consequence; it occasions no inconvenience whatever.

The whole arrangement is controlled in your room, by the switch, G, on the bell, which attaches the entire house at night, and detaches it in the day-time.

The bell gives instant alarm if a door or window is accidentally left open at night.

It is particularly valuable during a temporary absence of the family.

As a means of communicating to a stable or other out-building, it is superior to any and all other means used.

The simple touch of a small spring, arranged in your sitting-room, or any, or several parts of the house, rings the bell at the stable.

The doors and window of your stable can be connected with the same bell in your room.

The alarm can be set for a part of the house, and not the whole, if desired.

Windows can be left open sufficient for ventilation, and the alarm given if they are moved from their respective places.

If a window or door is carelessly or purposely left open at night, the bell gives notice.

The bell can be located in any part of the house, or in another building, without regard to the distance from the premises protected.

It requires from four to sixteen days to apply one to a house.

The battery is placed in a box twenty inches long, nine inches high, and six inches wide, with a lock and key.

It is in no way offensive, and can stand in any closet or pantry where most out of the way.

It is always in operation, and needs only about five minutes' attention once in two months.

It is so simple and so easily taken care of that a child can do it.

The expense for supplies is but a few shillings per year.

The invention is cheap, simple, and acknowledged by all who use it as a complete protection from burglars.

It has been in successful operation for the last seven years; during that time many attempts have been made by burglars upon houses, offices, stables, etc., protected by this invention, but in no case has it failed to give the alarm, consequently saving property and, perhaps, lives.

It possesses every improvement that study and ten years' practical experience has suggested.

The public are cautioned against all infringements, even if called improvements, as every case, either by using or vending, will be dealt with to the full extent of the law for such cases provided.

A pamphlet containing the names of ten or twelve hundred parties who are using it can be obtained by applying at the office.

Pratt's Astral Oil.

THE SAFEST AND BEST ILLUMINATING OIL FOR FAMILY USE EVER MADE.

Took the First Premiums and Diploma at American Institute Fairs for both years, 1869 *and* 1870, *for safest and best Oil.*

Endorsed by over 100 leading Fire Insurance Companies of New York.

If the Lamp becomes upset and broken, the contents will not explode nor take fire.

The Astral Oil has received the unqualified endorsements of eminent scientific men, dealers and consumers in all parts of the country.

Over 100,000 families continue to use it, and no accidents of any description, directly or indirectly, have ever occurred from burning, storing, or handling it.

The *Scientific American,* in an article on unsafe oils, March 4, 1871, says :

"There are notable exceptions, of which we might mention Pratt's Astral Oil, an article which we have used for many years, and found to be excellent in all respects. Moreover, we have never heard of an accident arising from its use."

Dr. G. Tagliabue says : "I have to pronounce it the safest illuminating oil in the market."

The *American Agriculturist* says : "We would not use any other oil, if it cost $5 per gallon."

Beware of Adulterations. See that the seals of the cans have not been tampered with.

The Nation.

NEW YORK, THURSDAY, JUNE 8, 1871.

The Week.

THE President has at last given evidence which nobody will gainsay that, when he recommended civil service reform, he really meant what he said. He has now been three years in office, and not the smallest step, so far as is known, has been taken at his instance to bring it about in any of the departments. Congress, at the close of the last session, and to the surprise of everybody, tacked on to the Appropriation Bill an authorization to the President to prescribe rules and regulations for the admission of persons into the civil service; but, as three months have elapsed since then, and the abuses in the civil service have continued very actively, and nothing was heard of any action on the President's part, the public began to fear that nothing would be done. He has, however, at last moved, and moved to such good purpose as to leave no doubt of his sincerity, by appointing a Commission to draw up the rules and regulations in question, composed of Messrs. G. W. Curtis, of New York; Alexander G. Cattell, of New Jersey; D. C. Cox, of the Department of the Interior; E. B. Elliott, of the Treasury Department; and Joseph H. Blackman, of the Post-Office Department. These appointments are all excellent, and Mr. Curtis's has the rare merit of giving a warm and able advocate of the reform a leading part in carrying it out. He made it the subject of his lecture the winter before last, besides strenuously supporting it in the press, and thus brought the subject to the notice and comprehension of thousands through the country districts who hardly knew what the phrase civil service reform meant. This was all the more meritorious, because we feel sure he might have lectured on "Caste," or on the "Millennium," with far more acceptance.

Jefferson Davis has made his appearance in public two or three times within the last fortnight, and, to the great disgust and embarrassment of the Vallandigham Democracy of the North, has been glorying in his past career, and professing his unshaken adhesion "to the lost cause." The *World* denounces him fiercely, and, indeed, makes it seem as if it would not be a bad plan for Republicans to pay him to stump the South during the coming winter. The Republican papers profess, of course, to regard his appearance as highly significant, and denounce him too, and treat his speeches as grave symptoms, so that, on the whole, a sickly old man, whose career has been a wretched failure, is being gradually drawn from his obscurity and elevated into the rank of an important political personage. Some of the Republican papers read him awful lectures on the impropriety of his conduct in showing himself again, but it seems to us there is something childish about these tirades against him. When he was let off without punishment, no pledges were exacted from him as to his future behavior; he never promised that he would never show himself in public again. To be sure, it is foolish and indecent for him to do so, but then those who now find fault with him have always maintained that nothing in the shape of good sense or good taste was to be expected from him. Whence, then, these tears?

The Republican organization in this city is still beset by troubles. It has long, as all the world knows, been divided into two factions, the cause of the division being, though disguised in various ways—offices. One faction always has possession of the Custom-house, and supports the Administration, and is profoundly impressed by the rapidity with which the public debt is being paid off, and with the extent to which "order and economy" have been infused into the collection of the revenue. The other is filled with horror of the Democrats, and is greatly concerned about "equal rights for all" and the three constitutional amendments; but it is always dissatisfied with the mode in which places in the Custom-house and in the United States Marshal's office are distributed. It takes consolation in State politics, and manages at Albany in such fashion as to pick up something. Last year it made a very good bargain with the Tammany Ring so as to get plenty of its men into City offices, who have since been known as "Tammany Republicans," and whose connection with Tammany does not hinder them from figuring prominently in the Republican organization, and this faction has had the wisdom to put Horace Greeley into their chair. After much fighting between the two, the State Committee interfered, and ordered a reorganization, which has been attempted under the superintendence of respectable and influential men; but the Greeleyites refuse to surrender, set the Custom-house at defiance, and say their organization is as "regular" as can be, and that they will not dissolve to please anybody. The Custom-house party has the State Committee under its control, and is said to be now using all its engines of war to secure the return of Grant delegates to the presidential convention. In the meantime, "the reform in the civil service" is going on in a wonderful manner in that institution. The last step in that direction has been an order emanating from Mr. Boutwell—who superintends the education of the young ministers and doctors in the Treasury at Washington—forbidding the publication of the changes made among officials in the Custom-house here; for the purpose, it is said, of covering up the bestowal of a sinecure on one Sam Maddox in the shape of a deputy-collectorship at large. It must be remembered that these operations are carried on by gentlemen who are horrified because Bill Tweed employs large bodies of laborers for whom he has little or nothing to do just before election day.

We have no doubt the *Tribune* has assailed the Senate for its late attempts to overhaul private telegrams and correspondence in good faith, and really believes what it has said in opposition to be sound and of general application. But it is nevertheless true, as we have pointed out, that the *Tribune*, by defending the conduct of the House in doing the same thing after the impeachment trial, did render itself incapable of making any effectual opposition to such conduct on the part of either House or Senate, at least for a good many years, and the moral which all editors ought to draw from its present position is that the establishment of precedents is dangerous work; that the first duty of a newspaper in "lively times" is to keep cool. It now defends itself (June 5) in the Butler matter in a way which can hardly be called ingenuous. It says that when Butler overhauled the barrel of telegrams under orders from the House, he was acting as the manager of the impeachment, or, in other words, as "the prosecuting officer" of a court. Now this is not true, and, if it were true, would be no answer. In the first place, the trial in which Butler was a prosecuting officer had already taken place, and been closed by a verdict of not guilty. Butler and his brother "managers" were therefore *functi officio;* the court in which they had acted had ceased to exist. They were absolutely without any judicial character whatever. In the second place, the enquiry in which the House permitted them to engage was scandalous and indecent, and without any color of right, because it was an enquiry by one House into the official conduct of the members of the other House, a proceeding unknown to parliamentary law; and, what was worse, it was conducted by the counsel of the defeated party, in a cause which had been fairly tried, for the purpose of fastening a charge of corruption on the judges who had decided against him; and, to crown all, it was conducted secretly and *ex-parte*. If ever there was an abuse of parliamentary powers against which the press ought to have thundered, it was this. One of the most discreditable passages in the history of journalism is that which tells that the political charlatan who got the enquiry up had the support of respectable papers in carrying it on, and had their approval of his violation of private correspondence and the seizure of the telegrams of private individuals

en masse, to be examined as he pleased, and without any specification of what he was looking for.

Mr. Wendell Phillips, in his recent discourse before the Boston Communists, while making a glowing eulogium on the brethren who have just come to grief in Paris, took occasion to say that "he felt nothing but disgust and rebuke for the vandal destruction of public and private property" which has taken place in that city. Now, we take the liberty of suggesting that he made a mistake in saying this. He ought to have defended the whole thing, destruction of property and all, because he would thus have made his speech far spicier, and would not have done anybody any harm. Let us add that he cuts a very sorry, commonplace figure as a rebuker of "vandalism"; any dolt could play that part. What we want from him is a good "silvery" justification of pillage and arson. Moreover, we do not approve of his talking of the people of Paris as "ignorant masses," who did not know what they were doing when they were burning and destroying the other day. In one of his great speeches delivered about a year ago, he laid it down that the best education a boy could receive was that which he acquired "in picking up a living." Now, this is just what Louis Napoleon and the priests thought, and this is all they let the French get, but we can't allow our philosopher to turn round now and say it was a bad one and did not fit them.

Mr. George T. Curtis has sent a defence of himself to the *World*, the sum and substance of which is that his "opinion" in the Field-Barlow controversy contained his real convictions, and that the fee did not influence him one way or the other. We are still left in the dark, however, as to the way in which an elderly lawyer came to the conclusion that, in conducting what he thought a judicial investigation, it was proper for him to get information freely from one side, and hold no communication whatever with the other side. We should like to know, also, why it was that, when he saw himself coming full tilt on the question of Barnard's corruption, he forbore to question Mr. Field or Mr. Shearman on that point. Had he done so, they would have informed him that, to their knowledge, Barnard was grossly and notoriously corrupt, and a disgrace to the bench and to the community which pays him and tolerates him. He would thus have been saved the scandal and disgrace and absurdity of rising up with his fee in his pocket to preach to men of honor, "in the name of all that is sacred," and so forth. There is one little test by which we can always ascertain whether an investigation is judicial in its character or not, with which Mr. Curtis is, of course, familiar, for it is as old as the art of judging, and which we are sorry he did not apply in this case; it consists simply in the question, Would the decision be rendered and published, no matter which way it went? If Mr. Curtis had asked himself this, and were given to candid self-examination, he would have had some painful moments before entering on his work.

Money is, according to the Wall Street phrase, a drug. Yet the great upward speculation in stocks appears to have come to a halt, and to be near culminating. Most classes of securities have declined during the week. Gold continues firm, owing to the unchanged unfavorable condition of our foreign exchanges, and the consequent steady export of coin. The funding appears to have ceased. The debt statement for the month shows a reduction of only $4,440,000, and no change of importance in the position of the debt. The receipts of the Treasury for the month of June are again, so far, extremely light, and the income tax, according to all accounts, will yield materially less than last year. Railroad and other negotiations, both here and abroad, still continue, but it is apparent that there is a decided lull in the public eagerness to invest in new enterprises.

☞ A movement of some significance seems to be springing up in Philadelphia, which, perhaps, our overburdened taxpayers might do well to watch. For years past, there has been a local quarrel there on the subject of building a new Court-House and City Hall. The site for the projected buildings has been fiercely contested, and while none of the rival locations has been strong enough to carry its point, each has had sufficient influence to prevent the success of its opponents. At length the Legislature was induced to intervene, and it did so a year ago by appointing a commission to erect the buildings. This commission was, perhaps, not quite so bad in principle as the one by which Messrs. Tweed, Sweeney, and Hall have obtained the control of New York, but as it authorized the commissioners to levy taxes without limit, and expend them without supervision; as there was no term of years defined for their tenure of office, and they were empowered to fill all vacancies in their own body, it will be seen that a comfortable little despotism was established in the city of Penn, which, by arts well understood among politicians, could speedily extend its control through all portions of the municipal organization. Our somewhat sluggish neighbors gradually awoke to a consciousness of this, and during last winter an agitation arose to urge the Legislature to abolish the commission. That body, however, has recently adjourned without granting the wished-for relief, and the disappointed agitators are turning upon the politicians, to whom they attribute their defeat. The movement is spreading, and there seems to be a disposition to strike at the cause as well as the effect. The programme appears to be to form associations without distinction of party, pledged to select the best candidates from both tickets for local officers, and, by wielding the balance of power, to compel the political managers to make good nominations. Parties in Philadelphia are so nearly equal that a comparatively small number of voters can turn the scale, and the scheme looks feasible enough if, as we are told is the case, it is in good hands. The problem of applying democratic institutions to the government of great cities is so intricate a one, and, withal, so important to the destinies of this country, that any attempt of this kind possesses more than a mere local interest.

The great majority of the Paris journals are reported to be in favor of the continuance of the Republic, and there can hardly be a doubt that this sentiment is the expression of public opinion, as it manifests itself not only in the reconquered capital, but in the large towns of France generally. Of this disposition of the majority of the urban population of France, the late municipal elections, which resulted in a decided triumph of the Moderate Republicans, in spite of the horrors of the civil war kindled by revolutionary folly, have given a sufficient evidence. The *Opinion*, *Bien Public*, *Politique*, *Siècle*, and *Constitutionnel* are mentioned as the most outspoken advocates of the Republic. The *Temps*, formerly the leading Radical paper, is reported as guarded in its expressions, which may be the consequence of prudence demanded by the exceptional circumstances. The position assumed by the *Journal des Débats* and the *Gaulois* is not clearly stated. The *Tricolore*—a new journal—and *Figaro* have hoisted the flag of monarchy. Émile de Girardin, in the *Liberté*, which appears to have resumed its place, in lieu of his late *Union Française*, urges the establishment of a federal republic. More moderate decentralization is urged by others, though the desire for the return of the Government to Paris is generally expressed by the metropolitan press—in which the promptings of self-interest may have a slight part. About the latest manifestations of the comparatively "rural" press, we are left in ignorance. We hear, however, that a clerical reaction is gaining ground among the strictly rural population, which is but too natural after the fiendish displays of anti-clerical rage exhibited by the revolutionists of Paris. Bonapartism, in favor of which Prince Napoleon calls for a new *plébiscite*, as yet nowhere lifts up its head. In the National Assembly it is entirely mute.

If a classification made a few weeks ago by a well-informed Versailles correspondent of the *Kölnische Zeitung* be still in the main correct (and there is hardly any reason to expect a considerable change to have taken place since), the six hundred members of the National Assembly who occupy their seats—double elections and resignations accounting for so many vacant ones—form the following groups: The

Radical Left, the Republican Left, the Left Centre, the Liberal Conservatives, and the Extreme Right, besides about one hundred representatives who may be designated as "wild," that is, belonging to no party. The Radical Left, owing to resignations by the most extreme, like Hugo, Rochefort, Pyat, Blanqui, Millière, and Delescluze, consists of a very small band, almost all Parisians, among whom are: Louis Blanc, Quinet, Schoelcher, and Tolain. The Republican Left numbers about one hundred and thirty members, and its leading committee consists of Emanuel Arago, Grévy--who is said to be the coming man—Lefranc, Leblond, and Rolland. The Left Centre, about one hundred strong, and leaning towards Orleanism, embraces, among others, the long-known names of Barante, Lasteyrie, Malleville, Say, and Vitet. The Liberal Conservatives—number not stated—follow the lead of Saint-Marc Girardin, almost all being Orleanists, and among the most conspicuous of them: Decazes, D'Haussonville, Comte Duchâtel, Ségur, and Salvandy. The Extreme Right, which represents Legitimism and Clericalism, is the most numerous of the five groups, and numbers among its members the Duc d'Audiffret-Pasquier, the Marquis de la Rochejaquelein, and the Archbishop of Orléans, Dupanloup.

As regards the Government, so much is certain that it neither has any sympathy with the extreme wings—Radical Republicans and Clerico-Legitimists—nor meets with sympathy on their part. It has its main support in the Centre, but it is often quite readily sustained by the Republican Left, especially whenever M. Thiers yields to one of those outbursts of passion into which he is not infrequently drawn by the reactionary impatience of the Legitimists. It is also generally believed that he is decidedly hostile to the more or less secret schemes of the Orleanists, whether aiming at the re-establishment of the throne of July, which was broken in 1848, or at a fusion with the elder branch of the House of Bourbon, which was exiled in 1830, and the head of which, the Comte de Chambord—a refugee from his childhood—has just issued another of his pitiable appeals to "his country," offering himself as the most convenient saviour of French society and restorer of French grandeur; the peasantry, the priests, and the Pope aiding. Whether a fusion of the two branches of the royal family of France, which has been repeatedly attempted in vain, has now actually been consummated, as is again asserted, to the chagrin of the many admirers of the accomplished sons and grandsons of Louis Philippe—a fusion which would render the elder of the latter, the Comte de Paris, the "legitimate" heir to the prospective crown of Henry V. (Chambord)—must soon appear from the debates, to begin to-day, on the admission of the Orleans princes to their seats in the Assembly and on the abrogation of the proscriptive laws against the Bourbons in general.

The principal points by which the definitive treaty of peace between France and Germany, concluded at Frankfort, May 10—of which the authentic text is now before us—differs from the preliminaries of Versailles, of March 26, are the following: The *rayon* of the fortress of Belfort, which the Germans are to restore to France, is extended so as to embrace the whole of the cantons of Belfort, Delle, and Giromagny, and the western portion of Fontaine. In compensation for this retrocession of Alsatian territory, Germany receives an addition to its Lotharingian conquest between the western boundary of the cantons of Cattenom and Thionville, and a line drawn from near the southwest corner of Luxemburg to the southwest corner of the last-named canton. The retroceded territory is inhabited by French, the newly-acquired by Germans; in this respect, then, the exchange is favorable to Germany. From a military point of view, however, it is regarded as advantageous to France. The payment of the first one hundred million dollars of the war indemnity, to be paid by France, is delayed to the expiration of one month after the restoration of the authority of the French Government in Paris. Two hundred millions will be paid within the present year, and one hundred millions on the 1st of May, 1872, the last three instalments remaining due, as stipulated in the preliminaries, on the 2d of March, 1874. On the payment of the first hundred millions, the departments of Somme, Seine-Inférieure, and Eure are to be finally evacuated by the Germans. The evacuation of the departments of Oise, Seine-et-Marne, and Seine, as well as of the forts of Paris, will take place "as soon as the German Government will deem the re-establishment of order—both in France and Paris—sufficient to ensure the fulfilment of the engagements entered into by France;" in any case, however, it must follow the payment of the third hundred millions. The Germans will continue to send home the captives "in understanding with the French Government." The latter will discharge those of the returning whose term of service has expired, and send the rest behind the Loire. The legal authority having been re-established in Paris, the army of Paris and Versailles, down to the evacuation of the forts by the Germans, is not to exceed the number of eighty thousand men. Nor can the French Government till then execute any concentration of troops on the right bank of the Loire. All commercial treaties between the two countries are regarded as abrogated by the war, and they are henceforth to base their commercial relations on the principle of reciprocity, and "on the footing of the most favored nation," but only with regard to the following nations: England, Belgium, the Netherlands, Switzerland, Austria, and Russia. The expelled Germans are reinstated in all their rights of property, domicile, and citizenship. The original text of the treaty is in French, but signs of German dictation are visible throughout.

The greater interest of the war with Germany has prevented the insurrection which has been raging in Algeria for the last year from attracting much attention; but it has been serious and bloody, and it is only now that we begin to get much light on it. The French have ascribed it, at the outset, like most of their misfortunes, to the machinations of Bismarck; but it appears to have been due, in part, to the determination of the Khouans, a fanatical and warlike sect of Mussulmans, to take advantage of French misfortunes, and these found the Kabyls and Arabs discontented enough, for various reasons, to join them in arms, though the Kabyls have not gone over to the insurrection until recently. The atrocities and desolation wrought by the conflict have been dreadful. The villages have been burnt, the farms laid waste, and the colonists massacred over the finest portion of the French domain to within twenty miles of Algiers; all of which the French troops have repaid in kind. During the month of May, the arrival of strong reinforcements from France has enabled the Government to take a vigorous offensive and inflict several crushing defeats on the rebels, whose chief, Bak-Aga-Mokrani, has been killed, and a large number of the tribes engaged in the revolt have made their submission. The present French Government has done what the Imperial Government always refused to do, and which, probably, more than anything else, will help to make Algiers a real French colony, attractive to French settlers—and that is, placed it under civil rule. The spirit of emigration is, at best, not strong among Frenchmen; were it ever so strong, they could not have been readily induced to quit the protection of the civil courts and take up their abode under the jurisdiction of courts-martial.

The Prohibitionists in England have made one more desperate effort to carry their ideas into execution, in the shape of what is known as Sir Wilfred Lawson's Permissive Bill, which gives the ratepayers of a parish the power to decide by a majority vote how many public-houses they will have within their limits, or whether they will have any. The bill was defeated, but not heavily defeated, and the arguments in its favor evidently made a deep impression, which will do much to hasten a vigorous attempt to deal with the question of drunkenness in some way or other. The strongest objection made to it was, that if the regulation of the liquor traffic to this extent was called for at all, it ought to be general, and enforced by Parliament, and not left to the discretion of local majorities. It was stated in the debates that $500,000,000 are spent annually in drink in the United Kingdom.

"THE NEW DEPARTURE."

Republicans of all shades of opinion have for a good while been urging on the Democrats the propriety and expediency of accepting "accomplished facts," that is, of formally acknowledging in the public utterances of the party that the war and the amendments to the Constitution adopted since the war had settled certain questions beyond further dispute or cavil. These questions are the non-existence of the constitutional rights of secession, the abolition and perpetual prohibition of slavery, and the equality of all men before the law. Republicans have furthermore urged on them the propriety of acknowledging the validity of the public debt, and the duty of the nation to discharge it in coin, according to the terms of the contract, and in accordance with the good old Democratic doctrine that there was no money known to the Government of the United States except hard money.

For six years the Democrats have resolutely refused to do any of these things. They have encouraged the South in the belief that the war had settled nothing except the momentary superiority of the North in strength. They have denied the validity of the three amendments which put into legal form the *de facto* changes effected by the war in the status of certain classes of citizens, and provided fresh securities against unequal or discriminating legislation; and they have persisted in denying the validity of the assurances given by the Government in the hour of its extremity to the persons from whom it borrowed money as to the amounts they would receive in repayment—or, in other words, have stoutly maintained that if one borrows money when his credit is very low, he may, afterwards, honestly repay it as if his credit had been very good when he borrowed, no matter what the terms of his contract were—a doctrine for which it would be difficult to claim any higher source than the mock-auction shop or the faro-bank. They have fought through two Presidential campaigns on this policy of negation, and have failed miserably in both. They could not get the country to acknowledge that nothing was changed by the war, and that the one business of sensible men was to get back as fast as possible to the point from which we started in 1861. What has made their persistence all the more extraordinary was the plainness with which the Republicans were profiting by it. There has rarely been a party in power which, since 1865, has offered so many tempting points of attack to an able and energetic opposition as the Republican party. Its legislation for the South, and its financial and foreign policy, although, perhaps, far better than the Democrats would have furnished in its place, and as good as we had any right to expect, were nevertheless full of imperfections of the grossest and most glaring kind, out of which an opposition which was as numerically strong in the country as the Democratic opposition was, might have made formidable use. The results of reconstruction legislation at the South have been pitiable; the manipulation of the Supreme Court has been shameful; the debauchery of the civil service—debauchery continued, too, most barefacedly in the teeth of strong professions of zeal for reform—has been flagrant, and all three have apparently afforded materials for an overwhelming Democratic victory; and yet the Democrats have made nothing out of them whatever. The address of their members of Congress, at the close of the last session, read not like the indictment of eager and triumphant accusers, as it might have been made to read, but like the abject apology of men who have failed miserably, and do not exactly know why. In fact, read in the light of the accounts of the Democrats given by the leading Republican papers, there was something very amusing about it. According to these papers, the Democratic chiefs were brigands of enormous stature, of inexhaustible resources, reckless courage, and ferocious and implacable temper; the address, however, sounded like a plea for consideration, or for some cold victuals and old clothes, from a parcel of puny little conscripts who had made an attempt to storm a great stronghold, and gave it up because the villains inside fired at them.

A considerable portion of the party, headed by Mr. Vallandigham, seem to have learned wisdom at last, and propose to surrender all the principal points in their former creed, and to begin their opposition to the party in power on a new line; to do, in fact, what the Republicans have been long wanting them to do, and abusing them for not doing; that is, accept the situation as settled by the war, and offer the country some reasons for supporting them which have no direct connection with the war. They offer, in short, to do what the Republican party has been doing—maintain the results of the war, and to do something which the Republican party has thus far neglected or failed to do—correct and restrain the evils growing out of the war. They offer, for instance, while adhering to the three new constitutional amendments, to oppose the dangerous tendency which the Republican party has for some time been manifesting to treat the amendments as having practically abrogated the whole Constitution; or, in other words, as having constituted the majority of both Houses as supreme judges of what is or what is not constitutional. They offer to treat the reconstruction measures as finalities—that is, to put the Southern States on a footing of equality with the Northern States, and put further interference with their affairs on exactly the same level with interference in the affairs of New York or Massachusetts. They call for universal amnesty, and while they denounce lawlessness on the part of mobs, they also denounce that disregard of law on the part of the legislature which is displayed in such measures as the Ku-klux Act, which not only disregards the supreme law of the land, but creates an officer unknown to the law, viz., a dictator. They call, too, for a revenue tariff, or, in other words, for the cessation of what is perhaps the most prolific source of corruption, the attempt to protect native industry by means of taxation. But instead of calling for reform in the civil service, they propose to take the work of collecting the Federal revenues from one set of rascals, the Federal employees, and hand it over to another set of rascals, the State employees; and they ask still to have the Government debts paid in greenbacks—that is, one promise to pay substituted for another.

Now, though this programme, which first made its appearance under Vallandigham's auspices at Dayton, has since been adopted by the State Conventions in Ohio and Tennessee, and though there is every sign that it will make way enough with the Democracy at large to have a fair chance of adoption at the Presidential Convention next year, it will need an uncommonly strong candidate, stronger than the Democracy is likely to adopt, to give it any great weight with the country, owing in the main to the general want of faith in the honesty and good sense of the men who, in case of a Democratic victory, would be sure to manage the Administration at Washington.

But however little value it may have as a platform, it has a great deal of value as a sign of the times. Whatever else it may be or may not be, this it is: a bid for the support of that large body of Republicans who are very sick of Republican doings, and who long for a decent excuse for trying both new measures and new men. It is impossible to overlook certain facts: 1. That during the present Administration nothing whatever has been done until now to reform the civil service, in spite of the loud and oft-repeated promises on the subject. 2. That a great blow has been struck at the purity, independence, and usefulness of the Supreme Court and of all courts, by packing the court to procure a sudden reversal of a carefully considered decision. 3. That so far from any steps having been taken towards a return to specie payments, this packing of the court was resorted to with the direct purpose of getting a judgment which made a return to specie payments more difficult and uncertain than ever, and this packing has been formally and publicly justified by the Secretary of the Treasury. 4. That no serious attempt has been made to reform the revenue, or infuse order or method into the tariff, which is now in a state of as great confusion as it was four years ago; and that, so far as we know anything of the mind of the party, it is occupied rather with the discovery of means of avoiding the question altogether than of dealing with it honestly and fairly. 5. That the time and attention of the Administration during four years have been mainly occupied with the project of annexing a semi-barbarous island occupied by a turbulent population unused to civil government, and that it was never so intent on this scheme as at the moment when Congress was appointing the President a dictator as a possible substitute for regular civil government in half the Union. The one positive step in the history of the Republican party that can be urged as a set-off to all this is the conclusion of the treaty with England, the value and importance of which we have no wish to underrate; but it is well to consider

whether a year hence people will be disposed to regard this one piece of foreign policy a compensation for the almost total neglect of internal reforms.

THE NEXT STAGE IN THE FRENCH REVOLUTION.

THE course taken by events in Paris has been almost exactly what most observers of French politics expected it to be; that is, a monarchy has been overturned by the rush of a mob into the legislature, or by "escalade," as the French themselves now call it; a provisional government has been formed by a selection from the bystanders, and this government has taken on the ways of a republic; but, though very radical, it has failed to give satisfaction to the Radicals, who have made several attempts to overturn it, and have succeeded in seizing and holding the capital for a brief period, but have been put down with great bloodshed after having greatly frightened the peasantry and property-owners, and given the administration once more a thoroughly military tone, made the commander-in-chief the most important man in the nation, and given the army once more a strong sense of its own power and importance and of its superiority to the civil authority. This is, in brief, the history of every French revolution; and, up to this point, there is never any difficulty in foretelling the principal events of a Parisian attempt at reform.

There are, however, some peculiarities in the present crisis which will probably, from this point on, give a turn to affairs in many respects novel, we will not venture as yet to say hopeful. The first and, of course, the most important of all is the complete separation in feeling and opinion between town and country which these late disturbances have revealed. In the first revolution, as well as in that of 1830, there is no doubt that Paris largely enjoyed the sympathy of the provinces. By the first revolution the peasantry gained more than any other class—how much they gained is strikingly sketched in Erckmann-Chatrian's "Histoire d'un Paysan," and they threw themselves into it heart and soul. In 1830, again, the revolt was directed against an attempt to restore partially, at least, the old régime. Charles X. was a Bourbon; he brought back the *majorats*, or law of primogeniture, and he filled the offices and the army with old émigrés, whose names were still remembered and hated by the country people. During the eighteen years of the Orleans rule, however, the peasants began to prosper and feel secure. The generation to which the passions of the Revolution had come down had died out, and there grew up in France a love of repose such as in all its history it had never known. The outbreak of 1848 took the country by surprise, and the great depression of trade and industry which prevailed during the three years of the Republic strengthened the growing distrust and dislike of revolutions as well as prepared for the Empire.

The overthrow of the Empire was accepted partly in disgust with the Imperial management of affairs, and partly from a hope that the Republic would make a better defence against the invader. The Republic, however, totally failed in the field, and the first and greatest effect of its failure was to convince people of the folly of "swopping horses while crossing the stream," or, in other words, of the enormous disadvantage a nation labors under which has no government that can survive disaster. The spectacle, too, of Prussian gravity and discipline, and devotion to duty, has made a profound impression on the French mind. One can hardly take up a French periodical without seeing evidences of this. Moreover, as was predicted by one very shrewd observer, the sufferings and misfortunes of the war have aroused a very marked revival of religious feeling, how marked those who have any knowledge of the French character will see from the recent passage, by a majority of 417 to 3, by the Assembly at Versailles, of a resolution to "offer up public prayers for a cessation of the civil war." A year ago this would have excited inextinguishable laughter and no end of epigrams. If we combine this weariness of revolutions and this peculiarly solemn frame of mind, we shall find ourselves in the presence of a state of things of which the like has never been seen in France. The nearest approach to it was made during the depression in 1712 preceding the battle of Denain, when old Louis XIV. made up his mind, as he informed Marshal Villars, to die sword in hand at the head of his troops.

The influence of this peculiar mental and moral condition of the French on their political future has been greatly fortified by one other feature of the late extraordinary struggle. Our readers may remember that we predicted at the beginning of the second siege that, if M. Thiers succeeded in retaining the hold of his government on France, in spite of its expulsion from Paris, he would open up a new chapter in French history. Now, he *has* succeeded in doing this, and in doing it he has broken a spell under which France has lain for two centuries. For the first time, the country at large has had a stand-up fight with Paris, and has soundly thrashed it. There has on this occasion been no uncertainty as to the character of the conflict. It has not been waged between one class of Parisians and another class of Parisians, or between the Parisians and a government set up by themselves, as in 1830 and 1848. This time, the country has engaged the capital fairly and squarely, and subdued it. Moreover, it has been the general opinion of Frenchmen, during the last forty years, that if the Reds got possession of Paris, for ever so short a period, society would be ruined, and anarchy spread through the country. The Reds have had possession of Paris for three months, and under circumstances more favorable than are ever again likely to present themselves, and nothing more serious than the destruction of life and property within the capital has come of it. We think it is impossible to overestimate the effect on French politics of the removal of this terrible bugbear, which has weighed on the imagination of every generation since 1793, and has made it impossible to secure anything like calm deliberation in the organization of a government. In 1795, in 1830, in 1848 and 1851, people rushed into any plan which promised to protect Paris from the Reds. It is possible, and not improbable, that whatever régime is now set up, will be set up with greater deliberation, and a more distinct reference to the wants and wishes of the provinces—that is, of France at large—than any which has preceded it.

What will that régime be? It may be calculated with almost certainty that the Bonapartes are out of the field. Nobody can reign in France who has surrendered to a foreign enemy at the head of 100,000 men. Supposing monarchy to be resolved on, the Count de Chambord would have a good chance if the present Assembly were to act as a Constitutional Convention, which it has, however, no right to do, and will probably not attempt to do. He has issued an address, from which the only thing clear is that he would, if restored, throw himself into the arms of the church, and this may win him favor with the peasantry; but, on the other hand, he is a Bourbon, which is the one name of French history which the peasantry dread, and he has no hold on the army or the literary class. Nevertheless, he represents what is now uppermost in French minds—the idea of continuity and permanence, and he has no children; and the late fusion with the Orleanists would not only put the succession in good hands, but would give the men of the Orleans family a great deal of influence on the court. On the whole, perhaps, the chances of his restoration are just now stronger than any other chances. But supposing, as is probable, no immediate decision should be reached as to the form of the government, there is little doubt that reflection, in the absence of disorder, would be favorable to a republic. There is no denying it, and nobody does deny it, that French manners are now unfavorable to a monarchy, and there is nothing left in French character into which any monarchy could be fairly expected to strike its roots. A monarchy, therefore, can hardly at best be more than a makeshift; a republic must come at last; but a republic cannot exist in conjunction with a large standing army, commanded by a man whose adhesion is necessary to the very existence of the government, and to whom all the offices of the state are open; and in the present state of the artisan mind in France, there is no prospect that the standing army can be dispensed with or will be dispensed with. So that wherever we begin to discuss the chances of a republic, we find ourselves brought up against a stone wall, against which some of us are like to butt our heads. There is as yet not enough republicanism in France for the government of one Swiss canton, and there is no class of the community which has less of it than the Republicans themselves. But it must be admitted that, on the whole, the events of the last three months, though for the moment unfavorable to republicanism,

have probably done more for it in reality than anything that has yet occurred, by satisfying the country of its ability to do without Paris and of the feebleness of the Red resources.

THE LABOR QUESTION IN MASSACHUSETTS.

It is difficult to exaggerate the value of such labor as is so intelligently performed by the Massachusetts Bureau of Labor Statistics, whose second annual report has been recently presented to the Legislature of that State. The report itself is a model for clearness, system, practical arrangement, and especially for the thorough recognition of the nature of the facts required by a body of legislators, though it is much to be feared that they will be the last to be benefited thereby. It does not need a very close scrutiny to recognize that Colonel Oliver, the chief of the Bureau, is in warm sympathy with the workingmen, and from conviction inclined to favor their views. But, after a careful study of the volume, and in spite of a sense of disappointment at not finding the reverse—for we were in hopes of meeting with a strong, logical, and intelligent defence of the employer—we must acquit the author of the report of every suspicion of partiality in what was, after all, his main work, the collection of the facts themselves. These are, as we have said, of the utmost importance. They comprise a complete history of all the strikes that occurred during the year, with the testimony in detail of all the witnesses examined; an admirable collection of statistics relating to the wages, expenses, food, dwellings, social condition, savings, habits, and hours of labor of men, women, and children, in several hundreds of different employments; and, finally, an immense amount of highly interesting testimony, mainly from the workpeople themselves, on every one of these various questions.

The general effect of the attentive perusal of this bulky volume is eminently discouraging. The proofs are numerous and unmistakable to the almost incredible fact that the condition of the working-classes throughout Massachusetts is a declining one, that the contrast between the relative positions of employer and employed is steadily becoming greater, that the number of men who emerge from the condition of workingmen is extremely small, and that the relations between employer and employed are becoming more and more hostile and defiant. When we read that the average earnings of over 17,000 persons, employed in thirty-three cotton-spinning establishments, including the better paid overseers and foremen, was eighty cents per day, or less than five dollars a week; that even at these rates work is not steady all the year round; that few are able, even if the work is had, to work steadily ten and eleven hours a day; that large numbers are obliged to stop work from sheer exhaustion; that young lads walk thirty and more miles a day while tending the machines; that many become intemperate from overwork; that the change of hands in large factories is frequently equal to an entire change every four months; that very few persons die while they are operatives, because, finding their health give way under their toils and exposures, they leave their employment and cease to be operatives,—when we read such things as these, we are introduced to a condition of affairs the existence of which is far from being generally known. When we read of men being dismissed from their occupation for the sole reason that they had been prominent in discussing the eight-hour movement, and refused employment in every mill in the State, where notices from their previous employers had preceded them; of men and their families incontinently turned out of house and home because they could not agree on the subject of factory wages with the owner of the tenement; of numerous employers combining to prevent the men from belonging to associations and labor-unions; of employers who openly boast that since a labor-union broke up, "they can do as they please with the men"; of employers who, claiming to be Christians, testify before a committee concerning their men: "If they were kept at work fourteen hours a day, it would be better for them. *They would die as quick one way as another.* They will drink. I don't know of anything in their employment that makes them so, *though it is fatiguing work,*"—when we read of such a spirit as that on the part of employers, we need no longer wonder at the growing frequency and increasing bitterness of strikes. On the contrary, we are filled with a conviction that there is a radical wrong somewhere which has brought about this change from the time when Lowell factory-girls earned handsome marriage portions with two or three years' labor, and found time, after working-hours, to write, edit, and read a very respectable newspaper. Where the evil lies, it would be presumptuous to indicate with any degree of positiveness. That it is more deeply-seated than is generally believed, we have no doubt. That the reading of such reports as Col. Oliver's will convince many persons of the gravity of the evil, and reconcile them to the freest and most exhaustive discussion of the remedies, is the chief as it will be the most immediate result of the establishment of the Bureau itself. It is unfortunately too true that the prejudice against everything savoring of so-called Labor Reform for the moment almost bars its intelligent discussion, and it is particularly to be regretted that the extreme bulk of the Bureau Report will prevent many from examining it who might otherwise contribute to make its contents known. But the mere existence of a permanent Bureau, authorized to take testimony on the subject, and capable of exercising that authority with fairness and intelligence, is a long step towards a correct understanding of this great problem.

Among the many different phases of the labor question, on which an extremely valuable collection of evidence is given, we have been especially struck with the influence of the trades-unions on intemperance. With the single exception, as far as we remember, of the gentleman whose evidence in favor of fourteen hours' work is quoted above, every witness declares that the trades-unions are most decided promoters of temperance. They furnish generally a meeting-place, which they seek to make attractive to members, and where at least once a week the dram-shop is neglected for business in which all are interested. The trades-union encourages economy, and raises the *esprit de corps* of the workmen. Apart from the question of wages, on which many different opinions prevail, the influence of trades-unions is almost unanimously described as beneficial both by workmen, employers, and disinterested outsiders. Notably is the evidence striking and interesting of the influence of the great Crispin organization in advancing the prosperity, sobriety, and intelligence of entire districts, the benefits of the organization being in a measure shared by thousands who do not belong to it. This evidence contrasts materially with the newspaper accounts received at the time of the great shoemakers' strike, and comes largely from merchants and others in the towns affected, who look with infinite disappointment on Mr. Sampson's Chinese, because they buy nothing, spend nothing, pay no share of the taxes, and are "no better than so much machinery."

The part of the report, however, which of all is, in our opinion, the most remarkable, is that relating to agriculture in Massachusetts. It may be summed up in two words: rapid decay. Increased nominal value of land, higher rents, fewer farms occupied by owners; diminished product, general decline of prosperity, lower wages; a more ignorant population, increasing number of women employed at hard outdoor labor (surest sign of a declining civilization), and steady deterioration in the style of farming—these are the conditions described by a cumulative mass of evidence that is perfectly irresistible, and that is unfortunately only too strongly confirmed by such details of census statistics as have so far been made public.

THE BORROWING POWER OF CORPORATIONS.

Students of social science have long since agreed that association has been the most potent of the many levers employed by modern civilization in its career of material progress. In an age marked by a growing indisposition to entrust to governments any powers not deemed absolutely essential to the maintenance of the state, association alone could render possible the creation of those vast works of public utility which are the wonder even of their own creators, and which would have been impossible save for that union and concentration of numberless individual efforts which we describe as the principle of association. Railroads, telegraphs, banks, life and fire insurance, steamships, bridges, tunnels, and canals, are all enterprises that the spirit of the age has been unwilling to commit to government management and government control, and which in their magnitude

were entirely beyond the means of private individuals, even in this age of colossal fortunes. Association has rendered them possible. Hence we are accustomed to look upon association as one of the most beneficent powers of our modern civilization, are indisposed to scrutinize its influences too closely, and are for ever tempted to frown down all attempts to disparage a system to which we must acknowledge ourselves so largely indebted. Yet it would be no exaggeration to say that the results of association to-day are perhaps fully as pernicious as they were beneficent twenty years ago. Not that nature has changed, not that society has changed, not that association has in itself ceased to be powerful for good, but that true association scarcely exists any longer, and that the outward forms and semblances of association have been and are seized upon and perverted to utterly improper uses.

The principle of association is the union of large numbers of small amounts of capital into one grand whole, and entrusting the employment of that capital to the management of one or more individuals selected by the owners and contributors of the capital. It is evident that the essential features of the system are: the contribution of capital, the control of the capital by the owners and contributors by means of the selection of managers; the responsibility of the managers towards the contributors; and the division of profits among the original contributors of the capital. Of all these essential features of the system, not one remains in the practice of to-day. The last thing contributed by the founders of associative enterprises is capital. Those that do contribute capital in such form as it ever is contributed, have no particle of control over the management. The managers are not in the least responsible to the contributors of capital, nor do the latter participate in the profits, though they are invariably made to bear the whole losses.

The perversion of association began when it was discovered that associations could borrow. Large undertakings, to which large capitals had been actually contributed, and which possessed valuable property, were early recognized as admirably safe borrowers, and speedily acquired great and general credit. As long as their borrowings were confined to large amounts, only to be obtained from great capitalists, wealthy firms, or other large associations like themselves, no strikingly evil results followed. For all these classes of lenders necessarily have the ability and the caution to investigate the condition of enterprises to which they advance large amounts, and generally have the indirect influence to control in a measure the money so advanced. But when it was discovered that the property of an association could be mortgaged, and the bond divided up into numberless small amounts, and that lenders could be found who would advance money on the security of such a bond and a mortgage, and that large amounts could in that way be borrowed from numerous small lenders, who advanced their money on the general reputation of the corporation, and whose limited means of enquiry and scattered influence had ceased to be a power—then the ability to borrow money became the destruction of the system of association. Naturally, at first money was borrowed in this fashion on mortgage bonds by associations who possessed property to mortgage, whose original contributors or shareholders had really contributed large amounts of capital, which they controlled by means of the managers of their election, and had consequently a powerful interest in securing honest and skilful managers to preserve the property. The theory in those days was that the shareholders or actual contributors of capital had so large a stake in the success of an enterprise, that its management was safe in their hands, and that the property mortgaged to the lender of further amounts of capital was wisely left to the original owners. In the early days of corporation loans, this belief proved generally well-founded, and so high became the credit of corporations, and so extremely convenient was the form of security devised, that large classes of investors, both for large and small amounts, habitually lent their capital to the various large corporations by buying their mortgage bonds, and that mortgage bonds came to be recognized as a safe and desirable form of investment.

It must be evident that the safety and desirability of this form of investment depend essentially upon two things: the existence and value of the property, and the character of the management secured by the stockholders and original contributors of capital. Both these considerations are, however, entirely disregarded in the modern system of forming corporations. The original contributions of capital, the actual stockholders, the property in existence, are all found to be totally unnecessary, nay cumbersome; and a modern corporation is virtually nothing but a device by means of which a few individuals can borrow enormous sums of money without personal responsibility; can use this money, without the slightest interference on the part of the lender or anybody else, for such purposes as they see fit; can devote this money to the most dangerous and hazardous enterprises, the loss in which, if any, falls upon the lender—the profit in which, if any, reverts to the individual; and can do, under the guise of a corporation, a number of things which, if done as individuals, would stamp them as cheats, swindlers, and rogues. With some few rare exceptions, the entire system of association to-day is nothing but a shield authorized by law to protect dishonest men from the legal consequences of dishonorable actions.

An association to-day, in ninety-nine cases out of a hundred, is not an association of men who unite their capital for some joint enterprise. It is, on the contrary, an association of men who never put a dollar of their own into such an enterprise, but who, under the false pretence of having thus risked their own money, borrow the money of others. Of all the railroad companies formed in the United States within the last five years, not five per cent. ever had any capital of their own. A dozen men procure a charter, subscribe nominally a certain amount of the stock, constituting themselves the stockholders; a stockholders' meeting is then called, and the twelve elect themselves directors, and, under the pretence of representing a body of stockholders, whose capital is supposed to lend respectability and solvency to their enterprise, proceed to commit a variety of acts which not one of them would dare to do as an individual unprotected by his official character, as a director acting under instructions from his stockholders—that is, from himself. Money is borrowed in enormous sums on the security of a mortgage upon property which does not exist; the entire risk of the success of the enterprise falls upon the lender of the money, the buyer of the mortgage-bonds, for there is no one else upon whom it can fall; the unfortunate lender thinks himself amply secured by a mortgage upon some existing property, and further protected by the watchfulness of a large body of stockholders who are supposed to have invested their capital in the enterprise. A better scheme for borrowing money without incurring any liability was never devised. The lender surrenders all right to interfere for twenty years or more, so long as his interest is punctually paid, and the borrower, so long as he pays the interest, is almost untrammelled in the uses to which he may put the principal.

If the evil results of this system were confined to the relations between the borrower and the lender, great as might be the mischief which will some day flow from it, it would be insignificant compared to the evils which it already daily inflicts upon the community. The whole legislation concerning corporations is based upon the original theory and practice of association, as we have described it. In order to induce the formation of companies, the responsibility of individual stockholders was legally limited to the extent of their share in the property of the company—in other words, the shareholders were virtually by law freed from all responsibility of whatever kind. In order to give the shareholders unlimited control over their property, the directors were made responsible almost exclusively to their stockholders, whose capital interest in the enterprise is supposed by the law, as well as by the public, to be ample guarantee that they will authorize no wrongful act on the part of the directors. But, under the modern practice, the directors being generally the chief, if not the sole, stockholders, are responsible as directors only to themselves as stockholders, and as stockholders they are responsible to nobody, while they have not even that limited responsibility as stockholders which they would have if they had invested capital in the enterprise, for the simple reason that they did not invest any. In this way the law has created a number of associations or corporations, which are supposed, from their inherent nature, to exercise a control over the actions of their representatives, but which, by the very law itself, are absolutely shielded from all responsibility. There are to-day in the

United States hundreds of associations, consisting each of them of a very limited number of individuals, upon whom the law confers enormous privileges, who, upon the strength of a sort of traditionary reputation of corporations in general, borrow hundreds of millions of money from deluded investors, and are by the law itself absolutely free from all responsibility. It is this borrowed money that is used to corrupt legislators, to buy privileges, to influence judges and sustain armies of lawyers, to resist the just claims of the public, and to maintain the entire system of corporate tyranny which threatens to make the principle of association odious in the eyes of the people and render it practically useless in the future.

No thoughtful person to-day doubts that the associative principle as now put in practice is no longer endurable. Either great works that cannot be accomplished by individual means must cease, which is almost equivalent to bidding civilization cease its progress, or means must be found to limit the power or to increase the responsibility of the managers of corporations. Whether this generation is equal to the task may well be doubted. But certain it is that no measure will ever be effective that is not based upon a restoration of the old original rule that the capital of an association must be furnished by the associates, and that borrowing must be restricted within very narrow limits, if not entirely prohibited. It is the borrowing power that destroys the responsibility of the managers, that has virtually eliminated the stockholder from all modern corporations. It is only by destroying the borrowing power that the stockholder can be brought back into active existence, and the people prevented from plunging into some hasty action to rid themselves of the insufferable tyranny, fraud, plunder, and corruption of the great corporations, who are to-day the masters, not the servants, of the people.

Correspondence.

"TOTAL ABSTINENCE."

To the Editor of the Nation:

Sir: In reading the article on "Prohibition" in your issue of May 25, although I entirely agree with the views therein expressed in regard to the inexpediency of attempting to suppress liquor drinking and the liquor traffic by law, I could not but think, as I have often thought when reading your remarks on the subject in other numbers of the *Nation*, that you very strangely ignore the strongest point which the rational advocates of the duty of total abstinence, as a duty binding upon every individual person, have made, the only one which I do not recollect to have seen triumphantly refuted. You say: "I may be, and often am, forbidden to do things which, though harmless in my case, would work mischief if all did them; but I am not prohibited from doing things which, if all did them, would still be perfectly harmless, lest some persons should do them in hurtful excess." Exactly: I do not see how your position can be successfully assailed.

But the habit of using intoxicating liquors, like the kindred habits of using opium and certain other drugs, has this terrible danger attending it, that it is liable in the course of indulgence to cease to be a mere habit, and to assume the character of a disease. I believe that the doctors are pretty nearly agreed on this point, that a drunkard has laid himself under actual physical disadvantages, and diminished, to a vastly greater extent than can be accounted for by the force of a mere habit, his powers of resistance. Even when a man by any means recovers himself from the grip of this habit, as a very few do, he does not throw it off as he would the habit of card-playing, for instance, with which it is often mistakenly compared, but he holds his liberty, usually, only on the condition of a rigid avoidance of temptation. However, such a one, being forewarned, ought to be also forearmed. It is his own fault if he allows himself to be tempted. Now although it is by no means true, as many too ardent teetotalers would seem to be willing to have us believe, that every one who begins the practice of "moderate drinking" will eventually fall a victim to *oinomania*, still I think that no one will deny:

1. That a very large proportion of those who habitually drink wine and distilled liquors do become drunkards.

2. That the point at which the habit begins to merge into a disease is almost impossible to distinguish, and is generally passed without notice by the drinker. "He can leave off whenever he will;" and he is seldom aware till it is too late that he has got himself into that state where the odds are overwhelmingly great that he never "will."

3. That there is no method yet discovered of telling beforehand who will and who will not pass this point, who can and who cannot with safety enter upon a course of moderate drinking. If there were any such method known, I think the last bit of ground would be cut away from under the feet of the total abstainers. It seems to be a matter of natural constitution; not a few physicians think that the tendency is inherited in many cases.

4. Not only weak and foolish characters are drawn under the power of this fatal habit, even to the point of becoming downright sots, but men of ability, genius, and strong character are not safe.

On these considerations the advocate of total abstinence bases his argument. It is no question of example; it is no question of the abstract right or wrong of liquor-drinking—nor, to my mind, does it touch the matter of the German artisan's beer-drinking—it is no question of what is expedient or right in times or countries other than our own, Scriptural or otherwise; it is a fact that, here and now, we have in the community a large class, who cannot be distinguished from the rest or warned beforehand, with whom the question whether or not they shall become drunkards depends for its answer simply on the answer to the question, whether they allow themselves to use intoxicating drinks to an extent only that to their differently constituted neighbors would be productive of no injury whatever. In this view of the case, I think that the total abstainer's sentiments in regard to the "drinking customs of society," whether defensible or not, are at least not utterly unreasonable and fanatical. T.

Broad Brook, Conn., May 26, 1871.

[We have not discussed total abstinence in the *Nation*, and have never said or insinuated that it was "unreasonable and fanatical" for a man to practise it and try to persuade others to do so. What we object to is attempts to enforce total abstinence by law. The argument in favor of voluntary abstinence which "T." urges is a very strong one, but we doubt much whether the risk of becoming drunkards will ever, in the long run, have more influence on men's conduct than any of the other great risks of life. Men take risks of all kinds every day, in many instances a great deal higher than the risk of becoming drunkards, in the pursuit of both business and pleasure, without any hesitation; and there is probably no point on which they are more reckless than their health, so that saying drunkenness is a disease does not heighten its terrors for them. They abuse their bodies abominably in working and playing, eating and drinking, in spite of the clearest knowledge as to the consequences of their acts. It is safe to say that the working power of the male portion of the race is reduced by one-half, and that of women by three-fourths, through reckless modes of living—that is, through the same want of self-control and of sense of responsibility which leads to the excessive use of alcoholic drinks. We believe, for instance, that a large proportion of the vice and crime of the world, drunkenness included, and of the feeble and inefficient performance of daily duties, is due to badness of digestion; and though this is very well known, and the ways of improving digestion are pretty well understood, the number of people who make any persistent and energetic efforts to improve their digestion or keep it good is very small. The singling out of drunkenness, therefore, as the root of our social troubles, and the one excess on which we need to expend our energies, is open to the same objection as all panaceas. We may add that we believe there does not exist a scrap of statistics as to the proportion borne by the number of drunkards to the number of moderate drinkers; that most of the assertions of the advocates of temperance on this subject are wild exaggerations or misrepresentations; and that the fact that all drunkards began by being moderate drinkers proves nothing more against moderate drinking than pugilism proves against athletic exercises. Every pugilist begins by being an athlete, and had he totally refrained from inordinate attention to his muscles would never have taken to the ring. Could it be shown that fondness for athletic exercises generally, or in a majority or in a large proportion of cases, led to pugilism, we do not deny that it would be a man's duty to avoid bestowing much attention on his muscles, but it is just at this point—the connection between the use and abuse—that the friends of temperance are weakest, and have the scantiest supply of facts.

We decline, it will be seen, to treat the craving for stimulants as a disease in itself, because it is apparently as general and as old almost as any other desire. Very few persons are exempt from it. We do not like to cite living examples in support of our argument, and especially where the example is a distinguished and universally respected man, and yet we may be permitted to call attention to the fact that Mr. Colfax, though a rigid teetotaler, is now suffering severely from excessive smoking, aggravated, it is said by excessive use of tea and coffee. We do not mention this in depreciation of him, but simply to suggest to the friends of temperance the possibility that they have not got to the bottom of this matter. Most of the movements to bring about social reforms are, we are sorry to say, carried on by exceptional persons, blessed or cursed with mental or physical peculiarities which make most of their gospel perfectly useless to the great mass of mankind. The rule of right reason will never be established in these matters till its apostles are more largely supplied by the "average man." —Ed. Nation.]

Notes.

Messrs. G. P. Putnam & Sons will republish immediately, in pamphlet form, the prophetic article in *Blackwood* for May, entitled "The Battle of Dorking; or, Reminiscences of a Volunteer."——"The Memoirs of John Quincy Adams," comprising his Diary from 1795 to 1848, and edited by the Hon. Charles Francis Adams, is in the press of J. B. Lippincott & Co. They will also shortly publish the following novels: "Rookstone," by Katherine S. Macquoid; "The Quiet Miss Godolphin," by Ruth Garrett; and "A Chance Child," by Edward Garrett; a book of poems by Emily M. Kiehl; and two medical works: "Diseases of the Ear," by Lawrence Turnbull, M.D.; and a new edition of Beck's "Medical Jurisprudence."——Messrs. Geo. A. Leavitt & Co., of this city, sell at auction on Thursday and Friday, June 15 and 16, a considerable collection of works with various attractions for bibliophiles, of which these four, however, are likely to command most attention: Nos. 203, 204, 205, and 336. The first three embrace a remarkably large number of Cruikshank's works, six of which (Lot 203) are original sketches in pencil or sepia. The last is the fifth edition of Granger's "Biographical History of England," containing Mark Noble's Continuation, and greatly enhanced in value by the insertion of upwards of 1,500 portraits, including Richardson's series. Six volumes folio have thus been extended to twenty-one.

—Prof. Gustavus Hinrichs writes us, in reference to our late remarks on his quarterly periodical, the *School Laboratory of Physical Science*, that he expects from this publication a very moderate influence on the diffusion of physical science in the common schools, and that in Iowa they depend on exactly the instrumentalities which we recommended. In the laboratory under his charge in the State University, "more than two hundred students have experimented throughout the greater part of this school-year; about one-half of these will continue this course next year; and quite a number will spend one or more years still in it. In each of the above grades," continues the professor, "we have students who will enter the educational field as teachers. Besides, we have promised to conduct, in the laboratory, after the close of the present school-year, a Teachers' Institute in Physical Science, for older teachers now active in various stations in our State." We take pleasure in recording these facts, and in making this further extract from our correspondent's letter: "We try to discountenance the mania for teaching science by 'illustration,' which has led to the purchase of all sorts of fancy furniture, diagrams, charts, etc., and of necessity leads away from nature. In how many schools do you find the orrery rather than a telescope? And yet a telescope, costing less than the orrery, would show much that the unaided eye cannot see; but, above all, it would compel the teacher to take his pupils out into the free air, there to study the stars themselves, and not fancy pictures."

—The New Haven *Palladium* appears to have authority for saying that the murderer Ruloff, in prosecution of his philological extravagances, called on Prof. Whitney, of Yale, towards the end of 1868, and made known in confidence the main outlines of his pretended discovery. "It was, in general, to the effect that the liquids, *l*, *m*, *n*, and *r*, are the substantial and essential elements of words and roots, all other elements being subsidiary accretions to these; words, therefore, containing these elements (which, moreover, are variously interchangeable with one another) are to be compared or identified as originally the same." We may, we suppose, trace this delusion in the man's assumed names—*Leurio*, as he called himself when he visited New Haven, being in two senses the equivalent of *Ruloff*. Prof. Whitney, regarding him as an object of commiseration, put him off as gently as he could, and, when he reappeared at the Philological Convention at Poughkeepsie, allowed him to name a committee to examine his theory. "The gentlemen he selected were of the highest and most unexceptionable character; but they, as was anticipated, absolutely refused to look into his scheme, on the ground that the association had no business to meddle with anybody's secret, that was on sale, to recommend it to a purchaser, or the contrary; it could only examine what was open to the whole learned public to examine. He was, as might perhaps have been expected, greatly dissatisfied with the decision." It would now remain for Mr. Stephen Pearl Andrews, whose Alwato shows a remarkable analogy to the Ruloff theory, to present himself at Rochester for the judgment of the learned, were it not that he finds it more convenient to obtain their endorsement in advance of publication and to defy their opinion afterwards.

—The difficulties people of moderate means have in procuring proper pictures for their walls, owing mainly to the racket kept up by the art critics, and by the ridiculous pretence put forward by the dilettante that the popular judgment about pictures is not always to be trusted, are, we are glad to say, in a fair way of being overcome in a manner that will satisfy all parties. Boston, the source of so many contrivances for making domestic life easy, has produced the new arrangement, which consists simply in the supply of pictures to match the furniture by the furniture-dealer. The Boston *Transcript* informs us that Messrs. ——— & ———, noted furniture dealers in that city, have opened a fine gallery of pictures in their store, "in connection with the sets of furniture." "The pictures embrace various subjects of landscape and still-life, many the production of local artists." "Good pictures," as the *Transcript* very truly observes, "have become the necessity of house furnishing, but the expense of these wall decorations confines many to cheaper works of art. Messrs. ——— & ——— conceived the idea of making the furnishing of houses more complete by associating with their chamber and other sets suitable pictures, which are sold in conjunction, at rates far more reasonable than could be obtained by separate purchase." We have no doubt they will profit by the "idea." Nothing can be more convenient than to be able to get landscapes and still-life to match your carpets, bedsteads, and crockery chosen for you by an experienced furniture-dealer. The artists must also, we suggest, keep the furniture in mind in choosing their subjects. "A Duck Pond in July," for instance, would go nicely with a painted set; "A Dog after a Cat," would be the thing for a plain maple or oak set; "A Girl Coming through Buckwheat," would look well with plain black walnut or mahogany; while for a truly gorgeous chamber, with carving and so forth, a "King Caught by a Tornado," would be about the thing. The clothes of the figures ought always, we need hardly say, to match the carpets and curtains in the prevailing tint. Messrs. ——— & ——— ought, however, to supply books as well as pictures, and their establishment will never be complete till they do. Everybody furnishing a house wants a library, and not a few do not exactly know what books it ought to contain, and this branch of business is now left entirely to the booksellers, who send home the books without ever having seen the wall-paper, carpets, chairs, or tables, or, indeed, anything in the house. The result is frequently the most shocking incongruities. By getting the books where you get your furniture, all this would be avoided, and a single order, given by a young couple in the course of half-an-hour, would surround them at once with all "the evidences of culture" at a very moderate cost.

—We some time ago copied an English announcement of Phillips's "Dictionary of Biographical Reference" (Sampson Low, Son & Marston), of which the most striking promise was that it should contain one hundred thousand names. We now have the preface and specimen pages before us, and can define the scope of the work a little more exactly. It has three principal features: (1) abundance of names, exceeding in this respect every other work of the kind, and embracing "the greatest number of distinguished Americans ever collected in one work"; (2) references at each name to one or more of a list of dictionaries which may be consulted for further particulars; (3) no more of characterization and of dates than can be comprised in one, two, or (apparently) three lines. The first page, we trust, is not to be taken as a fair specimen of the accuracy of this work. In the second column alone we note at least half-a-dozen serious errors. *Bistriez* for Bistritz, and *Foyaras* for Fogaras, occur in the same line. Aaron-*Ariseon* stands for Ariscon; the equivalent form *Harischon*,

however, being correctly given. This word, by the bye (= Lat. *priscus*), seems to be a stumbling-block to dictionary-makers. From a similar misunderstanding of the appellative, we have "*Aba*, Sam., king of Hungary," for Aba-Samuel, etc., *i. e.*, Father Samuel; like the Turkish Kara-George, Black George. The second name of Aaron-Ben-Anser, Aaron-Bar-Moses, is here printed Aaron-Bar-*Moise*, in the French form, for which there is no good reason. We have, without going below the surface, marked several other errors, chiefly in single letters, of more or less consequence.

—A few English titles of interest may be added to our summary of recent or forthcoming publications. W. D. Christie's "Life of Anthony Ashley Cooper, First Earl of Shaftesbury," of whom, if only as the friend of Locke, posterity ought to have a good opinion, is an attempt to redeem him from the harsh verdict of the historians. A very readable biography is the "Memoir of Charles Mayne Young, the Tragedian," by his son. A memoir of the artist, Maclise, by W. J. O'Driscoll, will not fail to have readers. Books of travel are increased by Frederic Eden's "Nile without a Dragoman;" "Travels of a Pioneer of Commerce in Pigtail and Petticoats," being an overland journey from China towards India, by T. T. Cooper; "Our Sister Republic: a Gala Trip through Tropical Mexico in 1869," by Albert S. Evans; and "A Journal Kept in France and Italy," with some account of the Revolution of 1848, by Nassau W. Senior. A diary of the Siege of Paris, taken from *Galignani's Messenger*, and "The Defence of Paris, narrated as it was seen," by Thomas Gibson Bowles, are the two latest contributions to the history of the chief event of the Franco-Prussian war. A volume of "Lyrical Poems," by Francis Turner Palgrave, has been published by Macmillan. Finally, we note the following: a new volume of sermons by the Rev. Stopford A. Brooke; an "Essay on the Druids, the Ancient Churches, and the Round Towers of Ireland," by the Rev. Richard Smiddy; and "Historical Narratives from the Russian," by H. C. Romanoff.

—Since Dr. Livingstone's discovery of the Victoria Falls on the Zambesi, in 1855, not a few travellers in South Africa have sought this remarkable scene. Chapman and Baines followed him closely; solitary Englishmen have found their way there from Natal, and last June the German explorer, Eduard Mohr, succeeded in spite of numerous obstacles in reaching the falls, where he planted for the first time the North-German colors. Had he known what was then passing in Europe, and how soon his flag was to cover the whole of Germany, he would have had a still juster cause of pride as a pioneer of German science. The journey to the falls, and the impression they made on him, are narrated at length in Petermann's *Mittheilungen*. Dr. Livingstone, revisiting Garden Island, on the brink of the falls, in 1860, found that the trees which he had planted there in order to teach the Makololo arboriculture had been totally destroyed by the hippopotami, and though he planted them again, and protected them with a strong stockaded fence, he had little hope of resisting the attacks of the same enemy. In fact, the fruit-trees were down three years later when visited by Sir Richard Glyn and his brother, and Mohr, of course, reports the garden ravaged and overgrown, since there had been no one to restore it a second time. This traveller made an interesting experiment in domesticating the ostrich, having raised no less than four from the egg. They exhibited not the slightest fear of man, but on the contrary great attachment and a remarkable sense of locality. They marched with Mohr hundreds of miles, and one ("ein grosser einjähriger Hahn"), which accompanied him the longest distance, to Potchefstroom, he parted with only because its appearance on the streets frightened the foreign cattle and horses.

TREITSCHKE ON MODERN FRANCE.*

HEINRICH VON TREITSCHKE is one of the most eminent, and at this moment, perhaps, the most conspicuous, of German historical essayists. He combines the all-embracing knowledge of a German historian with the versatile discursiveness of a Macaulay and the elegant polish of a French review writer. In this last respect he has scarcely a rival. It is not easy to find a paragraph—one might almost say, a sentence—in his writings which is not rounded, translucent, and graceful. And he has the good fortune to be a man of the time in his fatherland. He is no ideologist; he hates political sectarianism; he has a contempt for radicalism and universal suffrage; he is German through and through. He advocates imperial unity, and does not shrink from war; he is no less an admirer of the Hohenzollerns than Carlyle is, and like him, though in a feebler degree, a hero-worshipper. He is a constitutionalist, yet ready to follow the lead of a Bismarck; he ignores none of the questions of the present or of the future, but demands their solution in a grand style and by grand intellects; he has closely studied his people and its opportunities, and his people has given a triumphant confirmation to his beliefs and anticipations.

The collected "Aufsätze" treat exclusively of themes of modern European history, and chiefly of the history of this century. Their titles, in the order in which they are presented to us, are: "Prussia under the Teutonic Order," "Milton," "Fichte and the National Idea," "Hans von Gagern," "Karl August von Wangenheim," "Ludwig Uhland," "Lord Byron and Radicalism," "F. C. Dahlmann," "The Federal State and the Unitary State," "Liberty," "The Political Life of France and Bonapartism," "Cavour," "The Republic of the United Netherlands," "Lessing," "Heinrich von Kleist," "Otto Ludwig," "Friedrich Hebbel," "Constitutional Monarchy in Germany." Some were written before the war of 1866, some after it; all were published before the great Franco-Prussian struggle. This we must remark, chiefly in reference to the work on France and Bonapartism, the author's most extensive study; which, with its divisions and subdivisions—embracing three hundred and fifty octavo pages—forms rather a collection of essays on one connectedly treated subject than an essay, and to which we shall exclusively turn our attention in this notice. The importance of the subject, the exhaustive research bestowed upon it by the author, and a multitude of keen observations, original or gleaned, which cannot fail to strike the reader in connection with recent events in France, make this production particularly remarkable; and we cannot refrain from introducing it to our readers, though we are far from sharing all the conclusions the writer reaches concerning men and things in France, after closely weighing her political life in his critical balance. On account of its very richness, however, we can introduce it only in a very fragmentary way.

Herr von Treitschke finds the French particularly wanting in the sense of right, and in this defect an essential cause of the internal ailments of their body politic. It manifests itself above all in the absence of almost all perception of the right of foreign nations. This perception was gradually destroyed by the admiration for the conquests of Louis XIV. and those of the Convention, and the intoxication into which the victories of the First Empire plunged the people.

"It almost appears that that gifted nation is tacitly conscious of the truth that true creativeness and genius it has developed almost exclusively in war. In blind eagerness for war, all parties meet. The radicals are convinced that the natural constitution of France is armed democracy, and the legitimist Châteaubriand asserts that liberty in France must hide her red cap under the helmet. Even Lamartine, one of the most obstinate enemies of Bonapartism, pathetically tells us that the revolution of freedom was followed by the counter-revolution of glory; and it is amusing to see how in Proudhon's work on war the enthusiasm for the 'phénoménalité de la guerre' a hundred times breaks through all the peace-apostle's exhortations. Reason and equity are silenced, and even the decency of the nation of *bon-ton* vanishes, as soon as the phantom of *la gloire* flares before its eyes. All France shouted with joy when Napoleon heaped together the art-treasures of all countries in the halls of the Louvre, and nobody reproached him when he carried off the Madonna of Loretto, as the Romans used to carry off the gods of the vanquished. But a cry of indignation rang throughout the land when the allies demanded back the plunder, and to this day the official catalogue of the Louvre tells in the tone of offended morality how shamefully the Prussians, in 1815, pillaged the Imperial galleries."

And what that Imperial *gloire* cost France is partly stated in the following:

"France can tell a tale of the immortality of historical guilt. What makes Mirabeau so tragically striking an appearance is, that in his life the fate of his people is mirrored. Just as the shadow of his youthful profligacy intervened between Mirabeau and the crown, and prevented him from occupying the right place at the right moment, so the nation but half-completed its first revolution because it bore on its shoulders the burden of an iniquitous past, because its simple citizen virtues had been crushed out by the old régime. And similar is the present. No rational statistician doubts the fact that the main—though not the only—cause of the highly unsatisfactory physical conditions of the French population—infertility, frequent debility, superabundance of cripples—is to be found in the wars of the First Empire, which killed off the healthy male youth of the country. And the historian, too, will easily discover the traces of those stormy times in the political field."

The main representative of French military glory is thus sketched:

"Napoleon was a foreigner on the throne of France. . . . His mother bore him under her heart when, at the Ponte Nuovo, Corsica's freedom succumbed to French arms. He who for the first time beholds one of those figures in relief which represent the Emperor in a Roman

* "Historische und Politische Aufsätze. Von Heinrich von Treitschke." Vol. I., third edition. Leipzig, 1867. Vols. II. and III. Leipzig, 1870.

garb, needs some reflection to recognize that he has not the figure of a Roman before him. Observe the classical traits of this Augustan head, and see how little it has in common with the small skull of the Celt; and chiefly how entirely different the firm gaze of that powerful eye is from the unsteady fire which flickers in the eyes of Frenchmen. The *esprit* of beautiful France the *Imperator* neither possessed nor appreciated; the power and depth of his passion are purely Italian; his nature, his feeling, appears to Frenchmen too *entier*. Proud Italians hailed their countryman as a Roman *Imperator* whom Gallic legions had raised upon their shield. Corsican patriots of the old school saw in the tamer of France the avenger of his native isle. The Corsican became a hero of France merely because here the revolution opened a vast field for his immense strength. Under other circumstances, he would have indifferently selected any other land for the base of his greatness; as, in fact, in the years of unsatisfied ambition, he played with the thought of entering the Russian or the Turkish service. But the wreath of the highest princely glory is allotted only to national heroes, in whose image a whole people sees its innermost being reflected and glorified. Such a national hero Napoleon would have been had he ruled the world with the power of Italy; for in him was incarnated that ancient phantom of Italy's longings, the *Principe* of Machiavelli. As Emperor of the French, he is but the greatest of all the homeless adventurers of history."

Napoleon was the idol of one generation of Frenchmen in our century; the idol of another generation was "the people":

"All the spokesmen of radicalism vie with each other in offering adulation to the people. One of the maxims of the 'Society of the Rights of Man' is this: Every law must be based on the principle that the people is good and the government exposed to temptation. When a workmen's rising is quelled, the radical journals but rarely and timidly venture to throw out a word of condemnation against the movement—as unwise—but there is no end to the praise heaped upon the heroism of the men with the callous hands and sinewy arms. The fourth estate is the people proper, 'peuple-roi,' 'peuple tout-puissant,' 'peuple-idée.' The *gamin* of Paris, according to Victor Hugo, in breathing the air of the world-city, inhales innocence; the *ouvriers* form the genuine aristocracy. Every scandal of high society . . . . is skilfully worked up to contrast the purity of the maltreated helots with the wickedness of the revelling Sybarites. The intimidated middle-class does not always muster courage openly to defend the order of the state against the innocent people; the injustice of the jury becomes a rule in all political cases. The *blasés* among the rich, amid all their anxiety for their purses, hail every regicidal attempt, every insurrectionary riot, as a welcome change, breaking the uniformity of their enjoyments."

The Restoration, after some feeble and foolish attempts at repressing the revived revolutionary aspirations and Napoleonic idol-worship of the nation, succumbed to the *bourgeoisie*. The Orleans throne, whose royal representative and main supporters our author treats with great severity, fell under the blows of the "peuple-roi." The latter, by its folly, speedily sapped the foundations of its own structure, the Second Republic, and made a *coup d'état*, a dictatorship, unavoidable. The Bourbon and Orleans monarchies had bred republicans; the revolution of February reared a spirit of sweeping reaction. Napoleon III. gave France quiet, order, and a glittering prosperity under the cover of a despotism erected on a level of perfect equality. But under such a despotism there was as little room for an aristocracy of the mind as for hereditary distinctions. The new Empire in vain imitated the ways of the "Grand Monarque;" it had neither a Racine nor a Molière, and its court contained only "a company of *parvenus* and adventurers." There was no room there for high spirits or high hearts. The divinities of the time were Mammon and a vulgar Venus. The age, not of Louis XIV., but of the Regency, was revived. Paris again became the high school of vice for the world; French civilization shone in a renewed "propaganda of immorality."

The liberal armed propaganda was, however, not entirely given up either, even in this period; it shone once more in its better light in the Italian campaign of 1859. And our German author is far from inclined to deny that many of the warlike enterprises of the French, from the time of Rochambeau to our own, have been marked with a trait of a generous idealism. On the other hand, he clearly saw, at the time of his writing, the danger with which the mainspring of French aggressiveness, national vanity, threatened Germany. He regarded a Franco-German war as a calamity to both nations which was by all means to be avoided. He did not believe there was a war party in Germany. Nor did he expect to find in France an enemy as little to be dreaded as was Austria in the summer of 1866. Yet, were France to provoke a war, he was convinced Prussia "would take up the gauntlet with the calm confidence that the invasion of the domestic rights of the German people must this time end with the defeat of foreign arrogance." He did not believe Napoleon III. mentally "sunk so low that he would not see the formidable dangers of a war with Germany." Yet, "as the Emperor was obliged, for the sake of the Ultramontanes, to draw the sword against the Italians, in the same way," he thought, "increasing perplexities in his internal policy might drive him into the arms of the Chauvinists, into a nefarious war of plunder against the Germans."

THE STUDY OF GOVERNMENT.*

Mr. Yeaman's work on the "Study of Government" is intended as a contribution to the science of general politics. Its object is not to examine the text of the Constitution of the United States, but to investigate and state those principles which are essentially related to all governments, to discover the bases upon which government rests, and to describe the forms in which government has been expressed; with such illustrations and comparisons as shall show what forms are the best, in what forms the essential principles can have fullest and freest play. The work is a volume of more than seven hundred pages, and shows the results of a vast amount of reading, or, perhaps, it would be more accurate to say, of the consultation of a very large number of authorities. It consists in a large part of citations from writers of all the different schools of political thought from Puffendorf, Burlamaqui, and Rutherforth, down to Austin and Mill.

The first impression which we obtained from a careful reading of this book—and the impression has not been removed by any subsequent return to it—was that the author had formed no clear and accurate conception of government itself, or of the manner in which the discussion was to be conducted, or of the special object of the work he had undertaken. He says, in the introduction, "My original plan was to avoid almost entirely quotations and notes of reference." It was his intention "to reduce to a connected and consistent mass a system of conclusions derived from reason, experience, reflection, and the aid of other writers, embracing all that is deemed valuable and true, rejecting or omitting without notice all that has passed under the condemnation of modern thought, and upon controverted ground never avoid coming to a definite judgment." This plan was finally abandoned, and the completely different one was adopted of citing what a very large number of other writers have said, no matter how unlike their premises, their processes, and their conclusions, and of connecting these extracts by a thread of comment. Thus we have the diffuse platitudes of Rutherforth side by side with the close, scientific reasoning of Austin and the destructive dogmatism of Bentham.

The absence of any clear and accurate conceptions of government, of that very subject-matter which should be treated scientifically in order to be treated practically, is shown in those preliminary portions which are devoted to definitions, and in the selection of special topics, the discussion of which occupies a large part of the volume. We might cite very many instances of this vagueness and confusion of ideas, but will simply give one or two illustrations, taken at random as we turn over a few pages. Thus we are told in Chapter I. that "all government consists of law; and whatever furnishes a rule or law of conduct, whatever regulates the actions of mankind, is in one sense government. This is the moral government of moral beings." Here we learn, first, that all government is law; secondly, that it is what furnishes law; and, finally, that it is whatever regulates the actions of men. It is thus at once the agent and the result; and if whatever regulates the actions of men be government, then the appetites, desires, and passions must form a part of it. Again, in the introduction, the author says: "The term political law being often used in this work, it is due that I should attempt to give some idea of what is meant by it. It is the law of politics, the law or rule of political action, embracing all the motives, means, and necessities of organic, social, or governmental action." Political law, as used by all scientific and accurate writers, is a term having a well-settled and defined import. Mr. Yeaman, so far as we can gather from his language, uses it in a different sense, and thus obscures the discussion. This law, he tells us, embraces "all the motives, means, and necessities of organic, social, or governmental action." We are unable to understand how a law can embrace the motives, means, and necessities of organic or of any other kind of action. This sort of writing—and there is much of it in the book—will never aid the reader in the study of government.

When we turn from the preliminary definitions to the various topics which are discussed, the lack of accurate conceptions appears in even a more marked manner. The author says: "The present enquiry extends only to one part—that of political law, which is what we generally understand by the science of government. It embraces the organization of

* "The Study of Government. By George H. Yeaman." Boston: Little, Brown & Co. 1871.

civil society, the internal administration of its government, and its external relations with other civil societies." Pursuing this plan, he not only gives a short sketch of international law, but actually devotes the longest chapter of the book, running through seventy pages, to the subject of prize law and maritime capture, the whole chapter being "an argument against the capture and confiscation of private enemy's property found at sea, as a mode of warfare." All this has absolutely nothing to do with political law. Independent and sovereign nations have certain relations with each other, and in their intercourse observe certain rules; and these relations and rules form what is known as the international law, but do not depend in the slightest degree upon the form or ideas of government of any particular state, nor upon the nature or organization of its civil society. The author, in a special chapter, and at frequent intervals throughout the book, dwells at considerable length upon the objects of government, to the end that he may ascertain what laws are proper and expedient, and what are unnecessary and improper. He even makes an excursion into the department of parliamentary law. His conclusion is that the object of all government should be the protection of person and property, and we most heartily agree with him in his earnest condemnation of the recent practice which has so turned the rules of parliamentary law from their original design as to convert them into a means of stifling debate and of overriding a minority; but all this, however good in itself, and however appropriate and necessary in a treatise upon the theory of legislation, has no connection with political law or with the study of government.

Mr. Yeaman's book is perhaps even more marked by what it omits than by what it contains. There is no attempt to define a republican form of government, no discussion of the essential nature of the electoral franchise, and no thorough investigation of the intimate relations between local self-government and civil and political liberty. Of all the matters which properly belong to the study of government, to a treatment of political law in its widest sense, these three are just now of the greatest importance to the American people. Does a republican form of government necessarily involve universal suffrage? Is the electoral franchise a universal manhood right, to be ranged in the same class with the rights to life, liberty, and the pursuit of happiness, so that any institutions and laws which withhold it from portions of the citizens are essentially tyrannical? Is it best to abandon the system of local self-government elaborated by our fathers, and to substitute in its place a centralized power based upon universal suffrage, in order to procure a more perfect administration of public affairs? These momentous questions are now pending before the people of the United States. "The Study of Government" will bring little or no help to their final settlement.

The work is, in short, rather a discussion of many important topics and matters connected with government and legislation than a scientific treatise upon government itself. It contains many instructive extracts from political writers, and not a few very valuable observations and statements of opinion of the author. Its makeup is greatly marred by the absence of any index. A very copious index, with numerous cross-references, an analytical table of contents, and a list of authorities referred to, are absolutely necessary in a work which covers so large a ground as this, and which uses so frequently and freely the labors of others.

CORSON'S HAND-BOOK OF ANGLO-SAXON.*

Professor March's "Anglo-Saxon Reader" was noticed in our columns a few months ago. The present work by Professor Corson differs from that, as it is at the same time, and, indeed, mainly, a hand-book of Early English. Of 327 pages occupied by the selected texts, only 120 are given to Anglo-Saxon. And of this space, little less than half is taken up by the version of St. John's Gospel, which is presented here in its completeness, making a simple and easy introduction to the study of the language. The remaining texts are drawn from the Homilies of Ælfric—three of which are given entire—from the translations by King Alfred of Orosius' History, and of Boethius' "De Consolatione Philosophiæ," and from the Saxon Chronicle. The editor has not aimed at the greatest variety in his selections; he believes that "the real purposes of an educational text-book of this kind are better subserved by fewer extracts of considerable length, and, as far as possible, by complete productions, than by tidbits that give but a faint idea of the general style of a work." Without disputing the soundness of the principle, an exception might be claimed for the case of a literature in which the works themselves have, in general, no high literary interest, and the learner may need, therefore, the attraction of a greater variety. We are not sure, however, that by any principle of selection the editor could have done better than he has, in this respect, with the meagre and monotonous material afforded him in Anglo-Saxon prose.

As for Anglo-Saxon poetry, it is omitted altogether. This might seem at first view a defect in the work. The Anglo-Saxon prose, as just intimated, is of small literary value: to a great extent it consists of translations. All that is most elevated, striking, and characteristic in the monuments of the language, is to be found in its poetry. He who has read nothing of Cædmon, the Beówulf, or the shorter poems that have come down to us, can have no proper conception of the Anglo-Saxon genius. But this poetical literature is very difficult reading. It is brief, disjointed, enigmatical; it abounds in conceptions and expressions which may have seemed natural to our forefathers, with their different training and habits of thought, but are very strange to us; it is full of allusions the key to which is hardly, if at all, to be recovered. The editor, doubtless, felt that it required greater maturity of mind, as well as greater knowledge of the language, than could be expected in most of those who would use his book. And he must have felt this the more strongly, as the plan of his work allowed no place for explanatory notes. We must confess, however, that this total absence of commentary appears to us scarcely consistent with the aims and uses of such a manual. Even in the selections from Anglo-Saxon prose there are difficulties to be removed, obscurities to be cleared up, passages in which a few words of illustration would be a help and relief to the student. The same is true of the extracts from early English writings. In the excellent work of the German Mätzner, "Altenglische Sprachproben nebst einem Wörterbuche" (Specimens of Old English, with a Dictionary, Berlin, 1867–69), the selected texts are accompanied by a copious, and by no means superfluous, commentary. It is true that Professor Corson's glossary does much to supply the needed aid; but does it supply all that is needed? It is not safe to assume that a deficiency in this respect will be made up by the teacher. Good teachers of Anglo-Saxon will hardly be numerous for some time to come. Probably, no small part of those who take up this hand-book will use it in the way of self-instruction. It must be remembered that the study of our language in its older forms is not yet general and popular. That it may become so—that it may find a place in the training of all well-educated persons of both sexes—is an object greatly to be desired. But for this purpose it must be made easy. All obstacles which might repel and disgust the ordinary learner should, as far as possible, be removed from his path. The compilers of elementary books should take this as a guiding principle, and see to it that, if they err at all, it is on this side. The editor, in this case, may have thought that the addition of a commentary to a volume already numbering nearly six hundred pages would make it inconveniently heavy and clumsy. Some pages, however, might have been gained by the use of a smaller type and a more compact printing for the glossary; and if this were not sufficient, some of the extracts could have been abridged or omitted without serious disadvantage.

The specimens of early English, which in the aggregate much exceed those of Anglo-Saxon, are taken from "Layamon's Brut," the "Ancren Riwle," the "Ormulum," "Robert of Gloucester's (rhymed) Chronicle," "Dan Michel's Ayenbite of Inwyt," the "Voiage and Travaile of Sir John Maundevile," "Trevisa's Translation of Higden's Polychronicon," "Piers Plowman's Vision and Crede," the "Wycliffite Versions of the Bible," "Chaucer's Canterbury Tales" (the Prologue, entire), and Gower's "Confessio Amantis." The selections are made with judgment, and furnish a good view of the literature from which they come. In the Layamon texts, we think that a punctuation according to the sense should have been substituted for the merely rhythmical pointing of the manuscripts. In Sir F. Madden's edition, this was not necessary, as the subjoined translation everywhere shows what he considers to be the punctuation required. For the student of this hand-book, the difficulties of a text without note or comment are enhanced by the want of any practically useful punctuation. We have failed to discover even any statement of the character and purposes of the pointing taken from the manuscripts. It might have been well, in some cases, to take notice of the emendations proposed by Madden. Thus, in the introductory passage, of about seventy lines, the later text has *driste*, *ristnesse*, and *mistie*, apparently—as Madden suggests—for *drihte* (Lord), *rihtnesse* (right actions), *mihtie* (mighty). Professor Corson's Glossary gives *driste* as being probably for *drihte*; but of *mistie*, *ristnesse*, and even *rihtnesse*,

* "Hand-book of Anglo-Saxon and Early English. By Hiram Corson, M.A., Professor in the Cornell University." New York: Holt & Williams. 1871. 12mo. pp. xv. 572.

it makes no mention. It is silent also as to *folleft brofte*, seemingly miswritten for *folloht brohte* (he brought baptism). And there are some other words, occurring in the same passage, which we do not find in the "Glossary": so *fiede*, which Madden refers to an Anglo-Saxon *fegan* (to write); *thrumde*, which has the sense 'compressed'; *sumne*, which is not given as a separate word, though the student, if he looks under *to*, will find the compound *to somne* (Germ. *zusammen*, 'together'). The word *strende* is omitted; but the student may infer its meaning from the Anglo-Saxon *streónan* or *strynan* (to beget, conceive). To these we may add *hoe*, which Madden regards as miswritten for *heo* (them), as well as *afden* for *hafden* (had), and *hilke* for *ilke* (same), the omission of which may occasion some perplexity to the learner.

We suspect that this number of omissions, of words occurring in a single extract, may be the result of some untoward accident. In general, the "Glossary" seems to have been prepared with the care and thoroughness to be expected from a lexicographer so able and experienced as Professor Corson. If we were to make any suggestion looking to its improvement, it would be that derivative and compound words should be more uniformly referred to the roots from which they come. It would be well, for instance, that *duyedhe* (power, a force of men), in Layamon, should be traced to its root in Anglo-Saxon *dugan* (to avail). Under *yrmdh*, *eormdh*, *ermdh* (misery), reference should be made to the adjective *earm* (poor, miserable). In like manner the compound *avleiedh* (drives away), in the "Ancren Riwle," might be traced to the prefix *á* (out), corresponding to the German *er-*, Gothic *us*, and the verb *fleón* (to flee); the Anglo-Saxon *andefn* (equality), to the prefix *and* (against), corresponding to German *ent-*, Greek *ἀντί*, and the adjective *efen* (even); *altheódignys* (going abroad), to the root *el* (other), seen in English *else*, and the noun *theód* (people, country); *heregeat* (armor), to the nouns *here* (army) and *geatu* (equipment); and so in many other cases. In regard to words borrowed from the French—such as *achatours* (purchasers), *aswagen* (to assuage), *entaile* (shape), *mester* (trade), etc.—it might, perhaps, be doubted whether they ought to be traced with the same distinctness to their foreign roots; but at least the fact of their French origin should be indicated in the "Glossary." It would be well, too, if modern English words used in the definitions were distinguished, whenever they are connected in etymology with the words defined, by a peculiar style of printing, as in the excellent vocabulary to Professor Whitney's "German Reader." The learner would then see at once, what otherwise he might overlook or question, that there is an identity of origin between *emn* and *even*, *esse* and *ask*, *hreóh* or *hreów* and *rough*, *ille* and *each*, *iua* and *foe*, *loren* and *lost*, *mâ* and *more*, etc.

The grammatical sketches at the end of the volume constitute an important feature of the work. The "Anglo-Saxon Grammar" needs little enlargement to make it sufficient for the ordinary purposes of elementary instruction. Its division of the strong verbs into twenty-one classes, borrowed from the rather insignificant "Angelsæchsisch-englische Grammatik" of J. Loth, does not strike us favorably. It is unscientific, for it separates classes which are closely related (so, especially, the eighteenth and twenty-first) by interposing other classes of a widely different character. And it is unpractical, for a classification which runs to such high numbers is not easily apprehended or remembered; it requires for itself a further classification.

Outline grammars are given also for Layamon and the "Ancren Riwle." The pre-eminent importance of Chaucer in the early literature of our language would, perhaps, have made it worth while to give a similar view of English inflection as seen in his writings. But it may be safer to defer such a work until the texts now publishing by the Chaucer Society are fully before the public. With these in their hands, it may be possible for scholars like Professor Child to determine what Chaucer actually wrote, and thus to obtain the material for a trustworthy grammar of his language.

On the whole, we welcome the work before us as a useful contribution to the means of study in a field which is attracting much, but deserves to receive far more, of public interest and favor.

THE MAGAZINES FOR JUNE.

At the beginning of what promises to be another hot summer, the magazine reader is more ready than ever to turn first of all to the stories of the month for amusement. The longer stories run on well. Colonel De Forest's "Kate Beaumont," in the *Atlantic*, treats us to a drunken row, and we leave the sensitive Southrons loading their pistols for the inevitable duel, which will probably bring peace to the two great families distracted by their feud. The chapters of "Overland" in the *Galaxy* are capital reading, and if the storm on the Pacific is described in the manner of Charles Reade, that is a good manner for such thrilling scenes. "Lady Judith," in the same magazine, is about the same as usual. In *Old and New*, Mrs. Stowe still carries us deep into the tangled meshes of impropriety, although there are signs of an innocent ending. For shorter tales we find in *Lippincott's* a fable by our old friend, "Ouida," which is not at all in the manner of Æsop; and a disagreeable story called "Still Waters," by Florence Marryat. A story of a somewhat similar kind is "Fetters and Lures" in the *Galaxy*, in which strange imitations of human beings are racked by strange imitations of passion. One may well compare with the latter the amusingly innocent little tale in *Harper's* of the sort of which this magazine seems to have an unfailing supply. It is called "A Bohemian Household." Every one must have observed how greedily even the most experienced novel-readers devour these cheerful tales. They may not be the best ever written, but they have one element of the best, or rather they lack certain elements of the worst—they are not on offensive subjects, nor, certainly, are they vicious from over-subtlety. "Anteros" still continues to rack the school-girl's breast. It is amusing to notice the resemblance of this instalment of it to Mr. Bret Harte's parody in his "Condensed Novels."

For serious reading, we have Mr. Richard Grant White's defence of himself against the recent criticisms in the *College Courant*. It appears, as did the book criticised, in the *Galaxy*. It is written in a most artificially good-humored style, quivering with geniality, the reviewer being denounced as a "two-headed Connecticut giant of intellect," "good Mr. Pedagogue," and "Siamese-twin contributor." In fact, the English language seems to be as irritating a subject of controversy as the federal headship of Adam. In the same magazine is an article called "Sepulture," which might have been better called "Graveyards." It criticises very justly the absurd way in which our burying-grounds immortalize the stupidity of the journeyman stone-cutter, who seems only anxious to make as extravagant a display of white marble and white granite as possible. Most of our burial-places are glowing with this tawdry display, rivalling even the domestic mantelpiece. The officials insist, too, upon thick granite curbings, and succeed in making the places under their charge more artificial in appearance than the city itself. A more natural and vastly more pleasing system has been adopted in Cincinnati. We hope that it may be introduced in other cemeteries before they are wholly spoiled. The history of the campaigns of General Lee ends in this number with an account of the battle of Gettysburg and of the final struggles around Richmond.

In the *Atlantic* we have apparently the last extracts from the diary of the Virginian in New England, at a period thirty-five years ago, but which seems so much remoter. The capture of Fort Fisher is described, and this time it is General Ames who gets warm praise. Mr. Clarence King continues his well-written and interesting account of his adventures in the Sierra Nevada. The "Whispering Gallery" contains very little that will add to Dickens's fame or to one's interest in him. The "Encyclicals of a Traveller" are written with a facile pen. No family that intends to pass next winter in lodgings in Rome will be without excuse if it is unprepared for the housekeeper's troubles, what with these letters and the very entertaining one in *Old and New* from the same place.

In *Lippincott's* there is the third number of Mr. Donbavand's "Wild Ireland," and an account of the Freedman's Bureau. The anonymous attack upon Professor Lowell seems hardly justified by the scanty testimony adduced by the writer. The simple statement of his opinion may have relieved his breast, but even if combined with a hue-and-cry against favoritism, cliques, etc., it can hardly be expected to have much weight with the impartial reader. Two or three innocent phrases are picked from Mr. Lowell's last two volumes, and are the text of the writer's denunciations, which seem so animated by personal pique and blind illtemper that we wonder that they should have been admitted into the magazine. The writer sums up with the statement that Mr. Lowell is "destitute of the insight, the comprehension, the sympathy of the true critic and of the true poet." It may not be so great a deficiency if this article is to be taken as a specimen of critical insight, sympathy, and comprehension.

The *Overland* is quite as good as usual, but without containing any article of marked interest. "A Waif of the Pogonip" and "A Trinity Diamond" smack of the soil. Besides these, we find an account of the eclipse in Siberia, and of Northern whaling.

For the poetry of the month we have "The Robin" of Mr. Whittier's in the *Atlantic*, a sonnet of Mr. Boker's in *Lippincott's*, and a characteristic ode of Walt Whitman's in the *Galaxy*. As to the "Bubbles from an Old Pipe," in the *Atlantic*, they hardly need to be mentioned, unless it be to wonder why they were not kept for the newspaper of the next Great Fair.

The Year Book of Hunt's Merchants' Magazine, 1871. (New York: Wm. B. Dana & Co.).—This annual record contains a very useful collection of facts not otherwise readily accessible in a convenient form. The plan of the book is a good deal better than its execution, and there is room for a vast deal of improvement in future editions. But the labor of compiling statistics in this country, where so little has as yet been done to systematize this important branch of enquiry, is so great, that we must make many allowances for the shortcomings of the volume before us. There is less excuse for the character of the original matter in the volume, which is uneven and at times feeble. But there is enough of value to make these deficiencies appear light. Some of the financial statistics are extremely useful. The collection of data concerning the debts and finances of the United States, and of each separate State, is unusually complete, and has never before, so far as we are aware, been made in full. The commercial records of the year, and the extended market reports, both for Europe and America, have been selected with judgment, and contain an immense amount of just such information as every intelligent reader or writer is almost daily in want of, yet never knows precisely where to get. There is a good foundation here for an extremely valuable annual in the future, and a comparatively limited amount of additional labor would add materially to its usefulness. Notably is this the case with regard to the printing and proof-reading, which are inexcusably bad.

Words: their History and Derivation. Alphabetically arranged. By Dr. F. Ebener and E. M. Greenway, jun. (Baltimore. 1871. Super-royal 8vo, pp. 1–36.)—We gather from Mr. Greenway's Preface that this luxuriously-printed pamphlet, the first instalment of an extended work, contains the results of Dr. Ebener's "Research and Comparison" concerning English words, and that Dr. E. is a German, to whom the other plays the part of editor and patron. The treatise is declared to have been suggested by the reading of Mr. Grant White's "Words and their Uses," and its publication to have been prompted by the kind approbation of the "distinguished American philologist" (Prof. Haldeman) to whom it is inscribed. It would be very pleasant to say something in praise of a work which so many agencies and influences have combined to produce; but truth compels us to take the contrary tone. Dr. Ebener is apparently a man of some learning, but of no knowledge—so far, at least, as etymology is concerned. He has taken the trouble to acquire Sanskrit, but he has no idea of how it should be made useful. Having heard that this language is the mainstay of Indo-European etymology, he imagines that he has only to take a given English word straight to the Sanskrit dictionary, and find there a root that sounds something like it, and that has a meaning indefinite enough to be twisted into something like its meaning, and his task is done. Of the true historic method, which follows up the history of a word step by step, comparing it first with its nearest relatives, and striking at an ultimate root only as the winding-up of the search—of this method he has not an inkling. Hence, his results are not only false; they are ridiculous. It is truly astounding to see the assurance with which he takes up words whose history is as well known as anything in language can be, and refers them to Sanskrit roots or vocables with which they have just as much to do as *Moses* with *Middletown*. Thus, *accompany* has for its root *pang*, which is equivalent to *jhang*, which is Skt. *jhangam*, intensive of *gam*, 'go.' This *gam* is the root also of *accost*, *again*, and various other words. *Achieve* is from Skt. *kshi* or *kship*. *Ado* is Skt. *idâ*, 'talk,' from the root *i*, 'go,' of which, it is added, the infinitive is *itum*. *Ago* comes to us from a very ancient time, "when the participial forms had not become entirely adverbialized. One might safely say the word is as old as the Christian era, and a thousand years older at least." It does not mean 'gone,' but 'not gone,' its prefix *a* being the "alpha privative." *Air*, 'atmosphere,' is from Skt. *vâ*, 'blow;' but *air*, 'melody,' is from Skt. *îr*, 'utter.' *Alarm* is referable to the Skt. *lul*, '*agitare*.' And so on, through thirty-six dreary pages, unrelieved even by occasional glimmers of good sense and sound method.

The introduction is after the same pattern. It begins with a few indifferent generalities; next gives a list of books of reference, in which, though there are some conspicuous instances of bad judgment, there are also enough good works to show that a man's success as a student of language, even in this age of light, depends more upon his internal resources than upon any the best external aids; and then we are led off into a discussion of certain special peculiarities of Sanskrit phonetics. "Of these vowels," the author goes on to say, "the original *a* has lost its purity in most of the Germanic languages, and has glided down towards *i* or *u*, often announcing its presence in the influence it exercises upon them, forming what is called by English grammarians upsounds. So in Goth., *aí* (not *âi*) is pronounced like *vir* in Lat., *oí* like *world* in Eng." And, lest we be not sufficiently propitiated by these lucid statements, he winds up with, "The English has a great number of upsounds, exhibiting every shade of human feeling, and, so far as that is concerned, is the finest language in the world." Alas, that it should have been left to Dr. Ebener to make this wonderful and interesting discovery; and alas and alackaday, that his readers, who must be every moment dropping these precious upsounds from their lips, as the princess in the fairy-tale did pearls, should not even know them when they are pointed out by him.

We apologize to our readers for detaining them so long over this worse than worthless production. Not even the most merciless of the attacks on Mr. White's book ought so to distress him as the thought that he has had a share in suggesting it; and the "distinguished American philologist" would do well to clear his skirts, if he can, of the responsibility imputed to him on its dedication-page.

NEARLY READY.

AROUND A SPRING.

BY GUSTAVE DROZ.

"Written with just that art which redeems the most ordinary incidents from appearing commonplace. . . . A masterpiece of fiction. 'Around a Spring' is simple and pathetic. We shall not give an analysis of the novel which it is so easy to get, but shall content ourselves with praising its great merits. Regarded merely as a bit of workmanship, it has all the elegance which, perhaps, will immortalize the best of the present race of French writers."—Nation.

"A most graceful story, interesting from the beginning to the end. Portraiture of character, description of persons, dissection of motive, pictures of life in city and among the mountains, conversation, dialogue, development of plot, are all excellent."—Galaxy.

LATELY PUBLISHED:

M. or N. A Novel. By G. J. Whyte-Melville, Author of "Kate Coventry," "Holmby House," "Digby Grand," etc. 8vo, paper, 75 cents.

Hand-Book of Anglo-Saxon and Early English. By Hiram Corson, M.A., Professor in Cornell University. Post 8vo, cloth, $3.

Morelet's Central America. Including Accounts of some Regions Unexplored since the Conquest. From the French of the Chevalier Arthur Morelet. By Mrs. M. F. Squier. Introduction and Notes by E. Geo. Squier. Post 8vo, illustrated, cloth, $2.

Squier's Honduras: Descriptive, Historical, and Statistical. By E. G. Squier, formerly Minister of the United States in Central America. With a map. Price $2.

THE REVISED

Guide Through California!

FOR THE SEASON OF 1871.

A Tourist's Guide to the Yosemite Valley,

And all the Scenes of Wonder and Curiosity in California. Its big-tree groves, natural caves and bridges, quicksilver mines, Mount Shasta, the Farallone Islands, Geyser Springs, Lake Tahoe, and other places of interest.

ILLUSTRATED WITH OVER 100 ENGRAVINGS.

Also giving map of routes to Yosemite and Big-Tree Groves, tables of distance, rates of fare, hotel charges, and other desirable information for the traveller.

BY J. M. HUTCHINGS (of Yosemite).

An elegant 4to volume, tinted paper, extra cloth, bevelled edges, price $3.

For sale at the principal Bookstores, News Agents, and on the Cars.

"Those who diversify the summer by a trip to California, now brought so near to us by rail, should by no means fail to consult Mr. Hutchings's Guide. They will have good cause for gratitude for the whole labor. Those who can see the golden land and its marvels only by second-sight will not, for a long time to come, get so good a view as is here furnished."—Gazette.

SECOND EDITION.

AMERICAN RELIGION.

BY JOHN WEISS.

One Volume 16mo, price $1 50.

From the Christian Register.

John Weiss is a thinker; he is also a fluent exposer of the beautiful; hence a certain freshness of ideas and a certain aptitude for illustrations and grace of style, which are sure to bring him attentive and grateful readers, whether they agree with his reasonings or not. . . . . If we accept the broadest definition of religion as meaning faith, this charming little treatise may justly be considered as describing and analyzing the possible kind, degree, and vital force of belief in the popular heart; the convictions which are the essential facts of consciousness and life.

Thousands are killed every year by accidents arising from the use of impure oil. Be warned in time, and use only Pratt's Astral Oil—the safest and best. Its reputation is world-wide. No accident can possibly occur from it.

The Nation.

NEW YORK, THURSDAY, JUNE 15, 1871.

The Week.

THE political news of the week has not been exciting. The Democrats in the New Hampshire Legislature have, with the help of the labor reformers, elected their candidate for governor, and are now under the obligation of proving to the people of the State, during their brief term of supremacy, that the change back to Democratic rule was a fortunate one. In Ohio, the Republicans appear well satisfied with the phase which "the new departure" has put on since the Democratic convention met and gave a qualified acceptance to it—following Mr. Vallindigham in regard to the amendments, and Mr. Pendleton (who was chairman of the convention) in regard to greenback repudiation—and nominated for governor Gen. McCook, who said he had not read the platform, and denounced all the amendments but the thirteenth, which he well said "was, and is, the just and rightful consequence of the first gun fired at Sumter." Meanwhile, the Republican candidate is no nearer being fixed on than at any time during the last six months. The Hon. Ben Wade has been urged by his friends to consent to run, and has privately done so on condition that the party needs him. His diffidence seems a little more real than Mr. Greeley's under the temptation of the Presidency.

This would be a period of great barrenness in politics if it were not for the "new departures," and for Mr. Horace Greeley's return from Texas and reception by his admirers in this city, in the character of a possible candidate for the presidency. A letter written by him when at Leavenworth was held to indicate plainly that he was willing to be a candidate, if nominated, and this being taken up by the jokers, to whom he supplies food for mirth, combined with his sincere admirers, has resulted into converting him into an object of unusual curiosity, and has furnished "our New York correspondent" with materials for any quantity of gossip. Mr. Greeley has delivered a speech on his return from the South which may fairly be pronounced one of his most successful bits of oratory, but rather owing to the manner than matter, for it contained no views about the South with which readers of the *Tribune* are not already familiar. He was very strong in his denunciations of the "thieving carpet-baggers," but he strained his veracity rather severely when he said they went down to the South in the rear of our armies. We are sorry to say a good many went down *in* our armies. It was pleasant to believe at one time that every man who bore arms, and served in the war, was a Christian patriot. That theory has given many good people much comfort, but it is worn out, and it is now generally acknowledged with pain that some Union soldiers were pattern rascals, and that of these many settled in the South as politicians. Mr. Greeley denounces these, whatever their origin, in strong terms, and expresses a wish, in which most honest Northern men will heartily concur, that the Ku-klux would let the poor, helpless negroes alone, and give their attention to "the thieving carpet-baggers;" and he adds, that should they be all carried on a rail over the Ohio River, he would denounce it as a deed of violence, but not weep over it. So say we all.

The *Tribune* is setting a very good example to the press in various ways, so that it might as well be perfectly ingenuous about its approval of Butler's seizure of the barrel of private telegrams under the order of the House. It defends itself by alleging that Butler did this as the "officer of a court" and in the course of a judicial proceeding. We said that this was "not true, or, if true, was no answer," as when Butler began overhauling people's private correspondence, he was, as manager of the impeachment or prosecuting attorney, *functus officio*, and "the court" had ceased to exist. The *Tribune* now alleges we were wrong in saying the court had ceased to exist, inasmuch as it was not formally dissolved till the 25th, whereas Butler's Committee of Investigation was appointed on the 16th. Now, we *were* technically wrong in saying so, but the *Tribune's* position remains the same. The trial virtually, and really in the estimation of all concerned, closed on the 16th, when the vote on the eleventh article was taken. The subsequent proceedings of the court were merely formal. Moreover, the duties of the managers ceased to all intents and purposes when the case was submitted to the Senate on both sides, and the House knew this; and the committee was appointed, not to collect evidence for the prosecution, because no such evidence could be presented, but to take vengeance on the judges who had disappointed the expectations of a political party. The enquiry, therefore, was in no sense judicial in its nature, while its object was base and mischievous. The way in which it was conducted was a gross violation of law and justice, and the *Tribune* approved it, and has just been suffering from a similar abuse of power on the part of the Senate. We do not say the *Tribune* would now do the same thing again under the same circumstances; we believe it would not; but the case is such a striking example of the bad results of conniving at the establishment of a precedent in times of excitement, that it cannot be too much dwelt on.

We have learnt, for the first time, within the past week that we did Judge Orth, of Indiana, gross injustice some time ago in saying of him, *apropos* of his rumored appointment to the German mission, "that he would bring to the new place a fair ignorance of the German tongue." We understand that he learnt German as his mother tongue, and that he still uses it with fluency and correctness. It follows from this, of course, that we also did great injustice to the Administration in charging it by implication with putting a very unfit man in Mr. Bancroft's place. We might doubtless have taken greater pains than we did take to satisfy ourselves as to the correctness of the information we received as to Judge Orth's linguistic acquirements. All we can say in palliation of our offence in this case, as in others like it, is that we could only make ourselves absolutely sure that no mistake of the kind ever crept into the *Nation* by issuing the paper only once a year, and making the subscription a thousand dollars. We take as much pains to avoid mistakes as the condition of our own nature and that of the public will allow, and we stand ready at all times not only to be refuted by facts, but to acknowledge and publish the refutation. We are moved into saying this by a very comical article in the *Independent*, from the pen of Gail Hamilton, in which she uses our treatment of Judge Orth as an awful illustration of the moral condition even of the best portion of the press. We are sorry she takes the matter so much to heart, but we have no doubt she will feel differently about it after a month or six weeks in the mountains or at the seaside.

We confess we are not quite able to understand the position of Mr. Cheney and his friends in the controversy now raging between them and Bishop Whitehouse of Chicago. Mr. Cheney has been tried before an ecclesiastical court for a certain ecclesiastical offence—viz., dropping a certain word in the church service; he has been found guilty, and sentenced to deposition from the clerical office, so far as the Episcopal Church is concerned, but he refuses to submit to the sentence, retains his relations with his own congregation, does not withdraw from the Episcopal body, and while in this position his friends of the Evangelical party are rallying round him, and encouraging him in his resistance. Now, all this is, to the ordinary mind, perfectly incomprehensible. The organization known as the Episcopal Church is a body of persons, clergy and laity, who have agreed to be bound by certain rules, and one of these rules prescribes obedience to the commands of the bishops and the decrees of the courts, within certain limits settled either by statute or tradition. We can understand a minister's thinking the commands of a bishop, or the decrees of an ecclesiastical court, un-

just or iniquitous, and being unwilling to obey them, and we can understand his leaving an organization which was ruled in such a way as this, but we cannot understand a minister's remaining in the Episcopal Church with the determination to obey the bishop when the bishop and he agree, and at no other time, or to submit to the decrees of a court if he approves of them, and not otherwise. With the human mind constituted as at present, we doubt very much whether any organization, either civil or ecclesiastical, could be held together on any such basis.

The London *Economist*, commenting on Mr. Wells's recent letter to the *Nation* on the probable rate of interest during the next quarter of a century, concurs with him in so far as his conclusions are not connected with the supposed rate of interest in Europe. But it doubts whether the scarcity of capital and resulting high rate of interest likely to prevail for a long time to come in America, will be *materially* affected by importations from Europe. Even to Englishmen, it says, who are more closely connected with the United States in a business way than the men of any other European country, there is "a feeling of remoteness" about investments in the United States which will long prevent their being made on anything like a great scale. It adds, also, that "special and justifiable causes of distrust in lending to American corporations are to be found in the corruption of some of the State judiciaries. At a distance, it is hardly possible to discriminate between States, and, unfortunately, the most corrupt judiciary is that which has jurisdiction over their commercial capital, through which naturally most of the foreign investments would be made." It is evident that the writer means by this that there is corruption in the judiciary of New York City, which shows how little knowledge of his subject he possesses. Had he said the Boston judiciary was corrupt, he would have been excusable because no authentic information as to the moral condition of that body has been laid before the world; but if he will look into Mr. George Ticknor Curtis's pamphlet on the Field-Barlow controversy, which must have reached him before he wrote his article, he will see (pp. 98–9) that in the opinion of this eminent counsel the New York judge who is oftenest accused of corruption is not "capable of using his office contrary to law and to what is right to promote the interests of anybody," and that if he were "it would be wrong for the other judges to sit on the bench or to transact judicial business with him," or for "the Governor to assign him as one of the judges of the General Term for five years," "or for 'the people' to elect him to the bench twice by large majorities." Now, his brother judges do sit with him, the Governor has "assigned him," and "the people" has elected him, so it is hardly conceivable that he can be corrupt, or would "use his office contrary to law and to what is right," and if *he* would not, certainly no other judge would. The *Economist* may depend upon it, therefore, the judicial corruption it talks of is to be found in Boston if anywhere, and all foreign capitalists have to do is to put their money into New York securities to make it really safe. We have a few "receivers" here of great capacity, who will take the best of care of it for them, and let them have it back as soon as we can conveniently spare it.

The statue to Professor Morse, erected in the Central Park, was unveiled on Saturday, to the accompaniment of addresses from Gov. Hoffman and Mr. Bryant; in the evening there were other exercises at the Academy of Music, which included speeches from Mr. William Orton, General Banks, Dr. Samson, and a very interesting one from Professor Morse himself; but, it is permissible to say, the ceremonies would have been more effective if Mr. Bryant and Professor Morse had done all the speaking. There is a general objection to the erection of statues to living men, and it is founded on the principle that a man's own generation is hardly ever competent to estimate him properly. Professor Morse, however, enjoys the unheard-of distinction of having achieved something which has, in his own lifetime, effected a greater change in the conditions of human existence than the work of any one man has ever done. He has revolutionized commerce and war, and, we might almost add, literature and society; and there is hardly any honor which might not be paid to him without running the risk of establishing a dangerous precedent.

Woodhull & Claflin's Weekly, the New York organ of the woman movement, has plainly hoisted the black flag, for it insinuated last week that the hostility of the Boston Association to the discussion of free love and to the union of the love question with the suffrage question, was due to the inability of the members of that body to bear that searching examination of their domestic relations to which Mrs. Woodhull's own have been subjected by a hardened male magistrate and a prying public. Miss Tennie C. Claflin also has a strong and defiant article on the love question, in which she maintains that where there is legal restraint there can be no love, and where there is love there need be no legal restraint, and that the right of each of us is to love one person as long as we can, and then love somebody else. An amendment to the Federal Constitution, giving every citizen also a right to some other citizen's affection, would, we suggest to all the associations, be a pretty thing in the way of reform. At present every woman is, or ought to be, loved, and yet, under man-made laws, it is nobody's duty to love her, showing what a one-sided male affair our jurisprudence is, for, as Dr. Lieber says, "there is no right without a corresponding duty, and no duty without a corresponding right." We are sorry to say that one still hears the mending of armor and sharpening of spear-heads in all quarters of the Woman's Suffrage Camp—dismal sounds enough, for they denote preparation, not for an attack on the common foe, but for mutual slaughter.

In commercial circles, the revival of speculation has been more marked. Cotton, after a momentary reaction, has again advanced to the highest point. The great importance of the condition and prospects of the growing crop is well shown by the extraordinary means adopted to deceive the public in regard to it. The *Financial Chronicle*, heretofore considered the most trustworthy authority, prints telegraphic advices from all the chief Southern districts, giving doleful accounts of the weather, with details of daily rains and storms, which must necessarily have seriously injured the growing cotton; and these have materially contributed to strengthen the market. But an intelligent writer in the *Daily Bulletin* compares these accounts with those of the Signal Service, and shows that where private telegrams in one instance report sixteen days of rain in five cities, the Bureau records show only three, of which two are reported as "light rain," and that in another instance the Bureau records only one day of rain against eleven reported by private telegrams. Facts like these are of more general importance than may be at first sight apparent. It is not only the correct knowledge concerning our most important crop that is to be valued, but the fact that there are some kinds of information which, in the midst of perversion, prevarication, and falsehood may be accepted implicitly. Provisions seem to have touched their lowest points for the moment. Breadstuffs are firm but quiet; coal declining rapidly. There is some reason to fear that private citizens, by unwisely delaying their purchases, will cause prices to be higher in the winter than they otherwise would. Real estate is dull and depressed, although choice uptown property continues in demand. The pressure for money upon bond and mortgage shows the hollowness of present prices. General trade is quiet, as usual at this season, but the feeling among merchants is improved.

The money market presents no visible change. The speculation on the Stock Exchange is languid, artificial, and fluctuating, without much business. There has been an attempt to aid artificially the firmness in the gold premium, but without very material results. Money continues abundant and cheap, though slightly less so than a week ago, but capital for *bona-fide* permanent investment is scarcer than ever. While it is impossible to lend balances on call at three per cent., railroad bonds, recommended by responsible houses of good character as "first-class investments," go begging at figures that net eight and one-half to nine per cent. annual interest, while real-estate mortgages on choice city property pay even better.

The Treaty of Washington has come up in the British Parliament, but without any noteworthy result. In the House of Commons, Mr. Gladstone, in reply to a question, explained and defended the rule prohibiting the supply of arms and munitions to belligerents, and eulogized the conduct of the United States in the negotiations. In the House of Lords, Earl Russell made a vigorous attack on the treaty, and particularly that portion of it which gives the new rules a retrospective action, moving for an address to the crown against its ratification; but evidently all he sought was an opportunity of defending his course during the war, and he withdrew his motion at the close of the debate. Besides the objection on the merits, there is a particular objection to the overhauling of treaties by the House of Lords, in the fact that the ministry lives by a majority in the House of Commons, but rarely has a majority in the Lords, so that, if so important a point of policy as a treaty could be made the subject of serious assault in the Upper House, it would expose the ministry to a danger which might not improperly be called unconstitutional.

Now that the fighting is over in France, there is a good deal of speculation going on as to the motives of the Communists in trying to burn Paris. The doctors have produced one theory, which makes the work of destruction the result of a kind of contagious insanity, brought on by the anxieties and privations of the preceding siege. Another and more rational one is propounded by the London *Economist*, which ascribes it to the intensity of feeling produced by civil war; to the hatred which the desperate poor feel for the happy rich, and which made the Communists determine that if they could not have all the nice things Paris contained, neither should their opponents; and, finally, to the presence in the Communist ranks of a great body of foreign Reds, who had no sentimental regard for Paris, and did not care to see it remain, as it was likely to remain, the headquarters of Conservatism. One thing is certain, and that is, that it will be a good while before any French politician will again propose to hand Paris over to the custody of the National Guard. There is something comic in the news which comes that Louis Blanc is denouncing the Communists. No man has done more to make Communists than M. Blanc himself, and his lamentations over their excesses read like M. Thiers's denunciations of the Prussian war and the Napoleonic Empire. The deportation of large bodies of the captured Communists with their families to New Caledonia, an island 200 miles long by 30 broad, in the Southern Pacific, seems to be determined on, and perhaps wisely. These men can never lead rational or useful lives in an old society, and perhaps nothing would do more for their mental and moral health than the practical acquaintance with economical problems, stripped of the trappings of a high civilization, which life in a new colony gives.

The Orleans Princes have been admitted to their seats in the National Assembly by "a vote of 448 to 113." Of this fact we have been duly informed by the Cable, but concerning the way in which it has been achieved, the transactions which preceded it, and the new features of the situation it has brought to light, we are left in a perfect muddle. M. Thiers, we are told, at first urged that the Princes be admitted only on conditions securing the Republic against possible intrigues on their part; but subsequently "he ceased to insist on these conditions"—for reasons not stated. We then hear that "President Thiers rose, and said he had opposed the abrogation of the law of proscription because he believed such action would be dangerous, and only assented on the Princes engaging not to sit in the Assembly, and not to enter into any intrigue against the Republic." Then, that the Princes, having been admitted as members of the Assembly, "resigned their seats" at a cordial interview with MM. Thiers and Grévy, which "resignation" was to be communicated to the Assembly on the following day. This communication, however, is not reported, but, instead of it, the news that "the Prince de Joinville, having been chosen from more than one district, has addressed a letter to the President of the Assembly, electing to represent the Department of the Marne." The complexion of the immense vote which validated the elections is not specified; nor are we told whether "the law of proscription," the abrogation of which was previously carried by a still larger majority—"484 to 103"—refers exclusively to the law proscribing the House of Orleans, or to the proscription of both branches of the Bourbon family. The latter interpretation seems more probable, as a partial repeal could hardly have been carried by so overwhelming a vote, to which the Legitimists must have contributed as a body, and some Republicans from a general anti-proscriptive feeling.

The Paris journals continue to speak of M. Thiers as acting sincerely in the interest of the Republic, while some of them deprecate the action of the Assembly, as manifested by its late votes, as tending to precipitate France into the "abyss of monarchy," or else of a new revolution. Both Republicans and Bonapartists, however, expect a modification of the Assembly to come from the supplementary elections which are to take place early in July, upward of a hundred seats being vacant in consequence of double elections, resignations, and deaths. That the Republicans will make a good fight on that occasion there can be no doubt, and a signal triumph on their part may easily give them an accession of strength sufficient to guarantee for a time the continuance of the Republic, while a great defeat could hardly fail to seal its downfall. The Bonapartists, too, are preparing for a grand effort under prominent candidates, and are confident, we are told, of being able to carry a considerable number of districts; but this confidence is likely to be an idle boast, or, at least, to prove in great part illusory. Any victory of that party, however, would certainly add to the perplexing difficulties of the situation. An indefinite result, or a feeble Republican victory, will probably lead to the continuation of the provisional state, under the lead of M. Thiers. The latter, through his Minister of Finances, Pouyer-Quertier, is in the meanwhile making strenuous efforts to provide for a speedy paying off of some instalments of the war indemnity, by means of war loans and increased duties and taxes. The prisoners of war are rapidly returning from Germany. Arrests of Commune men continue to take place, but the executions have entirely ceased.

The session of the German Parliament, according to a late telegram, is to close to-day; the members are, however, to remain in Berlin for a few days longer, to take part in the ceremonies of the triumphal entry of the German armies, fixed for the 18th, the anniversary of the battle of Waterloo. In its late sittings, the first assembly of the German Empire was mainly engaged in discussing the bills presented by the Government for the regulation of military pensions, of premium loans, and of the status of the annexed Alsatian and Lotharingian territories. The bill on Alsace and Lorraine gave rise to grave questions and to lively debates in the Reichstag, the popular branch of the legislature. It passed, however, through a third reading without important modifications. According to its terms, Alsace-Lorraine is to form a separate state of the Empire, of which the Emperor, as such, will be the princely head (Landesherr), and until 1873 also the legislator in common with the Imperial Council. The legislative institutions which are to govern the new state after the expiration of this first, almost dictatorial period, and its full admission as a member of the Empire, are to be created by the German Parliament. It will then stand on an equal footing with Baden, Hesse, or Würtemberg, having, like them, a separate legislature and a separate princely government, but it will have no dynasty of its own, being connected with Prussia by a novel kind of personal union. By its future representation, it will add to the weight of Prussia both in the Imperial Council and in the Reichstag, without forming a part of that kingdom. The Emperor will have the direct command of its military forces and fortresses, as he has of those of Prussia, as her dynastic head. The position of the new state in Germany will thus be entirely anomalous, but it cannot be called surprising under the circumstances.

A CHAPTER IN THE HISTORY OF THE CIVIL SERVICE.

Mr. S. S. Fisher, the late Commissioner of Patents, delivered an address in Cincinnati, a fortnight ago, under the auspices of the Young Men's Christian Association of that city, which we are very sorry not to have seen in any of our Republican papers here at the East, and which we cordially recommend some publisher to reproduce in a handy form for "summer reading." It contains a tale of real life, being his own experience as head of the most important of the Government offices, that in which the inventions of the American people are every year examined, recorded, and secured as property to the inventors. He took office two months after the Administration had come into power, and when, as he hoped, the rush of office-seekers being over, he would be able to devote himself exclusively to the duties of his position; but he was mistaken. The rush was as great as ever, and, by a curious arrangement, every candidate who applied to the Secretary of the Interior had a separate set of recommendations for each of the bureaux of the Department, so that, if he failed in one, he unblushingly turned his attention to the next. The scientific character of the duties of the Patent Office would seem at first blush likely to cause the average office-seeker to keep clear of it, but it did not. On the contrary, no position was more sought after than that of "examiner of patents," who must, under the statute, and in fact, be "a person of competent legal knowledge and scientific ability." There are four grades of these examiners—the highest receiving $3,000 a year, and the lowest $1,609, but all were objects of the keenest competition. Persons who could not spell decently applied for them, and were powerfully backed up by Congressmen. One applicant acknowledged he had "no mechanical scientific experience," and "had never made mechanics a subject of theoretical study," and being asked politely how, under these circumstances, he came to have the audacity to apply for such a place, calmly replied, "He supposed he could learn."

What added considerably to the confusion of the period was that there of course prevailed among those actually in possession of the offices a panic, the intenseness of which was in the direct ratio of the eagerness of the outsiders to get them, and thus, while the outsiders armed themselves with Congressional recommendations, to enable them to secure the places, the insiders armed themselves with other recommendations to enable them to offer a gallant resistance, and the Congressmen gave them to both parties indiscriminately, and often without knowing much of either. One Congressman recommended, "with great pleasure," that a certain Dr. ——, an old gentleman of sixty, might be allowed to retain his place, as "a young gentleman of great promise." The entire delegation from one State, senators, representatives, and all, joined in recommending two different candidates for the same office, and each with equal warmth. Being taxed with this by the maddened head of the Department, they all stoutly denied all knowledge of either candidate. It was not on paper only, however, that the Congressmen told lies. They used to go to the Commissioner or Secretary with their applicants, and urge their claims with much ferocity; and then, when the candidate's back was turned, beg the officer not to mind a word they had been saying.

It is about the examinations, however—those examinations over which Mr. Boutwell has been so amusing—that Mr. Fisher is most amusing too. There is, as we have often told our readers, a law of 1853 which provides that no person shall be appointed to any clerkship in the departments "without having been examined and found qualified" by a certain board, the composition of which is duly prescribed. Now, this law, if honestly *enforced*, is amply sufficient to purify the civil service; but it never has been honestly enforced. President Grant found it on the statute-book, and might have enforced it if he pleased, but made no attempt to do so; our innocent friend Mr. Boutwell went further, and pretended it was enforced when he knew well it was not. It was, however, taken up and enforced by Mr. Fisher in the Patent Office, with comparative ease, because he had been put in his place on the recommendation of Secretary Cox, and thus was under no obligation to Congressmen. Had he owed his accession to Congressional influence, it would have been difficult for him to meet the argument that since Congressional influence had proved sufficient to secure *his* appointment, it would not be fair to ask anything more of his subordinates. Accordingly, a real examination was ordered, not of new candidates for places only, but of the officers already in possession. The consternation produced by this among the latter class was something touching, and it is very curious and entertaining to read how rapidly they fell back on the state of their "hearts," in accordance with the regular practice "inside politics," as soon as they found the condition of their heads made a subject of enquiry. Some came to the examination with fear and trembling, others with oaths and execrations, and others resigned sooner than submit. One gentleman who resigned sent Mr. Fisher a Bible, with a Latin translation of the Beatitudes written on a slip of paper, and inserted between the leaves, and called his attention to this, witheringly, as a proof that it was not want of education which made him refuse to undergo the ordeal; but it turned out he had copied the translation from the Vulgate, and, knowing no Latin, had copied it wrong. Several were dismissed as the result of the examination, and they then fell back on the Congressmen, who stormed and fumed dreadfully, declaring the examinations were a humbug, and, in the language of the police courts, "a put-up job," intended to get rid of particular people. One of the dismissed, finding Congressional interference useless, called on Mr. Fisher to read his Bible, repent of his sins, and put him back in his place, and prepare to meet him at the bar on the last great day. Another wrote to him as follows:

"Is it not singular that you should have selected to be dismissed one so thoroughly radical as myself—the only one in the four model rooms of the same religious profession as yourself—one kind to the poor, even beyond his means, and recommended by the best of men? Remember I am writing to a person who professes to delight in truth, and one who will shortly stand before a supreme tribunal. Can you there be justified?"

Another wrote:

"Now, S. S. Fisher, if your Masonry is greater than your religion, God will curse you. Repent before it is too late. See Psalm ci., verse 5. Reform the draughtsman and model rooms, dismiss the superintendents, and then pray, and maybe God will hear you."

Another laid his complaint before the Secretary of the Interior, and said:

"Allow me to call your attention to the accompanying letter of Mr. Wade, and to say that notwithstanding that letter and my long service in the Republican party, I have been dismissed by Mr. Fisher. The late Commissioner of Patents was removed in consequence of his politics not being of the proper stamp, and Mr. Fisher was put in his place because his politics are of the proper stamp, and yet Mr. F. selects me for dismissal. I wish you would have Mr. F., who doubtless has been urged to this by some personal or political enemy, to reconsider his action and have me reinstated, that I may not be taunted or triumphed over by political enemies."

Some came to the examination quite jovially, having passed it before, as they thought, in other departments, and found nothing in it more formidable than questions concerning "routes of travel, the state of the weather, the health of their families, and the welfare of their aged parents;" others, again, having, after making their application, received a letter, saying, that "having been examined and found qualified, they were thereby appointed," etc. One gentleman whose experience had been of this kind was put down to a table by Mr. Fisher, and a list of questions set before him. In a very few minutes he got a headache, and asked leave to withdraw, and continue the examination the next day. He accordingly returned joyously in the morning, with his head clear, but on finding fresh questions substituted for those which he had already seen, he retired in disgust and indignation. It is right to say that the examinations resulted in giving the Patent Office an admirable body of officers, and, as their biographical summaries show, just the kind of men the Government ought to have in its service. The first four successful candidates after the first examination, for instance, were a machinist, engineer, cabinetmaker, and printer respectively; two had had a collegiate, and two a high-school education. We ought not to pass from this branch of the subject without mentioning that it was in the Patent Office that the first appointments were made under the law authorizing the payment of the same salaries to female as to male employees, and Mr. Fisher testifies, as the result of careful tabulation, that the attendance of the women was as good as that of the men, and the work rather better, and that "some of the lady clerks had no equals among the gentlemen." On

the other hand, under the old system of appointments, women office-seekers were far harder to get rid of than the men, as they relied on their sex to excuse their persistence, and, if rebuffed, took to crying, and, if this failed, brought up strong reserves of Congressmen. One young miss brought in her train two senators, four or five members of the Lower House, a general or two, and "perhaps an admiral or commodore," though what "perhaps" means here we do not exactly understand. Of course the ability to bring up Congressmen gave the ladies in Washington great advantages over those at a distance, as a woman on the spot counts with a statesman for twenty-five women in the distance.

We are sorry to find that Mr. Fisher does not describe the Treasury Department as that holy and happy training-school for young candidates for the professions which the eminent financier who presides over it would have us believe. Indeed, he says that the arguments of the Secretary of the Treasury "in favor of the old system of pass examinations must have been exquisitely funny to all who knew anything of the actual system of appointments prevailing in that department;" and he adds, that when employees, so worthless "that even their Republicanism could not save them," were expelled from the Department of the Interior, "it caused no surprise to find them, after a few weeks' probation, safely housed under the spacious roofs of the Treasury." We believe all who have given any attention whatever to the subject have been long aware of this, and are therefore fully competent to share such enjoyment as the somewhat repulsive cant of the Secretary on this subject supplied to those who were on the spot.

Mr. Fisher's experience shows clearly what may be done towards reform by the honest enforcement of even a simple law like that already on the statute-book, and throws a good deal of light, too, which may be useful to the new Civil Service Commissioners, on the difficulties which any attempt at reform will have to encounter. The chief of these difficulties are undoubtedly the hostility of the political class, and above all their duplicity. Were their hostility open, it would be easy enough to rouse public opinion to such a degree as to put it down; but they are far too cunning to say they do not desire reform. They all, from the President down—and we are sorry to have to include him in this category—profess themselves favorable to reform, and even eager for it, and some, such as Mr. Boutwell, more artful still, declare they are carrying out the reform themselves, and only need to be let alone in order to accomplish all that is required; and in a matter which does not come home to the mass of the people, and about which they are necessarily imperfectly informed, it is very difficult to meet tactics of this kind. The President's course is, indeed, a fair illustration of how not to do it. He came into office as a civil-service reformer; he found on the statute-book a law under which the civil service might be reformed, but which the politicians had converted into a dead letter. For two years he made no attempt to have it enforced; nay, he allowed one of his Secretaries, who made an attempt to enforce it, to fall a victim to his zeal and be driven from his place. Under the pressure of the indignation excited by this case, he feebly recommended civil-service reform in his next message, and Congress authorized him to reform by a section stuck on to the Appropriation Bill last March. He has allowed two months to elapse without acting on that authorization, and now appoints his Commission just as the hot weather is beginning, and with the consequent certainty that nothing can be accomplished till October, and October will find us plunging into the excitement of a Presidential campaign, with the smallest possible chance of obtaining any attention for a movement of this kind, which would seriously interfere with the working of the electioneering machinery by the party in power, at a very critical moment. In fact, if it were not for the character and antecedents of some of the gentlemen he has put on the Commission, we should be disposed to accuse him of throwing dust in our eyes. As matters stand, we are willing to wait and see; but we warn the Commission that the political world, while approving of civil-service reform in the abstract, already begins to express strong doubts whether "this particular measure" is just what is needed, or can do any good.

COMMUNISTIC MORALITY.

There are two things which more than others have contributed to make the recent events in Paris unusually startling and impressive. One is, that a great part of the atrocities and follies which marked the career of the Commune was the work of men who were not criminals in the ordinary sense of the word, and who professed to be animated even in the work of destruction by philanthropic motives; the other is, that plenty of persons laying claim to high moral and religious feeling have been found among the lookers-on to applaud or excuse their doings, simply because they professed to be animated by philanthropic motives.

And it must be remembered, in examining the matter, that the Commune was simply a portion of the general class movement, of which we see the action in other countries in the shape of trades-unionism and, we might add, of Fenianism. What took place in Paris was simply the unexpected seizure of the government of a great city, largely peopled by timid rich people, by the leaders of the International Association, which two years ago at Geneva declared war against property and inheritance. The sentiment which animated that Association is one, however, by no means confined to France, and it is roughly this: that the ideas about property, marriage, inheritance, justice, and religion, on which the political and social arrangements of the civilized world are based, are inventions of one class, the lettered or idle class, for their own benefit and for the oppression of the working-class; that the world and the ordering of it belong of right to the working-class—meaning by this manual laborers and no others; and that the time has come for them to enter into the exercise of their authority, and that it would be weak and wicked to allow any of the rules of morality taught by the literate classes to prevent the use of any means likely to accomplish this end, as these rules have been contrived simply for the maintenance of a state of things in which the many are sacrificed to the few. These ideas, too, have now come to be held by large numbers, not simply with enthusiasm, but with fanaticism, and fanaticism always contains a strong element of hatred to opponents, and in the present case all persons who enjoy exceptional advantages, either as regards wealth or education, rank among opponents and incur the hatred. There is in fanaticism, also, a strong element of unscrupulousness; indeed, to say of a fanatic that he was scrupulous would be a contradiction in terms. He becomes a fanatic in virtue of his deep sense of the magnitude and importance of his "cause," and of the insignificance of all else, and to help the cause, therefore, he uses any weapon that may be within reach. For this reason, wars of religion have always been unusually bloody and cruel, and all wars for ideas, as distinguished from wars in defence of political arrangements, are of the same character as religious wars. The war which the Reds are declaring on society combines two sources of fierceness, in being both a war of ideas and a war of classes, and it is not surprising, therefore, that in Paris it should have been sanguinary and relentless. One of the most striking illustrations of its ferocity was shown in the seizure and execution of the archbishop and the priests. They were taken as hostages and killed, not simply because the Communists hate the church—though this doubtless had much to do with it—but because their opponents hold the clergy to be peculiarly sacred, and to threaten priests with death was therefore, as it seemed, the surest way of shocking the "friends of order," and giving them pain—in other words, of stabbing the old religious society to the heart.

Now, this spirit shows itself in a stronger form among Frenchmen than amongst other men, because their natures are more intense, and because the new doctrine, that society, as at present constituted, is a hideous contrivance for the oppression of the poor, has been longer at work among them. But it is at the bottom of the way in which the English trades-unions enforced their rules at Sheffield, as revealed in the evidence taken before the Government Commission—that is, by killing, maiming, and blowing up with gunpowder those who either disobeyed the rules or interfered with their execution, and it is to be observed that the men who resorted to these instrumentalities were men of good character, as this term is usually understood, just, true, and kindly in all the ordinary relations of life.

So, also, the Fenian risings in England have been characterized by a complete disregard of the received notions of criminality and by stupendous unscrupulousness. The attempt to blow down a prison wall by firing a barrel of gunpowder in a narrow and crowded street in London, had all the marks of the Communist operations in Paris. The Fenian performances were, however, in this and similar cases, simply copies of the trades-union performances, and at the bottom of both lay the idea which directed the deviltry in Paris last month, viz.: That the interests of the society, or of the class which it represented, were immeasurably superior to all other interests with which they came in collision, and that, therefore, there was nothing which it was not lawful to do to promote them, and that, in the choice of means, whatever most vexed the enemy and struck most terror into him was to be preferred.

No intelligent man can deny that the spread of such doctrines among large bodies of men, in the great centres of population and industry, is a very grave matter, but there is another matter connected with it which is perhaps graver still. "Humanitarians," considered as a sect—that is, persons who, all other doctrines and beliefs being laid aside, make the active promotion of the comfort and welfare, moral and physical, of the masses their great spring of action, and who do this without any expectation of future rewards, and in entire dissociation from Christianity—are a large and growing body, and they number amongst them a great many writers and speakers who exert a powerful influence on public opinion, and more or less on morals and legislation. They have by their exertions managed to spread through society a distrust of the actual state of things in church and state, which, although in a moderate degree it is the source or condition of all reform, is, like most other things, in excess a positive disease, and which, acting on an animal like man, which lives mainly by habit, produces a sort of dementia. We have it now in excess. There is hardly one of us who is sure of the ground he walks on in any field of human thought or activity. Once upon a time, doubting was left to philosophers; now we all doubt, and we doubt nothing so much as what has been long settled. There can, however, be no strong sense of duty where there is no settled conviction; the sense of duty rests on conviction; and our relations to every human being and every human institution, parents, wives, children, employer and servant, government and church, being thrown open to speculation and question, there are fewer and fewer of us who are capable of entering on any course with set teeth and an undaunted will. The result is, that any man who believes strongly has chances in the world such as never offered themselves before. Anybody who undertook to preach strange doctrines in times past, if a fanatic, found himself faced by fanatics as fierce as he; but the fanatic in our time finds himself in the midst of a timid crowd, who examine him with opera-glasses, and who, if he will only not come after them, are willing to concede any postulates he asks for.

It is out of this confusion that the "Red" church has not unnaturally grown up, but what is worst is that it finds admirers and apologists among those who are not of it, but whom its humanitarian tendencies dazzle or propitiate; and there could be no stronger illustration of the size of the breaches made in the received morality than the sympathy which the Communists have found among foreign philosophers, philanthropists, and even preachers. Matters have gone so far that the testimony of the worst ruffian who squats with a rifle behind a barricade, as to the nature of his motives in killing people or burning houses, is taken by many respectable men as a complete refutation of the presumptions raised against him by the ordinary canons of morality. Usually, if you see a man committing a breach of the moral law, you require weighty outside proof either of his insanity, or of his devotion to some idea, to induce you to excuse him; but we have now got to such a pass that we take his simple word for it. We come upon a party of workingmen preparing say to roast a family in their dwelling-house, and are duly stricken with *prima facie* horror, and ask what they are about. They reply that humanity requires this atrocity at their hands. On hearing this, far from going to the rescue or bringing the police, we hasten to the nearest hall, call a meeting, give a thrilling account of what we have seen, pronounce the band "erring but noble," and declare that, though condemning their methods, their aims are too lofty to permit of our casting the first stone against them. Now, if there be one deduction from human experience more firmly established than another, it is that the doctrine that the end justifies the means is a detestable doctrine, and as detestable in the hands of the democrat as of the priest or king. There is another hardly less valuable or well settled, and that is, that nothing saves the world from anarchy but the custom of judging men by their conduct, and not by their professions. Acts are the tests and signs of principles, and nothing but acts. If the relations of the working-classes to the rest of the community are to be rearranged and improved, as we firmly believe they may and will be, it must be by steady travelling along the ancient human way which experience lights, and on which opinions are changed by persuasion, and not by throat-cutting, and on which the great advances are made by reason and patience and labor. The world is not going to be set to rights in a year for the benefit of the workingman, any more than for the aristocrat; and the broadest "humanitarian" will find in the long run, to his cost, that he will have to live by the Ten Commandments, if he means to have any comfort in this life.

ENGLAND.—MR. MILL ON THE LAND QUESTION.

LONDON, May 26, 1871.

PARLIAMENTARY business is at the present moment progressing slowly, and the prospect for the session is less promising than ever. The radical theory, as expounded in the *Daily News*, is to this effect: The Army Bill and the Ballot Bill are the two main Government measures. The Army Bill goes first, and the Ballot Bill can only follow in proportion as the track is cleared. Now, says the *Daily News*, the Conservatives have made up their minds to accept the Army Bill, not as in itself desirable, but as offering higher terms to the persons enjoying vested interests than they are likely to obtain at any future time. They talk against it, therefore, not in the hope of securing its rejection, or even its modification, but in the view of delaying the Ballot Bill. Put the Ballot Bill first, it is said, and the Army Bill will follow easily enough; but otherwise it runs a fair chance of being squeezed out by the policy of talking against time on the companion measure. I think that this theory is a little too refined; there is this much of truth in it, however, that the Army Bill is producing some of the most wearisome and intricate debates that have recently occurred. At every stage of the measure, we have a repetition from the Conservatives of all the old arguments that have been worn so threadbare. The reason of this, however, appears to be simple enough. The tide of enthusiasm which carried Mr. Gladstone into power is ebbing with so much rapidity, that an obstructive policy, which would have been an exceedingly dangerous game, as against a popular minister, has fair chances of success. The Government majority is, in fact, declining rapidly, and last night they had so much trouble in defeating some proposed amendments that a modification of the bill seems to be highly probable. The bill must be forced through in some shape or other; but it seems as if it might be seriously mutilated in the process. There are, indeed, rumors to be heard, which I mention not as credible, but as significant of the disorganized condition of the Liberal party. It is said that the House of Lords will summon up courage to throw out the bill, and that thereupon some kind of coalition ministry will be formed, with, perhaps, Lord Derby at its head. I think that it would be impossible to form any such ministry which could hold together for a fortnight; but the existence of rumors of this character shows how feeble is the hold by which Mr. Gladstone at present maintains himself in office. The majority is true and pledged to vote for him; but the enthusiasm which is necessary even to work a majority successfully seems to have completely evaporated.

I turn, however, from these speculations to notice an agitation which has been recently started, and which may gain importance at some future period. A league has been formed for the purpose of advocating a reform in the land laws; it has held an initial meeting, and Mr. Mill has addressed it in a speech which has given rise to a considerable amount of controversy. The question is, in fact, one of the most vital importance, and the agitation, if once fairly launched, may lead to a very serious struggle. It is generally stated that the land of England is in possession of 30,000 proprietors, and that the number has rapidly diminished and is still diminishing. The figures, which are taken, I believe, from the last census, are probably inaccurate, and for reasons into which I need not enter; but the general tendency of things is indisputable. That landed estates tend to increase and the number of landowners to diminish, is ob-

vious, and no serious observer will deny that such a state of things constitutes a real danger to the country. Nor will many people think that the *Times* is adopting a wise and conciliatory course when it says that if a man wants land he had better emigrate to the colonies. An English statesman could hardly render a more unequivocal service than by bringing about the inversion of the present process and substituting division for accumulation of landed estates. Mr. Mill and the association of which he is the leader propose various measures with this intention. In the first place, they propose to facilitate the transfer of land, to provide some simple system of registration, and to confine the power of entail within narrower limits than at present. The ideal state of things would, of course, be one in which land could be disposed of as easily as railway shares, and it should always be held by some one in absolute possession. The inability to dispose of land when the owner for life has become hopelessly embarrassed is undoubtedly a great obstacle to improvement. Such changes, however, might be carried out far more perfectly than they are likely to be for many years to come without producing the result most desired. If, that is, land passed from hand to hand with the utmost possible facility, the growth of large estates might still proceed so long as the habits and tastes of Englishmen remain substantially unaltered. There are at present artificial hindrances to the breaking up of landed property, but, even if they were removed, men who have made their fortune in business might still choose to invest in land, so long as that mode of employing money confers a certain kind of social standing. The land, it is probable, would be in more energetic and solvent hands, but we need not be much nearer to the advent of the peasant proprietor. Here, accordingly, there is a certain divergence between different parties of Mr. Mill's associates. The more moderate would be content to allow things to take their course, and to trust to the free play of supply and demand. The more impetuous are inclined to denounce property in land altogether, or, in other words, to declare that the state should be the sole proprietor, and should simply grant leases for limited terms of years.

The programme advocated by Mr. Mill is something of a compromise between the radicals of the simple free-trade school and those who add some touch of socialist theory. He proposes that the state should take all the land at present uncultivated, and, after compensating the proprietors, dispose of it on some system to be devised for the encouragement either of small owners or of co-operative associations of laborers. The waste lands of England are rather more extensive than you might be inclined to imagine, but they are, of course, in a general way, the least valuable soil; and it may be doubted whether Mr. Mill would thus obtain a sufficient leverage for bringing about any very important change. He has not stated very distinctly how far he would propose that Government interference should extend; and whether, for example, having created peasant properties, it should take any measures to prevent their possible absorption by the neighboring landowners. The more important question concerns the owners of cultivated estates, which, of course, form by far the largest proportion of the country. And here Mr. Mill brings forward a plan which he originally advocated in his "Political Economy," and which seems to have particular charms for him. Land, he says, differs from all other property in this respect, that its value tends to increase as the population and wealth of the country increase, without any effort on the part of the owner. Therefore, if we could intercept that part of the increment of rent which is due not to the expenditure of capital, but to causes independent of the owner, we should have a fair justification for applying it to national purposes. He therefore proposes to make a valuation of land at fixed intervals; and, after allowing a certain rate of interest for any capital which has been expended, to consider the remainder as fairly liable to be appropriated by the nation. The scheme rests upon the theory of rent which is, perhaps, not universally accepted, though it is admitted by most of our orthodox political economists. But, after all, it comes simply to this, that Mr. Mill proposes to raise a considerable part of the national revenue from a land tax. The tax now going under that name has remained a fixed sum from the time of Queen Anne, and there may be good reasons for increasing it according to Mr. Mill's proposal. There are, however, many difficulties which will easily suggest themselves in determining how far it is equitable, and at what precise sum the tax ought to be fixed in any given case. The plan is not likely to be adopted for a good many years to come, and therefore any discussion as to its abstract justice would be rather premature. I notice it merely as significant of the questions which may, perhaps, be agitated within a short time, but, to say the truth, with very little belief that Mr. Mill's scheme will satisfy either wing of his party.

We have just received the news of the ratification of the Treaty of Washington. Personally, I am extremely pleased to hear of it, but I cannot expect that the people of the United States will be profoundly affected by such a piece of intelligence. Yet I am unable to convey to you any more general expression of opinion, for the simple reason that I have found it totally impossible to talk to any one whom I have met for the last two days upon any other topic than what is called in our newspaper placards the "Burning of Paris." By the time that this reaches you, I hope it may have received a less terrible title; but with telegrams coming in every hour announcing the destruction of some monument valued by all civilized beings, it is difficult to give much attention even to the details of a treaty between England and America.

HOSPITAL REMINISCENCES IN GERMANY.

BERLIN, May 18, 1871.

A HALF-YEAR spent in the Prussian military hospital service has called forth some reflections which, I venture to hope, will have a certain interest for your readers, although they are of necessity quite incomplete and disconnected in their form. In Cassel, where it was my lot to be stationed during the latter months of the war, the train depot of the 11th Army Corps was converted into an immense reserve hospital, with a capacity of nearly 800 beds, which was increased to 1,000 by 8 "American" barracks erected on adjacent ground—a capacity above that of any single institution in New York. I had charge of one division containing 80 beds, and, as during the time of my engagement more than 700 patients passed through the department assigned to me, I had thus a fair opportunity of seeing something of the Prussian soldier in all branches of the service, and from every province of the kingdom, as well as of the troops from other portions of the North German Confederation.

One of the first things that must strike any one who has a chance to observe the Prussian private is that, while he possesses in an eminent degree the virtues of the soldier, as his achievements have abundantly shown, he is remarkably free from the vices which the life of the soldier fosters, and which have generally characterized the profession of arms. Far from being improvident, idle, intemperate, lawless, brutal, or corrupt, he is brave, highly disciplined, persistent, faithful, intelligent, and submissive. The impression which the hundreds whose personal acquaintance I have made have left upon me is of simple-minded yet well-informed, frugal, and honest men, whose disposition and temperament would never lead them to bloodshed except as a necessity, yet whose reverence for authority would never permit them to disregard an order. This is only saying what has already been often and better said; but I may enforce its truth by some illustrations which my experience furnishes.

The use of alcohol in all American and English hospitals is hedged about with the strictest precautions, and in spite of these is yet constantly abused. In the hospitals of Germany, on the other hand, during the war, beer or wine was supplied by the government to every patient as a part of his daily diet; and the Soldiers' Aid Society considered it one of its most important tasks to provide extra quantities of these articles for such patients as were thought to need them; and not wine and beer alone, but rum, brandy, and whiskey, were easily within the reach of every patient. Yet, in nearly six months, among 700 men, although my knowledge of and daily contact with them was such that an excess of the sort could hardly have escaped my notice, I met with only four cases of drunkenness (one of them scarcely deserving the name), and I cannot now remember to have encountered a man who could be called a confirmed sot. On the King's birthday, the Sisters of Charity prepared liberal quantities of punch for the patients under their charge; and I am sure that a "thoughtful teetotaler" would have found abundant food for reflection in seeing a grave conclave of doctors "tasting" the beverage to see that no pharmaceutical rule had been violated in its composition, as well as in ascertaining whether it produced any evil effects among those who partook of it afterwards in every ward of the hospital.

Card-playing, which is also strictly forbidden in our hospitals, because it is found to lead to gambling, was rather encouraged in the hospitals of this war, and the men used indeed to gamble with what they considered impunity, their stakes being "pfennige," a coin equal to about one-third of a cent; and a loss or gain which amounted in the course of an evening to two groschen (five cents) would have been considered "colossal."

My only aim in citing these facts is to illustrate the temperance and moderation of the Prussian soldier, which enable him to venture freely and safely upon ground which is admitted to be fraught with danger for us.

But a single instance of insubordination requiring punishment came

to my knowledge, and not one occasion in which a quarrel leading to violence arose, while the examples of kind and thoughtful attention were innumerable; in short, good and orderly conduct and good nature formed a rule to which there were few exceptions.

A distinction between Prussian subjects, of which your readers may not have heard, is that between "Stock-Preusse" and "Muss-Preusse." It arose as follows: In some of the disaffected provinces which Prussia's prodigious powers of acquisition rather than the will of the people made her own, the derisive epithet of "Stock-Preussen," "Cane-Prussians," or, perhaps, "Poker Prussians," was applied by the people to the old Prussians on account of the very stiff bearing which their long military training gave them. These retaliated by calling their newly-made fellow-citizens "Muss Preussen" (Prussians by force, or whether or no). Of this latter class were the lukewarm Rhinelanders, the indifferent Hessians and Hanoverians, the disaffected Poles, the "subjugated" Holsteiners. I say *were*, for one sees now no trace of the former disaffection. I have had numerous specimens of all these different classes in my charge, and not only have not known of any case of open disloyalty, but have seen no indication in their conduct of any sentiment of hatred or opposition to the "powers that be." Of course, there has been enough dissatisfaction with the war, and murmuring at individual hardship, but there has been even *more* of this among the old Prussian landwehrmen who had already gone through '64 and '66, and were separated from families and homes, than among the young recruits who were having their first taste of glory and adventure under the victorious Prussian standard. "Nothing succeeds like success," and Prussia has played a winning game at home as well as abroad, winning hearts here as she won battles in France.

The visiting staff of our hospital was composed almost exclusively of private practitioners of the city of Cassel, and in my contact with them I was enabled to see much of the average practitioner of medicine here, about whom I should like to say a few words, as so much less is known of him than of his more famous professional brethren whose writings or other achievements have made them everywhere familiar. The advantages which long discipline and careful culture confer upon the followers of any vocation are readily apparent in the practice of every medical man one meets here. That ability is more marked or talents are greater than with Americans of the same calling no one would claim, but that these can here be turned to better account no one could deny. It goes without saying that German medical men are as a rule more firmly grounded, widely informed, and thoroughly drilled than those of our own country, and for reasons which lie upon the surface of the educational systems of the two countries; or, say, in the inscrutable necessities of the one and the incomparable advantages of the other. Deliberation, learning, system, prudence, are conspicuous in all the performances of these men, generally in an admirable, sometimes in a superfluous degree. They are familiar, to a greater extent than is the case with us, with the more advanced and abstruse methods of investigation as well as treatment of disease which the science and ingenuity of the day are making available. A far larger proportion of them are skilled in the use of the microscope, while the ophthalmoscope and the laryngoscope, which are being slowly introduced among us, are already in the hands of even the more elderly medical men here. As surgeons, they must undoubtedly yield to us in ingenuity and practical skill, but their caution and thorough science lead them to results perhaps equally as good. In a sudden emergency, a very difficult and dangerous operation, the ligation of the carotid artery, was done successfully in our hospital by an elderly gentleman who had scarcely employed a surgeon's knife for twenty years. The operation was far from brilliant, yet the manner in which the unexpected demand was met showed how well the anatomical foundations had once been laid, and saved a life placed in the utmost jeopardy; and numerous instances of the same sort, but less striking, were constantly attracting my attention.

The good sense and sagacity of the present generation of medical men here show themselves nowhere to better advantage than in the employment of drugs. The smallest, not the largest, admissible dose of any given remedy is almost always employed, and this only when there is the clearest indication for its use. The Prussian management of apothecary shops and system of dispensing deserves a chapter to itself. I can only say that the precautions taken against the incorrect compounding of drugs are such that a fatal mistake is quite an unheard-of thing. One must admit, however, that there are many old-fogies and many hobby-horsemen here as well as everywhere else in the medical world, and it would be no injustice to many of these phlegmatic doctors of medicine to call them indolent. There are many men who have been brilliant at the gymnasium and the university who lose all ambition and relapse into apathy as soon as the four long years and the hard examinations are over, and the spur of necessity is removed. In short, while with us almost everything depends upon the man himself, here, perhaps, too much depends upon the university and the severe demands of a government which regulates a thousand details which with us are left to take care of themselves.

In the hospitals of the present war, both field and reserve, the duties of the nurse have been very largely in the hands of the various Roman Catholic charitable sisterhoods, whose services their spiritual mother and dictatress has placed at the disposal of the military authorities. These devoted daughters of the church have followed close upon the heels of the ravaging demon of war with their merciful ministrations, and the heroic labors which they have performed through this memorable half-year of carnage must be a subject of profound admiration and gratitude to all who have witnessed them and shared in them. Through their unremitting exertions, the condition of the inmates of the hospitals has been immeasurably improved and their sufferings unspeakably relieved, while the tasks of the surgeon have been rendered far less severe, and his efforts for the welfare of his patients most ably and intelligently seconded. The art of nursing steadily assumes greater importance in the conduct of all diseases and injuries as the physician gains clearer conceptions of his powers and his limitations; and in the light of the labors of these excellent nurses, the Jesuit, and Franciscan, and other Catholic sisters, as well as the Evangelical deaconesses, I can, perhaps, offer your readers some interesting considerations on the general subject of nursing.

These good women deserve to be called excellent nurses for the following reasons: they are thoroughly-trained, intelligent, experienced, and in the highest degree faithful and devoted to their work. In the first place, they are all required to make preliminary studies of such elementary matters as the nurse requires to understand. They are minutely instructed in the preparation of the various articles of sick diet which play so important a part in the conduct of all disease, and systematically drilled in materia medica to such an extent that they are familiar with the properties and the doses of all the remedies in ordinary use. They are taught to discern symptoms of danger in sick or wounded or poisoned patients, and informed upon all the more simple measures of relief which any given emergency can bring into demand. They must practise the application of all sorts of bandages and dressings, until they acquire satisfactory skill. They learn the use of cupping glasses and leeches, the measuring of temperature, the giving of subcutaneous injections, and many similar duties, some of which, indeed, are not generally entrusted to the nurse. As soon as their prerequisite training is sufficiently advanced, certain duties are assigned them in some of the institutions under the control of the church or of their particular order, and they find abundant scope for putting in practice what they have learned, in the foundling and the lying-in hospitals, the fever, the insane, the small-pox hospitals, and the hospitals of a general character, to which they have access. They thus acquire a very respectable fund of knowledge and experience, and some of them are entitled to far more than the mere name of nurse. Of the twelve Franciscan nuns who had charge of the patients in the hospital where I was engaged, several had a really extensive knowledge of diseases, as well as remedies, and one of them used to treat independently any case of sickness occurring among her sisters, making her diagnosis and her prescription in a systematic manner, and meeting with as good success, so far as I could judge, as could result from the efforts of the best-informed male practitioner.

In my opinion, the church offers the world an example which it may study with profit, in the methods by which she produces these bands of skilful and intelligent nurses, and sends them on their noble mission into the world; and the imitation of her plan in its essential particulars, by the establishment of numerous non-sectarian schools for the training of male and female nurses in a scientific manner, is an object which must commend itself to the reason of all medical men, and meet with the approval of all others who know the present low condition of the useful art of nursing—the twin-sister of the art of healing. If we compare the qualifications of these benevolent sisters for their calling with the qualifications of the persons who generally undertake the tasks of the nurse among us, what do we find? Instead of thorough preliminary training, there is none at all worthy of the name. Nurses are too often illiterate and uncultivated people, whom necessity or chance rather than any fitness or talent has brought to this vocation, in which even those who have the best powers and intentions require to be well instructed and thoroughly drilled. With how many so-called nurses does every

physician come in contact whose best knowledge is superstition, whose highest intelligence is self-conceit, whose greatest gift is the "gift of gab," and who from long experience have only derived a multitude of prejudices! But how often do they add to the shining qualities of superstition and ignorance, conceit, loquacity, and prejudice, the further graces of imprudence, impertinence, negligence, duplicity, and intemperance! Indeed, one constant source of anxiety and embarrassment to every physician in public and private practice is the scarcity of good nurses. How desirable would it seem, then, to establish a standard of attainment for nurses which does not exist with us, and to place it in the power of all who earnestly wished it to make themselves capable and valuable followers of that calling, while rendering it difficult if not impossible for unworthy and ignorant characters to disgrace so honorable a vocation. In schools established with this view, women might find a widened and highly appropriate field of activity, and those whose ambition led them beyond the mere duties of the nurse, who were desirous of vindicating the claim of their sex to follow the profession of medicine on equal terms with man, would be provided with fine preparation and fresh incentive to their labors in their familiarity with disease and observation of its treatment.

It is only too true, as I know from personal experience, that a large majority of the hired nurses in our public institutions are unworthy of their places. In almost every hospital there are two or three really valuable nurses. The rest are such creatures as necessity compels to undertake a detested service. They are as a rule addicted to several vices, and utterly unworthy of confidence, and the natural and correct inference from these facts is that the patients suffer at their hands. There are not wanting those who say that, if the art of nursing is in a deplorable condition, the art of healing is in a scarcely less satisfactory state, and there are doubtless reasons for their assertions. The two arts must, indeed, go hand in hand, and, if medicine is ever to deserve the name of an exact science, it will be as much through the fruits of the indefatigable labors of faithful watchers by the bedside, like these devoted women, as by any brilliant deductions of genius or sagacious researches of talent in the fields of theory and hypothesis. R. S. D.

Correspondence.

HYDRAULIC ENGINEERING IN THE UNITED STATES.

To the Editor of the Nation:

Sir: It is no unusual thing for the Government and people of the United States to neglect to avail themselves of the professional knowledge which the country affords, but the *Nation* need not invoke the aid of Italian engineers for the protection of the Valley of the Mississippi (June 1, page 382).

In 1861, a "Report on the Physics and Hydraulics of the Mississippi River" was made by Captain A. A. Humphreys and Lieut. H. L. Abbot of the U. S. Engineer Corps, and printed by the Government. Prior to this report, "the laws which govern the flow of waters in natural channels were only partially and imperfectly developed," but through the labors of these gentlemen "laws have been revealed that were before unknown; new formulæ have been prepared, possessing far greater precision than the old; and improved methods of gauging streams have been devised."

In Italy, the Americans now have the reputation of knowing something about the science of hydraulics. W. R. W.

Notes.

Messrs. Appleton & Co. announce a "New Hand-Book of Western Travel," which they promise shall "exhaust the ground it intends to cover, and be specially full in regard to points on the Pacific coast." If it does not fall below the standard of their other American guide-books, it will not disappoint expectation. Other publications in press are chiefly reprints: "Recent Discoveries in Science, Philosophy, and Morals," by Herbert Spencer; "Light and Electricity," two lectures before the Royal Institution, and "Hours of Exercise in the Alps," by Prof. Tyndall; and "Light and Science for Leisure Hours: a Series of Familiar Essays on Scientific Subjects, Natural Phenomena," etc., by R. A. Proctor. We are glad to see a statement from this house that "they pay regular copyright, the same as that usually paid to American authors, to Messrs. Huxley, Tyndall, Darwin, Spencer, Lubbock, Lecky, Galton, and other English scientific writers, whose works they reprint."——"Strange Tales from Humble Life" is the title of an English work by John Ashworth, to be immediately republished here, with the author's consent, by Messrs. A. D. F. Randolph & Co. They will also issue in July "The St. George's Hall Lectures," designed to meet current forms of unbelief among the educated classes, by the Rev. Geo. Rawlinson, the Lord Bishop of Carlisle, and others.

—The proposal to which reference was made in these columns three weeks ago, to substitute graduates of Yale College for Connecticut Senators in the corporation of Yale, has been embodied in the following law ("An Act relating to Yale College"), which passed both Houses of the State Legislature without opposition, and has doubtless ere this received the signature of Governor Jewell. As the only radical point in which Old Yale or Young Yale seemed to differ was in respect to the organization of the Board of Trustees, this change so heartily desired by many graduates, and so readily permitted by the State of Connecticut, may be regarded as closing the discussion, and as ensuring the harmonious beginning of the new presidency:

Sec. 1. All persons who have been for five years graduated as Bachelors in any of the departments of Yale College, and all persons who have been admitted to any higher degree in Yale College, whether honorary or in course, may, on the public commencement day of said college, in the year of our Lord eighteen hundred and seventy-two, cast their votes, under such regulations as the President and Fellows of Yale College may prescribe, for six persons to be chosen from among such graduates of Yale College; and the six persons who shall be found to be elected by a majority of the votes cast shall be Fellows of Yale College in the stead of the six senior Senators of the State; and shall have all the rights, duties, and privileges as Fellows which are now by law conferred upon said Senators.

Sec. 2. The Fellows thus elected shall enroll themselves by lot in six classes, one holding office for six years, another for five years, another for four years, another for three years, another for two years, and another for one year, eligible for re-election; and every year, as a vacancy occurs, the graduates of Yale College shall, upon commencement day, in the manner heretofore prescribed, elect a person to fill the vacancy and hold the office of Fellow for a period of six years, eligible for re-election, and so, whenever a vacancy shall occur from death, resignation, or any other cause, such graduates may elect a person at the next commencement to fill the office of Fellow for the remainder of the term in which a vacancy has occurred.

Sec. 3. This act shall not take effect until the President and Fellows of Yale College by a vote communicated to the Governor of the State, shall have signified their acceptance of and consent to the provisions of this act.

Sec. 4. The acceptance of this act by said corporation shall not operate to make the charter of said corporation, as heretofore amended, subject to repeal, alteration, or amendment, without the consent of said corporation.

—Mr. William H. Dall, whose work on Alaska is the fullest account we have of that outlying territory, is to leave San Francisco next month in charge of a coast-survey expedition, which may be expected to construct a map of the northwestern corner of the continent—more especially its shores and islands—of a degree of accuracy never yet attained in any chart or atlas. Since we have this awkward possession, we ought undoubtedly to make the most of it, and the first thing is to know exactly what it consists of and how it is bounded. A late census has shown the population to be the lowest that can claim citizenship and protection under the American flag. As to the natural resources of the country and its attractions for trade and settlement, opinions differ. Mr. Dall, as our readers may remember, takes a very rose-colored view, and he is sustained by the editor of the *Lynchburg Republican*, who has made the tour of the Alaskan coast, and ascended the Yukon, and who says of the latter (May 19): "From our observations we are convinced that there is no portion of the whole territory which is more fertile, richer in resources, or more inviting to American enterprise and the investment of American capital." This statement is the more worthy of respect because it was elicited by a senseless fling of the Washington *Patriot* at the High Commission, for having opened the "Yucan" to American commerce—"Stupendous feat to open a river that freezes sixty feet deep!" The *Republican*, instead of copying this without comment, as almost any other Democratic journal would have done, to raise a laugh at the expense of the Administration, had the manliness to expose the "very apparent ignorance" that inspired the paragraph in question, and to tell what the editor knew from personal experience, without regard to party considerations. The incident is a trifling one, but as a rebuke to the pettiness of our politics it is, especially as coming from a Southern source, an encouraging symptom.

—A promising scheme of co-operation has been chartered in Boston, for the purpose of holding and improving real estate to the amount of

two hundred thousand dollars, as homes for working-people at moderate cost. The corporators named in the act consist of two gentlemen and two ladies of high social position, and both sexes are also represented in the subscribers to the stock up to this time, from among the wealthy classes. The par value of the shares is to be twenty-five dollars, and the dividends not to exceed seven per cent. thereon. The tenement-houses erected in the city will be of an improved character, and the occupants will become shareholders. We believe this movement is due to the suggestive letter of Dr. Henry I. Bowditch from London, written to his colleagues of the Massachusetts State Board of Health, and printed in full in their late report. It is already so well supported that building will begin in the course of the summer.

—The Rev. Alexander B. Grosart, St. George's, Blackburn, Lancashire, has been editing a "series of books from early English Literature," under the general title of "The Fuller Worthies' Library." These books—"reprinted for private circulation only (not published) in strictly limited impressions"—are enriched by Mr. Grosart's "memorial introductions and notes." We have the *Athenæum's* authority for the fact that Mr. Grosart "is a critic, no less than a collector; and he is, on the whole, a very good critic." Some of his critical notes are *too* good to be enjoyed "all to themselves" by the lucky possessors of these "privately circulated" volumes—as a single specimen will show. Sir John Beaumont's poems were reprinted in the ninth volume of the series, in 1869. In this author's "Metamorphosis of Tabacco" (first printed in 1602), the Earth proposes to her sister elements, Water, Fire, and Air, that, when the Tobacco plant shall spring forth,

> —"ev'ry Ladie shall that herbe endow
> With the best gemmes that deck her glorious brow."

Accordingly, the servants of Water, in turn,

> "Offer each one their best parts' quintessence.
> The icy waves were all with christall fraught;
> The Magellanick Sea her *vnions* brought;
>
> From British seas doth holesome corall come;
> The Danish gulfe doth send her succinum;" etc.

"Vnions" Mr. Grosart explains at the foot of the page by a single word, and that word is—"*Onions!*" Is not this a note to be noted by all Shakespearian critics? What piquancy and flavor does it impart to the draught, when

> "The king shall drink to Hamlet's better *breath;*
> And in the cup an *onion* shall he throw!"

What a point might Booth make of

> "Drink off this potion:—Is thy *onion* here?"

It is true that the glossaries and the dictionaries, from Johnson down, and fifty editors of Shakespeare, have told us, and every school-boy was expected to know, that "onions" were fine pearls, the Latin *uniones*. "Our dainties and delicates here at Rome," says Pliny, in Holland's version, "have devised this name for them, and call them *Unions*, as a man would say, *singular*, and by themselves alone." But why should a collector and "a critic, no less than a collector," who has to edit four-and-twenty volumes of English poetry, "in strictly limited impressions," waste time in looking out the meaning of every hard word in the dictionary? And can we blame him for not even pausing to explain what his author meant by "decking the glorious brow" of Water with onions—raised in Magellanic Seas?

—The first number of the Paris *Revue Bibliographique Universelle* which has reached us since that city was besieged by the Germans, makes a thin brochure bearing date October–March, 1870–71—sad reminder of the long blank in the intellectual life of France. The last number of the *Nation* whose contents are given in the *Revue*, is the issue of Aug. 18, 1870; scarcely any journal is reported received after September. The editor-in-chief offers a brief salutation to his readers on the resumption of the work which now, more than ever, corresponds to the highest needs of his country—"réagir contre les tendances fatales et frivoles de notre époque, ramener les esprits au culte du vrai, aux saines traditions de la science, de la littérature et de la critique." He has something to say of the lesson unmistakably taught by the part which science has played in the humiliation of France, but he cannot refrain from a "last word," which is also a "cry of horror and of indignation against the useless and wicked devastations which have characterized this war, in truth worthy of barbarous times"—a cry that will "find an echo even in the conscience of the conquerors." This was written, of course, before the last days of the Commune. The book-reviews are of necessity much fewer than usual. The necrology contains quite a number of names besides Dumas, Mérimée, and Ponson du Terrail, but none so well known in literature. Of Dumas, we read that "amid the prodigious dissipation in which his life was spent, he had still preserved in his heart the sentiments of religion. He died a Christian death." And a note is printed from his daughter to M. Veuillot, informing him that her "beloved father died Monday, Dec. 5, *muni des Sacrements de l'Eglise*. . . Praise God for this great example."

—In the *Revue's* list of publications in Paris during the siege or in the provinces, we find several that relate to the question of the future capital of France. The earliest appeared in November, in the city itself, states the question plainly, and seems to imply a negative answer: "Les Assemblées politiques doivent-elles continuer à siéger à Paris?" Of this M. Edouard Brinvilliers was the author. In March, we find "Décentralisation, l'Etat par la province," by the Comte d'Osmond; and "De la décentralisation et du transfert en province de la capitale politique de la France," by the Comte de Galembert—the first, published at Nevers, the second at Tours. Works pertaining to the history of the war, some of which we have mentioned already, and which, of course, do not antedate March, are G. Mitchell's "Journal des Deux-Mondes pendant le Siége de Paris" (14 parts, 8vo); "Journal du Siége de Paris," by G. d'Heylli, embracing decrees, proclamations, circulars, reports, etc. (20 parts, 8vo); "Histoire du Siége de Paris," by J. Noriac; and "La Retraite de Mézières," by H. Plon. Louis Blanc announces a history of the siege, and Léon Gautier a diary of it; and we may expect also—if the Commune has spared the writers—"Tablettes d'un Mobile," an historical and anecdotical journal of the siege, by Léon de Villiers and Georges de Targes; and "The Defence of Paris in 1870-71," by an anonymous major of engineers.

—Last October we called attention to the chapter in Trochu's "French Army" on the volunteers of 1792, and to his citation from Marshal Gouvion St. Cyr, to the effect that these representatives of the enthusiasm of that period "were constantly, at Valmy, Jemappes, and Neerwinden, a hindrance and a peril to the intelligent operations of Dumouriez." Additional proof, if any were needed, that it was the troops of the line which saved France from invasion by the coalition, and afterwards transferred the war to the enemies' country, has, meantime, been furnished by Camille Rousset, keeper of the historic war archives in Paris, in a work published last year, entitled "Les Volontaires, 1791–1794," and which has had a success of at least three editions. The sum of his evidences is, that the volunteers had a very trivial share in the victories achieved, even if they did not paralyze the movements of the army and the plan of the campaign, while to the regulars they were a perpetual annoyance and cause of demoralization. Kellermann, Biron, Beurnonville, and Custine are unanimous on these points. The volunteers had constantly to be restrained from pillage and devastation, and their tracks were always marked with ruin. After the war in Vendée, in which their cowardice and cruelty were equally conspicuous, they were extinguished by being amalgamated with the line.

"THE SERVICE OF THE POOR."*

THE book of which we give the title below is the first one we have ever seen in which the subject of it is treated rationally, dispassionately, and thoroughly. The second and longer title states the question which the book aims ultimately to answer, but the method pursued is to examine thoroughly all the conditions of the problem of "the poor," so that, although the real object is to discuss the merits of two rival methods of organizing women's labor in behalf of the poor, yet we are offered an exhaustive consideration of the wants of the poor, the circumstances and interests of the women who undertake to help them, the interests and obligations of society in this regard, and the methods to be pursued in relieving the various forms of distress which, although they are common to human beings, yet are so much aggravated by poverty that we naturally associate them with *charitable* effort only when they befall the poor.

It is pleasant to be able to say that Miss Stephen brings to the treatment of this subject a vigor of thought, acuteness of analysis, and correctness of literary style which we have rarely seen equalled in a popular work by any writer, male or female. The subject is a broad and complicated one, but the various extraneous and irrelevant matters which have become entangled with it are here sundered out with correct discrimination. The issue is sharply defined and faithfully kept in view in the argument, and the conclusion which is reached in favor of secular as against

* "The Service of the Poor. Being an enquiry into the reasons for and against the establishment of religious sisterhoods for charitable purposes. By Caroline Emelia Stephen." London and New York: Macmillan & Co. 1871.

religious organizations is firmly established for any one who looks at the matter rationally, and without the prejudice of affection for any ancient ecclesiastical form. Indeed, the only ground for fear is lest this judicial temper and discriminating criticism may not unfit the work for the influence which it ought to have upon the minds of the women who are attracted by sisterhoods, and the clergymen who are struggling to establish them—classes of persons who are more likely to be aroused to impatience than to be led to convictions by critical analysis and dispassionate discussion.

We cannot even attempt to give a summary of the discussion which Miss Stephen offers, but one point in her answer to the question, How shall we serve the poor? deserves to be especially noticed. It sounds like a truism, but it is continually overlooked. It is this: Serve them just as you would serve rich people who were in the same circumstances. We continually see people act as if there were some different way of nursing the sick poor from that employed for the sick rich—some different method of teaching the children of the poor from that employed for the children of the rich. There is also an ecclesiastical notion that the poor, *as such*, have some merit, or some peculiar claim, to be not *helped*, but *petted*. They are held to be, in some especial sense, representatives of Jesus Christ, that is, more so than the sick or ignorant rich. A service rendered to a poor man from Christian charity is regarded as *more* a service of Jesus Christ than one done to a rich man from the same pure motive. Thus "the poor" receives a technical or ecclesiastical signification. The first of these fallacies leads many well-intentioned people who undertake charitable work to hurt the feelings of their beneficiaries, or even to insult them, almost before they are themselves aware of it. The second leads the church to follow in its charitable work a system which demoralizes and pauperizes the poor, and almost seems to desire to keep them poor in order to use them as food for its own spiritual growth. Both ignore the fact that one who never meets a needy person face to face may do more by a sanitary, economical, or surgical discovery for the benefit of the poor than all the "visitors," as much as a man who uses a lever may do more to lift a weight than one who puts his hands upon it. The general services done to society and humanity always do most good to the poor, and in cases of individual contact and assistance the aid given by man to man must depend on a universal principle. If we analyze the popular notion, we shall find that it amounts to this, that Christian charity is something to be exercised by the church and towards the poor. The only true doctrine is, that Christian charity ought to be exercised by everybody towards anybody who is in need, whether he be rich or poor, and in each case according to the character of the need. One of the first requisites of successful work among the poor is to forget, and to make them forget, that they are poor, and to disabuse them of the idea that they are, therefore, to be treated in a peculiar manner.

The labor of alleviating human misery is one which involves great wear upon the spirits, even in the best case; but, when the victims are the poor, who cannot obtain the diet, the medicine, the fresh air, the change of scene, the surgical skill, the leisure and freedom from care, and often, also, cannot secure the cleanliness, which may do so much to alleviate pain and disease, then the strain upon both the physical and spiritual powers of the nurse is greatly multiplied. There is much which is disgusting and repulsive about disease at best, but, when it is found in the midst of squalor and poverty, its hideousness becomes almost unendurable. Yet there it is—the more repulsive it is, the more helpless it is; and the more helpless it is, the more imperative is its demand upon the more fortunate. Who shall undertake to alleviate it, so far as human aid can do this? In our complex society, in which each must have his own task, and attend to it almost exclusively, who shall undertake this task?

It is generally maintained by those who distribute the tasks of life between the two sexes according to the natural tastes, powers, and facilities, and the observed results of efforts in certain directions by each, that this is "woman's work." Women show skill and delicacy in nursing, magnetism in teaching, tact in visiting and relieving distress, far beyond what men display. Their sympathies are quicker and warmer; their zeal is subject to faith, rather than to reason; but, perhaps on that very account, it is better adapted to deal with cases in which it is more essential to heal the distress than to ascertain its causes, or to determine the amount of blame which attaches to it. Women also have an ardor for self-sacrifice, and find happiness in devotion, especially where it brings a return of affection. They are, therefore, able to ignore many things which, it seems to us, at first sight, would certainly be unendurable for them. The ecclesiastics affirm that no one can do the disagreeable work which is involved in the care of the sick poor, endure its trials and temptations, and persevere in it, who is not supported by love of Jesus Christ, and who does not regard the work as something done for his sake. Miss Stephen, however, evidently with full knowledge of the facts, affirms that the popular mind greatly exaggerates the sacrifice involved in this work, and that trained secular nurses, such as those of the Liverpool Infirmary, manifest as much zeal, fortitude, and devotion as any Sisters of the religious orders. It seems that enthusiasm and interest in the work avail here, as in other occupations which many people might consider disgusting, to overcome anything disagreeable in the work, and that, where there is that natural aptitude which constitutes a "calling," this employment gives happiness as much as any other congenial occupation. Unfortunately, it is a "mission"—that is, it is not attractive for any worldly rewards which it offers. The laborers must find their reward in the gratification of a natural inclination, and in the satisfaction of doing good. Fortunately, however, even in these mercenary days, and in callings which are purely secular, the idea of a "mission" has not entirely died out, and men can be found to turn their backs on pecuniary advantage in order to work for a cause. If this were not so, we do not know where our higher institutions of learning could find teachers, perhaps *the* class of men who to-day, in this country, are most obliged to depend, for support and strength in their work, upon their love for the "cause" they serve.

The persons who thus devote themselves to a cause are almost always those who have taken the religious view of life and its duties, and who are, therefore, to a great extent, animated by religious faith and zeal. There is a constant effort on the part of a certain class of religious, or, perhaps, we should say, ecclesiastical, people, who observe this fact, to confound membership in a religious institution with religious principle. They assume (what experience of secular visitors, teachers, and nurses, shows to be untrue) that charitable work is too disagreeable to be performed by any who have not the support of religious organization, and of an extraordinary measure of spiritual exercises. In their schemes, therefore, the benefit or service of the poor is made secondary to, or is at least mixed up with, the spiritual growth and benefit either of the poor or of those who do the work. One distinction which this produces, and which Miss Stephen very sharply and correctly points out, is that the attention of secular nurses is chiefly directed to preserving the life of the patient, while that of "religious" nurses is directed chiefly to preparing them for death. Important as the latter duty no doubt is when the stage is reached at which it alone can find proper place, yet the duty of the nurse as nurse is properly concentrated on the former.

Again, the ecclesiastical system of charity by sisterhoods seizes upon the prevailing discontent of women with their own work, and, instead of correcting it, fosters it, and makes use of it for its own purposes. Women are bribed, by a sensational dress, by a romantic atmosphere and surroundings, and by a melodramatic attitude before the public, into undertaking a work which, in its unadorned simplicity, they would find irksome and dull. Some may think it well to correct the false ambition for the platform, the forum, and the ballot-box, and to bring women back to their peculiar calling and duty, by such a bribe to their weakness; but it is a false policy, and every false policy, in the long run, avenges itself. It is rather to be earnestly insisted, on every proper occasion, that women, while striving for a share in the performance of a certain range of duties which are already being more or less well fulfilled, are neglecting a great work which is directly incumbent upon them, and which, when they neglect it, goes entirely undone. We may, then, hope that their own good sense will lead them to see their duty, and do it without any bribes to their vanity.

BRODHEAD'S HISTORY OF NEW YORK.*

THE first volume of Mr. Brodhead's "History of New York," published nearly twenty years ago, covers the period of Dutch rule over the province of New Netherlands, from the day when Hudson, refusing to fix the new seat of trading empire in the shallows of the Delaware estuary, anchored the *Half Moon*, of eighty tons, manned with twenty sailors, in the waters of Sandy Hook Bay, on the 3d of September, 1609. The present volume opens with the last scenes of Dutch authority, just fifty-five years later, when the reluctant Peter Stuyvesant led his small force out of Fort Amsterdam, with all the honors of war, yielding possession to the English Commander and first Governor, Richard Nichols. The attack upon the settlement was treacherously sudden, and its reduction speedy and bloodless. After ten days of parley, the inhabitants of New York,

* "History of the State of New York. By John Romeyn Brodhead." Second volume, pp. 680. 8vo. New York: Harper & Brothers. 1871.

then fifteen hundred in number, only two hundred and fifty of them fighting men, declared that "to resist so many was nothing else than to gape before an open oven," and compelled their high-spirited and indignant Governor to surrender to the English force of a thousand, aided by volunteers from New England and Long Island, and backed by six hundred savages. The author justly brands the conquest of New Netherlands as an act of peculiar national baseness, planned in secret, and accomplished with deliberate deceit toward a friendly government. The Dutch province became the easy prey of undeclared enemies, who sneaked in time of peace into her chief harbor.

Over the second marked period in the history of New York, between the date by English occupation and that of the subjection of all the northern colonies of the cession of Canada in 1763, the story of the present volume extends only to the year 1691. With the increasing complexity and interest of provincial affairs, the work threatens to grow encyclopedic in size. Indeed, the author's research results in such minute detail, and his strict chronological arrangement is so lifeless and calendar-like, that the book reads more as a monument of historical compilation than a fully digested and constructed history. That this does not follow from any want of grasp of thought is amply proved by the large generalization and eloquent descriptions scattered through the first volume. There is nothing in the present one as comprehensive as his account of the feudal system of Holland, or as vivid as his sketch of the rise of Dutch independence. The most successful instance of breadth in treatment is the summary of colonizing invasion as carried on simultaneously over this continent by three great nations—the English, French, and Dutch, opening with a note of the historical coincidence that occurred when Hudson sailed up the North River, while John Smith, under the English patent, was exploring the upper Chesapeake, and Champlain fighting the Indians on the lake that bears his name.

The fault is partly with the subject. Colonial annals are only relieved from dulness by their connection with those of the mother country, whose fortunes they follow. Great events at home distract attention from small provincial beginnings. The pageantry of war, the collisions of classes, the splendor and learning of old communities are not transplanted together with the suffering offshoots into the wilderness. And though colonies become the seed-plot of great principles civil and religious, the philosopher studies their slow, faint germination in vain for the picturesque and poetic elements of outward life that give color to the historian's page. Yet we must confess to a certain disappointment with the meagre mode in which the author has filled out his promised sketch of the contrast and blending of European with American life, the transfer of old institutions, and the development of the principles of self-government. An immense amount of material is laboriously brought together, but the fusing imagination fails which should shape it into a whole, and aid the reader in tracing the reasons for the appearances so faithfully depicted.

The historian's difficulty is increased by the want of unity in the development of New York. Massachusetts was built upon a foundation-principle, not religious freedom by any means, but protest against religious domination by any other creed than their own. But New Amsterdam took root in trade. Like the East Indian Empire, she was an outgrowth from the commercial interests of a company rather than from any religious system or civil theory. And the habit of freedom she inherited from Holland availed her little until it was intensified into a passion for freedom by the strong personal will and aggressiveness imported by her Anglo-Saxon conquerors. Without doing much more than to indicate this new impulse towards independence, our author follows the fortunes of the colony rechristened New York, as affected by the stepmother country's European wars. He exults with pardonable pride in its fair reconquest and short-lived restoration to Dutch rule in 1673–4. He traces the gradual decline of French influence among the natives through a tangled alternation of Indian treaties and wars, and follows the thread of its history among the connections between it and the colonies eastward and southward, growing always closer in their common defence against aboriginal enmity and home encroachment. In brief, the subject of this volume is the gradual fitting of the colony for, and the aid it gave to, that union with the rest under English rule which, it is trite to say, was a necessary preparation for any independence that would not have been followed by wars and mutual destruction.

In the indefinite style of American discovery and claim, the first charters granted by the States-General in 1616 and 1621, accompanied with a map, which is copied and prefixed to the first volume, covered the whole territory from the head of Delaware Bay to Maine. Actual occupation soon gave the English a better title to the eastern parts of this region, and actual seizure carried their control to the gentle slopes of the Connecticut, in spite of Dutch priority both of discovery and purchase in its rich valley. The charter granted by Charles II. upon the conquest of New Amsterdam to the Duke of York embraced an imperial domain, stretching from the west bank of the Connecticut to Delaware Bay, with indefinite extension westward. Pennsylvania, not included in its limits, was afterwards granted to Penn in payment of a royal debt of sixteen thousand pounds, due to the family of the courtly and calculating Quaker. The Duke of York rapidly dismembered his vast territory. Even before taking possession, he granted New Jersey to two of his favorites. In the same year Connecticut, yielding her modest claim of extension to the Pacific Ocean, gained concessions which carried her western boundary to its present line. And not many years after, the skilful Penn edged his American province with a strip of sea-coast, by obtaining the grant of Delaware, to which the proprietor of Maryland made an ineffectual claim. Thus the province of New Amsterdam, as held and settled by the Dutch, was soon reduced by their successor to less than half its original extent, and narrowed southwardly and eastwardly to the precise limits which now bound it as the State of New York.

Nor were the inhabitants of the diminished territory at all the gainers in point of freedom by the exchange of sovereigns. Even the faint degree of representative government they had enjoyed under Holland was not allowed them until after nearly twenty years, and then only for a brief period. They were less fortunate than New Jersey, whose liberal constitution, granted in the following year, provided that her inhabitants should, every year, elect representatives to a general assembly, by whose consent only they could be taxed. This right was withheld from New York until 1683, when the Duke established in his province a more democratic government than any of the chartered colonies in New England enjoyed, while retaining in his own hands the appointment of its governors and counsellors. But James the King was a very different ruler from James the Duke. Upon his accession to the throne, in 1685, he declined to confirm the charter, objecting that it gave greater privileges than had been granted to any other colonies, and was too democratic both in spirit and words. A more direct step towards the fusion of all the colonies under one government was the complete repeal of the charter, which took place the year following, in virtue of the royal instructions to Governor Dongan, reducing New York in effect once more to the condition of a conquered province. And from this time, unwelcome and "even abhorred" by her inhabitants as the enforced connection with Massachusetts was, the civil history of New York, and her development into independence, followed in the main for several years that of New England. Massachusetts, less loyal than New York, as our author avers, less submissive, as her own historians maintain, having begun by protesting against any other religious tyranny than her own, was destined to take the lead also in throwing off all civil authority that did not proceed from herself.

Religious liberty, planted by the Dutch, flourished with no interruption from the new government. Himself a Romanist, and taught by experience the injustice of persecution, James was tolerant of all forms of religious faith in his province. At the capitulation, the Dutch were allowed to preserve their own worship, and their church long remained ecclesiastically dependent upon the Classis at Amsterdam, and led all the others of the colony in wealth and influence. The Episcopal service was first celebrated at the capture. Worship according to that form was conducted for a long time by courtesy in one of the Dutch churches; and, though formally established in dependence on the See of Canterbury in 1783, Episcopalianism made but slow progress for many years, and never became the state religion in New York. It is a curious fact that a part of the present property of Trinity Church, lying between Warren and Christopher Streets, was originally the Bouwery, or farm of the Dutch Domine Bogardus, and passing by purchase from his family to Governor Lovelace, afterwards vested in the Duke of York, and formed part of the church grants made by his successors.

French Protestants, driven from their country by the Revocation of the Edict of Nantes, were encouraged to settle in the province, and much favor was shown them. Quakers, of course, constantly appear in our history, and, whether coming of their own accord from the southern provinces or against their will from the eastern ones, were treated with all toleration. Yet they were complained of as "making continual pretences to Staten Island," and, in spite of their claim to military exemption, were allowed no such privilege on the ground of their faith. At one time, the mayor and aldermen did resolve that the worship of the Jews was not to be per-

mitted, but the liberal instructions to Dongan soon recalled them to a juster view. The only instance of intolerance in the colonial times was the momentary anti-Catholic feeling, after the abdication of James, and that sprang rather from political than religious instigation, and was skilfully inflamed by Jacob Leisler to further his singular usurpation. Of course, the contrast of this large Christianity with the fierce, narrow Hebraism of Plymouth and Massachusetts, does not escape our author. His fervent, faithful Dutch spirit exults in lavishing just praise on his tolerant ancestors, just reproaches on the cruel bigotry of their Eastern neighbors. This honest zeal for fatherland glows throughout the book, flaming out now and then into vigorous invective against the harsh, sullen, tricky Puritan nature, as opposed to the fair, and genial, and generous Dutch character.

Theories of political and religious independence, however, ripened but slowly, and it was no part of the policy of the home government to foster them, to the interruption of that practical object of commerce which first brought settlers to Manhattan Island. A longer and less unquiet reign might have emboldened James to precipitate despotism, and impose the Catholic faith, as a part of it, upon his colonial subjects. Trade itself did not escape the cramping English ideas of the time. Its comparative freedom at New Amsterdam had promoted a smuggling traffic among the colonies, so injurious to the English revenue as to give a pretext and temptation for the conquest. At the capitulation, certain Dutch vessels were licensed to trade freely to the port for a term of years, but the complaints of English merchants, who threatened to withdraw from the settlement, soon led to the revocation of this promise, and to the application in the province of the English Customs and Navigation Acts, with the full rigor of their false principles. Whether this was important may be judged from the excuse made, "Because the trade of England was now in great measure upheld by the American plantations." Probably there was not less force in the unavowed reason that the ducal and royal revenues were largely fed from this source. Heavy duties fettered the export of furs and tobacco, while import-dues increased the cost of the necessaries of life, without the fallacious modern plea of protection to their production. But these checks could only impede without discouraging a commerce carried on at a point marked by nature as one of the world's great entrepôts, and at a time when barter with the savages of precious raw materials for the cheap fabrics and gewgaws of civilization still yielded enormous profits. Within a few years after the conquest, ship-building was begun near Beekman street, in the East River; a productive cod-fishery was discovered at the present Cholera Banks; and whale-fishing became a regular pursuit off the eastern end of Long Island. Many immigrants with money removed from the West Indies, and even "several people in and about Boston" began the practice, now so common as to excite no remark, of transferring their residence and investments to New York. Thus, the prediction of Governor Nichols, that "soon the staple of America will be drawn hither, of which the Boston brethren are very sensible," found an early and continuing fulfilment. Commerce prospered, and wealth steadily increased, yet the duties led to constant evasions and litigation, and kept up an irritation in the minds of the colonists which combined with taxation against their consent to strengthen the desire for a freer form of government.

The change of rulers upon the abdication of James was attended by an extraordinary episode of civil troubles and usurpation in the province. Jacob Leisler, a German by birth and a prosperous merchant, availed himself of the strong Dutch attachment to the House of Orange and of a foolish popular panic as to the Roman Catholics, to wrest the control of the city, in the absence of Governor Andros, from the hands of his feeble and irresolute deputy, Nicholson. Leisler is described as a person of coarse and vulgar nature, but of vigorous mind, wanting education, violent and vain, but remarked for his personal integrity and his blazing zeal against Popery. He seized the fort, assumed the title of Lieutenant-General, and caused William and Mary to be proclaimed. He then proceeded to imprison those who resisted, to fill the offices with his own creatures, to erect a court of justice, make a new colonial seal, call a convention of the province, and impose taxes. He attempted to get possession of Albany, and for nearly two years sustained his usurped power with vigor and violence. His single act that can bear a patriotic interpretation is the call of the first American Colonial Congress, which met at New York, in 1690, to organize a joint expedition for an attack upon Canada. On the arrival of William's governor, Henry Sloughter, Leisler refused to surrender the fort, until, deserted by his followers, he was taken, and afterwards tried for treason and executed. The new government went into peaceful operation over the province, once more detached from New England, under a charter as liberal as the earlier one granted and annulled by James, with the exception of a clause excluding Papists from liberty of conscience.

Among the multitude of details illustrating more serious topics, our author yields small space to descriptions of the manners and habits of our Manhattan forefathers, or of the appearance at various times of their abode. The interest of such occasional sketches as he gives makes us regret that he has not enlivened his pages by larger contributions from the material at his command. The least labored part of his work is found in the annals of the Indian wars—which are resumed and broken off at set periods, as if in despair of weaving any coherent web from the tangle of bewildering details. The specimens of aboriginal speeches preserved are far superior in sense and taste to the usual fustian of the forest that passes current for the red man's eloquence. But neither the original owners nor the latest occupants of Manhattan win from the author anything of the enthusiasm he reserves for the first Dutch colonists. In their praise, his style, which is usually clear and precise, as a mere record requires, rises into warmth and eloquence. The work reflects credit upon the author's patience, research, and accuracy, not more than upon his manly and earnest reverence for the virtues of an ancestry quite as worthy of the world's respect as if their descendants had not hitherto been content to let their deeds speak their own praise.

IAPI OAYE. May, 1871. Vol. I., No. 1. (Published for the Dakota Mission. John P. Williamson, Waka⁊niga.)—The first number of a Sioux newspaper must not pass without notice. The *Iapi Oaye, i.e.*, "Talk to carry about," or "Portable Talk," is handsomely printed on a half-sheet quarto. In an editorial salutatory on the second page, Mr. Williamson tells how *Wotaninwowapi unkitawapi* ("our newspaper") was started, gives the reason for its name, sets forth its aims and objects, and announces the terms of subscription. Following are brief notices of the eight Dakota mission churches, their officers, number of communicants, etc.; deaths since January 1 among the Santee Sioux, at Reipa, and on the Wakpaipaksan (Big Sioux) River; a calendar for 1871; a list of Yankton converts during the winter of 1870-71; a hymn by Rev. J. B. Renville; and various articles, original and selected, all appropriate to the columns of a paper pledged by its motto (*Taku waste okiya, taku sica ⁊kipajin*) "to help whatever is good, to oppose whatever is bad." Two items only appear in the English language, but these are not the least important ones: "Fifty cents a year," and "Persons wishing this paper will address Rev. J. P. Williamson, Greenwood, D. T."

Now that Red Cloud and Spotted Tail, the Ogallallas and the Brulés, have given the telegraph operators a respite, we may find time to remember that a considerable part of the Sioux nation has become "a semi-civilized Christian people, who very generally read God's Word in their own language," and among whom (to judge from a letter addressed to the Superintendent of Indian Affairs, by the venerable Dr. T. S. Williamson, in 1870) "a man may travel or reside with as little risk of losing anything by theft as among any people." These seem to take to reading and writing as naturally as some of the scattered northern bands of the same nation take to fighting. The Dakota children in the mission schools "are very fond of learning to read their own language," we are told, "and, on account of the simplicity of the orthography, they learn to read it sooner than American children do the English language. They peruse and reperuse all the books written in Dakota, and are fond of composing in their own tongue, and many of their compositions show considerable brilliancy of thought."

A "Dakota Bibliography," printed in the last volume of the "Minnesota Historical Society's Collections" (1870), comprises thirty-six titles of works "written in Minnesota for missions located in that State;" and several of these have appeared in two or more editions. In 1848, the Minnesota Sioux subscribed nearly $40 for an edition of the new Constitution of the State in their own language, and, in 1857, they paid $140 towards the publishing, in a handsome volume, the Rev. Mr. Riggs's translation of "Bunyan's Pilgrim's Progress." A small monthly newspaper, "The Dakota Friend" (*Dakota Tawaxitku kin*), was started so long ago as November, 1850, under the editorship of the Rev. G. H. Pond, a missionary of the American Board, and was sustained nearly two years.

In 1852, the Smithsonian Institution and the Minnesota Historical Society, jointly, did a good work by publishing an excellent Grammar and Dictionary of the Dakota language, compiled by the missionaries, and edited by Mr. Riggs, who had been connected with the mission since 1837. No more important contribution to the knowledge of American languages has been made in a single volume since Eliot's Indian Bible was printed in 1663.

A Dakota-English Vocabulary of more than 12,000 words, "compiled as a text-book for Indian students desiring a knowledge of the English language," was printed last spring at the Mission Press of the Santee Agency, Nebraska, edited by Mr. Williamson, who has now undertaken the publication of the *Iapi Oaye*.

Among recent works on the language by European scholars, the "Grammatik der Dakota Sprache," by H. C. von der Gabelentz (Leipzig, 1852), and "A Dakota Nyelv," by Hunfalvy Pál tól, printed in the Bulletin of the Hungarian Academy, and separately (Pesth, 1856), deserve mention.

The Sioux—in their own language *Dakotas, i.e.*, "confederate" or "allied"—are still the most powerful nation of Indians in the United States, numbering (by the last report of the Commissioner of Indian Affairs) not less than 25,000 souls. About two-thirds of these had, two years ago, been induced to locate on reservations near the Missouri River, and were "comparatively contented and friendly." Secure them in the peaceable possession of "that which justly belongs to them, and which it is the duty and interest of our Government to give," and—writes Dr. Williamson, who has lived and labored for thirty-six years among the Santee Sioux—"I believe they can and will show themselves not less worthy citizens than many of those immigrants from Europe whom several of our States are anxiously seeking to induce to settle within their borders."

A Compendious Grammar of the Latin Language, with Copious Exercises. By Charles D. Morris, M.A. (New York: F. J. Huntington & Co.)—Few teachers can doubt that we want a better Elementary Latin Grammar than has as yet appeared. Mr. Morris's is an attempt to supply the want. Unfortunately, as it seems to us, the book is based upon the crude form system, against which we have already given our opinion in these columns, and thus the whole book is made unavailable for any who disapprove of that system. Yet there is so much that is excellent in the book, that we may call attention to it from those who approve; and even those who disapprove may profit by some of its suggestions, though they cannot use it. In the Etymology, the forms are well set forth, perhaps as well as they can be, though there are some inaccuracies of statement which seem unavoidable under this method. In the Syntax, the cases are treated practically, just as they should be in an elementary work, yet the treatment is founded upon scientific principles, so that the pupil has nothing to unlearn when he begins to take a more scientific view of the subject—a statement which is far from true of most books. For example, the student is first informed that the accusative denoted originally the end of motion, from which use the other uses are more or less immediately deduced. Such a notion to start with sets a boy some distance on in the logical and scientific discussion of language. So, again, the use of neuter pronouns after intransitive verbs, and the adverbial uses of the accusative, are referred to the cognate accusative. The Genitive is also treated concisely and in an orderly manner. The Dative does not seem to us so well done. Particularly the rule in reference to the "Dative of Place" seems not happily expressed, though the Locative is recognized.

The note on *mutare* and *permutare* is a specimen of what a good grammatical rule ought to be. In general, the rules are clear and concise, and adapted to be easily learned. There are more of them than it is the fashion nowadays to require, but for ourselves we prefer to have a few not intended to be learned, but distinguished by a difference in print. The syntax of verbs is, on the whole, logically and concisely treated. Especially is it noticeable that dependent sentences are discussed in two connections, both as to their nature and as to the particle which introduces them. Final, consecutive, and object clauses are treated on sound principles, but the arrangement throughout this branch of the subject is somewhat bewildering. It may be that this matter is too obscure for an elementary book, but we cannot help thinking that Mr. Morris ought with his logical mind to have hinted at it in such a manner that the subsequent studies of the pupil would be a continuance of the same course, rather than a change of direction, a rule that applies to all elementary books on whatever subject. The chapter on conditional sentences is not so good as we had a right to expect, after what has been done by Professor Goodwin in Greek. The "general condition," as well as the various forms of conditional relative sentences, ought by this time to be recognized in Latin, even though the regular construction of them is not the same in the two languages. The subject of Indirect Discourse, so troublesome to beginners, has a separate chapter, and is admirably done.

With the grammar are bound up some seventy-five pages of exercises in English to be translated into Latin, which amount to a well-prepared manual for beginning Latin composition; there is also a separate Latin text of these examples which answers as a key.

Motherless; or, A Parisian Family. From the French of Madame Guizot De Witt. Translated by Mrs. Dinah Mulock-Craik. A tale for girls in their teens. (New York: Harper and Brothers. 1871.)—Madame Guizot De Witt is not, we fear, to be called an entertaining writer, and even with the aid of Mrs. Craik's facile pen to give her an English dress, the tales of French domestic life are anything but exhilarating reading. The present one is even more deficient in interest than her "French Country Family," which was also translated by Mrs. Craik some three years since. A family of four singularly characterless children is left motherless, and their father, who is what Madame De Witt supposes to be a philosophical free-thinker, allows his daughters to grow up pretty much as they please under the eye of an old nurse. They grow frivolous, spend too much money, run in debt for new bonnets, and neglect their lessons. At last their good aunt in the country, a model mother, and the wife of an austere Evangelical Christian, who has converted her from the folly of her youthful ways, comes up to Paris to their assistance. She astounds them by the elegance of her toilet, to the perfection of which they had supposed that a Puritan and a countrywoman could not attain—takes them to their great surprise into better company than they had yet known, and finally carries off the whole family, including the father, for a summer tour in Switzerland. Louise, the eldest girl, very fortunately gets upset into one of the lakes while on a boating excursion, and her cousin Raoul, the youthful inheritor of all his father's virtues, rescues and prays for her. A severe fit of sickness follows as a matter of course, in which she loses her culpable frivolity as well as her beautiful hair. Her father also, whose stern, unbending philosophy had withstood all other arguments, yields to the potent influences which emanate from her sick-bed. He takes to his Bible, he begins to pray, and the whole family return to Paris regenerated. The style in which all this is told is simple to puerility, the characters are utterly colorless, the incidents are childish, and the author seems either to have had nothing in view but the production of a "goody" book, or to have been incapable of anything better.

In Exile. Translated from the German of W. von St. (Philadelphia: J. B. Lippincott & Co. 1871.)—This is an agreeable and pleasantly-written story, which belongs to the better class of German novels. In its sentiment, and in the style of characters which it depicts, the book is somewhat suggestive of the Freytag novels, although it falls far below them in depth of thought and in artistic merit. It is almost praise enough for a book, however, to say that it recalls, in however faint a manner, a novel so thoroughly delightful as Freytag's "Lost Manuscript." It is not the likeness of imitation, but of likeness in general tone, which "In Exile" bears to that most charming of recent fictions. The author has none of Freytag's humor, and very little of his subtle strength of delineation. Nevertheless, the characters of Elizabeth and her husband, and that of the Prince Alexis, are very delicately done, and, as we said before, in a manner not unsuggestive of work so much better that even to have recalled it is no small achievement. The book is very well translated, also, and may fairly be recommended to the class of novel-readers who like to be careful in their selections.

Romance of the Charter Oak. A Picture of Colonial Times. By William Seton. In 2 volumes. (New York: P. O'Shea.)—We are of the opinion, which Mr. Seton's book has done nothing to alter, that the early days of the American colony afford an unpromising field for the work of the novelist and the poetaster. A hardness and baldness invest them which are essentially unpicturesque. Hawthorne's wonderful touch, indeed, could veil these rigorous outlines with a beauty rich and indefinable as October haze, but no imagination less potent than his should essay the task. Mr. Seton makes no such attempt. His "Romance of the Charter Oak" gives us bare and ugly reality, sketched from records more or less authentic. We confess to having risen from its perusal with an increased respect for the nineteenth century. It has its faults, and very bad ones, but on the whole they seem to us to war less against the comfort and progress of individuals than the faults of two centuries ago. Better by far that there should be a little too much incense and genuflexion in one church, a vague and rambling theology in another, neither of which we are bound to attend, than a weekly sermon on damnation listened to under

penalty of law, and divided into forty-two heads, from any one of which should an auditor take refuge in sleep he is liable to be awakened by having his nose tickled with a peacock's feather in the hands of the "tithing man." Better that rogues should combine to "water the stock" of a railroad than honest men to souse old ladies in the Connecticut for the crime of reading Shakespeare and wearing cap-ribbons. Better even a James Fisk, who, fortunately, is to most of us no more than an unsavory newspaper eidolon, than an "Elder Barebones," brought forcibly into collision with our everyday lives, to denounce ringlets and ruffles, invent improved ducking-stools and patent "cages" for Sabbath-breakers, and invoke eternal punishment upon his average fellow-man. For the rest, Mr. Seton's book contains a good deal of quaint information, which will give it a certain interest for many, despite the essentially unquaint manner in which it is conveyed.

Curiosities of the Law Reporter. By Franklin Fiske Heard. (Boston: Lee & Shepard).—This is a curious little book, with odd stories and bits of legal gossip and scandal, mainly from among the old reporters, and about the earlier judges and treatise-writers; but if we do not mistake, what is new in it is not good, and what is good is not new. Still, the book may have its use in showing laymen that lawyers are content with very simple fare for their intellectual recreation, and that the tradition that it is the right thing to laugh at a certain passage is often the best, if not the only, justification for the grin from the bar that responds to the joke from the bench. Mr. Heard has culled a few of the extravagances of our own and even of some English judges in their reported opinions; but we think this a mine that would have yielded a richer harvest if he had worked it more industriously. The publishers announce a new book by the same author on the legal acquirements of Shakespeare. We trust it has had at least the preparation to which, it appears, we owe the "Curiosities"—namely, "twenty years' profound reading."

TWO VALUABLE WORKS

OF

NATURAL HISTORY.

FOR SALE CHEAP.

ILLUSTRATIONS

ON

EXOTIC ENTOMOLOGY.

Containing upwards of 650 Colored Figures, with descriptions of Foreign Insects. Interspersed with remarks and reflections on their nature and properties.

BY DRU. DRURY.

A New Edition, brought down to the present state of the Science.

BY J. O. WESTWOOD, F.L.S.

3 vols. 4to, half-bound.....$50.

"The exquisite work of Drury displays the complete insect in a degree of perfection that leaves nothing to be desired."—Sir James Edward Smith, Pres. of the Linnæan Society.

ILLUSTRATIONS

OF

BRITISH ENTOMOLOGY.

Or, A Synopsis of Indigenous Insects, containing their Generic Distinctions, with an account of their Metamorphoses, Times of Appearance, Localities, Food, and Economy. Embellished with Colored Figures of the rarer and more interesting species.

12 vols. royal 8vo, half-bound, $50.

"The author has furnished us with the best (in numerous instances with the only) account which has hitherto been given of our native insects, and as he has not copied his descriptions from books, but given the result of his personal observation, the confidence of the student in the author's accuracy is thereby strongly corroborated."—London's Journal of Natural History.

FOR SALE BY

JAMES CAMPBELL,

18 Tremont St., Museum Building,

BOSTON, MASS.

JUST PUBLISHED.

The German Conquest of England in 1875, and Battle of Dorking.

DESCRIBED BY AN EYEWITNESS IN 1925.

Describing the Arrival of the German Armada; destruction of the British Fleet; the decisive battle of Dorking; capture of London; Downfall of the English Empire.

12mo, paper, 30 cents; cloth, 50 cents.

"A powerful satire on the military helplessness of England. The Britons are stirred up by it as they have been by no magazine article of this generation."—Journal of Commerce.

Everybody is talking about it, and everybody should read it.

For sale by all booksellers, or sent by mail on receipt of price.

PORTER & COATES, Publishers,

PHILADELPHIA.

J. SABIN & SONS,

Booksellers and Importers,

84 NASSAU STREET, NEW YORK,

22 BUCKINGHAM STREET, STRAND, LONDON,

for Fine, Standard, and Antiquarian Books, either in large or small quantities.

Send to them also for the "American Bibliopolist," a Catalogue and Literary Journal. Specimen gratis.

Borrow. Lavengro, the Scholar—the Gypsy—the Priest. By George Borrow. Best edition. 3 vols. crown 8vo, newly bound, half-morocco extra, top edges gilt. London, 1851. $7 50.

Publisher of "THE NATION,"

Box 6732, New York City.

JUST PUBLISHED.

AROUND A SPRING.

BY GUSTAVE DROZ.

Translated by M. S. 8vo, paper, 75 cents.

"Written with just that art which redeems the most ordinary incidents from appearing commonplace. . . . A masterpiece of fiction. 'Around a Spring' is simple and pathetic. We shall not give an analysis of the novel which it is so easy to get, but shall content ourselves with praising its great merits. Regarded merely as a bit of workmanship, it has all the elegance which, perhaps, will immortalize the best of the present race of French writers."—Nation.

"A most graceful story, interesting from the beginning to the end. Portraiture of character, description of persons, dissection of motive, pictures of life in city and among the mountains, conversation, dialogue, development of plot, are all excellent."—Galaxy.

HOLT & WILLIAMS, Publishers,

25 BOND STREET, NEW YORK.

NEW BOOKS.

THE POETS AND POETRY OF EUROPE.

PHILADELPHIA.

Sent by mail upon receipt of price, and for sale by all the principal booksellers.

The Nation Press.

The Proprietors of THE NATION PRESS give notice that they have established a Book, Pamphlet, Job, and Newspaper Printing-Office in this City, and are prepared to execute at moderate prices, for cash, the best of work in any and all of these branches.

For BOOKS they will furnish Electrotype or Stereotype Plates, as desired, and will guaranty unusual accuracy in their preparation.

J. ROSS & CO., 27 Rose St., New York.

ATHENS.

VIEWS OF THE ACROPOLIS.

The undersigned publish for the author an Album of photographic views, entitled "The Acropolis of Athens, Picturesquely and Architecturally Illustrated, by W. J. Stillman," printed in carbon by the Autotype Company, London.

These indestructible photographs are from 8x10 inch negatives, taken by Mr. Stillman during the winter and spring of 1869, and include all the views which are necessary to give the most complete idea of the existing ruins on the Acropolis, and their relation one to the other. They were taken with architectural lenses correcting the perspective distortions, and so that the proportions of the buildings may be measured as to scale, on any given plane; and most of them by Dallmeyer's wide-angle rectilinear lens, by the aid of which views never before successfully photographed have been rendered.

Of the twenty-five subjects, sixteen have not been taken by any other photographer, and the negatives used are selected from not less than 300 taken. The picturesque views show the Acropolis from five exterior points of view, and the architectural show those characteristics of Greek architecture which contribute to its unexplained as unapproached perfection—the curves of the horizontal lines, pitch of the columns, etc.

They are mounted on board about 13x22, with a page containing description opposed to each print; the whole bound in substantial and elegant style. Nothing finer of the kind, it may be safely asserted, has ever been offered for sale in this country. Edition limited to 100 copies.

Price, delivered at the *Nation* office, 3 Park Place, New York, $25.

Orders received by

E. L. GODKIN & CO.,
March 16, 1871. Office of the *Nation*, New York.

SINGLE VIEWS.

Enquiry having been made for single copies of the photographs contained in the Album, Mr. Stillman, while unable to furnish these in autotype, offers for sale a few duplicates printed by the ordinary silver process, along with other views enumerated below. The duplicates are marked with an asterisk:

VIEWS OF ATHENS (8x10):—Plain of Athens, from the East.—Valley of the Ilissus.—Mars Hill.—The Parthenon, from the South-east.—Columns of the Propylæa.—Tribune of the Caryatides.—Interior of the Propylæa.—Western façade of the Propylæa (*).—Eastern façade of the Erectheum (*).—Acropolis, from the Turkish town (*).—Acropolis from the Ilissus (*).—*Fragments of Sculpture:* Victory untying her sandals.—Victories with bull.—Victory elevating an offering.—Metope from the Parthenon.—Fragment of frieze from the Parthenon (Aeginetan school); do. do. (Attic school).

CRETAN VIEWS (8x10):—Bridge of Kalepa (Venetian).—Village of Kalepa.—View from Kalepa.—Convent of St. John (exterior); do. (interior).—Convent of the Holy Trinity: Olive-tree avenue; Cypress avenue; From the olive-trees; From the cypresses: The interior and church; The Cloisters.—Canea: The city and plain; Ruins of the citadel (Venetian); Fortifications; Doorway of ruined palace (Venetian); Court-yard of a mosque; Marina and dogana; Gate of the Castelli.—Town of Platania (ancient Pergamos).—Statue of Minerva found at Kisamos.—Ravine of Theriso.

VIEWS IN AND NEAR ATHENS (7½x4½):—Port of Peiræus.—Secret Port of ancient Peiræus.—Ruins of the Long Wall and Plain of Athens.—Ruins of the Temple of Jupiter Olympius.—Acropolis, with columns of the temple of Jupiter.—Choragic monument of Lysicrates.—Theatre of Bacchus; Altar from ditto (4½x3⅜); Choragic monument above ditto (4½x3⅜).—Arch of Hadrian.—Temple of Theseus (three views).—Pnyx.—Way of the Eumenides (footprints of the sacrificial animals).—University of Athens (modern).—Byzantine church (4½x3⅜).—Temple of the Winds (4½x3⅜).—Portico of Hadrian 4½x3⅜).—Bed of the Ilissus.—Two views on the Cephisus.—Town of Aegina and Temple of Venus.—Two views of the Temple of Minerva (Aegina).—Plain of Marathon and mound of the Greek dead.—Athens from Plato's Academy.—Acropolis from Mars Hill.—Grotto of Pan.

AMERICAN VIEWS (7½x4½):—Glen Ellis fall (White Mountains).—Glen Ellis, with fall in the distance.—Crystal cascade.—Glen below the Crystal cascade.—Two views of Mt. Kineo (Moosehead Lake).—Forest study.—Moosehead trout.

Price of the large views (8x10)—mounted, $1; unmounted, 85 cts. Of all the rest—mounted, 60 cts; unmounted, 50 cts. Payable in advance, together with postage on orders for less than six, viz.: for one to five large photographs—mounted, 30, 35, 40, 45, 50 cents; unmounted, 30 cents. For one to five small ones—mounted, 15, 20, 25, 30, 35 cents; unmounted, 15 cents. Orders to be filled in the course of thirty days after receipt.

Address E. L. GODKIN & CO., as above.

PRATT'S Astral OIL.

Nearly a million gallons of Pratt's Astral Oil have been sold—and no accident has ever occurred, directly or indirectly, from burning, storing, or handling it. We consider this the best test of its perfect safety.

G. P. PUTNAM & SONS

HAVE NOW READY:

I.

ARTHUR HELPS'S LIFE OF CORTES.

THE LIFE OF HERNANDO CORTES.

By ARTHUR HELPS,

Author of "Friends in Council," "Spanish Conquests in America," etc.

2 vols. complete in 1 vol., 12mo, cloth extra, $2.

A narrative of great interest, and full of romantic and picturesque incidents. The style of this author is admirable. Mr. Ruskin pronounced him "a true thinker, who has practical purpose in his thinking."

II.

THE STUDY OF THE BIBLE.

By HENRY DUNN,

of the British and Foreign School Society.

Uniform with "Benedicite." 12mo, cloth, red edges, $1 75.

III.

THE FALL OF ENGLAND? 1875-1925.

THE BATTLE OF DORKING.

REMINISCENCES OF A VOLUNTEER.

Reprinted from Blackwood.

12mo, 30 cents, paper; 50 cents, cloth.

CONTENTS: Destruction of the British Fleet; German Victory at Dorking; Occupation of London; Fall of the British Empire.

A vivid and powerful picture of the possible fate of England. Its graphic force is marvellous.

New Theological Works.

The Jurisdiction and Mission of the Anglican Episcopate. By the Rev. T. J. Bailey, M.A., Author of "A Defence of Holy Orders." 12mo, limp cloth, $1.

Pusey's Minor Prophets. Part IV. The Minor Prophets, with a Commentary, Explanatory and Practical, and Introduction to the several books. By the Rev. E. B. Pusey, D.D. 4to, $1 75.

Be particular and direct all orders,

HUGH J. HASTINGS,
Corner of Fulton and Nassau Streets, New York.

Weekly papers copying the above Prospectus, and sending us a marked copy, will be entitled to a copy of the *Spectator* for one year.

The Nation.

NEW YORK, THURSDAY, JUNE 22, 1871.

The Week.

THERE has been a Civil Service scandal during the week, which is worth notice, in the shape of a complaint addressed to the public, through the *Independent*, by the Rev. Dr. Strang, an American missionary in Egypt, touching the conduct of our Consul-General there, Mr. George H. Butler, a nephew of Mr. B. F. Butler, and the successor, be it remembered, of such men as Mr. Thayer and Mr. Hale. It appears from Dr. Strang's statement that the Consul-General, among other peccadilloes, forced the consuls and vice-consuls to purchase their appointments from him, through the instrumentality of a Jew named Strologo, with whom he presumptively shared the spoils. The belief of the American community is that the only man who obtained his appointment without paying for it is a gentleman who entertained the Consul-General "in a three days' drunken revel." He, Butler, and Strologo afterwards made a tour together in the upper country, and the simple Egyptians were a good deal astonished to find that the entertainment most relished by the American dignitary was exhibitions of dancing-girls *in puris naturalibus*. In some places their demands even shocked the Egyptian police, who are not purists. Dr. Strang also accuses Mr. Butler of lending his official aid to the prosecution of a notoriously fraudulent claim against the Egyptian government. We ought to add that Mr. G. H. Butler was a very notorious person in this city before his appointment, and that it would take a great deal more proof than is forthcoming to satisfy people that the President knew nothing of his character when he appointed him.

The gloomy forebodings with which we spoke last week of the condition of affairs in the Woman's Rights camp were only too fully justified a day or two later by the commencement of a libel suit against the *Christian Union*, on the part of Mrs. Victoria C. Woodhull, who complains and alleges that she has suffered damage to the extent of $250,000 by reason of allusions to her in a tale of Mrs. H. B. Stowe's, published in that paper, under the pseudonym of "Dacia Dangereyes," in which Mrs. Stowe expresses plainly the opinion that Dacia's adhesion to the woman suffrage movement, and the love and admiration she excites among the other sisters engaged in it, do not encourage the belief that the enfranchisement of women will "purify and elevate politics." We are greatly afraid the suit will never be tried, but the bringing of it will serve as a useful advertisement for Mrs. Woodhull's *Weekly*. Mrs. Stowe, we believe, is pretty sick of the "movement," and, if we are not misinformed, Mr. Beecher does not consider it savory, though their names are still trumpeted on the platform among those of the faithful.

The circumstances of Mr. Vallandigham's death—he accidentally shot himself with a pistol—would have been sufficient to moderate the post-mortem judgments passed upon him by his opponents; but his last political act had done so much to heighten their respect for him that it has been left for another generation to speak of him with a frankness which is now unnecessary, and which might seem harsh. We have attempted elsewhere to trace in his career the better side of American politics and politicians. In his early training there was nothing remarkable. He received such an education as a Western college affords, or did afford thirty years ago; taught for some time at an academy in Maryland; edited a political paper at Dayton, Ohio, and practised law at the same time; and followed the latter profession in the intervals of office-holding, both in his own State and in Congress, down to the day of his death. They must be few who are not glad that death came to him in the shape it did, rather than as a consequence of his reckless, violent, and—posterity may have to say—wicked conduct during the rebellion.

A Philadelphia subscriber has favored us with an angry letter respecting a paragraph in the *Nation* of June 8, on a political movement in that city which arises out of a quarrel over the "Public Building Commission." He defends with unnecessary eagerness the personal character of the members of the Commission, which we did not attack, and which has nothing to do at present with the matter as viewed from our standpoint. He assures us, moreover, that "there are two sides of the Public Building question, entirely distinct from the question of local politics with which you have entangled it." We have never doubted the existence of two sides to every question; and the "entanglement" of this one with local politics is none of our doing, but is the work of some of the best citizens of Philadelphia. When we see men representing the best elements of both political parties, such for instance as Alexander Henry and Richard Vaux, prominently co-operating in any movement of which the avowed object is to rescue the people of a large city from the domination of the "men inside politics," by electing the best candidates to office, our sympathies are inevitably enlisted in favor of the attempt, and we shall not fail to watch it, in the hope that it may be wisely conducted and may achieve whatever success it deserves.

The bonding of towns in the interest of railroad enterprises has been carried in Vermont to a finer point than, so far as our knowledge goes, in any other State. The clumsy process of a public vote, after open discussion in town meeting, has, in a certain place, been superseded by taking round a paper for the signatures of registered voters. The parties who give themselves this trouble, to save people the greater inconvenience of going to the polls, are, of course, the railroad managers or their agents. They thus have a clear field for an *ex-parte* statement of their case, and, as they labor with each voter separately, find it not difficult to persuade a majority of them to sign the document which is to bind the town. Whether or not they are at the pains to make a thorough canvass, not omitting to solicit any voter, whether known to be for or against the proposed action, we are not informed. They might, however, just as well stop when they have secured the requisite number of signatures, inasmuch as they have usurped all the other prerogatives of a self-governing community. Be this as it may, the credit of the town is declared pledged, and apparently the effort will be made to have it assume the bonds which it has in this way incurred. We are assured, however, that the case will be brought into court sooner, and there we cannot doubt what the judgment will be.

The excitement in the cotton market is the chief feature of interest in commercial circles. The importance of this staple is so great that the prospects of the crop directly or indirectly affect all our chief commercial and financial interests, and hence the market is watched with as much attention as the gold market used to receive in days gone by. The very conflicting accounts concerning the weather at the South—we must do the *Financial Chronicle* the justice to acknowledge—are explained by the fact that the correspondents of that journal report every shower or fall of rain during the day, while the officers of the Signal Bureau telegraph only the condition of the weather at specified hours. There can be no doubt, however, that the unfavorable aspect of the weather has been generally exaggerated by the speculative fraternity, and that the rain of which such dread accounts have been given has been less severe than during the same period of last year. The Agricultural Bureau, which had an excellent opportunity to distinguish itself, succeeded in combining almost every possible variety of blunder. Its report leaked out a week or more before its official publication, and, although repeatedly denied, materially affected the market. When published, its results were found to agree very nearly with the early statements of its contents, while some of its facts are impugned, and the conclusions drawn from them seem scarcely tenable.

The true state of the case seems to be this: Under the low prices prevailing this spring, and somewhat influenced by the incessant preachings of economists of the Greeley school, many cotton planters confined their cotton to the most favorable fields, putting corn on the poorer soils. The extent to which this has been done is variously estimated at from five to fifteen per cent. of the total acreage of cotton planted last year. But it would be a grave error to anticipate a corresponding reduction in the yield. The smaller acreage includes all the choice lands; the lesser area will be better cultivated, and, more important than all, the labor will suffice to pick all the cotton raised, which has scarcely ever before been the case. Beyond this fact of reduced acreage, nothing is positive. The weather is not unfavorable, and it is too early to form any estimates concerning the crop probabilities. There is reason enough, outside of the weather, for the advance that has taken place in cotton. With a supply of one million bales in excess of last year, the stocks on hand, in spite of wars and revolutions, have increased only about 300,000 bales, showing that with peace a supply even equal to that of last year would not satisfy the consumption at recent low prices. This is unquestionably the true reason of the advance.

Besides the cotton movement, the foreign commerce of the country shows a liberal export of tobacco at advancing prices, and of breadstuffs and provisions at lower figures. The crop advices from the continent of Europe are more favorable; and at home the prospects are for a more than average crop. General trade is dull; real estate dull and feverish, with occasional spasmodic movements; coal and iron dull and declining. Even the continued activity of the new railroads is unequal to the supply of iron from our domestic furnaces, and the protected smelters are clamorous for more "protection" to save them from loss. The imports continue very heavy, and the foreign exchanges consequently firm.

The examination of prisoners and seizure of documents prove pretty clearly the correctness of the belief that the International Association was at the bottom of the Paris insurrection, and the best observers concur in the opinion, which has been more than once expressed in these columns, that its failure, so far from bringing the Association into discredit with the classes from which it derives its support, will help to swell its numbers and resources. To have played such a conspicuous part and for three months held the French army at bay, although it was by a mere stroke of luck they got the means of doing so, will give the leaders a great prestige with the mass of their followers, and raise their expectations to a pitch they have never reached. A writer to the London *Times*, who professes to have the evidence in his hands, sets down the numbers of the members of the Association at 2,500,000, scattered through the various European countries. The Berlin correspondent of the same paper, an unusually well-informed and accurate observer, and himself a German, says that although the German press shrinks from acknowledging it, there is no doubt in men's minds in Germany that the Parisian horrors were the work of socialism, and not, as people there try to believe, simply the result of French folly and bloodthirstiness; and there is just as little that socialist ideas have got a strong hold on the German working-classes, and are operating now in producing strikes in increased numbers and bitterness, and in creating growing hostility between class and class, which will end God knows how. Bismarck affected to treat the declarations on this point of a socialist deputy from Saxony with scorn the other day in the Reichsrath, but he probably did so because he could not think of any better way of dealing with them, and not because he thought there was nothing behind them. One good result of the alarm is visible already in the exertions of some of the Berlin manufacturers, headed by Dr. Engel, head of the Prussian Statistical Department, to promote the system of industrial partnerships—that is, the admission of workmen to a share in the profits. It cannot be said too often or too earnestly to all politicians, capitalists, financiers, and philanthropists, that unless, while it is yet time, they give their earnest attention to the substitution of cooperation, in some form or other, for the present mode of dividing profits with the laborer, we shall witness in every country the alienation of the working-classes not only from the employing class, but from the very principles on which our civilization rests, and such a disorganization of industry as a barbarian invasion would hardly bring about.

The question of the extradition of the Communists has been agitating the public mind in European countries, and especially in Belgium and England, ever since the fighting ceased. Belgium and Spain promised, on the demand of the French Government, to deliver up the refugees as criminals. Switzerland said that each case should be decided on its merits, and in England the matter is under advisement. There can hardly be a doubt, however, that the offences of the Communists are sufficiently political in their character to entitle them to the right of asylum. Their means, no doubt, were horrible, but then, if any foreign government undertook to decide what operations in civil war are justifiable or military merely, and what criminal, it would make the offer of refuge to political offenders which every constitutional government holds out farcical. There is hardly any ground on which the present French Government might demand the surrender of Pyat and Grousset on which they might not also demand that of the elderly criminal who is enjoying himself at Chislehurst, is the recipient of attentions at the hands of the royal family, and was presented the other day with a blasphemous address from a batch of clergymen, hoping he would go back and save France from an "infidel republic." There is not a member of the Central Committee who is not far more respectable than he; and that so much blood of the poor, and ignorant, and miserable should be flowing in the gutters of Paris while he was being patted on the back by courtiers and ministers of the Gospel in England, is one of the spectacles which do much to shake the faith of the masses in our system of morals, and make them ready tools in the hands of every incendiary and adventurer who gets a hearing from them.

The testimony of observers of the late events in Paris is unanimous, absolutely unanimous, as to the large part which women played, not in the fighting only, but in the awful atrocities by which the fighting was accompanied and followed. The women of the Commune not only defended the barricades, but they played the leading part in setting fire to the houses and in plundering when the fighting was over. Moreover, they assassinated officers and men by felon shots after the surrender, and it seems to be well authenticated that a body of them treated soldiers to poisoned wine. In fact, the troops met with no such red-hot hate from the men as that which the women showed them, and the correspondents testify to the extremely "ladylike" and respectable appearance of many of the furies who were taken in the act of throwing petroleum. But this is not all. When these ladies were taken, as they were taken, in bands down to Versailles by the troops, they were received by large and infuriated crowds thirsting for their blood, and eager to mob them, and in these crowds the women were again foremost in the display of diabolical rage. On this point, too, the testimony is overwhelming. The Versailles women have equalled the Communist women in stimulating the savagery of the men. Even the wounded Communist prisoners were assailed by them with the bloodthirstiness of Indian squaws on roasting-day. One correspondent saw "a young and pretty woman" strike at a disabled prisoner with her parasol as he lay on the stretcher. Now, according to the theories to which our friends of the Woman's Rights agitation treat us, the strong interest felt by the women in this conflict, and the large and unprecedented part they have taken in carrying it on, ought to have lent it a character of peculiar gentleness. The Communist women ought to have been found in the hospitals during the fight, manning the fire-engines when it was over, and throwing themselves between the Versaillist bayonets and their lovers and husbands and brothers. Down at Versailles, too, the hapless Communist prisoners ought to have met looks of pity in every female face, and the "women of order" ought to have worked might and main to stay the conqueror's murderous hand in the last awful hours of the conflict. Women have purified literature and the drawing-room, as our friend *Harper's Weekly* tells us; so they will also purify politics, take the bitterness, hatred, and malice out of its strife. Now, we respectfully invite the champions of the suffrage movement to say whether they think, on the whole, such facts as are turning up bear out their theories. In those cases in which the com-

mon run of women (not the Howes, Motts, Livermores, be it remembered) have taken an active and interested part in political movements, have they helped to humanize and refine the struggle; or have they helped to give it fresh fierceness, and kindle about it the very flames of hell? Do the facts of experience favor the belief that it is well for women to take part in that portion of the work of life which consists in debate and contention, or, in other words, in struggling for power? What about the Southern women?

Elections are once more the absorbing theme of public discussion in France, with Paris as usual for the principal battle-field. The Left of the National Assembly was among the first to publish a manifesto, in which monarchy, the monarchical majority in the Assembly, the late misrule of the Bonapartists, and the intrigues of the Clericals and Legitimists in favor both of the Bourbons and the Pope, were severely denounced. This document was received with applause by a number of journals, but its effect was weakened by an address issued by the Radicals, which endeavored "to excuse the Commune." Eighteen journals thereupon united in constituting an electoral committee for the support of non-partisan candidates "whose careers are guarantees that they will support law and order." This programme was rejected by the distinctively Republican portion of the press as covertly aiming at the restoration of the throne, and a counter-manifesto was issued, declaring the Republic to be the only rational and legitimate expression of the national sovereignty, and monarchy to imply its abdication. The signers of this appeal promised their support to candidates pledged to uphold the *status quo*. The Internationals, too, in spite of the crushing defeat they lately suffered, were bold enough to appear with electoral programmes, one of which, whose genuineness it is permitted to suspect, even went so far as to "accept the responsibility for the conflagrations."

Among the chosen or self-constituted candidates belonging to the various parties are mentioned Generals Cissey, Faidherbe, and Uhrich —the last "as a permanent protest against the annexation of Strasbourg to Germany"—About, now a most violent defender of order; the once prominent imperialists, Magne and Abbatucci; old Odilon Barrot, who, in 1848, powerfully though unwittingly contributed to the overthrow of the throne of Louis Philippe, and in vain endeavored to save it for the Comte de Paris, the king's grandson; and the Duc de Chartres, the younger brother of the latter. Some of these electoral details, however, may belong to the unsifted class of "personals" of which the Cable has of late been so prodigal, and which embraces, among others, the multifarious versions of the arrest, execution, surrender, suicide, disappearance, reappearance, etc., of such noted Commune chiefs as Billioray, Grousset, La Cecilia, Pyat, and Cluseret, about whose fate something more definite ought to be ascertainable by this time.

"The men of the Fourth of September," as the members of the "Government of the National Defence" are called, are becoming every day objects of greater and greater execration in France, as might naturally have been expected, and the Assembly at Versailles is growing more and more impatient over having any of them in the Ministry, particularly Jules Favre, who, after vowing magniloquently that the Germans should never have a "stone of a fortress, or an inch of territory," has himself signed the treaty of peace. There is, of course, just now a general outcry that they ought to have made peace after Sedan, when they might have got far better terms than they got at last, besides avoiding the tremendous disasters of the winter campaign; and Prince Napoleon, who has kept very quiet ever since the war broke out, has very dexterously stepped in just at this juncture, when he is sure to have a strong force of public opinion with him, and has written Favre a letter, heaping reproaches on him and his colleagues, first, for having overturned the regular government in the presence of the enemy; next, for having themselves tried to govern at a most momentous crisis, without an appeal to the country; and lastly, for having governed without capacity or success, and brought ruin on the nation. The letter is an admirable piece of vituperative rhetoric, and almost every one of its reproaches is well-grounded; all that can be said against it is, that it is a singular document to come from a Bonapartist. But it is true that the country ought not to tolerate the presence of Favre and his colleagues in power one minute longer than can be helped. No punishment is too severe for men who, finding themselves converted into a provisional government by a street mob, deliberately took on themselves the responsibility, in virtue of authority thus bestowed, of carrying on a bloody war without consulting the nation, or giving it a chance of expressing an opinion. We greatly fear, however, it is Favre's and Gambetta's want of success, and not their usurpations, which has damned them in French eyes.

The Germans celebrated their victories over France by the triumphal entry of selected portions of their armies into Berlin, and by a number of more or less antiquated monarchical pageants and festivities, on the 16th and 18th of this month. The capital of the German Empire was crowded with deputations from all its provinces, and with various visitors from all countries, and the whole affair proved, in the language of the day, a brilliant success. The main feature of the display was the unveiling of an equestrian statue of Frederic William III., the father of the Emperor, who was, of course, the real lion of the occasion. Of his military advisers, the Minister of War, Von Roon, was elevated to the rank of Count of the Empire, and Count Moltke was made Field-Marshal of the Imperial Army. No new honors were bestowed upon Prince Bismarck. That the great majority not only of the witnesses of the celebration, but of the German people, felt both happy and proud on those days can hardly be doubted; but it is almost equally certain that the liberal minority must have been not a little mortified by the strongly feudal aspect of the ceremonies. That minority was, besides, still smarting under the blow dealt its not over-sanguine political expectations by the late imperious intervention of Bismarck in the debates on the Alsace and Lorraine Bill. The Emperor, in his speech from the throne closing the session, on the 15th, endeavored, it is true, to soothe the excited feelings of the opposition, and his utterances, during the celebration, were all dignified and expressive of moderation and love of peace; but the growing conviction of the men of progress in Germany that the victories and union of Germany are to be paid for by considerable sacrifices of freedom, and that the temporary dictators of Alsace and Lorraine are to be, for a time, also the dictators of the new empire, can, we presume, not easily be repressed.

Spanish finances, which have been for forty years a byword and a reproach, show at last some symptoms of revival. The floating debt, which was $125,000,000 when Isabella was driven out, has been reduced to $85,000,000. The revenue has fallen off since the revolution, as is not wonderful considering what the state of the country has been, by over $10,000,000, but then the expenditure has been reduced by nearly $24,000,000; the interest on the public debt, however, has increased by $1,700,000 (we give the round numbers). The most favorable symptoms in the situation as it stands at present are an increase in certain branches of the revenue, a rise in the public funds, and the reintroduction of Spanish securities upon the markets of London, Amsterdam, Frankfort, and Paris, from which they have been excluded with disgrace for many years, and their appearance in places like Lisbon, where they had previously been totally unknown; the returns from the customs, too, have notably increased, in spite of a considerable diminution in the duties, to which we drew attention in the *Nation* at the time (March 25, 1869). The new government found duties levied on 736 articles, and struck 400 of them from the list, and lowered the rate about 25 per cent. on the remainder, besides abolishing the navigation laws. The new tariff came into force only August 1, 1869, and the result has been very remarkable. Not only have the total returns risen in amount, but the importations of the raw material, in certain branches of industry, which were notably opposed to the change—the cotton manufacture, for instance—have greatly increased. The importations of wool, cotton, and raw silk have nearly doubled, and those of coal, which only reached 181,381 tons in 1868, reached last year 246,449.

THE LESSON OF VALLANDIGHAM'S CAREER.

ANY ONE who is inclined to take a gloomy view of the tendencies of American politics can hardly help having his courage strengthened and his hopes revived, when he looks at the career of the late Mr. Vallandigham, and reads the judgment upon it that his untimely end has called forth.

There could hardly be a better sign of the radical healthiness of American political life, and a better justification of the confidence with which the great body of the people look into the future, than that career, in spite of its faults, nay, in virtue of its faults, affords. It is a very great thing, in the first place, that in a time of such excitement as that in which Mr. Vallandigham first made himself notorious, men should have been found as ready to profess unpopular opinions as he showed himself, without incurring any worse penalties than those which overtook him. In no other country, and in no other state of society, could a man have risen up as he did to denounce a cause for which his neighbors were perishing by the thousand, without having any worse thing to fear than contemptuous exile. But it would be unjust to him to say or insinuate that his course was in any degree influenced by a knowledge of the lightness of the punishment that awaited him. His audacity was in no degree diminished by the good-natured scorn of the Government. There is nothing in the man's character, as we now know it, to warrant the belief that he would have flinched in the least degree from the expression of his opinions even if the gibbet or the shooting-party had stared him in the face. He had, beyond all question, civil courage in the highest degree; and when we say this of any man who lives in a community in which the temptation to go with the crowd is strong, and to most natures overwhelming, it is to accord him the very highest praise. To say it of any man is to say that he plays one of the most useful parts that a man can play in a democracy. He is a valuable citizen who gives form and substance to what the mass of his countrymen are thinking and feeling. He is a valuable citizen too—hardly less valuable, we were going to say—who tells them boldly what they would hate to think, and can hardly bear to listen to; and it is an excellent symptom that such men have never been wanting at any period of American history, have never failed to be listened to, and even in the worst times have suffered little, if anything, in mind, body, or estate. If we wished to give any one a vivid and true conception of the smallness of the extent to which, after all, the working of the machinery of constitutional government was interrupted by the war, and of the small importance even of the temporary disregard of constitutional forms, as long as the political habits of a free people are unshaken, we should put into his hands an edition of Vallandigham's speeches during the late war, and an account of his trial and condemnation by a court-martial.

His conduct during the war, however, was by no means what was most remarkable or most instructive in his life; the most valuable and the most *symptomatic* incident in it was undoubtedly the readiness to adapt himself to altered circumstances which was displayed by the "new departure," which he originated and supported in his last days. The high spirit, the self-confidence, the pugnacity, the strength of conviction, which made him during the rebellion the bitterest of copperheads, would in European politics have made him what is there called "an irreconcilable." He never would have forgiven his persecutors, and, so far from receding from any of his original demands, would have added something to them every year he lived. He would have created for himself a system of morals in which to hate and conspire would have been the first duties. He would in his own eyes have gradually grown out of an humble martyr into an avenging angel sent to smite and to revile. He would no more have thought of accepting the constitutional amendments, or of modifying any opinion that he ever had held about the causes, conduct, or results of the war, than of betraying his mother. He would therefore have passed the remainder of his days as a fomenter of disorder, and an apostle of distrust and confusion; he would have managed to shake the confidence, no less of his enemies than of his disciples, in the political system under which he lived, to beget even among the law-abiding that doubt about the future which, still more than the machinations of the lawless, helps to ruin free governments.

He had, however, in spite of his fury and his bitterness, that happy want of logic, that inbred consciousness of the falsehood of extremes, that invaluable and never-failing perception of the fact that government, instead of being the end for which society exists, is simply a means of making our lives comfortable and the free exercise of our faculties secure, which is the chief political characteristic of the race to which he belonged, which has done more for the United States than climate or soil, or coal or iron, or river or forest, and which, and not fleets or armies or constitution or laws, will form to the latest ages the great guarantee of their liberty and prosperity.

In ceasing to fight when fighting was useless, in ceasing to argue when the judge had decided, in accepting accomplished facts, in concentrating all his interest in the present hour, he proved himself to be a real politician in the best sense of the word—the kind of politician to which the great mass of the American people belong. The way in which the South succumbed after the war, the suddenness of its overthrow and the completeness of its submission, were signs of political ability such as no other people have ever shown, and these marks of capacity were equalled by the total absence from Northern dealings with it of the usual indications of rancor. Indeed, the only expression of "Latin" wrongheadedness and folly to be met with in the discussions which followed the war was the talk about "repentance," as a condition precedent of pardon and amnesty, and even that did not last long, and was only heard of from few mouths. The tendency to fancy himself the vicegerent of the Almighty, and to expect his enemies to put their necks under his heel, and confess their sins and wickednesses, which is the besetting sin of the Frenchman when he finds himself in power, no American ever displays, or displays long, without exciting laughter among the bystanders. Even "the Apostle John of Salvation by Impeachment" has to put his tongue in his cheek nowadays when he begins to talk of "a change of heart" on the part of Southerners as necessary to a complete restoration of civil government at the South. The disfranchisement has been maintained foolishly long, as we think, but still on the good old ground of expediency; not as a bit of divine chastisement, but as a measure of public safety. Mr. Vallandigham, with all his wrongheadedness, never lost his sight of this purely mundane character of the politician's mission. His business is to persuade, and not to preach; and if he finds he cannot persuade, his duty is to make the best of it.

There is another lesson, which we do not say is to be learnt from Mr. Vallandigham's career, but which, certainly, it brings prominently before us, and that is the virtue of talk in politics. If the other nations of the world had only a tithe of the faith in it, as a redresser of wrongs, and an amender of constitutions, and an assuager of malice, and reconciler of differences, the greatest fountain of human misery would be dried up. We have, perhaps, too much of it. If a large band of American Blatherskites would go abroad as missionaries and teach the European heathen how much better it is, and how much more effective in the long run, to inflict speeches on each other than to cut each other's throats, we could certainly spare them, and they could make a most impressive statement of their case. The sword settles things, to be sure—settles many things which nothing else can settle—but it does not settle them with that completeness with which they are settled by the tongue. There are often sects and parties which would face a world in arms, and fight while a man was left to stand behind a hedge or a barricade; but any party which finds the majority of the stump orators on the enemy's side, and finds that it is being denounced steadily, week in and week out, by the *Tom-tom*, the *Blatherskite*, and the *Blanket Sheet*, cannot keep up its courage long. It may be that the foe has neither logic, nor wit, nor knowledge, but if he has the longest tongue, the game is tolerably sure. The noise, if it does not bring conviction, sooner or later brings weariness of the subject, and a passionate desire for a quiet life. Thousands of Democrats who are now going to acquiesce in the changes wrought by the war, are no more convinced of the constitutionality of them, or of the expediency of them, than they ever were; but the damnable iteration is too much for them. The immortal mind may be never so mulish, the nerves give way at last.

THE FUTURE OF CAPITAL.

The London *Spectator* said, the other day, what we must all acknowledge, melancholy as it is, to be true, that, if the performances of the Commune do nothing else, they will do a great deal to secure a more persistent and earnest attention from the public at large for the reconciliation of labor and capital. The rising of June, 1848, caused Louis Napoleon to provide a substitute for the national workshops, by reconstructing a large portion of Paris at the public expense. The Fenian risings produced the state of mind in England which at last made it possible to disestablish the Irish Church and to amend the Irish land-laws. It is very likely now that the bloody work in Paris will do much towards convincing people—not that the theories of the Commune can or ought ever to be embodied in legislation—but that the fact that large bodies of men hold such theories is a serious fact which it will not do to slight or ignore, and with which intelligent and philanthropic men must make some attempt to deal. There is nothing of which the world is at this moment so greatly in need as peace and harmony between classes; no great advance in civilization beyond the point we have already reached is possible till this is brought about in some way. Two systems of industry have been tried thus far, the protective and the competitive, and neither of them has settled or shows any sign of settling the relations between labor and capital on a satisfactory basis. Under both, the capitalist is growing very rich and powerful; under neither is the condition of the workingman ceasing to be precarious and uncomfortable, and under neither does the contrast between his condition and that of the employer become less striking and exasperating. If we take any of the great branches of industry which the steam engine has called into existence, coal, iron, cotton, and wool, we find that, taking the civilized world as a whole, while a very large number of great fortunes have been made in them by the capitalist class, and while the habits of that class have grown very luxurious, and nearly all the good things of life, including political power, have largely fallen or are falling to it, the condition of the working-people engaged in them has not materially changed, or, at all events, has not improved in anything like the same degree. Their houses are perhaps a little better, their clothes a little cheaper, and their savings a little larger than they used to be, but the workingman's share of the pleasures and graces and refinements of life, and, above all, the distance which separates him and his family from want, has not much increased within fifty years under either the régime of free-trade or protection. In this country, the contrast between the laborer's condition and that of the capitalist is not so striking, or to the workingman so offensive, as in Europe, because, partly owing to the state of society here, and partly to the natural resources of the country, the passage from the one class to the other is easy and constantly made; but the tendencies which people are deploring in Europe are at work here, though less actively. We have our trades-unions, labor reformers, and so on, just as they have in Europe, but we have also fertile waste lands which they have not in Europe; and this takes the fizz and sparkle out of the preachings of our demagogues and blatherskites for the present; but the waste lands will not last always or last long, and we are almost as much concerned as any people in having the labor question settled out of hand.

We do not believe, as our readers know, that anything is likely to be done towards this desirable consummation by legislation; we believe liberty to be the only sound and safe and permanent basis for industry, the liberty to buy and sell, and make and mend, where, when, and how we please. We believe, too, that any attempt to provide by law any other measure of a man's deserts in the social state than the amount of his own labor, or the value put on the product of his labor by his fellows in free and open market, would in the long run be destructive to civilization, or at least to *our* civilization. A society in which the majority decided what I was to do, and how much I was to get for it, and in what manner I should expend my earnings, might exist, and enjoy a certain kind of prosperity, we freely admit. But it would not be a healthy society, or a society through which humanity at large would advance. It would not be a society in which human character would gain in strength, or foresight, or persistence, or in which human intellect would gain in power or flexibility, or in which the stores of human experience would be enriched. It would be a dull, dead, monotonous, bald, and barren society, fat and well clothed, no doubt, but with few aims or aspirations above those of a settlement of beavers or prairie-dogs. We hold, therefore, that any men, or body of men, who seek to substitute such a state of society for the one in which we now live, are to be opposed by all moral and mental agencies at our command, as long as they confine themselves to agitation and argument; and whenever they attempt it by force, as they do in France, we hold that if war be ever lawful for any object whatever, it is lawful to wage war upon them, and destroy them to any extent that may be necessary to secure peace. Of all the pernicious and immoral talk of the day, none is, to our mind, more pernicious, absurd, or immoral than that which claims a peculiar sanctity or reverence for the folly or violence of workingmen, or poor men, as such, and which excuses and defends, in a workingman or a poor man, crimes and absurdities which would damn any other men to infamy, and convert any other men into public enemies. Doubtless, at the bar of Supreme Justice a murdering ruffian like Rigault, the Public Prosecutor of the Commune, who spent his last night on earth arranging for the slaughter of innocent "hostages," will have all proper allowances made for his trials and temptations and congenital imperfections; but it behooves the sober, sensible, industrious members of the human race, to whose care civilization is committed, to remember above all things, in dealing with such people, that it is not their duty to measure out to Rigault and the like of him abstract justice, as they are not competent for any such task, but to see that he and his fellows do not imperil those great foundations on which human society rests—men's certainty that they will enjoy the fruits of their labor, their confidence in the permanence of the leading social conditions around them, and in the gradualness and peaceableness of all changes. To introduce complete uncertainty about the future into civilized life is to take from it the feature which more than all else distinguishes it from savage life, and to kill useful human activity at its very roots.

The elevation of the working-classes will come from co-operation. It is only in this way, that is, through the combination of labor and capital in the same hands, that whatever is now offensive in the difference in the life of the laborer and capitalist will disappear; and co-operation will only become possible through the workingman's growth in intelligence and self-restraint. It is through co-operation, and not through hate and levelling laws, that workingmen will finally come to dress like capitalists, go home to comfortable and well-ordered homes, and refined and rational amusements, as capitalists do, and get a share of the enjoyments other classes get from leisure, books, and travel. Nobody now takes anything from the workingman except what he surrenders through want of thrift, foresight, self-restraint, and mutual confidence. But there is no doubt that there is a long interval of time to be bridged over before co-operation becomes so general as either seriously to affect the condition of the laboring population in any country, or to reconcile them to the contrast between their life and that of the capitalist class. We have undoubtedly many years of envy, hatred, malice, and heart-burnings before us, and, during that period of transition, undoubtedly the larger portion of the responsibility for it all will necessarily fall on the capitalist. His resources are greater; his training is better, and his crosses are fewer and easier to bear. There is, it must be admitted, something grotesque in the comparison sometimes made in the labor discussions between his "anxieties" and those of the laborer. It must be remembered, too, that it is quite plain that he cannot secure himself peace and quiet by preaching the laws of political economy. This has been thoroughly tried both in France and England, and has failed. In both these countries, the working-classes have constructed a political economy of their own, in which Adam Smith counts for very little, and at the bottom of their system, though less apparent in some places than others, is the theory that capitalists are drones living on the proceeds of other men's labor, who ought to be either banished from the body politic altogether or else despoiled of a large portion of their yearly gains. In England, the latter doctrine is gaining most ground, under the influence of the hostility excited by the large idle and now almost useless class of landed proprietors. In France, and particularly in Paris—owing largely, we believe, to the ex-

tent to which that city is the resort of men of wealth who give themselves up wholly to sensual indulgence, under the eyes of a large body of excitable workingmen, who are also extraordinarily eager for sensual enjoyment themselves—the utter extirpation of the capitalist class, and the prevention of the accumulation of wealth in the hands of individuals, is sought with almost satanic energy. The Positivists, who have come to the support of the Commune, have provided an honored place for the capitalists in their system, namely, the directorship of industry, under the superintendence or inspiration of the Board of Sages, who are to form the spiritual power in the Comtist society, and who are to impel them to self-abnegation, public spirit, and good works. This is unquestionably the nearest approach that has been made to a solution of the question in what way the working-class hostility to capital can be assuaged, until such time as the working-classes become themselves owners of capital. The rich men of all countries will have to be coerced by public opinion into a deeper sense of the responsibility which wealth imposes on them than the mass of them as yet show. Extravagant and ostentatious living must be discountenanced by the great body of the community more than it is now. Giving, and giving freely, to charities, to institutions of learning, to all sorts of enterprises which have the moral and physical culture of the mass of the people for their object, must be insisted on more earnestly as a duty, and an imperative duty, and not treated, as it is now, as a work of supererogation, which an honorable man may let alone if he pleases. In short, the facts of society—the temper and condition of the working-classes, the share which they have in creating wealth, and which, though not recognizable legally in the distribution of wealth, the capitalist to whom the wealth comes is morally bound to remember—must be taken into account by rich men in regulating their lives. Mr. Peter Cooper, who may be pointed out as almost an example of what the capitalist ought to be in a better social state to which we trust we are yet coming, made the other night in his address at the Cooper Institute a touching and admirable statement of the principles which ought to govern the relations of the two great divisions of industrial society—and they may be formulated by saying to every rich man, after he has pocketed his half-yearly dividends, "You have now got your rights as an owner of capital; but the minute you leave this office your duties as a social being begin, and you are no more entitled in the forum of morals to neglect them than to fail to pay your pecuniary debts; and they are all the more imperative because the best interests of society forbid their being enforced by law."

DYNASTIC FUSION IN FRANCE.

THE exceedingly meagre report transmitted to us by the Cable concerning the admission of the Orleans Princes to their seats in the French National Assembly—an admission which was carried by so immense a majority that we must suppose members of all party shades to have swelled the vote—has failed to inform us whether that fact had or had not been preceded by the lately announced but not generally credited fusion of the two French branches of the Bourbon family. But whether finally consummated or not, this fusion movement is of sufficient political importance, in the present distracted and uncertain situation of France, to deserve a retrospective elucidation.

The beginning of the movement can be traced back to the latter part of 1848. The terrible battle of June had destroyed in the minds of most conservative men the confidence in the future of the French Republic. Some hailed in the rising star of Bonapartism the promise of a final restoration of order; others looked for a more solid basis upon which firmly to reconstruct the French state and French society, the very foundations of which seemed to be crumbling away. Some ultra-conservative Legitimists and Orleanists hoped to find this basis in a revival of the monarchico-hereditary principle, to which they unitedly devoted their energies. But the two last representatives of monarchy, the heads of the Bourbons proper and of the house of Orleans, lived not only in exile, but in antagonism to each other, and nothing short of a cordial co-operation of the adherents of both could possibly achieve the desired restoration. The young prince in whose favor Charles X. and his childless heir-presumptive, the Duc d'Angoulême, resigned their rights to the throne when driven from it by the revolution of July, 1820—the Comte de Chambord, formerly called Duc de Bordeaux, and dynastically Henry V.—saw in old Louis Philippe, whom a similar political whirlwind, in February, 1848, forced equally to resign his crown to a grandson and to flee, but a justly-punished family apostate, rebel, and usurper. Nor was the head of the house of Orleans in the least inclined to stoop to repentance, and acknowledge that his accepting the royal leadership over the victorious *bourgeoisie*, in 1830, was an act of criminal usurpation, and that the principle of monarchical liberalism which his house represented, in opposition to the divine-rights theory of the elder branch of the family, was now to be given up as exploded. As long as Louis Philippe lived, the desired fusion was impossible, though men like Guizot, Duchâtel, and Salvandy worked for it, and even General Lamoricière promised to support it.

In the summer of 1850, many distinguished Legitimists and Orleanists—Berryer among the former, and Thiers among the latter—made respective political pilgrimages to Wiesbaden, where the Comte de Chambord appeared, and to Claremont, where Louis Philippe was living in exile. No approach had been effected between the two camps. But towards the close of that summer Louis Philippe died; the Comte de Chambord had a solemn funeral service performed for him at Wiesbaden; and Berryer, with some friends, subsequently went to Claremont to persuade the queen-widow to give her adhesion to the scheme of union which would render her grandson, the Comte de Paris—whose father, the Duc d'Orleans, was accidentally killed in 1842—the heir-presumptive to the Comte de Chambord, the childless Bourbon pretender. "Let us give"—that was Berryer's romantic *mot* for the purpose—"a child to that father, and a father to that orphan." The old lady, the most unselfish and noble-hearted woman that ever shared a throne, was ready for conciliation; but her daughter-in-law, the mother of the Comte de Paris, protested, and was upheld in her opposition to the scheme not only by such of the more liberal Orleanist party leaders as Thiers and Rémusat, but also by two of her brothers-in-law, the Duc d'Aumale and the Prince de Joinville, the ablest surviving members of the house of Orleans.

The two other sons of Louis Philippe, however, the Duc de Nemours and the Duc de Montpensier, were much more anxious to bring about the reconciliation, which they regarded as the surest way for a return of their family to the Tuileries. Shortly after the proclamation of the Second Empire, the Duc de Nemours, having made some previous overtures to the Comte de Chambord, personally repaired to Frohsdorf, near Vienna, where the latter resided, to pay a visit to his "cousin," or, as the Legitimists told the story, to pay homage to his "king." The interview was very cordial, and was followed by the journey of Chambord to Claremont, where he was affectionately received by his "aunt," the widow of Louis Philippe. This visit was repaid by one made by Montpensier at Vienna, in 1855. With all this, however, fusion was no accomplished fact, for the Duchess of Orleans, the mother of the prince who was to be adopted by Chambord for his legitimate successor, persisted in her opposition to it, and the Comte de Paris himself followed the advice of his mother. In 1858 the Duchess died, but at that time the throne of Napoleon III. seemed firmly established. France needed no "saviour of society." Most of the Legitimist chiefs had long adhered to the Empire, and fusion had become altogether an idle talk, unheeded alike by the public of France and by her imperial despot.

The opposition to the Empire which began to manifest itself, and gradually assumed a more and more threatening form, in the latter half of the reign of Napoleon III.—whom it finally drove into the fatal abyss of the Prussian war—was carried on in a desultory way by liberals and radicals of every shade, but was not participated in by either Legitimists or Orleanists under any distinctive banner. Fusion had been forgotten. And when Napoleon, in September, 1870, finally sank under the load of well-merited hatred, misfortunes, and contempt, there was no monarchical party which could boast sufficient strength in the nation to assume the lead and attempt to retrieve its fallen fortunes. The republicans took up the flag of France, which had been trailing in the dust, but they fast exhausted the confidence of the people in their leadership by the frantic yet powerless efforts they made to drive back the invader. A strong monarchical reaction had set in when Paris surrendered, of which the elections of February 8, 1871, gave overwhelming evidence. Protesting against this reaction by an insurrection equally senseless and furious, the Reds of Paris only succeeded in reawakening the terrible reminiscences of the Reign of Terror and of the days of June, 1848, which dishonored and killed the first two French Republics. The third would immediately have collapsed with the fall of Gambetta had there been unity among the royalists—for imperialism was then still entirely paralyzed. Efforts were

therefore made to create that unity by accomplishing the work of fusion, and they are said to have succeeded, in spite of increased difficulties. For the last events in France have made it patent that the chasm between liberalism and conservatism in France is wider than it ever was, that no compact between revolution and the past is possible, and that the Orleans Princes, if subscribing for the sake of the future to a union with Chambord, the desire of the peasants and priests, must resign themselves to march for years in the wake of a reaction, revolting both to themselves and the better classes of France, among whom they still number so many friends—in fact, all they have.

PRINTING FOR THE BLIND.

An American custom, which has given occasion to more or less philosophizing on the part of foreign critics of our democracy, is the prevalent custom among our rich men of devoting large sums of money to the establishment and support of institutions of public utility—of colleges such as Vassar and Cornell; of free schools like that to which Mr. Peter Cooper has given more than half-a-million; of libraries like that endowed by Mr. Peabody, Mr. Astor, and very many more of our men of wealth; of professorial chairs, hospitals, academies of art, astronomical observatories, and innumerable other means of promoting the general advancement and welfare. To ostentation, no doubt, some of this beneficent activity is to be ascribed. The prominent citizen of Boston does not stand alone who, the other day, would agree to give fifty dollars to aid the French, in case the money raised were forwarded to a committee on the other side of the water, but would promise to double or treble his subscription, if the money, instead of being so expended as to do most good to the starving Frenchmen, were used to freight a ship which should be distinctly understood to have sailed into Havre, on her mission of mercy, from the port of Boston. That the cargo would be much belated, and made absurdly costly, was of no consequence to this sympathizer, so long as the stars and stripes were kept flying over it, and people in general knew to whose charity the French were indebted. But, if the class to which this gentleman belongs is not so small as it might be, it is, nevertheless, smaller than two or three other and better classes. Probably the men are numerous among us who, as our European critics say, merely by reason of our peculiar social conditions, are inclined towards enriching institutions of learning and charity, rather than towards keeping fast hold of their wealth. We are not, for example, much given to building and planting for coming generations of our children; nor are we very apt to devote much of our care and labor to the aggrandizement of "the family," an entity in being long before us, and long to outlast our individual lives. That development of the will, of individuality, of the distinctive personality of each man, which has taken place in so marked a degree in this country; which shows itself in a spirit of self-reliance and self-help that scatters the American family over three-quarters of a continent, and seldom allows more than a single generation to root itself in a given place; which causes each young American to see in himself a man who is to make him—this spirit also causes him to see in himself when made the man who has made him, and who has a perfect right to do what he likes with his own handiwork. We fight for our own hand more than other people, and feel at liberty to dispose of ourselves and our own as we please, even as we allow others to do the same. Yet the experience we get in our struggles, and the consequent sympathy with others similarly engaged which we learn to feel, and our American belief in the equality and fellowship of all men—these would seem to be sufficiently strong to counteract, in a great measure, the hardness and selfishness which our ways of life might, perhaps, be expected to produce. At all events, it is observed that, for whatever reason, there appears to be among us an unusually frequent exhibition of that munificence which bestows private wealth upon the public, to the end that benefit may accrue to the community at large. In the latest particularly noteworthy instance of benevolence which has come to our knowledge, it certainly is neither a desire for ostentatious display nor for gratifying the sense of power which seems to be the actuating motive, but rather a genuine feeling of commiseration for the afflicted, and a generous wish to alleviate a heavy calamity. We refer to a proposal recently made by Mr. S. P. Ruggles, of Boston, to Doctor Samuel G. Howe, of the same city, and through him to other physicians in charge of blind people.

It is going on forty years since Mr. Ruggles, then a practical printer, and, though a very young man, an inventor who had shown great talent and skill in mechanics, entered upon his duties as an assistant in the Boston Asylum for the Blind. This institution, founded in 1832, and, in point of time, the first of its kind in the country, was in the beginning of its usefulness when it secured the services of Mr. Ruggles, who in no long time made it, in some important respects, the first institution of its kind in the world, and one had in respect everywhere by instructors of the blind. Mr. Ruggles seems to be one of those inventors—different from the kind whose history makes most impression on the popular mind—whose inventive insight is accompanied by a singularly clear perception of the means proper to the attainment of his ends, and also by a wonderful expertness in the manipulation of his instruments. "All tools seemed made for him," and when he wanted others that had not been made, he made them, and with a neatness, skill, and despatch which are said to have been almost as remarkable as his powers of original invention. The heavy curse of the inventor—

"The lone inventor, by his demon haunted"—

of Pallissy, after years of discouragement, feeding his furnace with his house walls, his furniture, his child's cradle, and still drawing out his vases from the oven to find that the secret is not yet his; of Goodyear, starving for years, with wealth just within tantalizing distance, till one day a lucky accident gives him the clue which had eluded him so long—this curse of baffled endeavor and hope was never laid upon Ruggles, and from the beginning of his active life, whether when in his youth inventing a new printing-press or the other day selling for a small fortune a patent right to his newest improvement on the sewing machine, his career has been as prosperous as laborious. When he began his work at the Boston Asylum, the books used by the inmates of that institution were made after the method practised in Europe, and had the defect of being so bulky as to be unwieldy, and the vastly greater defect of being so costly that the literature of the blind—a class of readers more than any others dependent for pleasure and profit on the press, perhaps the very greatest means of pleasure ever bestowed upon man—was so miserably limited that the blind may almost be said to have had no books. Mr. Ruggles set to work to produce for his pupils books of convenient size, and so cheaply printed as to bring a variety of subjects within the reach of their readers. But to effect this it would be necessary, he soon saw, to invent a new kind of type, a new kind of paper, and a new press; and probably it would be necessary for him not only to invent these, but to manufacture them himself, and to make some of the instruments with which to proceed to their manufacture. With his type he was soon successful, though his success was not gained without much labor. But, having the advantage of constantly submitting to his pupils the impressions struck off from the types in the various stages of their progress toward perfection, his labor had for its result the production of a form of printed character very much better adapted to the use of the blind than anything produced in Great Britain or any other European country. "The Americans have revolutionized printing for the blind" was the European verdict, and this favorable judgment the types did much to win. Not all, however. His type being secured, Mr. Ruggles began printing, and almost immediately he had broken two of the strongest printing-presses in use. To make a press adapted for his particular purpose was therefore his next work, and he invented a press of an entirely new construction, of very great strength, and capable of turning off as many sheets in an hour as the ordinary power-presses of twenty years ago. This press, by the way, he so contrived that it could be used by the pupils. The next obstacle in the way of cheap literature for the blind was the lack of paper at once soft and flexible enough not to crack and break when embossed or printed in raised letters, and, on the other hand, so hard as that the letters should not flatten down and lose shape under the finger of the reader. This difficulty, after a long time and many experiments with gums, resins, gelatine, and various kinds of paper, was at last surmounted, and from that time forward the American system of printing for the blind superseded all others. Maps for his pupils next engaged Mr. Ruggles's attention, and in cartography, too, he effected a revolution for which the blind are under great obligations to him.

We have not space to speak at any length of this gentleman's other services, and have hardly left ourselves room to speak further of his benevolent offer already mentioned—an offer, by the bye, which it is somewhat strange not to hear more about from the gentleman to whom Mr. Ruggles first made it known. The letter in which it is made is dated at Boston, on the 27th of last November. "I have been thinking," the writer says, "that I should like to do something more for the benefit of the blind in the way of improving their school apparatus, and printing and binding their books. Having in the early part of my life devoted several years exclusively to the study of

the wants and necessities of the blind, and having always felt a deep interest in their welfare, I have very naturally continued from time to time to observe and study their requirements." He goes on to say that for ten years he has devoted most of his time to making inventions; that works for the blind have occupied a very large share of his closest attention; and that he is sure he can make for their use books which shall be very much less bulky than those now in use, very much cheaper, with much superior paper, and in every way very much better; that since 1835 several arts have been invented—as electrotyping, stereotyping, and others—which will be of great service to him in the cheapening and improving the books in question, and that, these things being so, and he having a great desire to see his own and other men's inventions made useful to an afflicted class of persons, in whom he takes a great interest, he—if the directors of American institutions for the blind give their approval—will fit up a completely equipped printing establishment, supplied with everything necessary for map printing as well as book printing, and with all the conveniences for electrotyping and stereotyping, and furthermore will himself oversee and manage, acting as superintendent without salary. The directors of the various asylums are on their part to do merely this: They are to appoint a publishing committee which shall represent all the asylums in the country, and this committee is to tell Mr. Ruggles what books and maps it will have printed, how many copies of each are to be struck off, and how they are to be distributed among the various asylums and schools. As we say, it is half a year and more since this letter was written, and nearly as long since a printed copy of it was sent to most of our institutions for the blind, but no definite action upon it seems to have been taken by those in authority. There is not the least doubt as to the sincerity of Mr. Ruggles's offer, nor as to his ability to do all he promises. His capacity as an inventor has made him a man of sufficient fortune; and he retains a warm interest in the unfortunates for whom some of his earliest and most successful, though not his most lucrative, efforts of invention were made.

It is to be hoped that the friends of the blind to whom the knowledge of Mr. Ruggles's proposed benevolence may come, will recollect that even among very useful philanthropists there may sometimes be such things as ill-founded dislikes, and petty grudgings, and prejudices, which work nobody any good; and that remembering this they may take the trouble to look to it that everybody, including themselves and their blind protégés, has fair play.

PICTURES IN BOSTON.

BOSTON, June 15, 1871.

THE summer exhibition of paintings at the Boston Athenæum is one demanding more than formal notice. The collection has been made with an object, and, though imperfectly attained, the effort is praiseworthy. An attempt has been made to gather together portraits, especially those by Copley and his predecessors, and the result is a larger collection than has graced these walls for many years.

Before speaking specially of Copley's paintings, a word may be said about the earlier portraits here exhibited. No. 208, a portrait of Dea. Barnard, dated 1728, is attributed to Peter Pelham. This artist was probably the first educated painter who settled in New England. He came from London, presumably a relative of an earlier English artist of the name, not improbably belonging to some obscure offshoot of the great Pelham family. In Boston Pelham lived for nearly a quarter of a century, and engraved some eight or nine mezzotint portraits with a skill unrivalled in this country until within the present generation. Two at least of these engravings bear the inscription that Pelham painted the original, and one of these, that of Rev. Cotton Mather, is now in the rooms of the American Antiquarian Society at Worcester. As Mr. Barnard was a deacon of Cotton Mather's church in 1727, when the pastor's likeness was taken, and as the portrait of him is especially firm in the drawing, there seems to be good cause for assigning this portrait to Pelham.

Another artist, evidently an amateur, was John Greenwood, who painted in 1748 the little portrait of John Cutler (No. 209).

In the first room, on entering the gallery, will be found seven of Pelham's mezzotints; one, that of Rev. Thomas Prince, being from an original by this same John Greenwood.

In fact, it would hardly be a wild surmise to imagine that Peter Pelham was the instructor of Greenwood, Richard Jennys, jr., and Nathaniel Hurd, the latter two being engravers. Lastly, Pelham undoubtedly was the first instructor of his step-son, John Singleton Copley, whose first public appearance is here shown in the mezzotint of Rev. Wm. Welsteed, published in 1753, when he was only fifteen years old.

Two portraits (Nos. 222 and 223) are very favorable specimens of the limited skill of John Smibert, the companion of good Dean Berkeley, whose stiff and feeble delineations were received with thankfulness in their day doubtless.

A much better artist, however, is here represented in Nos. 224–230. This is J. B. Blackburn, who had passed into such utter oblivion that he has been but a name. No particulars of his origin, Christian name, place of residence, or length of stay here have survived. Three of these portraits are dated 1755; one at Hartford is dated 1756. Of his merits further mention will be made.

The name of John Singleton Copley is familiar to all interested in American art. Although born in Boston in 1738, he was not of New England stock, his parents, Richard Copley and Mary Singleton, being both recent immigrants. It was doubtless owing to the second marriage of Copley's mother to Peter Pelham that the artistic talent of Copley received so early a development. In truth, necessity probably forced an early use of his talents, for in that way we interpret the appearance of the mezzotint signed by him at the age of fifteen, and sent out a few months only after Pelham's death. How soon after this Copley first commenced as a painter, we cannot say. No. 250, a portrait of his step-brother, Charles Pelham, must, however, have preceded by some years the portrait (No. 245) of Gen. Brattle, which was painted in 1756.

To close this recital of personal matters, No. 247, the well-known "Boy with a Squirrel," which Copley sent to England from Boston about 1760 and which was exhibited at the Royal Academy—this admirable picture is a portrait of Henry Pelham, Copley's half-brother, afterwards an engraver of considerable repute. No. 242, "The Red-Cross Knight," contains the portraits of the artist's two daughters, Mrs. Greene and Miss Mary Copley, and his son, the famous Lord Lyndhurst.

To return to a consideration of the artistic merits of the collection. Two things will strike every observer; first, that Copley was far ahead of Smibert and Blackburn; second, that he was absolutely a great portrait-painter. Enough examples are here shown to make it evident that he possessed that innate appreciation of form and color which academic culture may assist but cannot create. Despite the disadvantages of his early life, the lack of instruction, of opportunities to learn the possibilities as well as the limits of his art, it is evident that his genius enabled him to advance rapidly step by step, and to lose little by the enforced necessity of self-reliance.

The earliest dated portrait by him is a large one of Gen. Brattle (No. 245), dated 1756, when the artist was but eighteen years of age. The picture is crude in color, but the effect of the whole is decidedly good. The portrait of Henry Pelham (No. 247), painted four years later, shows a great advance, and the remainder of the American pictures, painted before Copley left this country in 1774, are all in the same strongly marked style. Perhaps the two portraits, No. 237, Lady Wentworth, and 249, Mrs. Bourne, are the least interesting; but those of Miss Hooper (No. 239) and Mrs. Sargent (243) are admirable. These two occupy the post of honor on the walls, and fully justify the praises so long bestowed on the artist. The figure in that of Mrs. Sargent possesses a solidity that is lifelike, and the flesh of the face and hands is firmly and forcibly painted. The drawing of the arms and hands is indeed one of Copley's best characteristics; and another is the ease which he imparts to his figures. Take, for instance, the four portraits of the Gill family (Nos. 256–259). The positions are all natural and easy, but without the slightest mannerism of arrangement.

The greatest deficiency shown in these pictures is in the lack of gradation of tones in the flesh tints. There is a want of the delicate half-tones which should melt gradually into the shadows. The shadows, indeed, of the flesh are uniformly too dark and too strongly defined. An example can be seen in the defining shadows of the hand in almost every one of Copley's portraits. Possibly the colors may have darkened, as these shadows seem always to be formed of the same pigments.

We fear, however, that it must be conceded that Copley was better qualified to paint the strong features of men or to reproduce the wrinkled front of age, than to catch the delicate outlines and marvellous tints of childhood and youth. In respect to drapery, however, Copley is almost unrivalled. Satins and laces occupy a large space in his picture, and are delineated with unmistakable fidelity. A curious contrast is afforded by two pictures here placed together—No. 244 (Mrs. Rogers), by Copley, and No. 226 (Mrs. Erving), by Blackburn. The dresses are almost the same in color, but Copley's is silk, and the other is a nondescript.

Blackburn, however, is second here only to Copley. In some respects, especially in delicacy of touch, he is superior. His draperies are marked by roundness of curves, suggestive of woollen textures, and this peculiarity is sufficiently strong to be a great assistance in identifying the works of this artist. Blackburn signed his pictures J. B. Blackburn in small letters, hardly larger than these types, in a color closely resembling the background. Hence many pictures have passed as the work of another which really bore his name.

As a rule, this collection has few examples of misapplied ascriptions: We strongly demur to the assertion that Copley ever painted No. 260 (Lady Erskine), and the Beale pictures (Nos. 233–235), though beautifully painted, seem not to be in Copley's style. Compare them with No. 246 (Mrs. Hay), a fine example of his later manner.

As to the other portraits, those of George Shirley and his wife (Nos. 200 and 201) were probably painted in England, as were those of Gov. Joseph Dudley and wife (Nos. 206 and 207). No. 205 is also a foreign portrait, said to be that of one of the Patteshall family of Plymouth colony. No. 203 is a superb portrait, artist and subject alike unknown, but well worth preservation for its artistic merits. The few Allstons may be left for the admiration of those who find merits therein hidden from the common eye. No. 219 contains two heads by Stuart, delightful from their fresh color and animation.

Lastly, the more general collection has some noteworthy pictures. No. 81, a very large flower-picture, by Hammer, the Swedish artist, is a thoroughly realistic representation. Your readers will remember his "Home of the Bees," which was exhibited everywhere. No. 85, a large landscape by the Comte de Bylandt, is a fine rendering of trees and sky. No. 72, "La Curée," is the well-known picture by Courbet, now infamous as a leader of the Paris Commune. The *genre* pictures, No. 63, by Baugniet, and No. 59, by Pécrus, are very good, as is also the striking picture, No. 66, by Pratére. The works of local artists are few; among them are some by Virgil Williams, Gay, Cole, and Norton. In fact, this part of the exhibition has been neglected in the desire to make the portrait collection full. The result is creditable to Mr. Ordway, who has had charge this season, and who has given us such a sight as will hardly be excelled for many years.

Correspondence.

THE CONDITION OF LABOR IN MASSACHUSETTS.

To the Editor of the Nation:

Sir: Your paper of June 8 contains an editorial upon the "Labor Question in Massachusetts," based upon the late report of General Oliver, Chief of the Bureau of Labor Statistics, to the Legislature. That report has made the same impression upon your mind that it has upon my own, viz.: that if the inferences drawn by General Oliver from the statistics compiled by him are true, "the condition of the working-classes in Massachusetts is a declining one." I think if you had analyzed his statements of wages and were more conversant with the facts in the case, you would continue to consider such an inference "incredible," and would find that there is no foundation in fact for such a conclusion.

It is impossible to make a complete review of this case within the limits of this communication, but it seems necessary that some denial of this charge should be made.

It is not to be doubted that the condition of the working people of Massachusetts might be much better than it is. I believe it to be true that the effect of a vicious currency and a bad tariff combined is to restrict production, and, consequently, consumption; to increase the general cost of subsistence; and if not now to make the rich richer, certainly to make the poor poorer than they would otherwise have been; and generally to make the contrast between employer and employed more striking, and therefore to promote antagonism between laborer and capitalist. Such, I doubt not, have been the effects of the legal-tender notes, and of the continued imposition of a monstrous tariff long after the excuse of war has ceased.

But it does not follow that the condition of the working people is absolutely bad. On the contrary, it may be safely asserted that, in spite of these causes, and of the large migration of the native population to more fertile lands and more lucrative occupations than are now open to them in Massachusetts, and the substitution of a mixed population of uneducated Irish, Germans, French Canadians, and other foreigners, who have never had the training of the school, the newspaper, and the town-meeting, there is no other equal population in the civilized world in which general comfort is so widely diffused, progress so clearly marked, or whose savings from past labor are so large.

The great difficulty which is met in the attempt to reform the currency and tax systems is in the fact that the mass of the people are so busy and so well paid that they cannot give time or attention to such questions. They can better afford to adjust themselves to a bad system than to give the time and the effort needed to improve it. It may possibly be true that it would not now be easy to establish the magazine published by the operatives some years since in Lowell, and referred to by you. You say: "We are filled with a conviction that there is a radical wrong somewhere which has brought about this change from the time when Lowell factory-girls earned handsome marriage-portions with two or three years' labor, and found time, after working hours, to write, edit, and read a very respectable newspaper." The facts are, that at the time you refer to, the hours of labor in cotton factories were much longer; the labor, owing to the less perfect character of the machinery, much harder; and the wages of weavers, the special class who, then as now, constituted the larger and better educated portion of factory operatives, less in proportion to the price of board and clothing than they now are. At that time the farmer's daughters, who had been taught at our common schools, could find no better employment than to work in a cotton factory. The reason they are not there now is because there has been such great progress in other employments, in which they can now earn very much better wages, and live in far greater comfort.

Had the class of persons who now work in our factories then attempted to live in Massachusetts, they would either have been common laborers or could have found no subsistence at all within the State. That our factory population is not equal in education to the standard of a few years since is true, but it is also true that the condition of those now in the factories is better than it was, or could have been, in Ireland, Germany, England, or Canada. The danger is that employers will not guard sufficiently against the tendency of ignorant parents to overwork their children. It has been, and, I trust, long will be, the function of Massachusetts to welcome the ignorant and oppressed of all lands, and to establish in their minds the ambition to lead a higher and a better life than has been possible for them elsewhere; and this function I believe she is performing to-day as effectively as she has before.

The inference drawn from this report that "the number of men who emerge from the condition of workingmen is extremely small," is not in accordance with the experience of those who are engaged in active business or in manufacturing, if it is intended to indicate a less number than usual in other times. On the contrary, I can now name more men who have emerged from the condition of workingmen and who now have the control of large establishments, than I have ever known before. If it is intended to be inferred that because 17,000 persons work in cotton-mills at an apparent average of 80 cents a day, they are, therefore, very much underpaid, such inference is not in accordance with the facts, as a single glance at the table of wages and the prices of board will prove. Any good overseer can now command $3 to $3 50 per day. Any good female weaver can command wages that will give her from $3 50 to $4 50 per week over and above the cost of her board, and weavers constitute by far the larger proportion of the factory operatives. A considerable portion of the 17,000 cited are young persons and children whose pay is important to the welfare of their family, ranging from $2 to $4 per week. It is not denied that these young persons are overworked, and that there is urgent need of the general adoption of the half-time school system. These wages do not promise affluence, and, so far as families are concerned, they yield little or no surplus; but so far as single operatives are concerned, they are sufficient to yield a large annual increment to the savings-bank deposits. The inference that you have drawn from General Oliver's report, "that very few persons die while they are operatives, because, finding their health give way under their toils and exposures, they leave their employment and cease to be operatives," has no warrant in my experience and I believe no foundation in fact. I have not had the same opportunity which a resident agent has to form an opinion upon the effect of factory work upon health, but it has often been a subject of close enquiry, and I have never seen any reason to believe that factory work was specially arduous or injurious to health, nor can I find any cause for ill-health in the large and necessarily well-ventilated rooms of a modern factory. Even in the hot-dressing rooms, which are now abolished by the adoption of a new machine for sizing warps, humane and considerate agents have failed

to find any special cause of ill-health if the men there employed took ordinary care when passing into the outer air.

That men have been marked and prevented from obtaining employment for the *sole* reason that they have belonged to eight-hour leagues is not warranted by any facts within my knowledge, and I do not believe it is true. That families are turned out of their houses because they cannot agree upon wages is true, and for the simple and sufficient reason that a large portion of the tenements belonging to factories are let at merely nominal rents, and must of necessity be retained by the owners for the use of those only whom they employ; and if the owners undertook to provide house and home upon the same terms for those who did not work for them or who could not agree about wages, they would soon fail.

Your citation of the man who was so stupid and inhuman as to advocate fourteen hours a day labor for the alleged benefit of the workmen, as an indication of the general spirit of employers and an explanation of the growing frequency and bitterness of strikes, is an absurd libel on a class of men in whose number are comprised those who are most efficient in all the efforts undertaken for the improvement and welfare of the people. That man stands alone in the extreme folly of his statement.

While thus denying the truth of the impression derived from the text of this report, I am far from holding up factory labor as a very desirable occupation if it can be avoided. It is not very arduous, but it is very monotonous; and, while I am utterly opposed to all attempts to impose legal restrictions upon either adult operatives or employers as to the hours of labor, I do not hesitate to say that eleven hours per day is too long for the class of operatives yearly growing larger in number—namely, those who will probably be permanently operatives. To the class of farmers' daughters who formerly worked in our mills, intending to remain but a few years, eleven and even twelve hours' work did little or no harm; but I have no doubt that eleven hours of confinement per day, as a permanent rule, will cause any population to cease to be progressive; and I trust and believe the day is not far distant when by common consent, and not by the arbitrary force of law, the rule shall be changed from eleven to ten, as it has been in the past from thirteen to twelve and from twelve to eleven.

I have taken cotton-spinning as the main subject of this letter, because it is best known to me, and because factory operatives are in the next grade above common laborers and domestic servants as to wages. If the reader of General Oliver's report will disabuse his mind of the inferences of the General himself, and will regard only his facts, I think he will find that the wages paid in almost all the other employments examined are sufficient, not only for a good subsistence, which is all that the very large majority of people born into the world ever attain; but also sufficient to account for the rapid increase of savings-bank deposits, and of small houses bordering all our lines of railroad, and clustered together in Springfield, Worcester, Fitchburg, Lynn, and other similar places, where great factories may not be most obvious, but where the infinite variety of domestic industries are to be found which protective tariffs can neither build up or break down, but only impede a little.

One word more as to the "rapid decay" of agriculture in New England. This rapid decay is accompanied by a greater abundance of food; by the increase of market-gardens; by the establishment of numerous cheese factories; by increased attention to stock-breeding; by vastly increased abundance of small fruits; and it is also marked by the rapid conversion of common Irish and German laborers into small landholders, as well as by the employment of a few German emigrant women in market-gardens who have been bred to field-work and know no other occupation, men commanding too high wages for such service.

In fact, the so-called decay is simply the change caused by railroads and immigration, and while it renders the State less pleasant to live in, and has entirely broken up the old country society which seems to have been so pleasant a feature of New England life in bygone days, it can by no means be considered a decay of the State.

In thus defending my native State from unwarranted aspersion, I by no means ignore the difficult problem which this change in the construction of society imposes upon us. We do not fear to deal with it, or to expose its worst features by means of the Bureau of Labour statistics and its able but somewhat sentimental report. We only ask that many things which to us are evidence of our partial success in dealing with difficult economic problems shall not be perverted into indications of decay, wrong, and oppression, and thus made the bases of further meddlesome legislation.

What we most need in order to abate the antagonism which now marks the relations of labor and capital, is the restoration of the specie standard and the adjustment of the tariff in such manner as shall cause it to cease to be a most oppressive burthen upon the cost of general production. It cannot be too often repeated, that by force of these unjust laws the poor grow poorer, but, as the burthen of taxation, whether it be imposed by a vicious currency or a bad tariff, finally diffuses itself, and ends in an increased cost of all production, it cannot now be claimed that we have even the small benefit of the rich made richer. The whole effect of these acts is now dead loss. E. A.

Boston, June 18, 1871.

Notes.

Messrs. Judd & White, New Haven, announce a selection of twenty-three from the practical and descriptive sermons of the late Rev. Prof. E. T. Fitch, D.D., of Yale College, to be published early in July.——A "Condensed School History of the United States, constructed for definite results in recitation, and containing a new method of topical reviews," by Wm. Swinton, A.M., of the University of California, is to be issued shortly by Messrs. Ivison, Blakeman & Co. The appearance of this work is a sign that the publishers, who were lately in litigation with Messrs. A. S. Barnes & Co. in regard to it, have made a satisfactory arrangement with the latter, who publish, we believe, a text-book by the same author called "Swinton's Comprehensive United States."——Messrs. Hurd & Houghton announce a new edition of Cooper's Works in thirty-two volumes 8vo, with Mr. Darley's illustrations, and in the best style of this house. Subscriptions will be taken only for the complete series, at $2 25 per volume. Other new works in preparation are: "Poems," by the late Wm. H. Burleigh, with a memoir by his wife; "Songs from the Old Dramatists," with music and notes; and "Montfort Hall," by Catherine A. Warfield.

—There are two notions about Harvard College very widely spread in other parts of the country, which, however well-founded they may have been at one time, have become wholly erroneous. One is that it is mainly a Unitarian college, and the other is that the majority of the students are from Massachusetts. The fact is, that of 608 students 452 are from the New England States generally, and 156 from other parts of the Union, and that so far from a majority of the students being Unitarians, two-thirds nearly belong to Trinitarian denominations. The following table is believed to be substantially correct at the present time:

Unitarian-Congregationalists	233
Episcopalians	150
Trinitarian-Congregationalists and Presbyterians	111
Baptists	35
Methodists	18
Universalists	12
New Jerusalem	10
Roman Catholics	7
Other denominations and unascertained	32
Total	608

Much less than half the students attend the college chapel on Sundays. Those whose homes are in Boston or the neighborhood attend church with their families if their families are church-going; the others go to the two Episcopal, one Methodist, one Trinitarian-Congregationalist, one Unitarian churches which are close to the college, or else to the two Episcopal, two Congregationalist (Trinitarian), one Unitarian, one Baptist, one Methodist, and two Roman Catholic churches which all lie within a mile of the college, and in which the college provides sittings at its own expense, and monitors to note absences and tardiness, and, we hope, to keep the students awake. There are, moreover, two voluntary religious societies among the students. In fact, the students represent very fairly the religious condition of the community from which they are drawn.

—Herr Roth, of the Cincinnati *Volksfreund*, writing to that paper from Wisconsin, says that the entire southeastern portion of that State is, with the exception of a few localities, almost wholly German, and that in the remainder of the State the American element is steadily retreating before the German increase, which is maintained by immigration. In the country, he says, it is with difficulty that instruction in English can be had for the children, and that the Americans themselves use more German in their conversation than the Germans do English. In some settlements, twenty-five or thirty years old, one does not hear a word of English spoken, and might readily suppose himself not in America. If the present movement of population continues, as it is likely to, in a few years, says Herr Roth, the Germans from having a majority in the State will possess it all—they and the Scandinavians together, let us add. In Chicago, just over the border, the Germans have one-fifth of the forty members of the city council, but are

disposed to complain that they are not fairly represented. In Cincinnati, the German population has increased but 6,000 in the past decade, against 13,000 from 1850 to 1860; and it is evident that this city is out of the line of foreign immigration to this country.

—It is generally supposed that the system of mutual aid in legislative and deliberative bodies, which is known as "log-rolling," is an American invention, owing in part to the happy American name which has been given to the process. But Pascal, in the "Provincial Letters," calls attention to the fact that not only was the practice known in ecclesiastical bodies in his day, but its lawfulness was the subject of discussion by the Jesuit casuist, Escobar. "Is it simony," asks the reverend father, "for two monks to pledge themselves to each other in this fashion: Give me your vote to make me provincial, and I will give you mine to make you prior"? And he answers, "By no means." The same learned theologian treats of a question which is of a good deal of interest both to legislators who take bribes, and to legislators who recommend persons for office, and afterwards go to the head of the department and request him to pay no attention to what they have said. The point Father Escobar examines is whether "it is simony to promise money for a church benefice when in reality you have no intention of paying it." And he decides that it is not, "since it is only feigned simony, which is no more real simony than false gold is real gold." It thus happens that you may recommend a worthless fellow for office, but if at the time of writing the recommendation you determine that it shall not help him to get the office, you are not guilty of abusing your influence. A small popular edition of the works of the Jesuit casuists would, indeed, do something to relieve many worthy politicians from a good deal of perplexity.

—Yankee enterprise seeking employment might do worse than select Italy as a field; and in Italy, the marble industry promises a fortune to whoever will rescue it from the present wasteful and uneconomic prosecution of it. Almost all that is known or needs to be known of that branch of it which is carried on in the region about the river Magra and the Gulf of Spezia, will be found in a work lately published by Barbèra at Florence: "L'Industria del Marmi Apuani," by Professor Carlo Magenta. The quarries at Carrara, Massa, and Serravezza have been worked for centuries, furnishing marble, at first for building, as in the Pantheon, and afterwards for statuary; yet the means of getting out the stone are in some respects as rude as in the days of Cæsar, and in others fall far behind the scientific processes in vogue in other countries. The use of machinery in quarrying is almost unknown; the roads are wretched; the stone is tediously drawn over them by bullocks in two or four-wheeled carts, and not long since a huge mass falling from a cart killed thirteen of the poor beasts who were drawing it. There is, too, no co-operation among the proprietors, who in Carrara alone number, as lessees of the communal quarries, 178, and as owners of private ones, upwards of 300. Transportation at the same place engages the services of 450 persons, 300 yoke of oxen, and 425 carts, and out of 10,000 inhabitants 3,000 get a living from the marble industry The business of the three communities first-named, derived from more than 600 quarries, amounts to $2,500,000 per annum; and marble is shipped to England, New York, Havana, Rio Janeiro, Buenos Ayres, and even to Australia. Yankee capitalists who should introduce at Carrara the best machinery, build railroads to the nearest port or lines, and then get the duties on imported marble removed or abated in this country, could hardly fail of their reward. In 1866, our tariff imposed on marble sawed in the form of tablets not only a duty of so much per square foot, but in addition fifty per cent. *ad valorem*. Prof. Magenta urges his Government to appeal to ours against this heavy burden on Italian labor.

—Less anxiety might have been felt with regard to the fate of the Louvre collections amid the fires of the Commune, had the public been aware of the disposition made of the works of art by the "administration" of the museum. Mr. Alfred Darcel, well known as an archæologist and draughtsman, and a curator of the National Museum, writes, on the 25th of May, to the *Journal de Rouen*, assuming that the great majority of the works of art were probably uninjured. He says that before the news of the disaster of Sedan was known in Paris, the *Direction des Musées* received orders to send to the arsenal at Brest the most precious works of the Louvre. They had sent off the contents of the "salon carré," the "little" and "long" galleries, *i. e.*, the principal paintings of all schools represented, and the full series of Italian, Dutch, and Flemish masters, and the older French ones, when, on the 4th of September, "they saw the Empress pass through the galleries on her way to exile." The government of the National Defence ordered the work stopped; but meanwhile, all the smaller works of art, antique and mediæval, were hidden in passage-ways within the walls, or enclosed, with the papyri, with the remainder pictures and drawings and the most precious statues and bas-reliefs, in the vaulted cellars of the building, considered as good as casemates by the engineers. Reservoirs for water had been established on the quay outside and also within the building, apparatus for extinguishing fires had been provided for each room, and day and night watches of firemen, guards, and curators had been organized. The pictures and statues of the Luxembourg Museum had been also deposited in the vaulted basements of the palace of Mary of Medici. This was the arrangement of the national collections at the date of the 2d of March, when the Prussians entered the courts of the Old and New Louvre; but on their departure a part of the works of art remaining in Paris were restored to their places, especially the drawings and the more modern French paintings, and certain galleries were again opened to the public and to students. Notwithstanding the military occupation of the Louvre and Tuileries, which took place on the 19th of March, and notwithstanding the appointment by the Commune of special delegates, the curators managed to remain within the place, and prolonged their watch over their trust, until forcibly relieved on the 17th of May. At the Luxembourg, the pictures and statues remained in the vaults, the officials in charge having ingeniously made use of every pretext to delay any public exhibition. A general distrust of the future seems to have been felt by those interested in these matters, and the artistic conscience will be relieved at learning that, in Mr. Darcel's unprejudiced opinion, the art delegates of the Commune assumed their office on purpose to protect the museums against rascalities which they vaguely dreaded. As to the Palace of the Tuileries, its artistic contents at the date of the fire were of relatively small value. After the 4th of September, the most remarkable works of art had been taken to the Garde Meuble, and thence removed to the Louvre.

—General Faidherbe, whom the close of the war left with a respectable reputation as a commander, published last year, after Sedan, a pamphlet on the reorganization of the military service of France ("Bases d'un Projet de Réorganisation d'une Armée Nationale"). The main feature of his plan is the personal service of every male citizen, not physically incapable; to which he joins the corresponding obligation of the state to support the dependent family of the husband or father while under arms. Into the details we shall not enter any further than to note that he provides for instruction in the common branches of learning as a part of the training of the army, and would allow no one who had not passed through its ranks to have a vote. The picture which he draws of the condition of the Imperial army on the eve of the war is as frank as he could venture, at the time he wrote, to make it.

—M. Gabriel Monod, of whose first article in *Macmillan's Magazine*, relating his experience as a volunteer in one of the French ambulances during the campaign on the Loire, we have already spoken, has a second and highly interesting one in the June number, in which he discusses the morale and mental qualities of the French army and peasantry with the same extraordinary candor. Of the old soldier—the man who had nearly reached the end of his seven years, and had contracted the garrison vices and *insouciance*—he speaks in terms of strong reprobation. The cavalry he rates higher than the infantry, and the marines than either. During the whole campaign of the Loire, he says, the Pontifical Zouaves—young men of good family and ardent Catholics, from the western provinces—and the sailors were "the only men who conducted themselves *sans peur et sans reproche*." The Mobiles, he says, "were generally incapable of supporting the hardship of the campaign or standing against regular troops, and their ignorance and want of all interest in political or patriotic questions, and of anything like elevation of sentiment, was to their disadvantage." Of the *francs-tireurs*, he says they were a complete failure, Frenchmen being too gentle by nature to permit of their prosecuting a guerilla warfare effectively. Moreover, most of the *francs-tireurs* did not know the country in which they were operating. "The majority were merely anxious to get rid of all discipline, and of the hardships of living in the open air, and of the dangers of real fighting," and wandered through the country without any control. "Whole corps were composed of mere thieves, who stole the plate from the churches, and used their muskets to break open houses." Of the feeling with which the French went into the war, he says:

"The bulk of the nation, though not desiring war, and in fact regarding it rather with dismay, felt no moral disapproval at the injustice of the Emperor's pretext for the declaration, and quickly came to regard the idea of a march to Berlin with satisfaction; while the soldiers were

delighted that the war was not to be against friends, as it had been in Italy, but against enemies, so that plunder would be no longer a crime. These feelings, base and childish as they were, changed into mere fury on the news of our first defeats, and of the actual invasion of France. Men who had openly spoken of ravaging and conquering the Rhine provinces, at once raised the cry of sacrilege, and talked of the violation of the sacred soil of France, and of the torch of civilization being in danger. The Germans were stigmatized as barbarians and savages, and no language was bad enough for these furious patriots, no slander or falsehood too strong. These exaggerations only increased with the advent of the Republic; so that instead of a people animated by one grand desire to perish in resistance to an unjust invasion and an unrighteous conquest, the country for the most part displayed arrogant fury and a ferocious appetite for vengeance."

The campaign showed, he said, also considerable decay of warlike feeling, "but no development of morals, religion, or education to keep pace with it." It "opened his eyes to the ignorance of his countrymen, and their lamentable want of moral and religious ideas." The ignorance of the troops was something "appalling." He "doubted, if they knew what 'Alsace,' 'France,' or 'Germany' meant." There was nothing approaching to religious feeling amongst them, not even superstition. He came across one really pious man, "though ignorant and childish enough," and he was the laughing-stock of his comrades.

"True piety, the mystical attempt of the mind to reach a higher and invisible world, was unknown. It is impossible, for instance, to imagine an army of Frenchmen singing with heart and voice a religious and patriotic song like the German hymn, 'Ein' feste Burg ist unser Gott.'

"The case would have been different if our soldiers had had even strong moral convictions; but while they scoffed at priest and church, they were equally ready to laugh at purity and every other home virtue. The ordinary talk of the French soldier is of that broad kind which we call *grivois*—the pleasantry of an easy, cynical, shallow habit of mind, which, with a certain air of innocence, is never happy unless it is endeavoring to destroy and defile everything higher and holier than itself. It is fortunate for the listener if the talk does not drop from this into something filthier still. . . . Even honesty was not too common amongst these debased characters. It is for the peasants to say whether the French soldiers respected their property more than the Prussians did. Had the tables turned, and the French army marched into Germany, I doubt if our conduct there would have been more creditable than that of the Germans has been in France. Certainly the women would have suffered far more. Amongst us, respect for women is a thing almost unknown, nay, it is too often all but ridiculed."

At the same time, M. Monod rates the character of the men, where not brutalized by ignorance, very high, and says "that their manners were gentle, and they had a strong feeling of justice and injustice, and of compassion for the weak, a quality in which the Germans were too often wanting." He says the ignorance of the officers of geography "surpasses anything that one can conceive of." His account of the behavior of the peasants in Normandy and the Beauce is something shocking, but we have no room to quote farther. The whole article is, owing to M. Monod's position and antecedents, a most interesting contribution to the literature of the war, and it goes to swell the body of proof, which accumulates every day, that it matters little what form of government is now set up in France; that she will have no rest until there is a complete renovation of her morals and manners, from the very bottom, through education and suffering.

—The utter fruitlessness of the French naval operations on the coast of Germany during the late war has caused not a little wonderment, though the general result was predicted by all who were acquainted with Prussia's experiments in land defences. That the Prussian fleet, however, should have cut no greater figure than it did in the presence of two such dispirited, purposeless, and irresolute adversaries as were the squadrons under Admirals Bouet-Willaumez and Fourichon, was not easily explicable, and, in fact, is but just beginning to be explained. A work which gives between two covers both the French and the German point of view has been published at Bremen: "Die Campagne von 1870 in der Nord und Ostsee." It consists, first, of the articles contributed towards the end of November to the *Moniteur Universel* by René de Pont-Jest, who had been deputed to watch the operations by sea, on account of the public clamor over their futility, and was attached to Bouet's squadron in the Baltic. He was, of course, able to speak as an eye-witness only of what happened in those waters; but his narrative is in defence of both admirals. It is supplemented by the corrections and additions of a German naval officer, and the whole is accompanied by a map of the mouths of the Jahde, Weser, and Elbe. Some of Pont-Jest's disclosures are very curious. The declaration of war found the French fleet wretchedly unprepared for duty, and the Minister of Marine, Rigault de Genouilly, had the courage, alone of all the Emperor's councillors, to tell the truth and confess he was not ready. The degree of backwardness may be inferred from the fact that one of Admiral Bouet's complaints—he was not on good terms with the Minister, and complained more than was always necessary in an officer supposed to know his business—was that, some time after he had been at his station, he had not received the maps of Denmark, which were indispensable to his operations on the German coast, where all the buoys and landmarks had been carefully removed.

—As for the German navy, the truth is that it also was quite unprepared for the war, though the same censure cannot be applied to the German as to the French Government on this account. It was, and still is, a growing, not a fully developed service, and, as is well known, in numbers and weight of metal the French navy was doubly and trebly its superior. Nevertheless, people had been led to expect great things of certain vessels, notably of the *König Wilhelm*, which popular writers had represented to be capable alone of annihilating the French fleet. It shared, however, the ill-luck of the *Kronprinz* and the *Friedrich Karl*, in having a foul bottom and disordered machinery; and their operations were additionally hindered, as were those of the German ships generally, by the fact that there were no reserves to take their places if disabled, and no opportunity for the iron-clads to reach the only available dockyards for repair. To take the offensive, therefore, against a vigilant and cautious blockading force, which indeed endeavored by all means to draw them out into clear water, would hardly have been prudent in the German commanders, whose first and highest duty was evidently to guard the harbors and coasts against invasion. This they did most effectively, causing the French to despair of making a landing, and actually preventing them from coming within gunshot of the shore. Such is the substance of the German naval officer's refutation of René de Pont-Jest's argument, that, if the German admirals had had more pluck, the French would not have earned the reproaches heaped upon them for their inefficiency. Though this brochure professedly treats only of operations in the North Sea and on the Baltic, it gives the German official report of the engagement between the *Meteor* and the *Bouvet* off Havana—the only engagement of the whole war which could be dignified with the name of sea-fight, and which left no room for imputations on German valor.

—Bishop Hefele's "History of the Council of Constance" (the seventh volume of his "Conciliengeschichte") has successfully vindicated the Emperor Sigismund from what has been the great stain upon his memory—the alleged violation of his safe-conduct granted to Hus (this is the spelling insisted upon by the author). "Hus came to Constance" (we quote from a review in the *Academy* of May 15) "as he himself repeatedly states, without any other safe-conduct than a verbal promise of protection on his journey from the emperor, which was faithfully kept. The written safe-conduct reached him after his arrival in Constance, and was undoubtedly violated by his imprisonment before the Council had given him a hearing, but it was not violated by his execution after he had been heard and condemned. It guaranteed him against all violence on the road to or from Constance, in the event of his return, but it did not, and could not, guarantee him against the sentence of the supreme tribunal, which he went there for the express purpose of appealing to, nor was it so understood at the time either by the Emperor or by Hus and his friends. He had himself repeatedly declared his readiness to abide by the judgment of the council; and if he anticipated, as he probably did, a favorable decision, that does not prove that an adverse sentence was unjust, still less that its execution was a breach of faith."

WASHBURN'S "PARAGUAY." *

The American public had almost a right to expect from Mr. Washburn the "Notes of Personal Observation and Reminiscences of Diplomacy" which he presents to them in the volumes before us. He had been the most prominent, the most active, the most abused of all the representatives of foreign powers in Paraguay during the terrible contest which that formerly so little known country—a miniature inland China, with nominally republican institutions, and ruled by enigmatic dictators—waged against ten times more numerous enemies, to the utter ruin of its Hispano-Guarani population. He had arraigned before his Government several of its highest naval functionaries as faithless to their duty, and had met with severe recriminations. He had been blamed, both for abusing his powers in defying the authority of President Lopez, in the very agony of his

* "The History of Paraguay, with Notes of Personal Observations and Reminiscences of Diplomacy under Difficulties. By Charles A. Washburn, Commissioner and Minister Resident of the United States, at Asuncion, from 1861 to 1868. In two volumes." Boston: Lee & Shepard. New York: Lee, Shepard & Dillingham. 1871.

death-grapple with Brazil, Uruguay, and the Argentine Republic, and for doing too little to prevent that bloodthirsty tyrant from wreaking his rage on innocent men—like Masterman and Bliss—who had a claim to protection under the United States flag. It was Mr. Washburn's duty to justify his actions before the people, as he did before the Government, and to lay before the world the knowledge he had gathered concerning Paraguay, its unfortunate people, and its last rulers; and he has fulfilled this double duty to the best of his ability, and, we may say, satisfactorily. He has, however, attempted more—he has undertaken to write a "History of Paraguay," and this task he has only poorly executed.

Mr. Washburn's personal recollections are intensely interesting, as descriptive of a people, a struggle, and a despot without a parallel in history, and of thrilling events and strange perplexities that need not the slightest exaggeration to be highly sensational; but it is these very recollections that almost entirely unfit him for an historian, even if on other grounds he were qualified for this vocation. He is embittered and revolted, and but too justly so, by what he has seen, learned, and suffered, and his whole book, though intended to present a continuous narrative of historical facts, intermixed with descriptions and anecdotes, resembles a Congressional report by a "committee on outrages" much more than a history. Mr. Washburn is perfectly correct—the testimony in this respect is now overwhelmingly unanimous—in all he says of the atrocious character of Francisco Solano Lopez, the President and Marshal, who slaughtered off his nation on the battle-field, and his generals and advisers, his brothers-in-law and brothers, by the hands of torturers and executioners. He may be right when he tells us that the elder Lopez, the predecessor, and, as he asserts, only the putative father of Francisco Solano, was a wicked usurper, a mean hypocrite, an unparalleled extortionist, a treacherous villain who knew no truth, and "had no shame in lying." He may be equally right, thought we doubt it, in representing Dr. Francia, the first dictator of Paraguay, Carlyle's "lonely Francia," the man who created that state, as not only incomparably more selfish and treacherous, more tyrannical and cruel, than his successor, the elder Lopez, but as "a man remarkable only for the absence of every human feeling or affection"—a man whose acts show "no glimpse of talent, of learning, or of any redeeming feature whatever." And all he says of the younger Lopez's cowardice, of his and his brother's profligacy, of the false and cruel disposition of his chief mistress, Madam Lynch, of the general depravity and remorselessness of his tools, whether priests, officers, or spies, or of the stupid imbecility of his enemies—though much of it seems exaggerated—may all be literally true. But, as the author of a history, he has no right to tell us all these things a hundred times, which he does, to the great torment of his readers.

Diffuseness is altogether the most striking defect of the thousand or eleven hundred pages which Mr. Washburn devotes to the memory of Dr. Francia and the two Lopezes, and an inclination to accept exaggerated accounts appears to us the next. Thus we cannot make up our mind to receive as quite exact, what he unreservedly asserts, that full nine-tenths of the entire population of Paraguay perished by the sword, or from overwork, disease, and destitution, during the war so wantonly begun by Lopez in 1865, and terminated with his death in March, 1870; that at one time, before Itapiru, "one-half of his troops at least" were "sick with the measles," and "twenty thousand men, or more than a third of the Paraguayan forces . . . died there and then;" or that recruiting went on "until all from eight to eighty, who were not in prison, were forced into the army." Justice to the author compels us, however, to add that his seemingly most extravagant statements of fact do not go much beyond what concurrent evidence furnished by other sources renders almost undeniable. To the most appalling, but sufficiently, if not perfectly, authenticated facts, belong the human hetacombs sacrificed by Lopez in 1868, from fury, suspicion, policy, or intoxication. And yet this monster was probably not entirely devoid of true sentiment when he, about the same time, used these words to Mr. Washburn, in answer to a proposal to end the hopeless contest by a voluntary exile under favorable circumstances:

"He would fight to the last, and fall with his last guard. His bones must rest in his own country, and his enemies should only have the satisfaction of beholding his tomb; he would not give them the pleasure of seeing him a fugitive in Europe or elsewhere; he would sooner die than be a second Rosas. If the worst came, it was to be no surrender, but all were to fight until they were killed; that he was prepared to resort to more extreme measures than any one imagined, if necessary; it was better to fall after his whole people had been destroyed than treat on the condition of leaving the country. Unless he should succeed and come off conqueror, there was no future for him, nor did he want to live. Whatever of glory and fame would result from the war, long protracted against odds infinitely superior, was already his, and he would never be deprived of it; his fame in history was, at any rate, secure. It was not his ambition to rank with any South American hero, like San Martin, Bolivar, or Belgrano; they were persons for whom he had no respect, nor had he any desire to be classed with men who had made such a contemptible figure in history; but it was his ambition to have his name enrolled on the same page of history with those of Washington and Lincoln; that he would, if necessary, crown his triumphs with an act of heroism, and perish at the head of his legions. He had labored so long for his country, and with such self-abnegation; had been sustained by his people so bravely, and with such free and spontaneous will, that all these things must justify him in history, and give him a place such as no South American hero ever had. He said it was glory enough for him, while living, to have three nations making war so long against his single arm. . . ."

Mr. Washburn, of course, "could hardly believe that the man was in earnest when he spoke in this way; that he could really be such a dolt and fool as not to know that the people who were fighting under his orders were but abject slaves, and obeyed only from fear." He thus relieves himself of the difficulty of attempting the solution of the double enigma which the character of Lopez and the ready obedience unto death of his whole people presents to other observers. Nor does he much trouble himself with many other "things that appear mysterious and utterly inexplicable," and the solution of which, he believes, can be expected only from the Paraguayan Padre Maiz, an intimate follower of Lopez, who survived him. "He may perhaps explain why Lopez killed so many of those who were, as all supposed, his most faithful and able officers. He may tell, too, why he killed his brothers, and flogged and otherwise tortured his mother and his sisters. He may also possibly be able to tell whether or not Lopez ever believed in the existence of the conspiracy which he pretended to discover, and for alleged complicity with which so many hundreds were executed." Our author also admits that "it is not the purpose of this work to give anything like a history of the war," and that "the writer had few advantages beyond people who were not near the scene of it that would enable him to describe the events as they appeared to those who were in the respective camps of the belligerents."

Haste in execution is visible throughout the work, and especially in the compilation of the earlier history, in which the author has been aided by others. Hence, not only endless repetition, but also repetition with contradictions. Thus we read of Dr. Francia's relation to the priests, that "he did not resort to the plan practised by his successors of extorting from them the secrets of the confessional, or compel them to disclose to him what they had extorted in the hour of death" (vol. i., p. 281); that the system of espionage he had established he "did not carry so far that he could tell the innermost thoughts of his subjects"; and that "Carlos Antonio Lopez improved on this by adding the power of the confessional to his other enginery of power" (ii. 54); and also the statement that he, the very same Francia, "did not object to people confessing to the padres, but the padres must then confess to him all they had heard in the confidence of the confessional," and "that these requirements greatly scandalized the bishops and some of the priests" (i. 213). The story of the persecution of Garmendia by Francia is twice fully told, and the details are far from agreeing (i. 291 and i. 392). Of the elder Lopez, we hear that he was born "about the year 1787" (i. 338); that in 1841, when he succeeded Francia, he was "about forty-seven years of age" (i. 337), and again, that early in 1844 he was "about fifty-one years of age" (i. 351). The younger Lopez is stated to have been "born July 24, 1826" (ii. 47), but after the treaties "with France, England, Sardinia, and the United States"—treaties concluded in 1853 (i. 351)—he is made to be "about twenty-four years of age" (i. 405). And these are not the only contradictions of this kind we have noticed. A vastly more curious specimen of chronological inaccuracy is presented in the following narrative of the origin of the elder Lopez (i. 338–9):

"He was born near the Recoleta, at a distance of a little more than a league from Asuncion, about the year 1787. The family was one of the lowest in the country, and . . . of disreputable origin. Under the old Spanish régime there lived in Asuncion a man by the name of Juan Bautista Goyez. When past middle age, and after Francia became dictator, he was employed by him as a clerk or accountant of his treasury, a position which he held for many years. He was never married, but lived with a mulatto woman, by whom he had one child that he acknowledged and treated as his own. When grown to womanhood, this child married a poor journeyman tailor of mixed Spanish and Guarani blood, by the name of Cirilo Lopez. . . . He [Lopez] continued . . . to follow his occupation of tailor, either as journeyman or master, being mainly dependent upon the work of his hands for the support of his family. This family, in due course of time, consisted of six sons and two daughters, of which Carlos Antonio was destined to be the President of the future Republic."

To which we must add, by way of comment, that Francia was made dictator in 1814, and that we are thus told in this genealogical narrative that Goyez, who was "past middle age" in or after 1814, "after Francia

became dictator," was the grandfather of six boys and two girls, one of whom, "Carlos Antonio," was born "about the year 1787"! In spite of all these defects, however, we cannot refrain from recommending Mr. Washburn's work as both very interesting and very instructive.

FAIRBANKS'S HISTORY OF FLORIDA.*

THE historians of all the Gulf States possess a veritable heritage of wealth in the chronicles of the early Spanish conquerors and explorers. For Florida alone, some ten or a dozen of them may be appropriated with effective results. The accounts of Hernando De Soto's expedition are laid under heavy contribution not only by all the States bordering on the Gulf of Mexico, but also by Tennessee, Missouri, Arkansas, and Texas; while Cabeza de Vaca (not Cabeça, which is a French form of the name), having already done duty for Florida, Louisiana, Arkansas, and New Mexico, stands good for the initial chapters of the future histories of a large group of States yet to be created between Arkansas and the Pacific Ocean.

While crediting the author with industry and intelligent appreciation of his subject, we nevertheless feel inclined to the opinion—under the Vicar of Wakefield's celebrated canon of criticism—that this history would have been better if the author had taken more pains. At page 16, Ponce de Leon (1512) is represented as hearing in a general and uncertain manner of the existence of land to the northwest of the Bahamas, and Mr. Fairbanks thinks that these islanders "had, doubtless, some intercourse across the calm southern seas with their neighbors of the main." This is rather indefinite, particularly as the author may be supposed to have had access to the published Fontaneda (Simancas) MS., one of the memoranda attached to which states: "Columbus discovered the Islands of Yucayo and Achiti; a part of Florida was discovered by other persons residents of Santo Domingo." The valuable notes of the translator of the Fontaneda MS. also go to show that Florida was already known to the Spaniards in 1510.

A passage at page 22 fills us, we must confess, with some alarm, as foreshadowing the possible repetition on a very large scale of the Pocahontas legend. Our author recounts the fate of some Indians captured by De Ayllon, in 1520, and impressively adds: "They were of an unconquerable spirit, and their successors upon the soil of Chicora, the gallant sons of Carolina, have vindicated their claim to be considered their descendants in their spirit of independence and bold assertion of their rights and liberties." We never before heard that any such claim was at any time made by these "sons" of well-known English, Scotch, French, and Irish descent, much less that it was disputed and subsequently vindicated. As to the unconquerable spirit of the Indians, Mr. Fairbanks relates in the next paragraph that "they all died of care and grief."

What Verazzano (p. 27) has to do with Florida is not very clear if, as the author states, he "came upon the coast of North America in about latitude 35°," and coasted as far north as Cape Cod.

At page 47, the author relieves the monotony of abridgment with this remarkable statement:

> "The discovery of the Mississippi has for a long time been erroneously attributed to De Soto; but Cabeça de Vaca and his companions had rested upon its banks before De Soto set out on his expedition; and upon some high bluff by that wondrous stream should be erected a column bearing the simple inscription:
>
> ALVAR NUÑEZ CABEÇA DE VACA
> IN HOC LOCO PRIMUS OMNIUM EUROPÆORUM FUIT,
> A.D. MDXXXV."

There are serious objections both to the matter and form of this inscription. If there be any credit of discovery in the case, it should in justice be divided among De Vaca and his three companions—all equally deserving of the honor. Now, one of these was Estevanico, an African, and, in the present condition of the average Mississippi mind on the subject of the late constitutional amendments, every one will at once perceive the impropriety of erecting columns with Latin inscriptions to perpetuate the name and memory of a negro. As to the *locus in quo*—for *in hoc loco* expresses precision of locality—it is utterly impossible to designate it, and we are moreover of the opinion, for good reasons, that Vaca and his companions never "rested on its banks," nor in fact ever even saw the Mississippi.

Vaca's entire narrative is very defective in indications of his line of travel, which is made out—when made out at all—more from his mention of natural products, fruits, and animals, than by description of localities. He most probably coasted the Gulf shore of Louisiana until he passed by the mouths of the Mississippi. His route can be traced with reasonable certainty until he reaches a point on the coast west of Mobile Bay, and near the mouth of Pearl River. In what follows he neither refers to nor describes any river that would impress one who saw it for the first time as would the Mississippi. True, he speaks of passing a river "the water reaching to the breast. It might be as wide as that at Seville, and its course was very rapid." This description of the Guadalquivir would hardly answer for the Mississippi. Further on, he says, "we crossed a great river coming from the north." But this also could not be the Mississippi, for the reason that he has previously described the fruit of the *mesquite* (of the family of the mimosæ and a species of *algorobia*), a tree not found east of the Mississippi, and only reached when near the Rio Bravo del Norte in going west. It must also be taken into consideration that the delta of the Mississippi in De Vaca's time was considerably north of its present position, as may be better understood by comparison of a map of the present day with the De Lisle map of 1685, so that De Vaca and his companions might have gone by water due west along the coast without interruption.

Mr. Fairbanks's fifth chapter—on the route of De Soto's expedition—is especially disappointing. The march of De Soto has well been styled wonderful, as well from its duration as from the vast extent of territory traversed by it. So wonderful was it found that the accounts given by Garcilasso de la Vega and the Gentleman of Elvas were received with scepticism by several historical scholars until the modern discovery of a third relation—that of Biedma—fully confirmed the truth of the strange story. Next in interest to the history of the expedition would be an intelligible tracing of De Soto's route by modern landmarks; and it is not at all creditable to Southern scholarship that so little has been done in this matter, if we are to accept Mr. Fairbanks's fifth chapter as the résumé of their labors. We already possessed substantially the same information in Mr. Buckingham Smith's notes and in the notes of the Louisiana Historical Society's republication of the Biedma narrative. Of course each succeeding year adds to the difficulty of such a task. Fifty years ago it could have been done with the aid of the Indian tongues and traditions, then spoken and current. Even now, knowledge of local topography and a little industry could do much. There are many localities mentioned by the De Soto chroniclers that might be as readily recognized as the junction of the Coosa and the Etowah, where the town of Rome now stands.

Mr. Fairbanks has a chapter on the expedition of De Gourgues to avenge the massacre of his countrymen by Melendez. It is fairly written, to the extent of the information supplied by his authorities. But the author does not appear to be aware of the existence of fresh historical matter upon this subject. Late investigations in France have added very materially to our knowledge of De Gourgues and his expedition. Thus, for instance, Mr. Fairbanks states (p. 143), "Of the faith of De Gourgues, we know nothing." But it is now well settled, from the letter of De Gourgues, Bishop of Bazas (29th April, 1790), and other sources, that he was a Catholic. It was as a Frenchman, not as a Catholic, that he avenged the Melendez massacre; it was as Spaniards, not as Catholics, that he executed the murderers. He is represented (p. 145) as addressing his men concerning "the shame that rested upon France for leaving so long unavenged an act so wicked and base as the murder of the Huguenots and the destruction of the French colony." The word Huguenots is not in the original,* nor is there in the whole account, which is satisfactorily ascertained to have been written by De Gourgues himself, any reference whatever either to Huguenot or Catholic. He looked upon the matter as a purely national one, and the inscription on the tablet placed over the Spaniards hanged by him was: "Je ne faicts cecy comme à Espaignols, ny comme à Marranes, mais comme à traistres, volleurs et meurtriers." The word Marranes has in some versions been incorrectly made *mariniers* (sailors). It is a term of reproach specially applicable to Spaniards, and signifies that they are suspected of having had Moorish or Jewish ancestors.

Mr. Fairbanks's volume is valuable as bringing within a moderate compass a history of Florida down to the close of the Seminole war, but we trust he will find some subject on which to expend his abilities of more importance than "the events of the late civil war" in Florida.

* "History of Florida from its Discovery by Ponce de Leon, in 1512, to the close of the Florida War in 1842. By George R. Fairbanks." Philadelphia: J. B. Lippincott & Co. 1871.

* "Icy le cappitaine Gourgue, ayant assemblé tous ses gens, leur declare comment il avoit entrepris ce voiage pour aller à la Floride vanger sur les Espaignols l'injure qu'ils avoient faite au Roy et à toute la France. Il leur met au devant la trahison et la cruaulté de ceulx qui avoient massacré les Françoys, etc."

AROUND A SPRING.

BY GUSTAVE DROZ.

Translated by M. S. 8vo, paper, 75 cents.

"Written with just that art which redeems the most ordinary incidents from appearing commonplace. . . . A masterpiece of fiction. 'Around a Spring' is simple and pathetic. We shall not give an analysis of the novel which it is so easy to get, but shall content ourselves with praising its great merits. Regarded merely as a bit of workmanship, it has all the elegance which, perhaps, will immortalize the best of the present race of French writers."—Nation.

"A most graceful story, interesting from the beginning to the end. Portraiture of character, description of persons, dissection of motive, pictures of life in city and among the mountains, conversation, dialogue, development of plot, are all excellent."—Galaxy.

PRATT'S Astral OIL. Upset and break a lamp filled with oil composed of Benzine or Naphtha, and explosion will surely follow. Pratt's Astral Oil is perfectly safe, and is wholly free from every explosive material.

The Nation.

NEW YORK, THURSDAY, JUNE 29, 1871.

The Week.

A STRIKING illustration of the way the Republican managers in various parts of the country try to dodge the tariff question has been afforded by the Iowa State platform, which favors "a reasonable degree of protection," but is "unalterably opposed to any system of legislation which favors one section of the country, or department of industrial enterprise, at the expense of another." A correspondent informs us that the resolution was reported to the convention by ex-Governor Stone, "with a wink," but the fact is, he need not have winked at all. This class of resolutions is well known to all persons who frequent conventions, and is greatly enjoyed internally by those who have an average sense of humor. The truth is, we suppose, that in Iowa, as in many other States, the great body of the Republicans are revenue reformers, but the managers, or men of experience, are old Clay Whigs, and we owe the double-faced sentiments of the platform to the desire of the elderly gentlemen to humbug the young ones in honor of their old chief. We doubt if the process can be carried on much longer.

The Ohio Republican platform eulogizes highly the past services of the party; recognizes the three constitutional amendments as accomplished facts, and as valuable and valid pieces of legislation; declares that duties on imports should be levied in such manner "as not to prejudice but promote the interests of every section and branch of industry as much as may be possible;" warmly commends the Administration for its impartial execution of the law, for its faithfulness and honesty and economy in the collection of the revenues, and for its management of our foreign relations, as exhibited in the negotiations with Great Britain, and expresses its continued confidence in the President; condemns the granting of public lands to corporations and monopolies, and declares that the public domain should be reserved for actual settlers; calls for the adoption of a "thorough system of civil service reform;" hopes that "the enmities and resentments of the war may soon be ended," and that the treatment of Unionists at the South may soon be sufficiently improved to "encourage the removal, in proper cases, of political disabilities for participation in the rebellion," an ingeniously mild and distant allusion to the possibility of a general amnesty; recommends the calling of a convention to amend the State Constitution, and thanks and commends Governor Hayes.

The Southern Outrage Committee have been looking into the state of affairs in Alabama, and have had before them Mr. Richard Busteed, the United States District Judge, who certainly draws a picture of the condition of society in his jurisdiction which might make the teeth of any inhabitant of the Northern States water. He denies that there has been any obstruction to the execution of the laws or of the process of the court, except in one instance, and in that case it was the Republican State Auditor who disobeyed an injunction, and had to be locked up and fined. The people of the State have a "deep-seated conviction," he says, "that the laws are not equal and impartial," and yet all classes pay the greatest respect to the judicial authority, and obey the laws without flinching. What makes this conduct seem all the more wonderful is that, according to the Judge, "the character of the persons holding subordinate official positions under the State Constitution is generally notoriously bad, both as to intelligence and honesty." Of the Rev. Mr. Lakin, who has given very alarming testimony before the Committee, saying among other things that thirty-three indictments had been found and tried in Judge Busteed's Court for violations of the Civil Rights Bill, while, in fact, only one had been found, and none had been tried, the Judge not unwarrantably, and it might be added, mildly, remarks that "he is a man who is apt to make wild statements without accurate basis."

We have ourselves received some curious and instructive, and, we may add, trustworthy information with regard to the state of things in North Carolina, which helps to shed light on the value of the Force Bill, particularly as it comes from the military officer engaged in executing that law. He confirms the stories of Ku-klux outrages on perfectly inoffensive persons, and says that in the town in which he is stationed, the mayor and town officers having gone out on the 1st of May, nobody has taken the trouble to elect others, so that the town is now without a government, and without police, except such as the United States troops furnish, which is of course feeble and ineffective. The result was that, previous to the arrival of the troops, the citizens passed the nights in the streets rioting, mediæval fashion; and though as much as a hundred discharges of firearms were sometimes heard in the course of a single night, nobody ever complained of anybody else. In fact, none of the inhabitants any longer give themselves any concern about the preservation of order, and, when informed that they must take the matter in hand, decline with serenity. The Republicans are mostly "low-down people," and, far from concerning themselves about affairs of state, are too thankful to escape notice. Most of them, our correspondent says, "sleep in the woods and unknown places" every night—or, as the French express it, *ils ne deconchent pas mal*—as a measure of personal safety—a custom which would destroy any man's zest for "politics." He speaks of the belief of the Republicans that the presence of the troops can permanently restore order as a "delusion," and characterizes the whole state of things as "very discouraging—almost hopeless."

General N. B. Forrest has also appeared on the scene as a witness about the existence of the Ku-klux, and declares to a newspaper correspondent that he has travelled much of late in Alabama and Tennessee, and has been able to find nobody "who knew of any such organization," and had no hesitation in "asserting that, did it exist, the inhabitants with whom he came in contact would have apprised him of that fact." He has also "travelled extensively in all portions of the South, and as far as his judgment and personal observation lead him to believe, he can safely assert" "that no such band has an existence in any of the Southern States." Now, this testimony may be worth little, or much, or nothing—in our opinion, it is worth little—but it is not to be answered as the *Tribune* answers it, by saying that Forrest "is a man who has schooled himself so thoroughly in treasonable practices and habits of thought, that, if he has any convictions of duty, they would teach him to conceal the truth, and assert its opposite in any dealings with the Government of the United States," and that he ought to have been hanged for his share in the rebellion. Forrest has been before the Southern Outrages Committee, and there confessed that at one time—that is to say, during the last Presidential campaign—he did belong to a secret political organization, called "White Camellias," or "Pale Faces," which the *Tribune* insists was in reality the Ku-klux Klan; but how are we to reconcile Forrest's confession in this instance with the assertion that "his convictions teach him to conceal the truth," etc.? If he lied for certain when he said there were no Ku-kluxes, how do we know he did not lie when he said he had been a "Pale Face" or a "White Camellia"?

Since the 5th of June, a General Indian Council has been sitting at Ocmulgee, with the view of organizing a federal form of government for the various tribes living in the Indian Territory. There are about sixty delegates, representing the sixty thousand of population; and one of the most interesting and hopeful features of the occasion is the voluntary attendance of several chiefs of the wild Indians on the Plains, who were cordially received by their semi-civilized brethren. Thus far, little progress has been made, except in good feeling. The constitution submitted last December to the tribes to be embraced in the confederation has failed, for one cause or another, to be accepted, or even generally considered; and the present effort is to get a temporary government established under it, and leave it to be amended as need

shall arise. To call the proposed government, however, a confederation is not to be strictly accurate, although the tribes are independent of each other and do not speak a common language. The movement is really toward unity, the tribes merely furnishing a natural division into electoral districts. As such, it cannot fail to be regarded with the highest interest, and its success will be among the brightest ornaments of Grant's Administration. Indeed, one has only to imagine the probable consequences for the Indians of Tweed's taking possession of the National Capitol, to confess that herein lies one of the weighty reasons for resisting the Democratic return to power.

Dr. Lanahan, the assistant agent of the Methodist Book Concern, soon after he took office, brought the most damaging charges against the business management of the enterprise, such as impropriety in the method of keeping the books, discrepancies between the figures in the ledger and the figures in the annual accounts presented to the Conference, and erasures and alterations without any explanation, all involving large amounts; and he offered to prove all these charges before a competent tribunal if an opportunity were afforded him. The persons in charge were, however, determined that no such opportunity should be afforded him; so he was first of all put on trial for giving scandal by making the charges, and then, when he sought access to the books and papers, it was denied him; and when he applied to the courts for a mandamus, to compel the production of the books and papers, he was tried for making the application, and actually condemned, and the Bishops recommended to remove him from office. The Bishops, however, are equally divided, so he remains in his position. We can only say that anybody who contributes money to the Concern, not only while these charges are unexamined, but while the examination of them is persistently and dexterously evaded, must not only be a very queer Christian, but a very queer owner of money. There has been nothing more discreditable in the history of the New York Ring than the whole affair, and the apparent calm with which the Methodist laity have looked on at it is not the least singular part of it.

As might have been foretold, Mr. B. F. Butler has come to the defence of "the Commune," and says the fight was all for municipal independence—he is so knowing about French politics—and declares solemnly that "none of us can foretell what has been the result on the future liberties of mankind by the crushing out of the Commune." Some of us certainly are in blessed ignorance about the matter, and some of us do not care particularly one way or the other; but we advise Brother Butler to keep his spirits up. "The liberties of mankind" are in no such danger as his pensive and somewhat melancholic cast of mind leads him to imagine. If anybody were to get up in the United States and proclaim that whenever an American city came to the conclusion that the legislature was not going to give it such a charter as it would like, it was entitled, before uttering one word of protest or remonstrance, to close its gates, declare war against the government, seize the spare cash in the banks, lock up the clergy, and fill the streets with barricades, and let loose the convicts, and put Bohemians, crack-brained people, and loose fishes in all places of trust and profit—and then, after fighting a while, without a chance of success, to fire the public buildings and charge the sewers with gunpowder—and any city were to follow his advice, there would not be in the whole Union a more furious defender of order than this same Butler. He would be levying troops, and marching, and vowing vengeance on "the rebels" all over the country; and after the troops had let him into the city, and he had the inhabitants at his mercy, he would surpass any Versaillist of them all in ferocity, if the government let him have his way, and, when all was over, would run for Congress on the credit of his severity.

The *Tribune* seems to be beset with complaints from women of the way they are ogled and insulted in public places, by men of various ages, either when following lawful callings, such as soliciting advertisements for newspapers, or when simply passing to and fro in the streets or in public conveyances. One woman asks impatiently whether "they must be condemned to pass through the streets with their eyes cast down, instead of the free gaze which belongs to American women?" At the bottom of all this trouble is undoubtedly the desire which a large number of women feel, not only to engage in all the occupations in which men engage, but, as a natural consequence of this, to be freed from all the conventional restraints which immemorial usage has imposed on female speech and behavior. These restraints have all been put in force under the influence of the theory that there is such a thing as sexual passion, which powerfully influences the conduct both of men and women, but particularly of men, and which, therefore, in the interest of purity, imposes on one sex a certain guardedness of manner when in the presence of the other sex, whether in the parlor, workshop, or street. One of the beautiful discoveries of the new school of social philosophers is, however, as we have repeatedly pointed out, that there is no such thing as a natural sexual passion; that the feeling which passes by that name is simply a bad habit, somewhat like smoking and drinking, which men can drop if they please, and which, for the convenience of women, they ought to drop, so as to enable the two sexes to stand towards each other on an exactly equal footing, and without other dangers than such as result from quarrelsomeness or cupidity. Women could then stare at anybody they pleased in the street, as they have a natural right to do, and go about with men just as if *they* were men. The working of the new doctrine into practice is, of course, attended with inconvenience; but it is making its way. Before long, man will gaze at woman with the same emotions with which he gazes at a landscape or a field of wheat; while woman will look on man as she looks on a grain elevator or a locomotive.

It was for some years apparently the belief of Congressmen, and, we might add, of Mr. Boutwell as well, that the credit of the United States in the money markets of the world was whatever Congress pleased to enact that it should be—that is, if Congress directed a loan to be made, it could fix the interest which should be paid, as if nobody had anything to say in the matter except the House and Senate and President. This peculiar view of the matter long afforded food for mirth to the epicureans and enemies of progress on both sides of the water. These hardened cynics are now, however, requested to take notice that this position has been abandoned. Mr. J. B. Elliott, the well-known accountant of the Treasury Department, has at last been directed to find out what the credit of the United States really is, and has been during the past ten years, by a series of calculations based on the market price of their bonds. He has accordingly gone to work, and has come to the conclusion that, from 1854 to 1861, the Government was able to borrow at from 3½ to 5 per cent.; that in 1861 its credit was marked by 8 per cent.; in 1869, by 7½ per cent.; and that at present its borrowing power is measured by from 5 to 5 1-5 per cent.

The financial world has been ruffled, though scarcely surprised, at the bursting of one of the stock bubbles, so industriously blown in Wall Street during the past year, by a class of men who seem determined to disregard all consequences in their greed for dishonest gain. Rock Island shares, which sixty days ago sold at 103, were run up to 130 and over, and when the bubble burst fell back to 110, causing the failure of a prominent operator, of fifteen or sixteen of his brokers, and heavy losses to bankers and other legitimate dealers. The outside public, which, as we have repeatedly pointed out, has almost ceased to speculate, fortunately did not suffer. Mr. Boutwell at last acknowledges that his funding schemes have proved a failure. Our own national banks, acting under Treasury pressure, have converted about sixty-five millions, but no other portion of the holders have been able to see the force of the Secretary's recommendation to exchange a six per cent. bond for one bearing only five. To punish their stolidity, it is now announced that Mr. Boutwell will pay off a portion of the bonds, in other words, will give the ungrateful holders, as a punishment, one hundred dollars for what they offer to sell for ninety-nine. And this is called finance. Mr. Boutwell evidently believes that there are no other securities in the world except American bonds, and that, if people cannot get our sixes, they will be compelled to take our fives. The financial condition of France is unfavorable to the peace of Europe. No Government that can now be formed can hope to grapple with the

crushing problem of the indemnity. It is the blunder of Bismarck's career. The Bourse, which in the worst days of the Commune stood at 48 to 50 for the Rentes, advanced only to 53 on the success of the Versaillists, and has since fluctuated between 51 and 52. The prospect of the new loan is evidently not bright, although the whole influence of Germany is now—strangely enough—exerted in favor of its success.

The accounts of the growing cotton crop are still very conflicting, but seem in the main more favorable, especially from Texas and the other Southwestern States. The price has been steady, with some tendency to a slight decline. The accounts of the grain crops have been less favorable, not only with us but all over Europe, but the liberal stocks in our markets have prevented any advance, while the export has been large. The total exports for the week are equal to the average of the height of the season, but the foreign exchanges nevertheless continue adverse, the coin shipments are large, double-eagles are again at a premium of three-eighths per cent., and there is evidently a settlement of international accounts going on, such as conservative merchants and bankers have been hoping for for two years past, in order to ascertain how much of our foreign trade and finance relations is sound and permanent, and how much mere speculation. It is difficult to foresee the result.

The French National Assembly has passed the Loan Bill without opposition. The loan will be issued at 82f. 50c., payable in seventeen instalments. During the debate, M. Thiers made a detailed statement of the financial condition of France, which, he said, was "difficult but not disastrous." The German war had cost the country $600,000,000. The deficit of the fiscal year 1870–71 reached $326,200,000; of this the Bank of France had advanced $266,000,000, so that the immediate deficiency for the year was $60,200,000. To this, however, must be added $87,200,000 for expenses incurred in the suppression of the Paris insurrection. Thus the total deficit was $147,400,000, which he proposed to meet by increased taxation, without resorting, however, to either an income tax or to measures of a prohibitory character. He was sanguine of success, and even expected the Government to be able to set apart annually two hundred million francs for the sinking fund, an announcement which was probably received with livelier applause than confidence. All furloughed treasurers, receivers, and collectors have been recalled to their posts to receive subscriptions, the lists for which were opened on the 26th. The urgency is the greater, as the first instalment of the war indemnity, made payable thirty days after the re-establishment of the authority of the Government in Paris, is just falling due. Retrenchments in the expenditures are to be made on a grand scale, and first of all in the navy department, thousands of sailors being dismissed.

In his speech on the Loan Bill, M. Thiers, while referring to the disastrous military operations which have so terribly deranged the finances of France, again reflected upon the course pursued by the Tours and Bordeaux Governments, though somewhat more leniently than he did in his remarkable speech on the abrogation of the proscription laws, delivered twelve days earlier, in which he designated the war measures of Gambetta as "the most ill-conceived that have been employed at any time, in any war," and his policy as a "politique insensée," a "politique de fous furieux" (a policy of raging madmen). M. Thiers's opinion of Gambetta, however, does not appear to be shared by our Cable reporters, to whom he still seems to be a statesman of first magnitude, all whose movements and utterances, authenticated or rumored, must be duly recorded. Thus they have, during the week, successively informed us that "Gambetta refuses to acknowledge the mandate of the Assembly," the latter having "ceased to exist when it voted the ratification of the treaty of peace"; that "Gambetta is in Malta"; that "Gambetta declines to run for the Assembly, because, he says, the present Chamber is an illegal body"; that "Gambetta offers his services to the Republic"; that "Gambetta has arrived in Paris," and "has accepted the candidacy to the Assembly from one of the districts of Paris"; and that "Gambetta arrived at Bordeaux on Sunday," and "adheres to the views of Louis Blanc." The despatches about the Longchamp review, the trial of Rochefort, Assy, and Rossel, the courts-martial in general, and the movements of the Orleans Princes, are just as multifarious, and of about the same historical value. The latest concerning the Princes, on the authority of the *Figaro*, is that they will "proceed to Frohsdorf," the residence of the Comte de Chambord, "where they will await the decision of the country in silence." This may not be true, as many a thing asserted by the *Figaro* is not; but "fusion" seems, after all, to be, to a degree, a fact. "The decision of the country" is expected to be rendered early in July, through the supplementary elections, concerning the result of which it would be idle to speculate after the indefinite indications telegraphed to us.

The gist of M. Thiers's speech of June 8, which we have alluded to above, is contained in the following remarks, addressed chiefly to the Conservative portions of the Assembly: "We have received from your hand a government *de facto*, the Republic. We have received the mission to make peace, to preserve order, to surrender the administration of the country into hands more worthy to manage it, to form an army, . . . to re-establish the credit of France as well as we could. We have received this mission, and also the mission—and I have accepted no other—to maintain the form of government we found in existence. . . . What you meant then was this: Representing the sovereignty of France, you had no intention to avail yourselves of the whole of it; you would not add to the revolution in the *personnel* of the government a revolution in the form of government itself. You have granted the Republic the fact of its existence, nothing but the fact; but this you have granted it. You have reserved to yourselves the future; you were right in so doing. . . . . What was our leading idea in Bordeaux? It was this: There are two tasks to execute; one which unites us, and one which divides us. Fortunately, the task which united us was the urgent one, the task which divided us could be delayed. . . . My rule of conduct is this: I shall not betray the future; I shall not betray the present; when I shall discover the one or the other to be imperilled, I shall separate myself from those who might cause the peril. . . . To precipitate the solution would be to plunge France into civil war. . . . We have obtained a truce between the parties. What is my duty, resulting from it? It is to cause, by impartial justice towards you all, that truce to last as long as possible." These are noble and assuring words on the morrow of the beastly attempt at revolution in Paris.

Count Beust's "Red Book," laid before the united Delegations of the Vienna Reichsrath and the Hungarian Diet, and his personal declarations, represent the dual empire of Francis Joseph to be in perfect peace and the best understanding with all powers in Europe. What the chancellor especially emphasizes is—and he is believed to be more sincere in this assertion than in what he says in regard to Russia—that his government is far from harboring any hostile design against the German Empire—the creation of his rival. This peaceful disposition meets, of course, with the applause of both grand divisions of the empire. The eastern, or Hungarian, has lately been unpleasantly affected by the resignation of its Minister of Justice, Horváth, the only non-noble member of the Andrássy Cabinet, equally esteemed for his character and abilities. The western, or Cisleithan, is in an incomparably more dissatisfied mood, the conciliatory efforts of the Hohenwart Ministry having as yet led to no compromise between the Reichsrath and the principal Slavic provinces, Bohemia and Galicia, and only created a breach between the German and centralistic majority of that assembly and the court, which now decidedly favors federalism. The Emperor, in his answer to an address of the Reichsrath expressive of a want of confidence in the Cisleithan cabinet, openly took side with the latter against the former, and the impression prevails that the Reichsrath will have to yield, as its continued opposition could not fail to lead to a dissolution, or something worse. The government counts upon the unconditional support of the Poles, to whom it has made special concessions, and expects that the Czechs, too, will this time be satisfied with a partial fulfilment of their demands for autonomy, which would anyhow be a great triumph over their Teutonic associates in the Empire. A *dénouement* is expected soon to come, but the question is, will it be final?

THE REPUBLICAN PROGRAMME.

THE campaign in Ohio is interesting, not only as likely to furnish a good indication of the strength with which the Republican party will go into the Presidential contest next year, but as presenting us with the first explicit declaration from an authoritative source which we have had for a long time of what the party means to do if its lease of power should be renewed. The speech made by Senator Sherman to the Convention at Columbus last week was the first attempt made by any Republican orator, within two years at least, if our memory serves us rightly, to pass beyond a recital of the claims of the party on popular gratitude into the wider and less inviting region of promise. We have been told, many people begin to think too often, what the Republican party has done for the country during the last ten years; but whenever we turn to the future, and ask what it is going to do for the country hereafter, we are usually treated to an account of what the Democratic party will do if *it* gets a chance, which is doubtless an important and interesting subject of consideration, but hardly "the main question." Besides, there is no such thing as "gratitude" to a party. Gratitude, in order to exist, has to have a determinate object, and a party is not a determinate object. It is not even a body of persons capable of description. A "party" is nothing more than a concurrence of opinions, and to request us to be grateful to it, and to continue to lodge the government in particular hands under the influence of this gratitude, is very like asking us to be faithful to the "voices of the night" or "the spirit of the age." The only use of telling people what a party has done by way of influencing votes at an election, is to give them an idea of what it will do if it is allowed to retain the reins of government; and the misfortune of the Republican party has been that its advocates, when recounting its exploits—have very generally confined themselves to facts which shed no light on the future whatever. To say that a party has fought out the war successfully, or has procured the adoption of amendments to the Constitution establishing the equality of all men before the law, gives us no clue whatever to its financial policy. A man might be a firm friend of emancipation, we all know, and a sworn foe of State rights, and yet utterly wild about the national income and outlay.

We do not wish to be disagreeable, but there is nothing like clothing an argument with circumstance, so we shall mention, in illustration of our meaning, that three very prominent Republicans—amongst the most prominent in the period immediately following the war: Mr. Sherman, of Ohio; Mr. Morton, of Indiana; and Mr. B. F. Butler, of Massachusetts—were, in the year 1867, as sound as a bell on reconstruction in all its branches; or, in other words, were as good Republicans as were to be found, and by no means the least influential. Yet, if we had listened to the teachings of those gentlemen in that year, we should, though all right on reconstruction, and brimful of gratitude "to the great party," etc., have been plunged into something very like ruin, on the very questions with which the party in power is now called upon to deal most seriously—questions of finance and taxation—as these statesmen would themselves now be the first to acknowledge. When we read over Senator Sherman's wise and forcible remarks at Columbus on the advantages of honesty, as the financial policy of a great, rich, and growing country, we asked ourselves whether this was really and truly the philosopher who, in 1867, gravely recommended the public creditor to submit to a reduction on the interest on his bonds, lest a worst thing—namely, the total loss of both principal and interest—should befall him, and never once rose anywhere to tell his countrymen at that critical moment, when the national judgment was still unformed and the national conscience was still groping its way unsteadily through the confusion of a first contact with novel economical and moral problems, that when a body of men has promised to pay a certain sum of money, and is able to pay it, there is for it no more escape, either in earth or heaven, from the payment of it, than there is for any individual in easy circumstances from the settlement of his butcher's bill. And when within the last few months we have come across the various bits of encouragement which have at different times been offered us by Mr. Morton and Mr. Butler to keep on voting the Republican ticket, in the sure and certain hope of a prosperous and happy future, who could help asking himself what better reason he had to trust these gentlemen now than when, in the year above-mentioned, they were abusing or frightening the bondholders, and urging the people to pay them off in depreciated paper money?

It is a saying of that profound thinker, Mr. Wendell Phillips, recently produced on the platform on various occasions, in giving advice to the newly enfranchised negroes, "Never forget or forgive at the polls." If we might be allowed to suggest a substitute for any counsel of this sage, we would say to all voters, whether newly enfranchised or not, "Don't be silly at the polls; forget or remember at them as seems most likely to serve your interests." Consequently, we are not calling up these errors and shortcomings of Republican leaders with a view either of making them objects of ridicule or of mistrust. We simply wish to show that the past performances of a political party give it no claim on the continued confidence of the people, unless they plainly indicate the mode in which it is likely to deal with new problems, and it may be, as in this case, entirely different ones from those with which it has had to deal in the past. And if Mr. Sherman had had at Columbus nothing better to offer us than promises or professions, there could be no more reason—nay, there would even be less reason—for heeding him now than there was for heeding him four years ago, when he was advising the public creditor to submit to a swindle, and dared not advise his constituents to refrain from committing it.

Happily, he has had on this occasion something to show on which sensible men may really pin their faith. He gives us, as a reason for believing that if the Republican party is kept in power it will improve the national credit, the undeniable fact, not that it has emancipated four millions of bondsmen, but that it has raised the value of the national promises to pay from sixty-nine to ninety-one cents on the dollar. He gives as a reason for believing that it may be relied on to reduce taxation the equally undeniable fact, not that it successfully put down the greatest rebellion the world ever saw, but that in the last Congress alone it has reduced taxation fifty-six millions. We wish the promises that he makes, that the tariff will be simplified and reduced, had the same solid foundation to rest upon. He says, too:

> "It is now sufficient for me to say that I am utterly opposed to continuing, at a high rate, the taxes on articles of prime necessity, in common use among all our people, merely to be able to reduce the taxes on those articles which enter into competition with our own industry. Nor is it wise by protective laws to force our home industries into unnatural channels. A reduction of duties on necessaries, large duties on luxuries, and average duties on articles competing with our own, this is the general idea which, in my opinion, should guide us in reducing our tariff, and they surely will guide me."

Although we may not attach much importance to this either as an opinion or as a promise, there can be no doubt about its value as an indication of the temper of the audience he is addressing; he clearly believes that the West demands revenue reform, and if he is not going to march in that direction, he will certainly turn his face towards it, and produce as good an appearance of marching as circumstances will allow. The saving clause, as we may call the following—

> "I am for the reduction of taxes by the repeal or modification of all that are excessive, but I am not in favor of following any wild theories of political economists to the destruction of any home industry, or to the diminution of our revenue, so as to endanger a deficiency"—

is, of course, what is to be expected in the speeches of all politicians not blessed with strong or clear convictions, and is of about the same value as the clauses so frequently found in party platforms, which express equally warm sympathy with laborers and capitalists, with the poor and with the rich, with the French and with the Germans, and equally strong confidence in science and in the rule of thumb.

Perhaps, however, what was most remarkable in the proceedings of the Convention, as well as in Mr. Sherman's speech, was the emphatic endorsement given by both to civil service reform. Unhappily, the record of the party on this question contains little to guarantee the sincerity of its professions. It has been ten years in power, and it has done nothing for the cause of civil service reform. It found a law in the statute-book making some sort of provision for such a reform, and it made no attempt to enforce it. It ridiculed and heaped odium upon its one or two officers who tried to do so. Many if not most of its

leading politicians have denounced the movement as the work of crack-brained visionaries; it received no sort of countenance in Congress until the close of the last session; and if it were not for the President's appointment of the Commission which is now at work drawing up rules and regulations for the government of the civil service, Senator Sherman's remarks on this subject, and especially those of them in which he throws the blame of the civil service abuses on the Democratic party, would be simply ludicrous. Coming, however, from so astute a politician, they do show one thing clearly, and that is, that the public wants to have the civil service reformed; but, to effect this, the public will have to see to it that such recommendations as the Commission may make are not pigeon-holed, but are acted on during the coming winter.

THE SUPREME COURT AND ITS THEORY OF NATIONALITY.

The theory which the Supreme Court of the United States shall at any time adopt in reference to the nationality of the Union, and its relations with the several States, must, to a very great extent, determine and shape the action of the court in construing and interpreting particular clauses of the Constitution, and in deciding upon the powers conferred upon the General and the State governments. It will be interesting therefore, as well as instructive, to ascertain with accuracy the position which that high tribunal now occupies, and to compare it with the doctrines which have been maintained by it at a former period.

The nationality of the United States which the court recognized and upheld while Chief-Justice Marshall was at its head, was based upon the declaration of the preamble that "We, the people of the United States, do ordain and establish this Constitution." This theory, which went back no further than the text of the fundamental law, may have been logically deficient; and it may be historically difficult to conceive how a political organization—the people—which had no prior existence, should have been called into being at the very moment when the Constitution was adopted, and should have been the authors of that instrument. But the court was not troubled by these logical and historical defects. The foundation was deep and broad enough for all the emergencies which then arose, and upon it Webster as an advocate, and Marshall as a judge, built up a superstructure of constitutional construction which trembled only during the upheavals of the civil war. After the death of Chief-Justice Marshall, and the elevation of Chief-Justice Taney to the bench, a change took place in these fundamental notions. The one people was no longer looked upon as the source of power, as the authors of the Constitution and of the General Government. The organic law was constantly described as the work of States which had been originally sovereign and independent, but which had surrendered some portions of their sovereignty and certain administrative functions to the United States which they had voluntarily formed. It should be said in the most emphatic manner, that neither Chief-Justice Taney, nor the majority of the court under him, ever adopted the heresies which justified secession. With them the surrender once made by the States was irrevocable, and the union once formed by them was indissoluble. The court, however, was not a unit in upholding these doctrines. A large minority pushed the State-sovereignty dogma to its logical conclusions, and the contests which sometimes arose in the consultation-room and upon the bench were bitter and protracted. On more than one occasion the meagre theory of nationality which we have sketched was sustained by the casting vote of a single judge, who, appointed from a Southern State, had sat under Marshall, and had received lasting impressions from his massive intellect.

Shortly after the breaking out of the civil war, several vacancies occurred in the court by death and resignation, and President Lincoln was called upon to appoint a new Chief-Justice and four new associates. President Grant has recently added two associate justices, so that, of the old court, Justices Nelson and Clifford are the only remaining members. It was natural to suppose that a tribunal thus reorganized, with its fresh material taken from the ranks of those who were laboring in the field, in the legislature, and in the forum to sustain the Union, should adopt a theory of nationality different from that which their immediate predecessors had maintained, and which was hardly to be distinguished from the dogma of absolute State sovereignty. The war brought with it questions which far transcended in importance any which arose during the leadership of Chief-Justice Marshall, questions which required that the foundations of our civil society should at last be reached and built upon. The court evidently felt the great responsibility which rested upon them, and were not anxious to undertake the task. Several cases growing out of the Reconstruction measures which followed the close of the war, and which, it was supposed, involved the validity of these measures, were dismissed upon the ground that the question whether a given State government is legitimate or illegitimate is not juridical, but is merely a political one, and cannot, therefore, be considered by any judicial tribunal. A case, however, soon arose of such a nature that the court could not avoid the issue. In the year 1867, and before she was completely restored to her normal relations with the United States under the operation of the Reconstruction Acts, Texas commenced a suit in the Supreme Court against certain citizens of other States. The Constitution and the statutes of Congress provide that the jurisdiction of the court shall extend "to controversies between a State and citizens of other States." The objection was, of course, raised that Texas was not a State, and had no standing in court. No graver question was ever presented to this tribunal of last resort in constitutional matters. Its solution involved an examination into the nature of the Union and its government, the nature of the States and of their governments, the relations of these political societies to each other, and the effects of the war upon these relations. The decision of the court was pronounced by Chief-Justice Chase in a judgment remarkable for its clearness and for the cogency of its reasoning.

In this opinion the court, for the first time in its entire history, struck the solid ground of historic fact, and announced a theory which defines and preserves both the inherent nationality of the United States and the separate existence, necessity, and local rights of the several States. By this theory the States did not create the Constitution and the nation, nor is the people found in existence for the first time in the preamble. Historically, the nation preceded the Constitution; it took its rise with the first united movement of the colonies. The national idea springing out of their common origin, interests, and necessities found its first open expression in their resistance to Great Britain; it was strengthened by the war; it was triumphant in the Declaration of Independence; it was incorporated in the feeble Articles of Confederation; and it was finally perfected in the Constitution. The court has at last found a firm basis—firm because historically and logically true—upon which to rest the supreme nationality of the United States; and we believe that this theory, which was for a long time supported by only a few historical students, but which has now received the approval of the Supreme Court, will soon be accepted by all parties, and will become one of the first principles of our constitutional law. But while the court thus placed the nation upon a sure foundation, it defined the status of the States, and asserted their necessary existence and peculiar rights in a manner no less clear and certain. Historically, the States existed also from the beginning. The Constitution recognized them, and provided for the creation of new commonwealths. The Government which the nation called into being is built upon the States as separate societies; without them, it would vanish. They and their separate and local rights and powers are inseparably bound up with it, and cannot be destroyed without blotting out the present system. The Supreme Court has thus, in this judgment, placed the nation and the States upon exactly the same footing; whoever weakens the one, weakens the other; whoever denies the historic origin of the one, denies the same origin of the other. As we have in this theory the greatest security for the nation, we have also the greatest security for the several States, so that it may be adopted with equal faith by these who would maintain the supremacy of the Union and by those who would preserve local self-government. The opinion of the Chief-Justice was concurred in by all but three of the judges, and was adopted as a formal expression of the doctrines which were to guide the court in their treatment of the great questions of constitutional construction which might come before them.

The positions of this most important judgment have been repeated on several subsequent occasions, and they finally received the almost unanimous sanction of the court in the well-known case of Day and Buffinton, decided at the last term. As this case involved the power of the United States to tax the salary of a State judge, it again became necessary to examine into and determine the relations of the two political societies, the nation and the State. Mr. Justice Nelson delivered the opinion, which was concurred in by the entire bench, with the single exception of Mr. Justice Bradley. Again we are told that "both the States and the United States existed before the Constitution." The arguments of the Chief-Justice are reiterated. "The people," it is said, "established a more perfect union by substituting a national government, acting with ample powers directly upon the citizens, instead of the confederate government." We find here no trace of the exploded dogma that the originally sovereign States created the government, and surrendered to it some important functions. Fifteen years ago Mr. Justice Nelson would have probably used such language; but the court has moved during the last decade, and this progress has been conspicuously noticeable in its oldest members. Side by side with this strong assertion of inherent nationality, the rights of the States, as recognized in and protected by the Constitution, are maintained in the most emphatic manner. The true position is reached that the Constitution which created the General Government for the nation adopted the States and made them essential parts of the entire system, so that politically the central administration and the local administrations draw their life from the same source, and must stand or fall together. This theory is certainly a great advance upon the methods used by Webster and Marshall, and it should be able to reconcile all conflicting schools. If it can command the assent of such representative men as Justices Miller, Strong, and Swayne on the one hand, and Justices Clifford, Nelson, and Field on the other, it will surely be accepted by all parties, and by all good citizens, except the few Bourbons who will not learn the lessons of the war.

ENGLAND.—THE TICHBORNE CASE.

LONDON, June 16, 1871.

ONE topic of conversation at present engrosses the attention of all the world—by which phrase I, of course, understand a certain number of human beings in respectable clothing, who live within a circle whose centre is Charing Cross, and whose radius may be reckoned at about ten miles. I may, indeed, give a rather wider sweep to the title on the present occasion, and my proposition will still be true. The absorbing topic of which I speak is the trial which in future collections of *causes célèbres* will be known as the Tichborne Case. I know not how the interest taken in the story may spread across the Atlantic, nor how far I am communicating a piece of superfluous information, when I say that, if you wish for a story to rival the most exciting of sensation novels, or for a puzzle as amusing as that which has hitherto been raised over the authorship of Junius, you cannot do better than study the reports of this apparently endless case. The question is, as I may briefly notice, whether a very fat and vulgar person, 350 lbs. in weight, and of the illiterate Cockney type in his speech and manners, is or is not the same as the slim heir to an ancient family, who sailed from Chili for Australia some seventeen years ago, and was supposed to have been lost at sea. According to the story of the present claimant, he was picked up by a passing American ship, landed in Australia, and there led a vagabond life for twelve years and more, until he heard that he had become heir to the family estates of £25,000 a-year. Then he thought it well to return to his affectionate mother, who still survived, and who recognized him as her son. A number of old fellow-officers, servants, and relations were convinced of his identity after a time. Others hold out and maintain that the transformation supposed is impossible, and that the baronet is really a butcher, and even has been crammed by designing persons with the information necessary for his imposture. It is a very good rule for papers never to discuss such cases whilst they are still under trial; and, following the precedent, I shall say nothing more than that at present there is a very curious conflict of evidence. I am the more bound to silence, as it is highly probable that this letter will reach you and have time to be printed and returned to England long before the case is decided. The evidence is, as you may easily guess, voluminous, and examinations and cross-examinations spin themselves out to the most interminable lengths. The unlucky claimant is breaking down, according to his friends from ill-health, according to his enemies by way of shirking enquiry, and can only be tortured for a few hours in the day: in short, the boldest prophet can hardly name a day for the conclusion of the trial, and the less eager readers of news are beginning to break down. I hardly know whether or not to be ashamed of taking an interest in such a story. Undoubtedly, it matters very little to humanity in general whether A or B has the luck to enjoy the particular income in question; yet, after all, sympathies will not quite follow the precepts of philosophers, and if an amount of intellectual labor has been applied to solving mere puzzles, such as Junius and the Man in the Iron Mask, which would have sufficed for important scientific discoveries, at least it has produced a good deal of harmless amusement. Tichborne is, perhaps, coming up to replace Junius; for I think that few impartial people will doubt that Mr. Chabot and Mr. Twisleton have between them given an impulse to the Franciscan theory, which will pretty well serve as a *quietus* to that much-vexed problem.

And yet we have the further excuse that it is rather difficult to find other topics of domestic interest. Here are a couple of very respectable murders, as murders go nowadays, waiting for investigation, and, of course, for those who care, there is the regular supply of sporting and similar intelligence. But Parliament has become all but intolerable for the present. The policy of obstruction, of which I have already spoken to you, is being pushed to extremes. All the colonels in the House of Commons—and their name is Legion—rise night after night, talking endlessly, always repeating the same arguments against the Government measure. The majority has again rallied round Mr. Gladstone to meet these tactics. They vote doggedly and silently, and gradually force the bill forward. Every now and then the Radicals imitate a bit of the Conservative tactics. Six hours of talk were wasted two nights ago in discussing an amendment proposed by one of the Radical wing, which everybody knew could not be carried, and which was ultimately rejected by an immense majority; and yet the supporters of it professed to be anxious for the success of the Government measure. In short, what with Mr. Gladstone's loss of prestige, the jealousy which the Radicals entertain of his principles, the want of any strong feeling in the country on the army bill, and the absence of anything very satisfactory in the measure itself, the debates seem likely to last almost as long as their more popular rival, the Tichborne trial. It is totally impossible for anybody not familiar with a number of technical details as to British military organization to follow the ins and outs of the discussion; and I shall not trouble you with any details upon the subject. At present, it is enough to say that rumors are beginning to be heard of a probable intention of Government to divide the bill, and to pass during the present session only that part—by far the most important part, it is true—which relates to the abolition of the purchase system. Whatever may be the result, it is impossible to look without much annoyance upon the amount of time wasted during this session. The forms of the House of Commons provide innumerable entrenchments behind which a majority may successively rally in order to assist the passage of an obnoxious measure. When there is any strong popular excitement behind the majority, they may be carried by the moral pressure and the dread of constituencies. But when the feeling is at last conquered, as is the case at the present time, the obstruction to business becomes an evil of serious magnitude. We must have patience; but certainly this is the worst side of our system of parliamentary government.

Perhaps it is not out of place to notice the curious success of a couple of squibs, significant of the present state of feeling. I imagine that you already know the name, and, perhaps, have looked at the original of the little allegory about Dame Europa's school. Its success was enormous, measured by the number of copies sold, and it is said that the author has been so encouraged by his lucky hit as to have immediately adopted the profession of literature. He has published a novel, which—if I may judge from the reviews—will go a long way to discount any glory that he may have acquired, and will probably learn by experience the truth of the proverb about one swallow not making a summer. The other success of which I spoke is the story of the Battle of Dorking, which appeared in last month's *Blackwood*, and which is now published separately. It is very cleverly written, though, perhaps, the design counts far more in its popularity than the invention. The author narrates an imaginary invasion of England by the Prussians, and sets forth the various calamities likely to happen, in case of invasion, from the utterly unprepared and disorganized state of her militia and volunteers. Perhaps we are not very much frightened, though we have always a taste for alarmist literature. We fortunately have the Channel and a fleet which

is likely to present some difficulties even to German strategists, supposing that a war should ever take place between the two countries. Yet this little performance, like the other, may be quoted as indicating the existence of a considerable amount of disgust at the position occupied by the country in Europe, and a desire to make ourselves more capable of taking our own part in case of need. There would, indeed, be much to do before we could possibly join issue effectually with the vast military organizations of Europe. Whether it is desirable that we ever should do so, is another question; but, at least, our statesmen should aim at promoting absolute security at home; and I believe that if Mr Gladstone's Government had had the courage to bring in a vigorous measure for the purpose, they would have found no want of support.

Meanwhile, they have done one action, for which I, at least, and I believe a great majority of Englishmen, are sincerely obliged to them. The Treaty with the United States has, on the whole, given general satisfaction. There have been, indeed, some mutterings of discontent from those who think that we are making undue sacrifices of national dignity; but the greatest mass of public opinion is decidedly in favor of the general justice of the principles involved in the Treaty, and looks forward with sincere satisfaction to the prospect of a better state of feeling between the two countries. It is a subject on which it is difficult to speak without running into platitude; but I may be permitted a word of congratulation on an event which could have been so little hoped in the bitter feelings which existed a few years ago.

Correspondence.

MR. CHENEY'S REBELLION.

To the Editor of the Nation:

Sir: There appeared in your issue of June 15 a dispassionate and clear article on the subject of "The position of Mr. Cheney and his friends in the controversy now raging between them and Bishop Whitehouse of Chicago." So well taken were its positions, that I feel that, if unanswered, it may have an influence prejudicial to Mr. Cheney. In justice to him, therefore, as one of his friends, I ask to be permitted a few words in your columns.

The argument of your article was in substance this: Mr. Cheney has been tried before an ecclesiastical court. He has been found guilty, and sentenced to deposition from the clerical office in the Protestant Episcopal Church. Therefore, he should submit, and his friends should not encourage him in refusing to do so. That he and they pursue a different course, you say "is, to the ordinary mind, perfectly incomprehensible."

In reply, I venture to fall back on the established axiom, that there is no rule without an exception. Revolution is certainly justifiable in extreme circumstances. In the present case, were the facts all known, I think you could not resist the conclusion that the action of the Bishop in pronouncing sentence may properly be called "persecution."

Suppose a law providing for a proper disposition of all small-pox patients, by removal from private houses. Suppose, in the jurisdiction in which you happen to live, a construction is placed upon that law which results in the practice of careless and dangerous disposition of the patients. Suppose your wife to be attacked by the disease, and the officers of the "law" to come, empowered to make such careless disposition in her case. Which would you feel to be your duty? To permit the gross outrage upon your sacred relation, or to oppose it with your life? I think the latter. Why? Simply because there is palpable injustice done. *This* the ordinary mind can understand. It can, I think, *also* comprehend that whatever may be said about your leaving the jurisdiction in which the law is so much misconstrued, to do so might not only be impracticable for many reasons, but, if practicable, would be to encourage such misconstruction.

The case surely becomes stronger when the attitude of resistance is taken in defence of a vital principle of Gospel truth.

So long as the human mind is constituted as at present, the right of revolution must be admitted in every organization. Just so long shall we be liable to be subjected to unjust enactments; and when these are pressed upon us beyond endurance, then we are justified in rebelling against them.

Mr. Cheney and his friends are satisfied that the Protestant Episcopal Church at large would not condemn him to deposition from its ministry. Therefore, his friends stand by him in his resistance of the verdict of a court, and the sentence of a Bishop, whose judgments are, in their view, subservient to a narrow and uncatholic policy. It is, in my opinion, one of the greatest misfortunes that the legislation of our church admits of no appeal from a diocesan sentence. Were such an appeal possible, we should be saved the disagreeable duty of a resort to rebellion.

B. O. D.

New York, June 19, 1871.

["B. O. D.'s" illustration is not a good one, because it does not take into account the purely voluntary character of the organization to which Mr. Cheney belonged. His case resembles that of a man who, having joined an association for the establishment of a small-pox hospital, and having solemnly bound himself, in case he had to resort to it for the treatment either of himself or his relatives, to abide by the rules and regulations of its managers, should, on his wife being conveyed thither, refuse to allow her to follow the prescriptions of the house-surgeon or take the doses prepared by the apothecary; and on being then requested to remove her, should set the officers at defiance, and call in assistance from the street to enable him to hold the ward against all comers. Mr. Cheney is a minister of the Episcopal Church because he chose to be so; and he chose to be so, we take it, because he believed the Episcopal form of church government to be of divine ordinance, and the most effective and convenient. He did not vow, in joining it, that he would obey the Bishop when he pleased; he vowed he would obey him as bishops are and have been usually obeyed; and he vowed it with the full knowledge that bishops are men, and afflicted with the usual infirmities of men. Nor did he undertake to submit his professional conduct to the jurisdiction of an ecclesiastical court in case its decisions were in accordance with what he (Mr. Cheney) believed to be the sentiment of "the Protestant Episcopal Church at large"; he undertook to accept its decisions as the judgments of the church; and he knew when he did so that there was no appeal from a "diocesan sentence." As we have said, we understand a man's leaving an organization because he does not like its ways; but that a man should justify disobedience to rules to which he has himself subscribed, on the grounds put forward by "B. O. D.," is, to our mind, considering that the argument comes from a body of educated men, a striking sign of the loose way of thinking on all matters of contract and obligation which the labors of the Sentimentalists have, during the last twenty years, been introducing into nearly every department of human conduct. "B. O. D.'s" observations on the "right of revolution" are another illustration of the same thing. The right of revolution is undoubtedly an ecclesiastical as well as a civil right; but revolution does not consist simply in rebellion; it means rebellion with the view of substituting a new government for an old one, either by displacing the old one, or by leaving its jurisdiction, and founding a new church, or a new state. A man who rebels simply with the view of releasing himself from the restraints of authority, or escaping the consequences of a particular sentence or enactment, and with no aim beyond this, is not a revolutionist, but a brigand, and can claim nothing but a speedy trial, and as lenient a sentence as the interests of society will permit. With ecclesiastical revolutions we are all perfectly familiar. The Anglicans made one when they threw off the authority of the Bishop of Rome, and set up another church government of their own; the English Puritans made another when they left the Anglican Church, on finding its rules intolerable, and established a church of their own, with different rules and a different court of last resort. The Free Church of Scotland and the New School Presbyterians did the same thing. But Mr. Cheney and his friends refuse to exercise the right of revolution, and insist on being simple rebels. They refuse to overthrow the old government, or secede and set up a new one, but they refuse also to obey its laws. Mr. Cheney will not treat Bishop Whitehouse as a lawful bishop, or the sentence of his court as a valid sentence; and yet he will not provide himself with any other bishop, or select any court to which he will submit. He persists, in short, in establishing himself in "a state of nature," and living by such rules of eternal justice as he extracts from time to time from his own breast. "B. O. D." will find persons outside the Church by whom some other name than anarchical will be given to such conduct; but we do not think they will be persons to whose judgment on any other subject he would pay much attention. The *Protestant Churchman* assails our position also

on the ground that the Episcopal Church is "comprehensive," and permits many varieties of opinion within its limits. This may be true, but however "comprehensive" it may be, it *has* limits. Who defines them? If every minister may define them for himself, anybody may fill its pulpits, and preach any doctrine, which is, of course, an absurd supposition.—Ed. Nation.]

PAYMENTS UNDER THE LEGAL TENDER DECISION.

To the Editor of the Nation:

Sir: Your objections to the reconsideration of the acts of the Supreme Court of the United States evince you as one unlikely to be too much biassed in favor of those desiring to benefit by said reconsideration, but I beg to know if you agree with the lawyers, that a sufferer by the reversal of the Legal Tender Act is not entitled to any favor now that that august body reverses its reversal?

Could no part of any payment made in gold, under protest, on February 8, 1870, be recovered under the new act?—Truly yours,

K.

New Haven, June 20, 1871.

[As the *Nation* is not a legal journal, we suppose that "K." desires to know our opinion upon the abstract justice of her claim to recover back money paid after the first decision of the Supreme Court and before its recent reversal. We must say that, from the standpoint of equity and justice, the obligation to pay just what it was understood would be paid when the debt was originally contracted, seems to us stronger than any purely legal right that might exist to recover back what turns out to be an excess of payment under the last decision of the court. As a technical question, we agree with the lawyers referred to by "K.," that, as the payment appears to have been voluntarily made in gold, no amount of "protesting" at the time would change its nature and enable the debtor to recover it back, now that he discovers his mistake as to the law.—Ed. Nation.]

AN ARGUMENT FOR THE VERONESE.

To the Editor of the Nation:

Sir: Though unwilling to express an opinion respecting the much-vexed question of Shakespeare's "*runaways*," I think Mr. Spencer's most ingenious version should want no aid that it may derive from Shakespeare's handwriting. Please observe the scrawl appended to my note—the first letter is an *R*, the last syllable *way*. Would not the inspectors of Shakespeare's own writing of the word, if so written by him, be disposed to find *Runaway*, which they might improve by adding an *s*? Now, with the exception of the *o*, which is my own, the whole is just the way in which Shakespeare would have written Veronas, if he wrote as he has written his own name, which I find, in *fac-simile* of his autograph, with many others, at the end of S. C. Hall's "Book of Gems," London, 1836. I add, first, that the word *Verona's* makes the rhythm of the line complete, slurring the *e*; second, in the folio of 1632, I find *Veronessa* (not *Veronese*), which is a little more unmanageable, I think, for Mr. Spencer's purpose than *Veronese*.—Sir, your obedient servant,

To the Editor of the Nation:

Sir: I had no intention to intrude upon your columns again with regard to Shakespeare's "Runaway," but the above polite note, which came to me through the post-office, is evidently meant for you. It certainly goes some way to show that there was nothing in the probable manuscript of the poet to prevent the false reading of "runaways" for "Verona's."

There is nothing to say with respect to Mr. Hudson's preference for "runaways" over any other version, save to make the general remark that it seems to be a preference of that which is less obvious over that which is simple and satisfactory. It has often struck me that some of his critics went away from Shakespeare's path of thought in seeking recondite explanations for all he said, and metaphysical interpretations for all his figurative language. In spite of his profound depth of thought and his ethereal delicate fancy, there was a solid English basis of beef and beer at bottom of the entire man, a groundwork of hard, sound common-sense, firm and immovable as the bed-rock of a river. He often ran away with fancy, but never permitted fancy to run away with him. Hence, when Shakespeare claims to have dined on sack and pudding, and some one else tells me he means to say nectar and ambrosia, I think I am justified, by the character of the man, in holding to the more obvious diet. And hence, if there are no practical difficulties in the way, I am inclined to prefer an obvious "Verona's eyes," of which an ingenuous maiden so circumstanced would be poignantly conscious (and the poet was the very man to "put himself in her place," and sympathize with this consciousness), to a hypothetical "runaway's eyes," which require to be figuratively, and I was going to say metaphysically, interpreted, and about the meaning of which scarcely any two critics are exactly agreed.

As I said before, however, I am not a Shakespearean critic, and do not hold myself competent to decide even the least matter of debate concerning his text—much less a point so often disputed, and so absolutely in controversy, as the one referred to. Edward Spencer.

THE MASSACHUSETTS COTTON-WEAVERS.

To the Editor of the Nation:

Sir: I am, and have been from the first, a constant reader of your paper. You very properly lay great stress on the importance of getting correct statistics. In your article on "The Labor Question in Massachusetts," you use the following language: "On the contrary, we are filled with the conviction that there is a radical wrong somewhere which has brought about this change, from the time when Lowell factory-girls earned marriage portions with two or three years' labor, and found time, after working-hours, to write, edit, and read a very respectable newspaper."

The idea intended to be conveyed is undoubtedly this: When the *Lowell Offering* was printed, many years ago, edited by one or more factory operatives, those employed to work in the mills could earn more money and had more leisure time than the operatives occupying their places to-day. You would find, by going to the books of the corporations, that the same class of help, say the weavers, make more money per week in gold to-day than at the time you referred to, and the number of hours worked per week has been reduced from about 72 to 66.

It is nearly forty years since I went from home to work in a cotton-mill, and I have been connected with the system in some way ever since. I dislike false statements, whether made in the interest of reform or conservatism. I only wish to add that I am confident that skilled labor was never so well paid in gold since my remembrance, for any length of time, as during the last two years in this vicinity. We might just as well be sorry that men are not born full grown as that all laborers are not "men of property and standing." D. G.

Notes.

Messrs. James R. Osgood & Co. will republish John Francis Maguire's "The Next Generation," a novel of about the time assigned for the Battle of Dorking, and in which the supposed logical consequences of woman suffrage are freely depicted.——"Tom Pippin's Wedding," by Mr. Pullen, author of "The Fight at Dame Europa's School," is among the announcements of Messrs. J. B. Lippincott & Co., and we believe it will disappoint nobody who rates at its proper worth the lucky brochure which preceded it, and which the publishers first applied to were only commercially mistaken in declining to touch. The same house will also issue the following works: "Wear and Tear; or, Hints for the Overworked," by Dr. S. Weir Mitchell; "The Life of John Bunyan," by D. Hurshel; and a "Life of Taulerus," by Peter Lossing.——Messrs. A. D. F. Randolph & Co. announce: "The True Life of Calvary," by Fisher Howe; "The Biblical Museum," by James C. Gray; and these tales: "Episodes in an Obscure Life;" "The House of De Valdez," by Frances Browne; "David Lloyd's Last Will;" and "The Clackitts of Inglebrook Hall," by Mrs. Prosser.——"The Domestic Life of Thomas Jefferson," compiled from family letters and reminiscences by his great-granddaughter, Sarah N. Randolph; and "Reindeer, Dogs, and Snow-shoes," a journal of Siberian travel and explorations, made in the years 1865-67, by Richard J. Bush, late of the Russo-American Telegraph Expedition, are on the list of the Messrs. Harper.——"Mount Washington in Winter," to be published by Messrs. Chick & Andrews, Boston, will give us an inside view of life on that peak as experienced by the scientific expedition which wintered there last season, all the while in communication by telegraph with the world below. The observations on the appearances of nature under such conditions may be expected to be novel and entertaining.——The American Philological Association holds its third annual session at New Haven,

commencing on Tuesday, July 25, at 3 P.M. The President, Rev. Dr. Howard Crosby, will deliver the annual address on the evening of the same day.

—While Mr. Dall and his associates are exploring the islands and inlets on the west coast of Alaska, the best map of the Yukon River that has yet appeared (his own not excepted) has been published from the office of the Chief of Engineers, War Department. The survey was made under the command of Capt. Chas. W. Raymond, U.S.A., with the help of astronomical instruments, from July to September, 1869, and embraced the stretch from Fort Yukon to the sea—1,100 miles, or about one-half of the full course of this stream, the longest by far upon the western coast of America. The map is on the scale of $\frac{1}{600\,000}$, and is so minute in its details as to show even *caches* and graves. Included within it is an outline map of Alaska and adjacent territory, giving the relative position and, so far as known, the entire length of the Yukon and its tributaries, and a still smaller map of the Aleutian Islands. Captain Raymond's report of his reconnoissance (for the expedition was too limited in point of time to make an exhaustive and absolutely correct survey) is printed as Executive Document No. 12, Senate, XLIId Congress, and furnishes pleasant reading for midsummer, though any one in the habit of thinking of Alaska as one mass of ice and snow should make haste to compare this impression with two or three sentences on p. 14 of the Report: "The swarms of mosquitoes and gnats which abound on the river during the months of June and July proved a very serious annoyance. When the boat was not in motion, we were obliged to wear face nets and gloves, and on one occasion an attempt to make sextant observations failed completely from this cause." Capt. Raymond's chief errand was to ascertain if Fort Yukon lay within the territory acquired by the United States, since the Hudson's Bay Company had possession of it. He found that it clearly did, and hoisted the flag over it; but he is evidently of opinion that the value the place is likely to have for the commercial interests of the United States would not warrant a journey of a thousand miles to secure it. He sums up the capacity of the region for the fur trade by saying (p. 39) that the amount "will at most furnish a business for one company, and employment on the river for about fifteen men." The timber does not begin for a hundred miles from its mouth, and "cannot for many years become an article of commerce, because large supplies, superior in quality, and much more accessible, exist nearer the market." Much the same may be said of the fish, in which it abounds. As for agricultural resources, they do not exist, and "no valuable mineral deposits in workable quantities have been found in the vicinity of the Yukon River up to the present time."

—The loud complaints which arose against the British Post-office immediately after it had assumed control of the telegraph lines throughout the kingdom, soon died away; and though the transfer was made in face of the most formidable difficulties, the result has been a complete justification of the undertaking. When the subject arises again in Congress, as it can hardly fail to do, the report of Mr. Scudamore, Second Secretary to the Post-office, will furnish some very forcible arguments for consolidation in this country also. Some of his statistics are highly interesting. To show, for example, the great extension given to the public's facilities, he states that of all the messages handed in at Birmingham, Leeds, Liverpool, and Manchester, from 14 to nearly 40 per cent. were at stations previously unsupplied with accommodation; while in London, deliveries which used to take hours are now made within an average of ten minutes. The cost to the public of inland messages, including porterage beyond the free delivery, has been reduced from 1s. 7d. to 1s. 1¼d. or 1s. 1d. Any sender of a message can now reckon the cost of it (the standard rate is one shilling for twenty words), and a great many messages are handed in prepaid; and the Government even goes so far (not without the protest of the stationers) as to furnish frequent senders with books of message blanks on which the names and addresses of the senders are printed, and in some cases of the receivers also, and to provide envelopes with printed addresses for those who receive numerous messages. Whereas the telegraph companies had but 1,869 instruments, the Post-office had, last August, 4,153; and whereas the former had but 2,514 clerks—viz., 2,035 males and 479 females—the Post-office employed, in the month just mentioned, 4,913 clerks and assistants, of whom 1,535 were females; the messengers not being counted in either case.

—Many of the women clerks were secured by recalling those who had been discharged on marriage by the telegraph companies. Of this class as a whole, it is said (we quote directly from the *Times*):

"They have the essential qualifications of quickness of eye and ear and delicacy of touch, are more patient than men during long confinement to one place, and take more kindly to sedentary employment; that the wages which will draw men from but an inferior class will draw women from a superior class, and hence they will generally write better than the former and spell more correctly; and that they are less disposed than men to combine for the purpose of extorting higher wages. Where the staff is mixed, the female clerks raise the tone of the whole staff. Civil servants expect their remuneration to increase with their years of service, even though from the nature of their employment they can be of no more use or value in the twentieth than in the fifth year of service, but women will retire for the purpose of getting married as soon as they have the chance, and only those will return to the service whose married life is less fortunate than they hoped. Mr. Scudamore concludes that if we place an equal number of females and males on the same ascending scale of pay, the aggregate pay to the females will be less than that to the males; and there will be fewer females than males on the pension list."

In the training-schools of London, it is stated that the average time occupied in instructing a male learner is two months, and a female three months. In little more than twelve months the department "added to the effective telegraph force of the country not less than 2,000 persons who knew nothing whatever of telegraphy prior to the transfer." Even the uncouth messengers, "apparently a set of irreclaimable scamps," were taken in hand, paid a rate per message delivered as their only wages, drilled in walking, and obliged to keep themselves clean. The social effect of the change thus appears not inconsiderable, while the throwing open the lines to the press without distinction or preference has produced a great increase in business, and cannot fail to improve the quality of the newspapers, and enlarge the intelligence of the people.

—From the English trade-organs we glean the following titles of works of interest already or soon to be published. The late European struggle is illustrated in "My Experiences of the War between France and Germany," by Archibald Forbes, a work in two volumes; "The Medical and Surgical Aspects of the Siege of Paris," by C. J. F. Stuart Macdowall; "The Campaign of 1870-71," reprinted from the *Times;* "Our Adventures during the War of 1870-71," by two English ladies, Emma Pearson and Louisa M'Laughlin; and "Modern War; or, The Campaign of the First Prussian Army of 1870-71," by Sir Randall Roberts, the London *Telegraph's* "special." The last two works are also in two volumes. Other historical works deserving attention are: "Outlines of Indian History," from the earliest date to the resignation of Sir John Lawrence, by A. W. Hughes; J. Murray Graham's "Historical View of Literature and Art in Great Britain, from the Ascension of the House of Hanover to the Reign of Queen Victoria"; and Col H. A. Ouvry's translation of Nasse's well-known work on "The Agricultural Community of the Middle Ages, and Inclosures of the Sixteenth Century in England." In the pursuit of genealogies, these two works will be found useful here: "The Original Lists of Persons of Quality, Emigrants, Religious Exiles, Political Rebels, Serving Men Sold for a Term of Years, Apprentices, Children Stolen, Maidens Pressed, and others who went from Great Britain to the American Plantations between 1600-1700," compiled with full particulars from MSS. preserved in the State Paper Department (London: John Camden Hotten); "An Analysis of the Domesday Book of Norfolk," by the Rev. G. Munford, who is also the author of "An Attempt to Ascertain the True Derivation of the Names of Towns, etc., in the County of Norfolk." Among books of travel, the Rev. Charles Kingsley's "At Last: A Christmas in the West Indies," is the most promising; and this one appears to be a pioneer in its way: "A Breeze from the Great Salt Lake; or, New Zealand to New York by the New Mail Route," by G. E. Ollivant. We conclude with a miscellaneous list: "The Life and Letters of William Bewick, the Artist," by Sir Thomas Landseer; "A Collection of Soldiers' Songs," by A. Wyatt Edgell; "Early Typography; or, Letterpress Printing in the Fifteenth Century," by William Skeen; "Memories of the Library of the British Museum from 1835 to 1871," by R. Cowtan, who tells how its books were got together and something about them; "Hamlet," an essay by Arthur Meadows; "How the French make Fowls pay a Profit of 500 per cent. per annum," by Kinard B. Edwards; and "Eight Years' Experience of Mothers' Meetings," by Mrs. Goodwin Hatchard (a religious work).

—Another great Englishman has, like De Morgan and Herschel, joined the illustrious dead of the present half-year. George Grote died on the 18th instant, at Clayhill, Kent, in the 78th year of his age. Like Herschel, too, he was of German descent, and exhibited in the great work of his life all the best qualities of the German stock. He was not a university man, nor, though bred for business, was he a business man in an American sense, or really more than a silent partner in the great banking-house of his father. He was a so called philosophical radical, but there was nothing

wild or visionary in his radicalism. Sydney Smith's saying, that "if the world were a chessboard, he would be a great politician," did him much injustice. He had an unusual proportion of strong Anglo-Saxon common sense. In 1832, he was a Member of Parliament for the City of London, and took a conspicuous stand in favor of the ballot. Soon after the Swiss secession of 1847 was so neatly put down by President Ochsenbein, Grote contributed to the *Spectator* a very able series of letters on Switzerland. His "History of Greece" took ten years to publish, and represents twenty years of preparatory work. His scholarship was of the Oxford rather than the Cambridge type—that is, he cared more for matter and historical knowledge than for grammatical minutiæ. His style, which was good in argument, was poor in narration, and grew worse as he grew older. Some of the "Plato" is hardly intelligible, and thoroughly disfigured with Hellenisms. The three great points of his Greek writings were these: (1) his rejection of all Greek history prior to the First Olympiad as myth; (2) his defence of the Athenian Democracy, both people and leaders, against the English and German Conservative writers; (3) his vindication of the Sophists (as lecturers on and professors of moral philosophy and ethics) against the received German conception of them. In his social relations, Grote was a most hospitable and genial man, universally liked by all who knew him. His wife (formerly Mrs. Harriet Lewin, and a very able and accomplished woman—author, among other things, of a "Life of Ary Scheffer") survives him, but he leaves no children.

—The recent death of the Rev. Thomas Toke Lynch, minister of Mornington Chapel, London, is a greater loss to religious literature than will be appreciated here, where his works were too little known. He had published "Memorials of Theophilus Trinal, Student" (1850), "Essays on Some of the Forms of Literature" (1853), "Lectures in Aid of Self-Improvement" (1854), "Among Transgressors" (1860), "The Mornington Lecture" (1870), a volume or two of sermons, and "The Rivulet" (1855). The appearance of the last-mentioned, a seemingly innocent volume of 100 original hymns, occasioned a furious pamphlet war, which made no little stir among English Dissenters at the time. The book and its author were violently assailed by Dr. Campbell, of *The British Banner*, and others. Newman Hall, Thomas Binney, and several more Independents of that stamp stood by their friend, Mr. Lynch, and he himself, during the progress of the controversy, levelled some hard blows at his assailants. He was a man of feeble body but indomitable spirit, a bold thinker and frank utterer of his thoughts, with a wholesome abhorrence of commonplace, and no little subtlety and refinement of mind and style; an intense lover of nature, and in some sense a born poet. The writer most like him, though with more versatility and popularity, is Mr. George Macdonald. Lynch's own favorite among his books was "The Rivulet," as it is that of readers who have taken the pains to understand it; for freshness of thought, deep experience, and quiet devotion of an uncommon kind, it is precious to not a few readers. It is in contemplation to reprint here some of the works of this perhaps the most persecuted Englishman, as he was one of the brightest teachers, of our day.

—Our London correspondent, in his letter on a preceding page, remarks that few impartial readers of Chabot's "Handwriting of Junius Professionally Investigated" can fail to be convinced that the vexed question of identity has for ever received its quietus, and that, accordingly, Junius and Sir Philip Francis were one and the same person. The work is a costly one, and, perhaps, not many copies have reached this country. We do not, for our part, happen to have seen it, and can only judge of its merits by the reviews of it in the English press. In spite, however, of the *Quarterly's* anticipatory endorsement of it, echoed by the *Academy*—which has been justly censured as a breach of professional etiquette, Mr. Murray being at once the publisher of the book and of the *Review*—we are of opinion that the Franciscan theory has, if anything, been weakened, certainly not finally established. At all events, we venture to assert that no impartial reader who will turn from the *Quarterly* and the *Academy* to the reviews in the *Athenæum* and the London *Times* (of May 22), will feel that the question has been settled, however much he may still incline to believe in Francis. The *Athenæum* brings out very clearly the weak points in Mr. Chabot's analysis of the Junian handwriting, and the general worthlessness of the testimony of experts of this class; while the *Times'* reviewer is especially strong in showing what a poor service it is to Francis to prove him the anonymous libeller and enemy of the men on whose favor he was intimately dependent, and the professed friend of men whom his autobiography shows him in private to have cordially hated and denounced. It is, in fact, more charitable to regard Francis as an impostor and a mystifier (after public rumor had thrust the unmerited honor upon him) than a coward and an ingrate; besides thus relieving ourselves of the necessity of explaining the marked inferiority of his compositions to those of the great unknown.

—Not long ago we briefly mentioned a work (Major Frank Bolton's "Telegraph Code," of which Messrs. F. B. Felt & Co. are the American agents) designed to reduce the expense and ensure the privacy of telegraphing, by substituting figures for words, a dictionary being provided to serve as a key. It is evident that the same or a similar system would answer for written correspondence, and there exists, in fact, in Munich a Central Pasigraphical Society, whose president, Anton Bachmaier, has just published an English, French, and German version of a Pasigraphical Dictionary and Grammar. These works, small as they are (18mo, containing together, in each case, only about 200 pages), nevertheless admit of intelligent communication within a range of 4,334 ideas, between two persons who understand not a word of each other's language, but who each possess a dictionary in the vernacular, and have studied the grammar—that is to say, the syntax—of the system. Pasigraphy thus, in the words of the enthusiastic editor, "reunites people whom languages separate," and makes, it must be allowed, a fair approach to that universal language which seems likely to be reached in no other way so easily. Mr. Bachmaier's works may be had by the curious of Mr. Trübner, Paternoster Row, London.

—We are glad to learn from *Trübner's Record* that the publication of the *Revue Celtique* has only been delayed by the war, and that it will be immediately resumed with the second number, which was almost finished when the war broke out. Renan contributes to it a note on the name *Abailard*. From the *Record* we borrow also our information in regard to two works on Alsace: "Geschichte des Elsasses von den ältesten Zeiten bis auf die Gegenwart," by Drs. O. Lorenz and W. Scherer; and Volumes VIII. and IX. of the "Chronicles of the German Cities from the Fourteenth to the Sixteenth Century," edited by Professor Hegel. The first-named is, of course, a book for the times, Dr. Scherer's part in it being the literary history of Alsace; the appearance of the second only accidentally coincides with the recovery of her ancient province by Germany. It embraces the Strassburg chronicles of Closener and of Jacob Twinger von Königshofen, of which latter the original manuscript perished in the bombardment of the city, along with a full series of MS. chronicles from the fourteenth to the eighteenth century, which are irretrievably lost; and it shows, according to our authority, "that Strassburg from its very beginning, and as long as it had a history of its own, had proved itself to be a genuine Imperial German city; and that Alsace had understood its mission as the German frontier-land on the Vosges, viz., to keep the frontier watch of the German Empire against French lust of conquest."

— It can hardly be said that General Trochu has maintained his character for anything but honesty and patriotism since the publication of his exposure of the defects of the French military system. The limitations of his intellect were seen in his proclamations and promises during the siege of Paris, and in his weak, unsoldierlike, and (considering its possible consequences) almost criminal advice to the Parisians to shut their gates against the Prussian occupation after the surrender; and that he is a man of narrow mind was again shown in his late vindication of the Government of National Defence before the Assembly at Versailles. He there charged the disasters of the French arms upon English luxury and Italian corruption —two invasions of which the history has evidently yet to be written. If he is right, however, England has paid dearly for the French Anglomania, and Italy for the unnamed vices now traced back to her by her neighbor. Across the Channel, as across the Alps, there has been for thirty years and upwards a steady counter-current of nasty literature and indecent drama, which no passport or custom-house regulations could withstand. The ocean itself has been traversed by it, and our people been made the innocent victims of English and Italian guiltiness; the "Grand Duchesse" and "Belle Hélène" still defile our stage, and our print-shops still abound with seductive French lithographs of life among the demi-monde; and it is a singular comment on Trochu's absurdities that a favorite subject with these artists of the Mabille is the full-blown Englishman as the butt of frailty.

LIFE OF MAJOR-GENERAL GREENE.*

We have so recently reviewed the second volume of the life of Gen. Greene, that it would almost seem as if nothing more were necessary now than to call attention to the completion of the work, with a word or two

* "The Life of Nathanael Greene, Major-General in the Army of the Revolution. By George Washington Greene, author of 'Historical View of the American Revolution,' 'Historical Studies,' etc." In three volumes. Vol. III. New York: Published by Hurd & Houghton; Cambridge: Riverside Press. 1871. 8vo, pp. 571.

in recognition of the high merits which have distinguished every part of it. But excellent as each volume has been, this last volume is pre-eminently excellent. No doubt this is principally due to the subject-matter. So brilliant a military campaign as that here narrated might have lent fire to even a cold and sluggish pen. But it is a merit of the writer that he has been susceptible of so high a degree of inspiration. It is enough to say that the history of Greene's Southern campaign is every way worthy of its noble subject.

This volume has a unity of its own, being devoted—with the exception of a few closing pages—to the history of a distinct, connected, and complete series of military operations; not by any means an episode in the war, but a campaign which can be clearly described with hardly an allusion to contemporary events. The plan of the work, too, has a sort of epic unity and completeness, and has been evidently laid out with a good deal of care; while the varied succession of events gives to the history the greatest life and variety. We find here all the phases of military life, and all kinds of military history—descriptions of country and of character, battle, march, retreat, camp-life, hope, discouragement, with many entertaining episodes, all told in so apt and attractive a style as to make the volume one of intense interest. In the other volumes, there are many pages that one is tempted to skip, because of needless repetition or the unattractive nature of the quartermaster's work. In the volume before us, there is hardly a line that could be spared or that one would wish to alter.

The first chapter in the volume treats of the physical geography of the Southern coast—an admirable example of the correct treatment of geography in connection with history. As an illustration:

"But while the face of the country was abundantly watered, and a path seemed everywhere open from the sea-coast to the interior, the utility of these streams as channels of communication by no means corresponded to their size or their number. Those which emptied directly into the ocean were made difficult of access by sand-bars at their mouths which it required the guidance of a skilful pilot to cross. When the bar had been crossed and the river entered, a direct communication with the interior was in many of them still impeded by falls. And whenever the rain fell, as in those latitudes it often does, suddenly and in great quantity, the river presently rises with marvellous rapidity, and renders the passage from one bank to the other difficult and hazardous always, and often wholly impossible. We shall see these sudden swellings of the waters playing an almost providential part in some of the most critical movements of Greene's first campaign.

"Another obstacle to the navigation of these rivers is found in the marshes and swamps which line their course, extending sometimes one and sometimes even three miles inland, tainting the air with noxious exhalations, rendering the approaches to the waters difficult, and making it impossible to build upon their banks, as we build upon the banks of our Northern streams. The roads through them were always difficult, often impassable, and all around their borders, as well as in their deeper recesses, lurked the deadly rattlesnake and still more dreaded moccasin. Mosquitoes by myriads, thronging around the helpless traveller, annoyed him by their shrill song and poisonous bite. Years of the peaceful industry of a growing population were required to redeem these regions from the hands of a too luxuriant nature" (p. 3).

As an illustration of this, we find that in the movements just preceding the battle of Eutaw Springs, it was necessary for Greene to make a circuit of seventy miles to get at an enemy only sixteen miles distant.

This short and graphic chapter is followed by a brief account of Gates's disastrous campaign, and Greene's journey and first acts as commander. Then comes another remarkable chapter, containing an account of the brilliant group of subordinates who aided so largely in the successes of the Southern war—Morgan, Huger, Williams, Lee, Howard, Washington, Carrington, Davie, Sumter, and Marion. We wish we had room for the sketch of Daniel Morgan, perhaps the best of all these; but we must be contented with a part of the characterization of two men whose names are always associated, but who were very unlike—Thomas Sumter and Francis Marion. Sumter "comes before us tall, vigorous, dauntless, with a bold bearing and imperious brow, stern to look upon, fierce in his self-will, arrogant in his decisions, tenacious in his prejudices, resolute and vigorous in the execution of his own plans, remiss and almost lukewarm in carrying out the plans of others" (p. 122)—qualities that spoiled more than one well-laid plan of his commanding officer. Of Marion (p. 124): "His life forms one of those pictures upon which the mind loves to dwell, from the singular combination of rare qualities which it displays. . . . He was now twenty-six, small in frame, low in stature, but vigorous, active, and healthy. By nature he was taciturn and reticent, with nothing in the expression of his face to attract or interest a casual observer, but still inspiring confidence and commanding respect in those who were brought into intimate relations with him." "Without claiming for Marion those powers of combination which belong to the highest order of military genius, he must be allowed to have excelled in all the qualities which form the consummate partisan—vigilance, promptitude, activity, energy, dauntless courage, and unshaken self-control. While watching his enemy, he never forgot that his enemy might be watching him. He never permitted success to lull him into ill-timed confidence, nor failure to depress his energy. Fertile in resources, he was always prepared for sudden emergencies. Thoroughly self-possessed, he could always look calmly upon approaching danger. Quick in his conceptions, he was equally quick in the execution of them. As prudent as he was bold, he always chose his time and place with consummate judgment, and though constantly surrounded by vindictive enemies, and constantly exposed to death or capture by the restless genius and unscrupulous characters of the greater part of his own men, the lustre of his long and brilliant career was never dimmed by surprise."

Having thus introduced the heroes of his story, the author proceeds with a most vivid and interesting narrative, well illustrated, we will remark, with maps and plans. Throughout the volume he keeps to his old method of allowing the subject of the biography to display his own character, rather than analyzing it for the reader. And the characteristic that most strikes one who has thought of this Southern campaign especially as a brilliant one, and has been led by the earlier volumes to regard Greene as of a rather sanguine disposition, is the remarkable caution and thoroughness of preparation at every step. His invasion of South Carolina after the battle of Guilford is shown not to have been a mere headlong sally like that of Gates, but a piece of careful strategy. He even appears unduly anxious at times. We have been particularly struck with his instructions, on taking command, in regard to exploring the rivers (p. 66) and other preparations (p. 73)—which show the fruits of his experience as quartermaster-general, and the wisdom of which was amply proved by events which followed.

The character of this Southern war was largely affected by the dissensions among the people of the Carolinas themselves. The Tories appear to have been about as numerous as the Whigs; and from this resulted great perplexities, and excessive barbarities in the conduct of the war. But this dark picture is lighted up by examples of genuine heroism—Macon refusing to leave the ranks in order to take a seat in the legislature, until urged to do so by his commander; Lee asking to be put in "in some degree under Marion's command," for "it will please him, and I admire him"; Mrs. Motte giving aid in setting her own house afire, which was occupied by the British as a fort. There are also incidents of stirring adventure—the night expedition to John's Island, that to the Combahee, and the surprise of Wayne's camp by the Indians.

We learn little of the condition of the slaves or the nature of the slavery. There is some interesting discussion of the project of arming the slaves (p. 426). This had been suggested by John Laurens, was urged by Greene, and approved by Washington; but it was not possible to bring the people of the South to it. One is still more interested, in view of the fact that Greene himself became a slaveholder after the war, to learn what his opinions and plans were. It is certain that he disliked slavery, and it seems that he had devised a scheme for its gradual abolition, the details of which are unfortunately lost. His plan seems to have been that which was successful in England long ago—admitting the slaves to the tenure of land by copyhold.

The following passage contains a good specimen of Mr. Greene's narrative style: it is in the retreat of Greene, with Cornwallis in pursuit, after the battle of Cowpens, when Col. Williams, with the light troops, was covering the retreat, and keeping the enemy at bay:

"Day waned, and pursuers and pursued breathed more freely as they saw the grateful evening shadows deepen into night. 'We shall get some rest now,' said the men. But Cornwallis still held on, and Williams dared not halt. The night was dark, the wind was cold, and a drizzly mist filled the air. Suddenly the cavalry in advance saw the tree-tops before them lighten up as with the blaze of many fires. As the van pressed forward, the flames grew brighter, and presently a long row of watch-fires came into view. The hearts of the Americans sank within them. 'Alas, all this toil for such an ending! Has Cornwallis succeeded at last, and hemmed Greene in between the river and a superior army?' Then came a sudden impulse. 'If this is the main army, the army on which the safety of the South depends, we will throw ourselves upon the enemy, and buy our brothers' safety with our blood.' The noble words passed from mouth to mouth, and reached the ear of Williams. He turned to Greene's last letter. This had been his halting-ground two nights before, and some friendly hand must have fed the fires till now" (p. 171).

This volume contains frequent illustration of a point which has been much discussed of late—the low value of irregular troops even in warfare like this. It was on his "Continentals" that Greene placed his whole reliance; it was the militia who broke in battle, and the partisans and guerillas that committed the atrocities that disgraced the warfare of the South.

Of Greene's life after the war there is little to say; he died of a sunstroke in Georgia, in 1786. It is a pleasant picture of his life there that the following presents: "Not many years ago, there was an old lady living who remembered seeing him after the war play 'Puss in the Corner' with his wife; and his youngest son always recalled him as a tall man, who used to take him on his knee and teach him funny songs" (p. 531). Greene himself writes of his wife: "She is a great favorite, even with the ladies, and has almost rivalled me even where I least expected it; her flowing tongue and cheerful countenance quite triumph over my grave face."

In conclusion, we will say that this volume will add to the already high reputation of its author, and fully establishes his claim—if, indeed, it was doubtful before—to rank among the best American historians.

HAWAIIAN MISSIONS.*

WHAT religious missions have done for civilization, and what they have failed to do, will remain a point of controversy as long as theology and the doctrine of evolution fail to make up their difference. Dr. Anderson's philosophy, in the matter of the missions discussed in the present volume, is very simple. Providence opened the hearts of the islanders and the purses of the American church members. Providence guided the missionaries to the Hawaiian shores. "The Prudential Committee of the American Board of Commissioners for Foreign Missions" directed the energies of the faithful laborers in the field. "The Prudential Committee" shares with Providence the credit of the spiritual harvest.

But this theory proves, on examination, too simple to be tenable. It does not account for the comparative failure of other missions under the care of the same Committee and the same Providence. It does not explain why the Hawaiians should have adopted the religions as well as the vices of the foreigners—their manners almost as readily as their diseases; nor why, within the space of a generation, these savages, rather than others, should have gained laws, education, a fair amount of intelligence and of morality; nor why life and property are now quite as safe in Honolulu as in Boston. What are the reasons of this success in civilizing? and why has the main credit of it accrued to this particular mission, and so little to the Catholic, to the Puseyite or "Reformed Catholic," and to the Mormon missions in the same field? Though less successful in Hawaii, they have often distanced—the Catholic missions have commonly distanced—in the competition for proselytes, the efforts of "The Board" in other parts of the world. Yet each one of these missions is quite as well authorized to call itself "The Sandwich Islands Mission" as the particular one for which Dr. Anderson would claim the distinctive title. The more correct name of the mission described in the present volume—a mission which, though purely sectarian since the withdrawal from it of the Presbyterian churches, retains the undistinctive title that we have just quoted—would be "The American Congregational Board of Foreign Missions."

We should not advert to a question so unimportant as that of the name of this board of missions, did it not lead us directly to a central error of the present volume. The tone of Dr. Anderson's book is intimated in its title. In his estimate of its success, "The Board" is everything; and the natural causes which have led to the missionary victory are quite overlooked. The present account of the subject is, in brief, that as Von Moltke organized in Berlin his triumphant campaigns against the French, so the victory over heathenism was won in Pemberton Square.

The following causes, however, afford a truer explanation of the missionary campaign. The character of the islanders must first be taken into account. A kindly, docile, imitative race, long oppressed under the cruel system of the *tabu*, they were prepared to welcome any less exacting spiritual rule. Secondly, the precise moment for a change in the religious dynasty had arrived. The old system of the idols had fallen by its own weight, and by the influence of foreign civilization, less than a year before the first missionaries landed. They came not a day too soon or too late. Whether "providentially ordained" or not, their landing was most favorably timed. The islands had lately been united under the single government of the first Kamehameha. His successor gave official sanction to the mission which was first upon the ground. A Catholic mission, sent to the islands at a later date, was banished by the authorities, and re-established only by the aid of French military power. It ever afterwards labored, and justly, under the stigma of this armed interference; and the Protestant religion was the more readily accepted, in fact if not formally, as the religion of the state.

Again, the comparative nearness of the islands to the American continent, and their commerce, for nearly forty years before the establishment of the mission, with both the Eastern and the Western world, must not be overlooked among the causes that prepared the way for a missionary success. In the Scriptural phrase, the field was ripe for the harvest. When the laborers appeared, men of zeal and intelligence, they found an easier task before them than is found among the preoccupied minds of the Hindoos or the Chinese. Within the term of a single generation, their labors were so far complete that the whole population, above the age of infancy, could read, write, and cipher; while the schools, not here discouraged and repressed as in the Indian missions of the same board, became exceedingly popular. A larger proportion of the population could read the Scriptures than in New England; a much larger proportion than there became church members; and respect for religion was almost universal. Friends and enemies alike were astonished at this speedy transformation of the habits of an entire people, and the missionary reports described the Hawaiians, not untruthfully, as "a heathen nation evangelized."

Yet these facts, the pride of the missionary board, require some comment in order to prevent them from conveying a false impression. To be instructed, to be converted—these changes do not express the same fact when wrought in the crude material of the savage nature, as when brought to pass in the finer and firmer tissue of civilized minds. Only those who have lived among savages can estimate the inferiority of the material with which the missionary has to deal. He is required to mould the clay, rather than to work in the marble; and though the result may be defined by the same lines as those which bound the statue, yet the model is uncomely and perishable, and in constant danger of reverting to its original formlessness. It is said that certain Maori or native deacons of New Zealand, after their conversion to Christianity, behaved with great propriety until the occurrence of an unlucky civil war. The sound of fighting being heard one Sunday, they rushed out of church, joined in the fray, and, according to their old custom, roasted and devoured the victims at the close of the battle, in spite of the remonstrances of their pastor. A similar account comes this week from Fiji; and something of the same inconstancy may be observed in many of the results of missionary labor. It is a fault wholly due to the grain of the savage constitution, and in no way detracts from the credit due to the patient toils of the missionaries. The amount of actual result, of enlightenment, of heightened moral sense, among the savages, in spite of the deficiencies in the aboriginal character, is, as we can testify from long personal observation, very great. The labors of men like the Rev. Titus Coan have rarely been equalled in their direct effect for good. The Hawaiian mission has numbered many able men; and it is to them, rather than to the bureau in Pemberton Square, that the distinguished success is due which has made Dr. Anderson glad to write another history of Hawaiian missions.

The American Cardinal. A Novel. (New York: Dodd & Mead.)—There are three several hypotheses on which this book might be accounted for. The first is suggested in the publishers' advertisements: that it is the *bona fide* production of an Evangelical divine of the Protestant Episcopal Church, designed as a warning against "the Babylonian woe," and especially to countervail the influence of Dr. James Kent Stone's defection to the Church of Rome. This theory, however, is excluded by internal evidence, and by a decent respect for the Episcopalian ministry. The second hypothesis is that the publishers, instigated by reports of large profits received for the publishing of "Lothair," employed Dr. J. H. Robinson, or some other of the writers of dime novels, to get up something for the American market on the same subject, to be put forward under false pretence of the "eminent divine." But this is excluded by the known uprightness of the firm in question. We fall back, therefore, on the third hypothesis: that it was gotten up by some diabolical, deep-scheming Jesuit in burlesque of the Evangelical anti-Popery novel of the period, and especially of the Protestant Episcopal phase of papophobia, and palmed off on Messrs. Dodd & Mead as the genuine work of a clergyman of that persuasion.

Taking this view of it, we must say that it is extremely well gotten up, considering the difficulty of the work. For nothing is so difficult to caricature as the commonplace. We must do our Jesuit the justice to say that he has successfully caught and reproduced, with only enough of exaggeration to give effect to his work, the tone and style of the second-rate Sunday-school novel. His scene painting is as cheap, his plot as preposterous, his dialogue as prosy and feeble, and his moralizing as dull and

* "History of the Sandwich Islands Mission. By Rufus Anderson, D.D., LL.D., late Foreign Secretary of the Board." Boston: Congregational Publishing Society. 8vo, pp. 408.

dragged-in, as if the book was just what it is claimed to be in Messrs. Dodd & Mead's advertisement.

Another effective point in this satire is the perfectly legitimate caricature of that deep reverential awe with which anti-Popery writers often regard the Jesuit order as a supernatural power of evil. There is no such awe-struck veneration of Jesuitism to be found anywhere as among ultra-Protestants; and when we read here of "Jesuit bishops" with "magic eyes" and "mysterious fascinations" and unlimited command of cells and dungeons, and bars and bolts, we find the imitation of the average Protestant novel so close and clever as almost to deceive the critic himself. But caricature is sure to betray itself somewhere by overdoing. "The American Cardinal" takes off the imbecilities of a class of books to the life; but when it attempts to portray their malignity, it overstrains the point. We concede that the *odium theologicum* might tempt the aggrieved party to represent the Rev. Dr. Stone (as honest and intelligent a convert as ever followed a wrong premise to a wrong conclusion) as having been governed by base motives in his change. But to impute to "an Evangelical divine" a book attacking this gentleman, not only in his personal character but in his domestic relations, out of dislike to his theology, is, we would hope, sufficient to discredit the whole Jesuitical contrivance at once. "Evangelical divines" may sometimes do stupid things, and sometimes ill-tempered things, but the ingenious author of this book will hardly persuade those who know them that they would be guilty of such mean malignity as this.

We find similar overstraining in the details of execution. Protestant clergymen are, we admit, seldom well-informed about the Roman Catholic Church. But how absurd to represent one of them as supposing that "that church regards as void a marriage where the service is performed by any but her own priests"! And what could be more preposterous than to impute to a Protestant Episcopal divine of the Evangelical school that admiring description of the typical young clergyman dancing the *saltanello* at a ball in the costume of an Italian peasant! "The young gentleman did not sink the dignity of the clergyman in the gaiety of the dancer. He and Ada wheeled around each other in rapid circles, balancing their hands," etc.

Bating some such extravagances, the imitation is on the whole successful. But we cannot regard such insidious devices to injure the Protestant side of the question as among the legitimate weapons of controversy.

Outlines of History. With Original Tables, Chronological, Genealogical, and Literary. By Robert H. Labberton. (Philadelphia: Claxton, Remsen & Haffelfinger.)—Mr. Labberton's "Outlines of History" is one of the very few school text-books which have a distinctive idea and character of their own. It is an attempt, and, in the main, a very successful one, to solve the problem which at present discourages all teachers of history—how to combine a general outline with fulness and interest of detail. The subject is so vast and indefinite that most text-books now in use fail of either the one or the other of these ends. They either present a dry skeleton of facts, which the pupil straightway forgets, or lose sight of system and perspective in attempting an animated narrative. A book which aims to teach just what the pupil ought to remember, and no more, is sure to fail in accomplishing even so much; for history differs from most other branches of study in this—it is impossible to remember isolated facts; they must be connected and illustrated by details in themselves indifferent, so that the mind may get hold of them and retain them. Just as pure nutriment must be mixed with matter which contains no nutriment, but which enables the stomach to digest the food, so in history the facts which are to be fixed in the memory must be combined with facts that are not expected to be retained, but without which the leading events would speedily be forgotten.

Mr. Labberton's plan to accomplish this end is an excellent one, and is carried out with great success. A series of chronological tables, arranged by periods, gives a succession of names or events, with dates equidistant from one another—ten years, five years, or two years apart, in different periods. The plan is to give the year to which the person or the institution may be most fairly assigned—thus, for 1300 we have Dante, and for 1500 Erasmus. These dates are four hundred and twenty in number. Then follows a sketch, alphabetically arranged, of all these names, admirably executed; then an appendix, giving an analysis of institutions, the causes of wars, etc., and sixteen genealogical tables of uncommon excellence. Thus the pupil's attention is directed first of all to the great names of history, and the succession of these names at regular intervals is made to convey a clear and correct notion of historical distances. The book may be used for regular lessons, assigning a certain number of dates for each day; or it is eminently fitted to serve as the basis of a course of lectures.

This work deserves high praise, both as regards plan and execution. Of course no two persons would agree upon the same names to be given; and if we take exception to any of the details, it will be understood as rather a difference in judgment than a point of censure. We must say that we find fewer of such points than we should expect. We are disappointed, however, that the appendix does not contain a chapter upon the ecclesiastical power, explaining the contest of investitures, and the whole career of the Papacy down to the Reformation. Again, the Council of Constance is mentioned only incidentally, the Council of Trent not at all. There is no mention, or no adequate one, of the Magna Charta, of the Hanseatic League, of Simon de Montfort, Margaret of Denmark, Louis the Great of Hungary, John Hunyady, Scanderbeg, Van Artevelde, Gonsalvo di Cordova, Philip the Fair and Louis XI., Maurice of Nassau, Olden Barneveldt, John Hampden, and Mirabeau. It is very well to begin mediæval history at A.D. 300, but we do not agree to having modern history commence at 1300. Surely Wallace, Froissart, and Joan of Arc belong to the Middle Ages, if anybody ever did. So with the term "Great Schism"; this is generally understood to belong to the period when there were two and three popes; but this event is not even mentioned, while the term is applied, with some theoretical correctness, we admit, to the Reformation.

In the Genealogical Tables, it would have been well if the Guises could have been added to Table VIII.; if Table IX. indicated the *kings* of the line of Savoy; if Table XIII. told who Frederic IV. was; and if Table XIV. gave the Polish kings of the house of Vasa, and thus explained the Polish war of Charles X. In regard to the Treaty of Oliva, by the way, page 206, the important fact is not mentioned of Prussia being made independent of Poland. In Table XIII. it would have been very easy to show how the marriage of John Sigismund of Brandenburg with the daughter of Albert Frederic of Prussia united these two provinces under one sceptre; and it would not have been hard, in so open a table, to add the important Cleve genealogy.

We have observed very few errors or misprints. We do not know, page 180, where the author finds twenty-eight centuries of the fifth class; both Livy and Dionysius give thirty. Page 163, Christian I. should be II.; page 20, Alexander II. should be III.; Table IX., at bottom, Amadeus VII. should be VIII.; page 135, we find Septimus Severus; page 25, the Great Elector died 1688. Sir Robert Cecil stands in the table, but his father, Lord Burleigh, in the Alphabetical List.

One criticism of a more general nature. We do not think it wise to adhere so rigidly to the system of equidistant dates. We should like to have a few important dates given exactly, and fixed in the student's memory; particularly when a career culminates, or is especially associated in all minds with a particular year, it should stand *on the table*. Thus, everybody associates William the Conqueror with the year 1066; and such dates as 476, 622, 1453, and 1789 should, we think, be made prominent. Either the plan itself should be made more elastic, or—which is better—a few special dates should be added in a peculiar type. As it is, we fear that the student will sometimes get an important event associated with the wrong year, because, although the right year is always to be found in the book, it is the table which will be fixed in the memory. Thus, 1712 is given for the Bourbons in Spain; but this is no date at all, while the Treaty of Utrecht cannot be given because it came in an odd year. So we have the battles of Agincourt, Wakefield, Bosworth, and Mohács, but not Cressy or Poitiers, Towton, Mühlberg, Naseby, or Blenheim—that is, not in the tables. In fine, this system gives historical periods and distances admirably; but the *emphasis* must be supplied by the teacher, and a competent teacher can easily supply it.

Congregationalism: What it is; Whence it is; How it works; Why it is better than any other form of Church Government; and its Consequent Demands. By Henry M. Dexter. (Boston: Noyes, Holmes & Co.)—Dr. Dexter is an example of the true historic spirit; patient of investigation, careful of details, of a microscopic accuracy in facts and dates, candid almost to a fault, of good powers of generalization, and a broad and catholic philosophy. For many years, the history of the Pilgrim Fathers and of their ecclesiastical polity has been his specialty, and this has now become the passion of his life. To him we are already indebted for a careful and satisfactory search after the earliest traces of the Pilgrims in Austerfield, Bawtry, and Scrooby—*maximæ gentis incunabula*—and for the identifica-

tion of Robinson's house at Leyden, and the erection of a tablet to mark the site; and he has again gone abroad to spend a year in further investigations of Pilgrim history in England and Holland. With Congregationalism as a polity, in comparison with other forms of church government, the *Nation* has no concern. Dr. Dexter's manual has long been accepted in his own communion as an authority upon the principles and usages of the body. This third edition contains an appendix of nearly 100 pages, in which several controverted points of administration are discussed at length—chief among which is the question of "Female and Minor Suffrage in Congregational Churches." Upon this point the ancient practice of the fathers, which restricted voting to male members of lawful age, has been departed from by many Congregational churches in the West, and by some in New England. After a candid and able review of the whole discussion, Dr. Dexter decides against female suffrage upon very cogent grounds of reason and Scripture. The Scriptural argument, so universally discarded, if not scouted, from the platform of Women's Rights Conventions, still has weight with bodies which profess to receive the Bible as the sole authoritative rule of faith and practice. Mr. Beecher and others have attempted to set aside Paul's injunction, "Let your women keep silence in the churches, for it is not permitted unto them to speak," by the plea that this precept was local, having reference to the condition of women among the Greeks. But the argument of Paul in his Second Epistle to Timothy concerns the entire race: "I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence. For Adam was first formed, then Eve. And Adam was not deceived, but the woman being deceived, was in the transgression." Unless Mr. Beecher can show that Adam was a Greek, and that already in the time of Eve there were pre-Adamic women in Corinth who had made themselves notorious by their shameless behavior in public, it will be difficult to make out that Paul's declaration, "It is a shame for women to speak in the church," had reference to a passing phase of Corinthian society. To contemn Paul's precept as that of a "crabbed bachelor" is of course to invalidate his authority as an apostle, which the churches will hardly consent to do, whatever the platforms may say on that point. Hence, Dr. Dexter's argument, as addressed to churches, is valid; and even the platforms might profitably consider its sterling common sense.

Amid the diversities of usage in minor matters which obtain among Congregational churches, it is not to be expected that Dr. Dexter's ruling upon "practical points" will be acquiesced in by all; but those who have suspected Congregationalism of looseness will be surprised to find how strong and consistent a body of common law has grown up about its fundamental principles.

It is important always to distinguish the Pilgrims from the Puritans. The Puritans were a reforming party within the Church of England, and were quite willing to use the power of the state to further their reformation. The Pilgrims were Separatists, who abandoned every form of state church for the simple, independent brotherhood of believers, which they regarded as the church of the New Testament. But Congregationalists are as tenacious of the spiritual fellowship of the churches as of the independence of the local church. Both these aspects of the system are developed by Dr. Dexter as the two *foci* of an ellipse about which the system revolves with freedom and order conjoined.

The War Correspondence of the [London] *Daily News;* continued from the Recapture of Orleans by the Germans to the Peace. Edited with Notes and Comments, forming a continuous History of the War between Germany and France. (London and New York: Macmillan & Co. 1871.)—All we need say of the merits of this volume is, that it forms a perfectly homogeneous and in every respect worthy continuation of the first collection, the great merits and slight defects of which we pointed out to our readers in a late review (*Nation*, No. 296). About half of the letters it contains are devoted to the siege of Paris and the condition of that capital immediately after its surrender, but the military operations and changing situations in the North, the West, and the East also receive their full share of attention; the introductory "notes" filling up the gaps arising from the absence of descriptions by eye-witnesses. The camps, the scenes, the impressions, are varied. Some of the best correspondence comes from the successive seats of the Delegation of the Government of National Defence, Tours and Bordeaux, probably from one and the same pen. The following, on the impressions of aeronauts of various nationalities, may serve as a specimen:

"Mr. May, the American, who left the French capital simultaneously with M. Gambetta, though in another balloon . . . intensely enjoyed the easy locomotion. . . . 'Nothing could,' he said, 'be more beautiful. There you went, ever so much faster than an express train, without a single jolt, or the least sense of friction. The wind was not in your face, and you hardly felt it at your back. There was no noise, no dust, no racket, but the most lovely gliding motion. Apart from the Prussian bullets that whistled unpleasantly around the ears of the balloonists, the single drawback was the faint smell of gas, which, throughout the journey, betrayed the bad quality of the varnish used by Nadar in the manufacture of his cotton balloons.' . . . Gambetta's impressions were entirely different. He was almost, to use his own language, 'stunned with the overpowering idea of Nature's force and man's weakness. He felt, to his great astonishment, that he had no sense of the abyss.' The world seemed to recede from the balloon. Instead of being dazzled with the vast horizon which was open to his gaze, he was stupefied at the total obliteration of the picturesque in the boundless expanse beneath him. The earth had to him the appearance of a badly designed carpet, or rather a carpet in which the different-colored wools had been woven entirely by chance. Light and vastness were deprived of the value which shade and proportion give them. Nature seen from the balloon was, in M. Gambetta's estimation, *une vilaine chinoiserie*, and the art-loving child of the South thanked heaven when he touched earth again, and got into a sphere where man has a *point de résistance* in struggling against the tyranny of creation. M. Spuller, M. Gambetta's companion, who, I presume, is of German origin as he is of German appearance, was otherwise affected. He enjoyed a sensation of being carried along as helplessly as if he were a log of wood floating down a river. The pantheistic leanings of the Teuton came out in him. He was glad, as the Hindoos put it, to be lost in the Great Whole. In M. Gambetta there was manifested that tendency of the Gallo-Latin family to react against Nature which is at the bottom of every truly artistic organization. The American studied 'ballooning' as compared with steam locomotion. He had suffered from the inconveniences of travelling across continents in 'railway cars,' and his attention was turned from the picturesque side of the question to the practical."

The revision of this second volume is not better than that of the first. We have noticed "two months" for *three months* (p. 4), "October" for *September* (p. 33), "Voigts-Rhetz," "les dernières événements," and similar mistakes.

Ghardaia; or, Ninety Days among the B'ni Mozab: Adventures in the Oasis of the Desert of Sahara. By G. Naphegyi, M.D., A.M., Author of the "Album of Language," "Among the Arabs," "The Cause of the Yellow Fever," "History of Hungary," etc. (New York: G. P. Putnam & Sons. 1871.)—We have praised, in our notice of Mr. Naphegyi's "Among the Arabs," the likeness of the author which precedes its title-page. We can do the same in regard to the picture of "The Author in the Desert," which is the opening page of "Ghardaia," and shows him standing in the shade of a graceful and richly-saddled camel. We can do more. We can praise not only the external ornaments of "Ghardaia," which are varied, but also the sweetness of its title, which, our readers can bear us witness, we like to repeat, the readableness of its fiction (for fiction its contents are, in spite of all that is stated in the introductory letter to "Bugat Pal"),* and, above all, the good English style in which that tale of romance and adventure is presented to us. For Mr. Naphegyi, whose name is so purely Magyar, but whose Magyar is terribly barbarous—witness his "mil es dárab" (p. 273), a mixture of bad Slavic and bad Magyar, which stands for *mérföld és darab*—can at least boast of writing or publishing good English. He seems to cultivate this the most diligently of all the hundred tongues he has written on in his "Album of Language." That he has forgotten the language of the country of which he loves to speak so often and so tenderly in his discursive reminiscences, is doubtless to be attributed to his having been so long away from it, and so exceedingly remote, that even its mountain *ranges*—"the Tatra, Fatra, and Matra"—appear to him as "*peaks*" (p. 197). And yet, the things of the past stand so vividly before his mind that he speaks of them as if they were facts of the present. Thus he says of Munkács, in Hungary, where not a single Polish prisoner of state is now to be found: "In the bowels of that hill hundreds upon hundreds of human beings are immured, cursing the day that gave them birth. Yes, that hill, so luxuriantly covered with the delicious vine, hides in its interior the flower of the nobility of crushed, unhappy Poland. It is the place where all the nobility of Poland, who attempted to revolt against the oppressor, are kept as prisoners." We are sorry to find that his French, too, is getting somewhat rusty—"Poulet fricassée," "De [s] dattes fraîches" (in the Nom.)—but his Desert Arabic may be better; at any rate he talks glibly of the B'ni Mozab, their language, their present and their past, although "Herodotus, Sallust, Pliny, and Dr. Shaw, all differ in regard to the antiquity of this race."

* That is, to Paul Bugát, the names as above being given in the inverse Magyar order. And here we have a fit opportunity to correct an error in our review of the Dakotah *Iapi Oaye*. The words, "Hunfalvy Páltól," taken from the title-page of a Pesth publication on that Indian language, signify *By Paul Hunfalvy, tól* being the Magyar for *by*.

Life of Major André. By Winthrop Sargent. New edition. (New York: D. Appleton & Co.)—The author of this memoir was one of the few young men in this country to whom, by good fortune and by choice, the practice of letters was only an outlet for a studious mind and a zeal for progress, and his reward lay in the consciousness of "having done the subject justice." His youthful and elegant mind found a congenial task in the biography of Major André, and he treated his theme in the most skilful and conscientious manner. No name suggests more sympathetic interest or awakens more tender memories than that of André. Every schoolboy knows that this unfortunate officer was executed for a technical offence, from the result of which he could not consistently be allowed to escape. Not the most partisan history has ever imputed to him anything but high and honorable intentions, and his mournful fate has never been anything but deplored. The part which Washington took in this sad drama is one of the most important events of our Revolutionary war, and it may almost be said that his claim to the respect of posterity hangs upon their verdict on his conduct regarding André. To the tale of this story Mr. Sargent brought remarkable historical knowledge, painstaking accuracy, and a lucid and graceful style. The collateral information and historical gossip which he gives are worthy of Dr. Dryasdust. His description of the manners of our Revolutionary period is quite fascinating, and the characters of our national ancestors are set forth in a way which brings them into the very presence of the reader. The analysis of the motions and conduct of Washington regarding André is made simple by the light of the correspondence, conversation, and diaries of those concerned in the melancholy controversy, and it is impossible to arise from the book without a satisfactory sense of the wisdom and discretion of our great captain. Amid all, the portrait of André, the refined, sensitive, chivalrous victim, is painted with a force and particularity almost beyond praise. The very excellence of this work stands in the way of its popularity, but it is none the less a monument and model of biographical writing which will outlast brass.

AROUND A SPRING.

BY GUSTAVE DROZ.

Translated by M. S. 8vo, paper, 75 cents.

"Written with just that art which redeems the most ordinary incidents from appearing commonplace. . . . A masterpiece of fiction. 'Around a Spring' is simple and pathetic. We shall not give an analysis of the novel which it is so easy to get, but shall content ourselves with praising its great merits. Regarded merely as a bit of workmanship, it has all the elegance which, perhaps, will immortalize the best of the present race of French writers."—Nation.

"A most graceful story, interesting from the beginning to the end. Portraiture of character, description of persons, dissection of motive, pictures of life in city and among the mountains, conversation, dialogue, development of plot, are all excellent."—Galaxy.

II.

MACMILLAN & CO.'S LIST.

In one vol., crown 8vo, price $2.

AT LAST. A Christmas in the West Indies. By Charles Kingsley. With numerous Illustrations.

"In this book, as during his visit, Mr. Kingsley revels in the gorgeous wealth of the West Indian vegetation, bringing before us one marvel after another, alternately sating and piquing our curiosity. Whether we climb the cliffs with him and peer over into the narrow bays which are being hollowed out by the trade surf, or wander through impenetrable forests, where the tops of the trees form a green cloud overhead, or gaze down glens which are watered by the clearest brooks, running through masses of palm and banana and all the rich variety of foliage, we are equally delighted and amazed."—Athenæum.

MEMOIR OF CHARLES MAYNE YOUNG, Tragedian. With Extracts from his Son's Journal. By Julian Charles Young, M.A. With Portraits and Sketches. 1 vol. crown 8vo, cloth, $2 25.

"Mr. Young is one of those pleasant diarists who, it is to be feared, are rapidly becoming as extinct as the delightful letter-writers of the past age. In this budget of anecdotes, fables, and gossip, old and new, relative to Scott, Moore, Chalmers, Coleridge, Wordsworth, Croker, Mathews, the Third and Fourth Georges, Bowles, Beckford, Lockhart, Wellington, Peel, Louis Napoleon, D'Orsay, Dickens, Thackeray, Louis Blanc, Gibson, Constable, and Stanfield (the list might be much extended), the reader must be hard indeed to please who cannot find entertainment."—Pall Mall Gazette.

"He has contrived to bring out a narrative often as detailed as Pepys, as versatile and lifelike as Boswell, and as full of recent personal interest as Crabb Robinson. It is not a barren record of facts, but a kindly chronicle of life and manners, and men and minds, running over the last half century."—Saturday Review.

"There is hardly a page of it which was not worth printing. There is hardly a line which has not some kind of interest attaching to it.... When we mention that the extracts from Mr. Young's own journal abound in choice anecdotes of Wordsworth, Coleridge, and Scott, and many other of the great men of the last generation with whom he was brought into personal contact, we have said enough to prove the interest of the work, even if it had less of the grace and vivacity which characterize it from beginning to end. We lay down the volume with regret, and shall return to it in many a leisure hour."—Guardian.

SPRING COMEDIES. By Lady Barker, author of "Station Life in New Zealand" and "Stories About," etc. Crown 8vo, cloth, $1 50.

CONTENTS: A Wedding Story.—A Stupid Story.—A Scotch Story.—A Man's Story.

"Lady Barker is endowed with a rare and delicate gift for narrating stories. She has the faculty of throwing into her printed narratives a soft and pleasant tone, which goes far to make the reader think the matter immaterial, so long as the author will go on telling stories for his benefit."—Athenæum.

Books bought and sold at fair prices. Books imported to order.

Now on sale a large collection of Cruikshankiana, the finest ever brought to this country. Catalogues free on application.

A selection from some fine books just received from London offered at very low prices.

BENTLEY'S MISCELLANY. A very fine set. 62 vols. half-calf, marbled edges, $150.

This publication contains more entertaining matter than any of the standard British periodicals. It is profusely illustrated by George Cruikshank, John Gilbert, Sam Lover, Alfred Crowquill, John Leech, H. K. Browne, etc., etc.

DICKENS'S WORKS. 17 vols. crown 8vo, cloth. London edition. $16 50.

DIBDIN, T. F. Bibliomania; or, Book Madness. A Bibliographical Romance. Illustrated with Cuts. New edition, to which is now added a Supplement, including a Key to the assumed characters in the drama. 8vo, half-morocco extra, gilt top. London, 1811. $40.

This work has in a great degree given a stimulus to the collecting of early literature and bibliography, on which subjects it will be always consulted as a first authority. This copy is unique, being further illustrated with 48 inserted portraits, and autograph letters of Dibdin, Horace Walpole, and W. Hodgson.

FIELDING. Select Works, containing Joseph Andrews, Tom Jones, Amelia and Jonathan Wild. Portrait. 5 vols. 8vo, russia. Edinburgh, 1857. $9.

HARLEIAN MISCELLANY. A Collection of Scarce, Curious, and Entertaining Pamphlets and Tracts, as well in Manuscript as Print, selected from the Library of the Earl of Oxford. Best edition, with the Supplement and large Additions and Notes, by T. Park. 12 vols. 8vo, morocco, gilt edges. London, 1808-13. $37 50.

HORE diue Virginis Marie Sedin veru vsum Romanu cum aliis multis folio, sequenti notatis; una cum figuris apocalipsis post figuras biblie recenter insertis in fine. Printed as MSS. on vellum, with numerous Woodcuts. 12mo, vellum. Paris: Thielmani Keruer, 1520. $65.

A very beautiful specimen of early typography. The capitals in gold and colors, illuminated by hand, and quaint, graphic, and very curious illustrative borders to every page.

JUST PUBLISHED:

Nonsense Songs, Stories, Botany, and Alphabets,

By EDWARD LEAR.

With One Hundred and Fifty Illustrations, from Original Grotesque Designs by the Author.

1 vol. square 12mo. $2 00.

Unlike the former volume by the same author, the verses of which were all of the same rhythm and length, the new work contains nonsense songs of different styles, ludicrous travesties of Andersen and other well-known authors, in the form of nursery stories, most audacious and vastly clever burlesques of botanical terms, and a set of original alphabets with accompanying pictures, that are calculated to make the infantile idea of humor develop with marvellous rapidity. Grotesque illustrations, as original and laughable as are the contents, accompany each subject. The Pall Mall Gazette says:

"The alphabets are funny, the stories are funnier, the botany ingeniously comical, and the songs are most ingenious and comical of all. The illustrations are ridiculously clever sketches. Who chooses this book will choose well.

II.

Nathaniel Hawthorne's Works

ILLUSTRATED LIBRARY EDITION.

Vol. II. Twice Told Tales.

Vol. III. Mosses from an Old Manse.

Each complete in 1 vol. 12mo. $2 per vol.

Each volume illustrated and handsomely stamped. These form the second and third volumes of the new edition of Nathaniel Hawthorne's Works, designed both as an elegant and popular edition.

HORACE B. FULLER,

14 Bromfield Street, Boston.

Doty's Washing Machine has been before the public now for several years, and has had a full and fair trial in innumerable households. We have had one of them in use in our family from the first day of their public sale, and it gives us great pleasure to bear testimony of their great excellence, use, and value. There is no mistake about them. They perform all the work that is claimed for them by the makers, and all who have used Doty's Machine say that they would not be without it for a thousand dollars.—Chicago, Ill., Tribune.

'PRATT'S Astral OIL. Pratt's Astral Oil is endorsed by nearly one hundred leading Fire Insurance Cos. of New York. Dr. G. Tagliabue says: I have to pronounce it the SAFEST illuminating oil in the market.
